PROCEEDINGS AND DEBATES OF THE 91st CONGRESS, FIRST SESSION

SENATE—*Friday, June 20, 1969*

The Senate met at 11 o'clock a.m., and was called to order by the Vice President.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O Lord, our God, for this quiet moment lift us above the rituals of duty into the light of Thy presence. Breathe through the things that are seen the peace and joy of the unseen and eternal.

Whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely and of good report, grant that with one accord we may think on these things to do them; through Jesus Christ our Lord. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Thursday, June 19, 1969, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the Senate by Mr. Leonard, one of his secretaries.

EXECUTIVE MESSAGE REFERRED

As in executive session,

The VICE PRESIDENT laid before the Senate a message from the President of the United States submitting a nomination, which was referred to the Committee on Foreign Relations.

(For nomination this day received, see the end of Senate proceedings.)

TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the distinguished Senator from Iowa (Mr. HUGHES) has completed his remarks, there be a period for the transaction of routine morning business, with statements therein limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the Executive Calendar, beginning with "New Reports."

There being no objection, the Senate proceeded to the consideration of executive business.

The VICE PRESIDENT. The nominations on the Executive Calendar will be stated, beginning with "New Reports."

DEPARTMENT OF DEFENSE

The assistant legislative clerk proceeded to read sundry nominations in the Department of Defense.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The VICE PRESIDENT. Without objection, the nominations are considered and confirmed en bloc.

OFFICE OF EMERGENCY PREPAREDNESS

The assistant legislative clerk read the nomination of Haakon Lindjord, of Virginia, to be an Assistant Director of the Office of Emergency Preparedness.

The VICE PRESIDENT. Without objection, the nomination is considered and confirmed.

U.S. ARMY

The assistant legislative clerk proceeded to read sundry nominations in the U.S. Army.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The VICE PRESIDENT. Without objection, the nominations are considered and confirmed en bloc.

U.S. NAVY

The assistant legislative clerk proceeded to read sundry nominations in the U.S. Navy.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The VICE PRESIDENT. Without objection, the nominations are considered and confirmed en bloc.

U.S. MARINE CORPS

The assistant legislative clerk proceeded to read sundry nominations in the U.S. Marine Corps.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The VICE PRESIDENT. Without objection, the nominations are considered and confirmed en bloc.

U.S. MARSHAL

The assistant legislative clerk read the nomination of Walter J. Link, of North Dakota, to be U.S. marshal for the district of North Dakota.

The VICE PRESIDENT. Without objection, the nomination is considered and confirmed.

NOMINATIONS PLACED ON THE SECRETARY'S DESK—THE AIR FORCE, THE ARMY, AND THE NAVY

The assistant legislative clerk proceeded to read sundry nominations in the Air Force, the Army, and the Navy which had been placed on the Secretary's desk.

The VICE PRESIDENT. Without objection, the nominations are considered and confirmed en bloc.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immedately notified of the confirmation of these nominations.

The VICE PRESIDENT. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

ORDER OF BUSINESS

The VICE PRESIDENT. Under the order of June 18, 1969, the Senator from Iowa (Mr. HUGHES) is recognized for a period not to exceed 40 minutes.

VIETNAM PERSPECTIVE

Mr. HUGHES. Mr. President, at the present time there is a rising dialog throughout this land about our goals and priorities as a civilized society. I believe this a healthy sign in a free country.

The fact that much of the dialog is concerned with priorities—not only for America and the free world, but for the human race—reflects our idealism as a people. It also indicates our growing awareness of the realities of the nuclear age.

The majority of the people who are involved in this discussion are not radicals or summer patriots.

They are thoughtful men and women of good will who have long been concerned but are now aroused at our seeming inability as a nation to escape from the imprisonment of collision-course national policies.

They include public leaders, scientists, economists, businessmen, and other concerned citizens who are deeply upset by the growing obsolescence of our traditional foreign policy in a drastically changing world, the implications of the arms race, the continuing dominance of the military over our culture and economy, and, above all, the unmet critical needs of our domestic society.

The participants in this national dialog also include ordinary fathers and mothers who want a future for their sons and daughters—and young people who are not convinced that there is a future.

The new dialog has mounted an impressive critique of our traditional policies. This does not imply that our present policies are products of a deliberate, self-serving conspiracy. Nor does it imply that those who support and carry out these policies are not well intentioned.

The belief is, rather, that some of these key policies are no longer relevant or right in the context of present and future realities.

Those who believe we must free ourselves from the inflexible past and seek new options are of both political parties and of no political party. If the dialog is political, we are talking about the politics of hope and survival, not partisan considerations.

At the present time, a Congressional Conference on the Planning of New Priorities is in session here on Capitol Hill, in which Members of Congress, businessmen, scientists, scholars, and other thoughtful Americans are discussing in a positive way the exciting possibilities of setting new priorities for a redirected and regenerated Nation.

I believe that our public leaders of all political allegiances know in their hearts that we must make massive moves, as yet not seriously envisioned, if we are to meet the overwhelming problems of peace and poverty and equality of opportunity that must be met if our Nation is to endure in its intended image.

But directly in the road of any plans to reshape our society and bind its wounds is a mammoth and sinister presence—the unspeakably tragic and seemingly endless war in Vietnam.

Whatever our other travails may be, the ending of this costly and pointless war is the sine qua non of what we must do to create a new order of priorities in which there is hope and substance.

Over a period of 14 years we have seen the growth of the cancer: the original intervention, the buildup, the escalation, and now the deadlock while hundreds of American servicemen are dying each week along with untold numbers of Vietnamese military personnel and civilians—men, women, and children.

It is said that there is nothing new under the sun, and certainly the discussion of our policies in Vietnam has been as endless as the war itself. I do not pose as a military expert or a prophet in foreign policy. But I have taken the floor to give expression to thoughts and emotions that have too long been bottled up and which, I believe, are passionately shared by millions of responsible Americans, including distinguished colleagues on both sides of the aisle in this Chamber.

Many of these people supported our Government's policies in Vietnam silently and hopefully over a long period of time. They recognized the awesome complexity of making the right command decisions. They had the deepest sympathy for the unimaginably heavy burdens of leadership in this most repugnant of all wars.

But time ran out—and disillusionment came.

It became apparent that if this hideous war drags on, breeding the likelihood of future similar involvements, our entire society may be damaged beyond recovery.

It is time for every American who cares about the things worth caring about to speak out. The greatest peril of all would be to remain silent.

I read an excerpt from a letter I received just this morning from a combat soldier in Vietnam:

> I know it's often said back home that dissent just lowers the morale of our troops over here. Nothing could be farther from the truth. We live to hear that people back home are working to end the war.

Mr. President, no reasonable person could fault the bravery and devotion to duty of our military men in Vietnam. I think they are the finest soldiers in our history, fighting one of the dirtiest and most difficult wars of our history.

American industry has done an admirable job of supplying the material and equipment for this conflict. I am not faulting them.

We are simply ruled by policies and programs that have led us into a dead end.

I have never doubted Mr. Nixon's deep commitment to peace—nor that of Mr. Laird or Mr. Rogers and the other leaders who direct our defense and foreign policy.

I never doubted Mr. Johnson's passion for peace, either.

From 1963 through mid-1967, as Governor of my native State, I fully supported President Johnson's leadership in Vietnam. I doubt if there was a more ardent supporter than I was at that time.

During this period, I attended several briefings by the President and his Cabinet members on the progress of the war. In 1965, I went to Vietnam and talked to troops and military leaders in the battle areas. I saw at first hand, as so many of my colleagues have the viciousness of this jungle war and the high dedication and morale of the troops.

Although questions began to rise and haunt me, I still supported the administration line. In 1967, these questions became too intense to live with—and I sought, in the highest offices of the land, the answers that were needed. There were no rational answers.

It was not anyone's intentions that I questioned, but the premises of our policy and the direction it was taking.

I could only conclude that the premises on which our involvement was founded were wrong, that we had no business on the basis of moral imperative and national interest to be there, that there could be no military victory or even negotiated settlement that would satisfy our traditional demands, and that we should move at once to halt the bombing and take other measures toward attaining an honorable, if not wholly satisfactory peace.

I believe, and still believe, that we are strong enough as a nation to take compelling new initiatives for peace in Vietnam without losing the respect of other nations and the peoples of this world. On the whole, I was convinced, we would gain their respect, and I still feel that way.

Since then, my personal agony over this war and what it is doing to our own country, as well as to the people of Southeast Asia, has steadily increased to the point where I think it would be criminally irresponsible on my part to remain silent.

It should be starkly significant to all Americans that, one by one, distinguished leaders who had key roles in our defense and foreign policies through the years of this conflict have changed their minds about the hard line we have taken in Southeast Asia.

Governor Harriman, Clark Clifford, and Cyrus Vance are recent members of this growing group who have recently called for strong and bold action by our Government to get this war ended.

These distinguished men have not proposed such rash measures as unconditional withdrawal or unilateral disarming.

But they have pushed for strong, determined, immediate measures on the part of our Government toward peace. They have proposed, for example, that we press for very substantial troop withdrawals and that we take other bold initiatives.

And an ever-increasing number of our distinguished leaders during the course of this catastrophic war have renounced military intervention, global policing, and uncontrolled military spending by our Government.

Retired Marine General Shoupe made a monumental contribution to our national enlightenment with his recent article in the Atlantic Monthly on military intervention around the world as a tool of our foreign policy and on the inordinate influence of the military on all of our national policies.

No responsible leader, to my knowl-

edge, advocates reducing our military capabilities beyond the rational needs of our national defense to keep our commitments.

But the policies that led to Vietnam and will inexorably lead to future Vietnams, if they are not changed, are being scrutinized and questioned today, as never before in our history.

The intention of the bipartisan opposition to the war policies of the present administration is not in any sense an effort to embarrass the President or to impede whatever unrevealed program he may have to end the war. If partisanship is inferred, it should be remembered that most of these same people who are now questioning the Nixon war policies also questioned the war policies of Lyndon Johnson.

Our role is to urge the President to take action that we deem in the national interest and in his interest as well. It was the same insistence on the part of congressional critics and concerned citizens that persuaded Mr. Johnson, to his great credit, to take the move he had so long resisted—the cessation of the bombing in the north.

We now need a similar breakthrough move by Mr. Nixon to get the peace movement realistically on the road again.

The president said last night:

> I am re-examining our policy in Vietnam every day . . . I will not get frozen in.

On the basis of what we had seen before—on the basis of his Air Force Academy speech—he appears to be already frozen in.

But on the basis of what he said last night in his press conference—that he hoped to beat Mr. Clifford's proposed schedule of removing a hundred thousand American combat troops from Vietnam this year and completing the withdrawal of combat units next year—he is definitely not frozen in.

I can only hope that the press conference version is right.

As a freshman Senator from an inland State, it is not my thought to present a new and unique blueprint of what should be done to disengage ourselves from the Vietnam conflict.

Suffice it to say that I believe our Government should take some strong initiative, choosing among lines that have been suggested recently by highly competent authorities.

For example, it would be a breakthrough if the President would announce a timetable along the lines of Clark Clifford's recent proposal that 100,000 combat troops be removed this year and the rest of the ground troops be phased out in 1970. It could be made clear that this was not an immutable schedule into which the leadership would be frozen, but a declaration of solid intention that would clear the atmosphere. The token withdrawal of 25,000 has not served this purpose and the atmosphere is not cleared at this time.

I, personally, would further endorse the proposals of Cyrus R. Vance, a former negotiator at the Paris Peace Conference, which included several items:

First, a stand-still cease-fire by all sides in Vietnam;

Second, an international peacekeeping force to oversee the cease-fire, the political settlement, the withdrawal of all outside military forces and the protection of the minorities;

Third, democratic self-determination for the South Vietnamese through a system of free elections at the earliest possible date under the jurisdiction of a representative—joint—electoral commission, with both sides agreeing to accept the result of the election;

Fourth, a sweeping land reform programs giving title to the tenants faring the land and providing compensation to the landlords;

Fifth, massive medical aid and relief to refugees to bind the wounds of the war, and economic development channeled through the United Nations.

Again I say, we are not trying to force decisions on the President; we are trying to suggest the options available to him and to urge that he take action along the lines of his choice toward the common objective of ending this war.

Mr. President, I thought long about presenting my feelings on the floor of the Senate regarding this conflict in Southeast Asia. Over this period of time I have patiently waited, as have all the people of this country, I believe for these strong indications. I am encouraged and hopeful that the signs are here that the President of our great Nation can take the action that can be politically of enough force to again bring a breakthrough in negotiations and result in bringing an end to the interminable conflict.

Until these steps are taken, I am convinced the priorities of America will not be met. I believe commitments at nome are as important in the defense of this Nation as commitments abroad. If we are going to meet the needs of the hungry and the starving, housing needs, the needs of the underprivileged, the needs of education, and needs in every area, we have to rechannel the resources of this Nation to the best of our ability.

I realize that with the heavy incumbencies and burdens of this we cannot commit ourselves to providing all of the solutions immediately. In my opinion, however, we do not have 2 years to meet the needs internally of this Nation.

So we must have a set of priorities which will permit us, as a people, to commit ourselves to what can be an acceptable solution of the war in Southeast Asia and, at the same time, to redirect our energies in meeting the total needs of our people within the boundaries of this Nation.

Thank you, Mr. President.

Mr. MANSFIELD. Mr. President, will the Senator from Iowa yield?

Mr. HUGHES. I am happy to yield to the Senator from Montana.

Mr. MANSFIELD. Mr. President, I want to commend the distinguished Senator from Iowa for the thoughtful, statesmanlike speech he has just made. I know how deeply he feels about the situation which has developed in Vietnam. I concur wholeheartedly in the adjectives he has used to describe that barbaric, that tragic, that brutal, and that unnecessary war.

It has weighed on the minds of many of us for some years now. It has been a burden which has cost this country something on the order of 36,000 dead, well over 200,000 wounded, and almost $100 billion—and the end, Mr. President, is not yet in sight.

It is my belief that President Nixon would take courage and sustenance from what the distinguished Senator has said, because the Senator's tone was moderate and helpful. The Senator is aware of the difficulties under which the Chief of State of this Nation must labor to find a solution.

Thus, the good wishes of the Senator and the fact that he realizes that Mr. Nixon has an onerous burden to bear and that Mr. Nixon is interested in a real peace must be considered in the context in which the speech was made.

The Senator mentioned the fact that until 1967, he went along with President Johnson on the conduct of the war and believed that it was a proper conflict, so to speak; but that after a visit to Vietnam, and the more he thought about it, the more convinced he became that it was not the right war in the right place or at the right time.

Mr. President, I honor the Senator from Iowa, a combat infantryman in the Second World War, who has had the courage to face up to a difficult situation and to change his mind in accordance with his conscience.

I honor former Secretary of Defense Clifford for changing his mind, too.

I honor, too, President Nixon for changing his mind.

Those of us who raise questions about the war in Vietnam are not isolationists—"neo" or otherwise. Those of us who raise questions about the war in Vietnam are not in favor of unilateral disarmament. Those of us who raise questions are just as concerned about the welfare of this country as is the distinguished Senator from Iowa, who stated that what, in effect, we must achieve, if at all possible, is a balance between our domestic needs, which are difficult and increasing, and our commitments overseas.

The distinguished Senator from Iowa has indicated that he questioned the premises on which the policies which involved us in Vietnam were arrived at, not the intentions of the people who happened to be the Chiefs of State of this Government in the past 4 or 5 years, and at the present time.

He also raised the question about achieving a peace without losing the respect of other nations. I would say that what we should be interested in is not that, so much, as a peace with which we could retain our respect in this Nation and save the lives of those young men who are carrying out their bounden obligation as citizens of the United States, and who are carrying out a policy for which they are not responsible but which was laid down here in Congress and in the executive department—policies which have brought us nothing but sorrow and distress.

I am glad that the distinguished Senator referred to the statement of President Nixon at his press conference last evening, to the effect that he was not "frozen in," but was reassessing the situation in Vietnam on a daily basis and was prepared to take advantage of any possibilities which might arise.

I think that proposals have been made which are worthy of consideration and

which, in my opinion, are being given consideration—proposals like those advanced by our former Ambassador to the Paris Peace Conference, Cyrus Vance, and proposals like those advanced by former Secretary of Defense Clark Clifford. All of these proposals have merit. They may or may not be the answers; but, certainly, in my opinion, the President is giving consideration to the proposals. If he is not bound in by the bureaucracy in the State Department and the Defense Department, there are good possibilities that these suggestions may be given independent consideration, and that the decisions will be made by the President—I certainly hope that he will not be bound by policies which were good 5 years ago, a decade ago, or two decades ago.

The trouble with too many people in high positions is that they live in the past and believe that something which was good at the end of the Second World War is still good today. But, Mr. President, times have changed, and changed drastically.

The Senator from Iowa has pointed out that there are difficulties—I repeat—arising at home which must be faced up to. There are policies which must be changed.

I commend the distinguished Senator from Iowa (Mr. HUGHES) for taking the floor on this occasion and making his maiden speech on this particular subject. I thank him for giving all of us the benefit of his thoughts and his views on the situation as it exists today, both in the area of Vietnam and, just as important, in the domestic field.

Mr. HUGHES. Mr. President, I thank the distinguished Senator from Montana for his very eloquent additions and admonitions to the people of our country concerning considerations of the time and the age in which we live.

I certainly share his hopes and his thoughts that we will not be bound, today or tomorrow, by anything in history that is so traditional that we cannot constantly review our existing positions and, if new options appear, move to take advantage of them.

I concur with the distinguished Senator from Montana that, in conducting the affairs of this Nation, our primary concern should be for the self-respect of the people of this Nation.

My thought in expressing the statement as I did today was that the steps proposed would be respected, and this country would gain in prestige in the world by having the courage to take the initiative as we may see it at this particular time.

I believe that certainly this mightiest of the nations on the face of the earth should have the courage to take the steps for peace as well as the courage to meet our commitments in war and international agreements. I believe that as the President moves these days—certainly our prayers and our hopes are with him; he is our President—we want to do everything we can to strengthen his positions in negotiations, but encourage also the people of this Nation by these discussions and dialogs, not only with respect to the war in Vietnam but our commitment in other affairs and the internal problems of this Nation.

I think as much has been added to the greatness of this Nation in dissent as has been added in affirmation.

As the Senator from Montana pointed out, it took a couple of years before I reached the position of publicly changing my opinion.

I thank the distinguished Senator from Montana for his contribution.

Mr. KENNEDY. Mr. President, will the Senator yield?

Mr. HUGHES. I yield to the Senator from Massachusetts.

Mr. KENNEDY. I would like to underscore the very eloquent remarks and comments made by the distinguished majority leader, and to add my commendation to the Senator from Iowa for his statement, his maiden speech before this body. I want to urge all Members of this body, and certainly the people throughout the country, to read what I believe has been a concise, balanced presentation of the dilemma in which, as a great nation, we find ourselves today.

I think the Senator from Iowa has presented to the Members of the Senate and to the American people in a most explicit way, in a way which is reasoned, thoughtful, and moderate, an explanation of the real cost of this war. He has pointed out to all of us once again the cost of that war in terms of lives and in terms of our resources, and has reminded all Americans of the costs of the American people of our failure to meet our commitments to the education of our young, the health of our old, and those who live with little hope and much despair in our urban areas.

In the relatively short period of time that I have been in the Senate, I have heard few Members, and even fewer freshmen, address this body with the kind of thoughtful commentary that has been made by the distinguished Senator from Iowa this morning. I think he serves a great purpose in the Senate, and I think brings great credit to his State, by the remarks which he has shared with us.

The Senator from Iowa comes to this body with a reputation which preceded him, as a man who is ready to plow new fields, who is not satisfied with the shibboleths of old and the policies of the past, all of which he had demonstrated by his forward-looking administration as one of the great Governors of our Nation. Now he has turned those abundant talents to the national and international questions which face this Nation today. I think the result has been a thoughtful and commendable statement. I congratulate the Senator from Iowa.

Mr. HUGHES. The Senator from Iowa deeply appreciates the very eloquent statements of the Senator from Massachusetts and hopes that in the weeks and months ahead, as we continue our dialog, we can continue to open avenues in support of this great country that will strengthen our country by the proper direction of our resources and by meeting what commitments we must meet internally and externally.

I thank the Chair very much.

Mr. MANSFIELD. Mr. President, the distinguished Senator from Iowa, in his thoughtful, reasoned, and courageous speech has, in my opinion, performed a public service.

I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

DISCLOSURE BY SENATOR JAVITS OF FINANCIAL INTERESTS

Mr. JAVITS. Mr. President, on May 14 of this year I filed, as did each other Member of the Senate, two reports required under the new Senate disclosure rules which have just become effective. One report, filed with the Secretary of the Senate and made public upon its filing, disclosed honorariums and contributions received by me in 1968; and another report, filed with the Comptroller General, disclosed my financial interests, but that report is not, under Senate rules, considered public information.

I am, therefore, continuing today to pursue my practice of many years by publicly filing a report of my major financial interests. I hereby publish this list of companies subject to regulation by the Federal Government, in each of which I have an interest—direct or indirect—mainly as beneficiary of a family trust—in an amount exceeding $5,000. These are normal investments in publicly owned corporations and constitute no element of control alone or in combination with others, directly or indirectly:

Apco Oil Corp., Baxter Laboratories, Belco Petroleum, Cities Service, Corinthian Broadcasting Corp., Felmont Oil Corp., First National City Corp., General Instrument, Government Employees Corp., Government Employees Financial, Government Employees Insurance, Government Employees Life Insurance, South Carolina Electric & Gas, Southern Co., Transamerica Corp., and White Shield Oil & Gas Corp.

Mr. President, I have today filed, and will annually continue to do so. my own financial statement with respect to securities, under any form of Government regulation, relation, or control, in which I have, directly or indirectly an interest in excess of $5,000, as I have for many years, notwithstanding the filing which the Senate now requires, which I made on May 14. I believe this ought to be public information, and under the Senate rule, that information is filed with the Comptroller confidentially.

I just say that at this time, because it is a practice which I have pursued and which I intend to continue until such time as the Senate requires, as I believe it should, complete publication of such information by its Members of a public character.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

REPORT OF THE EAST-WEST CENTER IN HONOLULU

A letter from the Secretary of State, transmitting, pursuant to law, the eighth annual report on the activities of the East-West Center in Honolulu, covering the period July 1, 1967 through June 30, 1968 (with an accompanying report); to the Committee on Foreign Relations.

REPORT ON NONPROFIT EDUCATIONAL INSTITUTIONS AND OTHER NONPROFIT ORGANIZATIONS

A letter from the General Manager, U.S. Atomic Energy Commission, reporting, pursuant to law, the nonprofit educational institutions and other nonprofit organizations in which title to equipment was vested by the Atomic Energy Commission pursuant to section 2 of Public Law 85-934, for calendar year 1968 (with accompanying papers); to the Committee on Government Operations.

REPORT ON DEPARTMENT OF TRANSPORTATION GRANTS

A letter from the Deputy, Office of the Secretary of Transportation, reporting, pursuant to law, that there were no grants made by the Department of Transportation pursuant to section 1891 of title 42, U.S. Code, during the preceding year; to the Committee on Government Operations.

REPORT OF PROPOSED CONCESSION CONTRACT FOR THE GRAND TETON NATIONAL PARK, WYOMING

A letter from the Deputy Assistant Secretary of the Interior, transmitting, pursuant to law, a proposed concession contract under which Leek's Lodge, Inc., will be authorized to continue to provide accommodations, facilities, and services for the public in Grand Teton National Park, Wyoming, for a 20-year period from October 1, 1968, through September 30, 1988, when executed by the Director of the National Park Service (with accompanying papers); to the Committee on Interior and Insular Affairs.

PROPOSED LEGISLATION TO COMMENCE PROGRESS PAYMENTS TO A BRIDGE OWNER UPON ORDERING ALTERATION OF THE BRIDGE

A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to commence progress payments to a bridge owner upon ordering alteration of the bridge (with accompanying papers); to the Committee on Public Works.

EXECUTIVE REPORTS OF COMMITTEES

As in executive session, the following favorable reports of nominations were submitted:

By Mr. RANDOLPH, from the Committee on Public Works:

Maj. Gen. Andrew Peach Rollins, Jr., Army of the United States (brigadier general, U.S. Army), to be a member and president of the Mississippi River Commission; and

Col. Charles R. Roberts, Corps of Engineers, to be a member of the California Debris Commission.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A resolution adopted by the Chatauga County Board of Supervisors, New York, recommending that local government obligations remain free from taxation; to the Committee on Finance.

A resolution adopted by the Board of Supervisors of Cayuga County, N.Y., opposing Federal legislation eliminating tax-exempt municipal bonds; to the Committee on Finance.

By Mrs. SMITH (for herself and Mr. MUSKIE):

Joint resolution of the Legislature of the State of Maine; to the Committee on Finance:

"JOINT RESOLUTION MEMORIALIZING THE HONORABLE MAURICE H. STANS, SECRETARY OF COMMERCE, THE HONORABLE GEORGE P. SHULTZ, SECRETARY OF LABOR AND THE MAINE CONGRESSIONAL DELEGATION TO CURTAIL THE CRIPPLING FLOW OF FOREIGN FOOTWEAR IMPORTS

"We, your Memorialists, the Senate and House of Representatives of the State of Maine of the One Hundred and Fourth Legislative Session assembled, most respectfully present and petition the Honorable Maurice H. Stans, Secretary of Commerce, George P. Shultz, Secretary of Labor and the Maine Congressional Delegation, as follows:

"Whereas, the production and importation of foreign footwear has become a decisive threat to the shoe industry in the Sanford-Springvale area; and

"Whereas, a petition is being prepared on the national level for presidential presentation as an initial step toward curtailment of this hazard to the leather and vinyl footwear industries in Maine; and

"Whereas, seven New England shoe factories have already found it necessary to close in the past six months, due to the increasing percentage of imported leather; and

"Whereas, a strong possibility exists that two manufacturing industries located in the area of Sanford and Springvale will also close their operations in the near future depriving some 500 workers of their major source of income and employment; now, therefore, be it

"Resolved: That we, your Memorialists, recommend and urge the Secretary of Commerce and the Secretary of Labor and the Members of the United States Congress from the State of Maine to use every possible means to promptly curtail the importation of foreign footwear and to provide adequate safeguards to our domestic industry and its work force; and be it further

"Resolved: That copies of this resolution, duly authenticated by the Secretary of State, be immediately transmitted by the Secretary of State to the Secretary of Commerce, the Secretary of Labor, and each Senator and Representative from Maine in the Congress of the United States."

HOUSE BILL PLACED ON CALENDAR

The bill (H.R. 265) to amend section 502 of the Merchant Marine Act, 1936, relating to construction-differential subsidies, was read twice by its title and ordered to be placed on the calendar.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. HANSEN, from the Committee on Interior and Insular Affairs, without amendment:

S. 38. A bill to consent to the upper Niobrara River compact between the States of Wyoming and Nebraska (Rept. No. 91-265).

By Mr. EASTLAND, from the Committee on the Judiciary, with an amendment:

H.R. 4297. An act to amend the act of November 8, 1966 (Rept. No. 91-266).

By Mr. MAGNUSON, from the Committee on Commerce, without amendment:

S. 2341. A bill to amend section 502 of the Merchant Marine Act, 1936, relating to construction-differential subsidies (Rept. No. 91-267).

SENATE JOINT RESOLUTION 126—REPORT OF A COMMITTEE ON ORIGINAL JOINT RESOLUTION RELATING TO INCREASE OF APPROPRIATION AUTHORIZATION FOR THE FOOD STAMP PROGRAM (S. REPT. NO. 91-264)

Mr. ELLENDER, from the Committee on Agriculture and Forestry, reported an original joint resolution (S.J. Res. 126) to increase the appropriation authorization for the food stamp program for fiscal 1970 to $750 million, and submitted a report thereon, which report was ordered to be printed, and the joint resolution was placed on the calendar.

BILLS AND A JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced or reported, read the first time and, by unanimous consent, the second time, and referred or placed on the calendar as follows:

By Mr. RANDOLPH:

S. 2461. A bill to amend the Randolph-Sheppard Act for the blind so as to make certain improvements therein and for other purposes; to the Committee on Labor and Public Welfare.

(The remarks of Mr. Randolph when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. DIRKSEN (for himself, Mr. PASTORE, Mr. COTTON and Mr. BROOKE):

S. 2462. A bill to amend the joint resolution establishing the American Revolution Bicentennial Commission; to the Committee on the Judiciary.

(The remarks of Mr. DIRKSEN when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. TALMADGE:

S. 2463. A bill for the relief of Rosemaria De Loach; to the Committee on the Judiciary.

By Mr. ELLENDER:

S.J. Res. 126. A joint resolution to increase the appropriation authorization for the food stamp program for fiscal 1970 to $750 million; placed on the calendar.

(The remarks of Mr. ELLENDER when he reported the joint resolution appear earlier in the RECORD under the appropriate heading.)

S. 2462—INTRODUCTION OF A BILL ESTABLISHING THE AMERICAN REVOLUTION BICENTENNIAL COMMISSION

Mr. DIRKSEN. Mr. President, for myself and Senators BROOKE, COTTON, and PASTORE, I introduce for appropriate reference, a bill to extend the life of the American Revolution Bicentennial Commission for 1 year. The Commission by laws is required to report to the President and Congress by July 4 of this year and its appropriation authorization expires June 30 this year.

When the Commission was first created it was felt that sufficient time had been provided for it to complete its work: That of recommending suitable bicentennial observances.

However, it was more than 10 months before members of the Commission were appointed and funds were not provided for several additional months. In fact, the Commission has been staffed and

operating for only 7 months. I am assured by the members of the Commission that they can complete their work within 1 year. The budget request for this Commission has been reduced by some $40,000, but of course funds for the Commission are contingent upon the enactment of this legislation. I am confident that a 1-year extension will be sufficient.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 2462) to amend the joint resolution establishing the American Revolution Bicentennial Commission, introduced by Mr. DIRKSEN, for himself and other Senators, was received, read twice by its title, and referred to the Committee on the Judiciary.

ADDITIONAL COSPONSOR OF A BILL

S. 1653

Mr. BYRD of West Virginia. Mr. President, at the request of the Senator from Washington (Mr. MAGNUSON), I ask unanimous consent that, at its next printing, the name of the Senator from Kansas (Mr. PEARSON) be added as a cosponsor of the bill (S. 1653) to amend the Interstate Commerce Act, with respect to recovery of a reasonable attorney's fee in case of successful maintenance of an action for recovery of damages sustained in transportation of property.

The VICE PRESIDENT. Without objection, it is so ordered.

NOTICE CONCERNING NOMINATIONS BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nominations have been referred to and are now pending before the Committee on the Judiciary:

William E. Amos, of Maryland, to be a member of the board of parole for the term expiring September 30, 1974, vice Homer L. Benson;

Leigh B. Hanes, Jr., of Virginia, to be U.S. attorney for the western district of Virginia for the term of 4 years, vice Thomas B. Mason, resigned;

William F. Howland, Jr., of Virginia, to be a member of the board of parole for the term expiring September 30, 1972 (Reappointment);

Joseph O. Rogers, Jr., of South Carolina, to be U.S. attorney for the district of South Carolina for the term of 4 years, vice Klyde Robinson;

Charles R. Wilcox, of Wyoming, to be U.S. marshal for the district of Wyoming for the term of 4 years, vice John Terrill, retired.

James E. Williams, of South Carolina, to be U.S. marshal for the district of South Carolina for the term of 4 years, vice Walter N. Lawson, Jr.

Charles S. White-Spunner, Jr., of Alabama, to be U.S. attorney for the southern district of Alabama for the term of 4 years, vice Vernol R. Jansen, Jr.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Friday, June 27, 1969, any representations or objections they may wish to present concerning the above nomination, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

NOTICE OF HEARINGS

Mr. ERVIN. Mr. President, the Subcommittee on Constitutional Rights will conduct hearings on Tuesday, Wednesday, and Thursday of next week to consider proposed amendments to the Criminal Justice Act of 1964. That act is the Federal statute providing for the appointment and compensation of attorneys to represent persons accused of Federal crimes who cannot afford to retain adequate counsel and investigative services.

The Senator from Nebraska (Mr. HRUSKA) and I have cosponsored a bill (S. 1461) which would amend the act to increase the compensation for attorneys appointed to represent indigents and expand the types of cases and proceedings for which appointed counsel could be paid. The bill would also authorize the establishment of full-time Federal public defenders in certain high volume districts which have had some difficulty in providing adequate representation by appointments from the private bar or from privately supported legal aid agencies under the present act. Members of this body will recall that the version of the Criminal Justice Act passed by the Senate in 1963 provided for such public defender offices. That provision was deleted from the bill by the House of Representatives and the final legislation did not include it. Senator HRUSKA and I believe, however, that experience under the act has indicated the need for amendment of the act to authorize high volume districts to establish full-time defender offices. Our amendments would assure the continuing involvement of the private bar by providing that a substantial number of indigent defendants in such districts would have to be represented by counsel appointed from the private bar.

Among those who will appear at the subcommittee hearings are: Judge Harvey M. Johnsen, senior judge of the Eighth Circuit Court of Appeals, who chaired a U.S. Judicial Conference Committee established to assist in the implementation of the act; Prof. Dallin Oaks, of the University of Chicago Law School, who directed an extensive study of the act last year for the Judicial Conference Committee, other Federal court judges with broad experience under the act, and a representative of the Department of Justice. A complete list of witnesses scheduled to testify is attached:

WITNESS LIST FOR HEARINGS ON S. 1461, AMENDMENTS TO THE CRIMINAL JUSTICE ACT OF 1964, SENATE SUBCOMMITTEE ON CONSTITUTIONAL RIGHTS, JUNE 24, 25, AND 26, 1969, ROOM 2228, NEW SENATE OFFICE BUILDING

TUESDAY, JUNE 24, 1969, 10:30 A.M.

Honorable Harvey M. Johnsen, Senior Circuit Judge, U.S. Court of Appeals for the 8th Circuit, Omaha, Nebraska. Accompanied by: William E. Foley, Deputy Director, Administrative Office of the United States Courts.

Donald E. Santarelli, Associate Deputy Attorney General for Administration of Criminal Justice, Department of Justice.

Professor Dallin Oaks, The Law School, University of Chicago.

Mrs. Barbara Allen Bowman, Director, Legal Aid Agency for the District of Columbia. Accompanied by: Samuel Dash, Chairman, Board of Trustees, Legal Aid Agency for the District of Columbia.

Terence F. MacCarthy, Executive Director, Federal Defender Program Inc., Chicago, Ill.

WEDNESDAY, JUNE 25, 1969, 10:30 A.M.

Honorable James M. Carter, Judge, U.S. Court of Appeals for the 9th Circuit, San Diego, California.

Honorable Walter E. Craig, Judge, U.S. District Court, Phoenix, Arizona.

Maynard J. Toll, President, National Legal Aid and Defender Association, Los Angeles, California. Accompanied by: Robert J. Kutak, appearing on behalf of William F. Gossett, President, American Bar Association.

Tom Karas, Federal Defender, Federal Criminal Defense, Phoenix, Arizona.

James F. Hewitt, Attorney in Charge, Federal Criminal Defense Office, San Francisco, California.

Harry D. Steward, Executive Director, Defenders Inc., San Diego, California.

THURSDAY, JUNE 26, 1969, 10:30 A.M.

Daniel J. Freed, Former Director, Office of the Criminal Justice, Department of Justice.

Honorable William H. Hastie, Chief Judge, U.S. Court of Appeals for the 3rd Circuit, Philadelphia, Pa.

Charles L. Decker, Director, National Defender Project, Washington, D.C.

Lawrence Speiser, Director, Washington Office, American Civil Liberties Union.

CALL OF THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate turn to the consideration of the calendar, beginning with Calendar No. 228, and that the rest of the calendar be considered in sequence.

The VICE PRESIDENT. Is there objection? Without objection, it is so ordered.

The clerk will state the first bill by title.

RAYMOND C. MELVIN

The bill (S. 632) for the relief of Raymond C. Melvin was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of clause (1) of section 2733 of title 10, United States Code, and any regulations promulgated pursuant to such clause, the Secretary of the Army is authorized to receive, consider, settle, and pay any claim filed under such section within six months after the date of enactment of this Act by Raymond C. Melvin, of Burlington, Vermont, for permanent physical injury suffered by him as a result of the accidental explosion of a blasting cap allegedly left by United States Army personnel in an area near a military housing development where children were known to play and which was found by said Raymond C. Melvin on July 4, 1964, while playing in such area.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–238), explaining the purposes of the bill.

There being no objection, the excerpt was ordrered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the bill is to waive the applicable statute of limitations to permit the filing under the Military Claims Act a claim for Raymond C. Melvin, of Burlington, Vt., for permanent physical injury suffered by

him as the result of the accidental explosion of a blasting cap.

STATEMENT

A bill for this claimant was introduced in the 90th Congress to provide for the payment of $10,000 to the claimant. In its report on that bill the Department of the Army stated that it would have no objection to the enactment of the legislation if the bill were amended to provide for the filing of the claim under the Military Claims Act.

The facts of the case as set forth by the Department of the Army are as follows:

"Official records of the Department of the Army show that Raymond C. Melvin was residing with his father, Sfc. Donald D. Melvin, at Fort Lewis, Wash., on July 6, 1964. He was then 13 years of age and often played in a wooded area adjacent to his family's assigned quarters. Although posted signs stated that entry into the wooded area was prohibited because the area was the location of a small-arms firing range, it was common knowledge on the post that children frequently disregarded the warning. On July 6, 1964, Raymond found a blasting cap in the area. As he picked it up, the cap exploded and his left hand was severly injured. He was admitted to Madigan General Hospital at Fort Lewis for treatment. Several days later his hand swelled markedly, the skin sloughed over the back of his hand, infection set in, and the extensor tendons to the long and ring fingers were exposed and lost. Raymond had two skin grafts to the back of his hand at Madigan General Hospital in July 1964, and had further grafts at Walter Reed General Hospital in October 1964, July 1965, and September 1965. In April 1966, he had reconstructive surgery of the tendons and joints. Doctors for the claimant now feel that an optimum of 60 percent use of the hand may be returned with further surgery involving tendon grafting. Raymond's total hospitalization has been in excess of 4 months and because of his injury his school's principal reports that he has lost about 2 full years of formal schooling.

"At the time of the accident, Sergeant Melvin reported the accident to the safety officer at Madigan General Hospital but did not file a claim or seek claims information within 2 years of the inquiry. This Department has no knowledge of why Sergeant Melvin failed to initiate claims action.

"The accident was reported to the Fort Lewis safety office but a detailed report of a safety or claims investigation has not been found. In a statement dated June 17, 1967, however, the former safety noncommissioned officer at Madigan General Hospital reports that he searched the area where Raymond found the device and found no other explosive devices. Other evidence, primarily hearsay, indicates that explosives were often found in the general area.

"A claim for the damages suffered by Raymond would have been cognizable under the Military Claims Act (10 U.S.C. 2733) had it been filed with the Department of the Army, within 2 years of the date of the injury. As a claim was not filed within the statutory period, recovery is now barred by the statute of limitations (10 U.S.C. 2733). Available evidence indicates that the Government is probably liable under the Military Claims Act and evidence is available to determine the amount of damages, if settlement under the act is authorized.

"In view of the circumstances set out above, the Department of the Army is opposed to the enactment of S. 1254. Payment of the lump-sum award proposed in this bill would clearly constitute discriminatory and preferential treatment over that accorded other claimants similarly situated, particularly those who, after filing timely claims under the Military Claims Act, have had such claims settled pursuant to the uniformly applicable standards for measuring damages which have been prescribed under that act.

"If, however, the Congress should find extenuating circumstances relating to Sergeant Melvin's failure to file a timely claim under the Military Claims Act, this Department would have no objection to the enactment of legislation for the limited purpose of waiving the applicable statute of limitations and authorizing the filing of a claim under that act within 6 months of the date of enactment.

"The cost of the bill, if amended as suggested and enacted, cannot be determined at this time."

The committee believes that the bill as introduced in this Congress to authorize the filing of the claim under the Military Claims Act is meritorious and recommends it favorably.

BILL PASSED OVER

The bill (S. 1932), for the relief of Arthur Rike, was announced as next in order.

Mr. MANSFIELD. Over, Mr. President.

The VICE PRESIDENT. The bill will be passed over.

CREATION OF A COMMISSION TO STUDY THE BANKRUPTCY LAWS OF THE UNITED STATES

The joint resolution (S.J. Res. 88) to create a Commission To Study the Bankruptcy Laws of the United States was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S.J. RES. 88

Whereas the number of bankruptcies in the United States has increased more than 1,000 per centum annually in the last twenty years; and

Whereas more than one-fourth of the referees in bankruptcy have problems arising in their administration of the existing Bankruptcy Act and have made suggestions for substantial improvement in that Act; and

Whereas the technical aspects of the Bankruptcy Act are interwoven with the rapid expansion of credit which has reached proportions far beyond anything previously experienced by the citizens of the United States; and

Whereas there appears to be little experience or understanding by the Federal Government and the commercial community of the Nation in evaluating the need to update the technical aspects of the Bankruptcy Act and the financial policies pursued by the Federal Government and the commercial community: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) there is hereby established a commission to be known as the Commission on the Bankruptcy Laws of the United States (hereinafter referred to as the "Commission").

(b) The Commission shall study, analyze, evaluate, and recommend changes to the Act entitled "An Act to establish a uniform system of bankruptcy throughout the United States", approved July 1, 1898 (30 Stat. 544), as amended (title 11, United States Code), in order for such Act to reflect and adequately meet the demands of present technical, financial, and commercial activities. The Commission's study, analysis, and evaluation shall include a consideration of the basic philosophy of bankruptcy, the causes of bankruptcy, the possible alternatives to the present system of bankruptcy administration, and all other matters which the Commission shall deem relevant.

(c) The Commission shall submit a comprehensive report of its activities, including its recommendations, to the President and the Congress within two years after the date of enactment of the joint resolution. Upon the filing of such report, the Commission shall cease to exist.

SEC. 2. (a) The Commission shall be composed of the following members appointed as follows:

(1) three members appointed by the President of the United States, one of whom shall be designated as Chairman by the President and two of whom shall be active practitioners in the field of bankruptcy law;

(2) two appointed by the President of the Senate;

(3) two appointed by the Speaker of the House of Representatives; and

(4) two active full-time referees in bankruptcy appointed by the Chief Justice of the United States. (b) Five members of the Commission shall constitute a quorum.

(c) A vacancy in the Commission shall not affect its powers. Any vacancy shall be filled in the manner in which the original appointment was made.

(d) Referees in bankruptcy and any other employees of the Federal Government who are members of the Commission shall serve without additional compensation. Each member from private life shall receive $100 per diem for each day (including traveltime) during which he is engaged in the actual performance of his duties as a member of the Commission. All members of the Commission shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of their duties.

SEC. 3. The Commission shall have the power to appoint and fix the compensation of such personnel as may be necessary to carry out the provisions of this joint resolution. Such appointments shall be without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and such compensation shall be paid without regard to the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates.

SEC. 4. To carry out the purposes of this joint resolution, the Commission shall have the authority, within the limits of available appropriations—

(1) to obtain any research or other assistance it deems necessary;

(2) to prescribe such rules and regulations as it deems necessary governing the manner of its operations and its organization and personnel;

(3) to enter into contracts or other arrangements, or modifications thereof, and such contracts or other arrangements or modifications thereof may be entered into without legal consideration, without performance or other bonds, and without regard to section 3709 of the Revised Statutes, as amended (41 U.S.C. 5);

(4) to make advance, progress, and other payments which it deems necessary without regard to the provisions of section 3648 of the Revised Statutes, as amended (31 U.S.C. 529);

(5) to accept and utilize the services of voluntary and uncompensated personnel and reimburse them for travel expenses, including per diem, as authorized by section 5703 of title 5, United States Code; and

(6) to acquire by lease, loan, gift, bequest, or devise, and to hold and dispose of by sale, lease, or loan, real or personal property of all kinds necessary for or resulting from the exercise of authority under this joint resolution.

SEC. 5. Any office, department, agency, or instrumentality of the executive or judicial branches of the United States Government shall furnish to the Commission, upon a reimbursable basis, such advice, information,

and records as the Commission may require for the performance of its duties.

SEC. 6. There are authorized to be appropriated to the Commission such sums as may be necessary to carry out the provisions of this joint resolution.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–240), explaining the purposes of the joint resolution.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the joint resolution is to create a commission to study the bankruptcy laws of the United States.

STATEMENT

A similar resolution in the 90th Congress, S.J. Res. 100, was the subject of a subcommittee hearing, was approved by the full committee, and was passed by the Senate, but no action was taken in the closing days of the session in the House of Representatives.

In its favorable report on the similar resolution in the 90th Congress, this committee said:

"The Commission's work should result in recommendations the Bankruptcy Laws of the United States which will have as its objective a wide range study and analysis of the bankruptcy situation as it exists in America today.

"The Commission's work should result in recommendations for changes in the National Bankruptcy Act in order to make this act reflect current conditions and meet the needs of our present society. During the course of the hearings, testimony was heard from outstanding referees in bankruptcy and representatives of the Judicial Conference of the United States, the Executive Office of the President, the National Association of Credit Management, the National Conference of Referees in Bankruptcy, the Association of the Bar of the City of New York, and the National Bankruptcy Conference. In addition, a statement was received from the American Bankers Association. Interest in the hearings was expressed by the American Bar Association which was represented by a staff member who attended the hearings in behalf of his association and the Brookings Institution which was represented by a member of its staff. All the witnesses expressed strong approval of the proposed Commission. The recurring theme was that the current Bankruptcy Act deals with conditions of a bygone era; it must be updated.

"The present Bankruptcy Act was enacted in 1898. It is interesting to note that the first major revision of this act was not made until 40 years later with the passage of the Chandler Act in 1938. The primary purpose of the Chandler Act was to revise the bankruptcy law to meet modern business and economic problems and to take into account far-reaching social and economic changes which had occurred in the span of 40 years, and to correct defects and inadequacies in the Bankruptcy Act.

"Since the enactment of the Chandler Act in 1938, there has been only one important revision of the act, which was passed in 1946. The 1946 amendment abolished the old fee system of compensating referees in bankruptcy and placed them on annual salaries. The 1946 act also established a self-supporting system under which the salaries and office expenses of referees in bankruptcy are paid out of a special fund in the Treasury. This fund is maintained by the deposit of filing fees and certain charges collected from the assets of bankrupt estates.

"In the 30 years since the last major revision of the Bankruptcy Act, there have probably been even greater changes in the social and economic conditions of the country than in the 40 years prior to the enactment of that act. The population of the country has grown in the last 30 years from approximately 130 million to 200 million. Installment credit has increased in the same period from approximately $4 billion to $80 billion today.

"It is generally agreed that the present Bankruptcy Act can and should be improved to make it a better instrument for debtor relief and rehabilitation in the courts.

"The number of bankruptcies has reached an annual rate of more than 200,000. Just a few years ago, in 1957, there were 74,000 cases of bankruptcy. The rate of business bankruptcies has remained quite stable. The increase is in personal bankruptcies, which represent over 90 percent of the total yearly bankruptcies. Although we cannot say we have reached a crisis, the rapidly increasing rate of bankruptcies shows that we are on the road to a crisis in this area. The time to act is now while we can evaluate the problem in a calm environment.

"The subcommittee is aware of the Brookings Institution study on bankruptcy, as are all the experts in the field of bankruptcy. The consensus is that this study will be useful to the Commission. The Commission will not duplicate the work of the Brookings Institution because the Commission's task will be much wider in scope than the Brookings Institution study as we understand it. The thought was expressed several times during the hearings that since the Brookings Institution study will be available within a few months, it is now the propitious time to create this Commission so that the Brookings Institution study can be immediately utilized to provide a base from which the Commission can begin to build its record.

"Under section 2075, title 28, of the United States Code Annotated, the U.S. Supreme Court is authorized to prescribe by general rules the forms of process, writs, pleadings and motions, and the practice and procedure under the Bankruptcy Act. Pursuant to this authorization, the Advisory Committee on Bankruptcy Rules of the Judicial Conference of the United States will, in the next several months, complete the drafting of a set of rules of practice and procedure in the bankruptcy courts. In the process of drafting these procedural rules, many procedural sections of the Bankruptcy Act will be incorporated in the rules, leaving intact only substantive provisions of the act. The Commission contemplated by Senate Joint Resolution 100 will therefore, have the benefit of the work of the Rules Committee with respect to practice and procedure and be able to concentrate on the remaining substantive provisions which, in its judgment, need to be changed to meet modern economic and social conditions."

Senate Joint Resolution 100 of the 90th Congress provided for a 10-member Commission, all appointed by the President; there were to be two members of the Senate, two members of the House of Representatives, three referees in bankruptcy, and three businessmen "knowledgeable in the field of bankruptcy." The Commission proposed in Senate Joint Resolution 88 consists of nine members, three, including the Chairman, appointed by the President, two by the President of the Senate, two by the Speaker of the House, and two "active full-time referees in bankruptcy" appointed by the Chief Justice of the United States.

The greater flexibility of the membership provision of Senate Joint Resolution 88 will permit the appointment of a broader range of highly qualified individuals who may bring to the Commission widely diverse viewpoints. It is reasonable to expect that the business community would be represented in such a Commission. Also, because of its substantial role in the administration of the present Bankruptcy Act, the Securities and Exchange Commission should have a hand in the work of the Commission.

The committee believes that the joint resolution is meritorious and recommends it favorably.

BILL PASSED OVER

The bill (S. 2416) to authorize appropriations to the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes, was announced as next in order.

Mr. MANSFIELD. Over, Mr. President.

The VICE PRESIDENT. The bill will be passed over.

SUSPENSION OF DEPORTATION OF CERTAIN ALIENS

The concurrent resolution (S. Con. Res. 33) favoring the suspension of deportation of certain aliens was considered and agreed to, as follows:

S. CON. RES. 33

Resolved by the Senate (the House of Representatives concurring), That the Congress favors the suspension of deportation in the case of each alien hereinafter named, in which case the Attorney General has suspended deportation pursuant to the provisions of section 244(a)(2) of the Immigration and Nationality Act, as amended (66 Stat. 204; 8 U.S.C. 1251):

A–13388850, Berger, Harry.
A–14605579, Ma, Yiu Kay.
A–11598081, Pung, Wone.

A–12649506, Wong, Kim Taw.
A–14585059, Chin, Goon You.
A–5433208, Papuzynski, Walter John.
A–1050706, Tahir, Ahmed.
A–17878251, Rodriguez, Jose Roman.
A–5665371, Soares, Jacintho Perreira.
A–17185939, Wong, Harry.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–245), explaining the purposes of the resolution.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE CONCURRENT RESOLUTION

The purpose of the concurrent resolution is to record congressional approval of suspension of deportation in certain cases in which the Attorney General has suspended deportation pursuant to section 244(a)(2) of the Immigration and Nationality Act, as amended. Under the prescribed procedure, affirmative approval by both the Senate and the House of Representatives is required before the status of the aliens may be adjusted to that of aliens lawfully admitted for permanent residence.

STATEMENT OF FACTS

The concurrent resolution relates to certain cases in which the Attorney General has suspended deportation under the provisions of section 244(a)(2) of the Immigration and Nationality Act, as amended. These cases are submitted to the Congress under the provisions of that section subsequent to its amendment by section 4 of Public Law 87–885. The aliens are deportable as former sub-

versives, criminals, immoral persons, violators of the narcotic laws, or violators of the alien registration laws. The discretionary relief may be granted to an alien within these categories upon a showing (1) of 10 years' continuous physical presence in the United States following the commission of an act or the assumption of a status constituting a ground for deportation; (2) that he has not been served with a final order of deportation up to the time of his application for suspension of deportation; (3) that he has been a person of good moral character during the required period of physical presence; and (4) that his deportation would result in exceptional and extremely unusual hardship to himself or to his spouse, parent, or child, who is a citizen or an alien lawfully admitted for permanent residence.

Included in the concurrent resolution are 23 cases which were referred to the Congress between February 1, 1968, and October 1, 1968. One case referred during that period was withdrawn by the Attorney General, and one case was not approved. In each case included in the concurrent resolution, a careful check has been made to determine whether or not the alien (*a*) has met the requirements of the law; (*b*) is of good moral character; and (*c*) warrants the granting of suspension of deportation.

The committee, after consideration of all the facts in each case referred to in the concurrent resolution, is of the opinion that the concurrent resolution (S. Con. Res. 33) should be agreed to.

DR. JOAQUIN JUAN VALENTIN FERNANDEZ

The bill (S. 152) for the relief of Dr. Joaquin Juan Valentin Fernandez was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 152

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Doctor Joaquin Juan Valentin Fernandez shall be held and considered to have been lawfully admitted to the United States for permanent residence as of August 15, 1956, and the periods of time he has resided in the United States since that date shall be held and considered to meet the residence and physical presence requirements of section 316 of such Act.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–246), explaining the purpose of this bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to enable the beneficiary to file a petition for naturalization.

VERNON LOUIS HOBERG

The bill (S. 1087) for the relief of Vernon Louis Hoberg was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 1087

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212(a)(4) of the Immigration and Nationality Act, Vernon Louis Hoberg may be issued a visa and be admitted to the United States for permanent residence if he is found to be otherwise admissible under the provision of that Act; *Provided,* That if the said Vernon Louis Hoberg is not entitled to medical care under the Dependents' Medical Care Act (70 Stat. 250), a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the Immigration and Nationality Act: *Provided further,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–247), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to waive the excluding provision of existing law relating to one who has a mental defect in behalf of Vernon Louis Hoberg. The bill provides for the posting of a bond as a guarantee that the beneficiary will not become a public charge if he is not eligible for medical care under the Dependents' Medical Care Act.

LILLIAN BIAZZO

The bill (S. 1704) for the relief of Lillian Biazzo was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 1704

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Lillian Biazzo shall be deemed to be a returning resident alien within the meaning of section 101(a)(27)(B) of that Act.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–248), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to provide for the readmission to the United States for permanent residence of a former resident of the United States.

CHONG PIL LEE

The Senate proceeded to consider the bill (S. 690) for the relief of Chong Pil Lee, which had been reported from the Committee on the Judiciary, with an amendment, on page 1, line 6, after the word "of" where it appears the second time, to strike out "April 1955, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota control officer to deduct one number from the appropriate quota for the first year that such quota is available," and insert "May 26, 1963, and the periods of time he has resided in the United States since that date shall be held and considered to meet the residence and physical presence requirements of section 316 of such Act."; so as to make the bill read:

S. 690

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Chong Pil Lee shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of May 26, 1963, and the periods of time he has resided in the United States since that date shall be held and considered to meet the residence and physical presence requirements of section 316 of such Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–249), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill, as amended, is to enable the beneficiary to file a petition for naturalization. The bill has been amended in accordance with established precedents.

CHONG SUK STROISCH

The Senate proceeded to consider the bill (S. 1128) for the relief of Chong Suk Stroisch, which had been reported from the Committee on the Judiciary, with an amendment, to strike out all after the enacting clause and insert:

That, in the administration of the Immigration and Nationality Act, Mrs. Chong Suk Stroisch, the widow of Sergeant Lloyd Edward Stroisch, a citizen of the United States, shall be held and considered to be within the purview of section 201(b) of that Act and the provisions of section 204 of the said Act shall not be applicable in this case.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

The title was amended, so as to read "A bill for the relief of Mrs. Chong Suk Stroisch."

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–250), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill, as amended, is to grant the status of an immediate relative to Mrs. Chong Suk Stroisch which is the status she would be entitled to were it not for the death of her husband, a citizen of the United States. The bill has been amended in accordance with established precedents.

AUGUSTO G. USATEGUI

The Senate proceeded to consider the bill (S. 1677) for the relief of Augusto G. Usategui, doctor of medicine, which had been reported from the Committee on the Judiciary, with an amendment, in line 4, after the word "Act," to strike out "Augusto G. Usategui, doctor of medicine," and insert "Doctor Augusto G. Usategui,"; so as to make the bill read:

S. 1677

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Doctor Augusto G. Usategui, shall be held and considered to have been lawfully admitted to the United States for permanent residence as of November 2, 1960.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

The title was amended, so as to read: "A bill for the relief of Dr. Augusto G. Usategui."

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–251), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill, as amended, is to enable the beneficiary to file a petition for naturalization. The amendments are technical in nature.

COSMINA RUGGIERO

The bill (H.R. 1437) for the relief of Cosmina Ruggiero was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–252), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to facilitate the admission into the United States in an immediate status of the adopted child of a citizen of the United States.

MRS. MARJORIE J. HOTTENROTH

The bill (H.R. 1939) for the relief of Mrs. Marjorie J. Hottenroth was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–253), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to preserve immediate relative status in behalf of the widow of a U.S. citizen.

MARIO SANTOS GOMES

The bill (H.R. 1960) for the relief of Mario Santos Gomes was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD, an excerpt from the report (No. 254), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill would provide for compliance with the residence and physical presence requirements of section 316 of the Immigration and Nationality Act by Mario Santos Gomes.

LOURDES M. ARRANT

The bill (H.R. 2005) for the relief of Lourdes M. Arrant was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–255), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to facilitate the entry into the United States in an immediate relative status of the adopted child of citizens of the United States.

GEORGE TILSON WEED

The bill (H.R. 5136) for the relief of George Tilson Weed was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–256), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to enable George Tilson Weed to file a petition for naturalization.

CONFERRING OF U.S. CITIZENSHIP POSTHUMOUSLY UPON SP4C. KLAUS JOSEF STRAUSS

The bill (H.R. 6607) to confer U.S. citizenship posthumously upon Sp4c. Klaus Josef Strauss was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–257), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to confer posthumous U.S. citizenship on Sp4c. Klaus Josef Strauss.

ROMEO DA LA TORRE SANANO AND HIS SISTER, JULIETA DE LA TORRE SANANO

The bill (H.R. 1632) for the relief of Romeo da la Torre Sanano and his sister, Julieta de la Torre Sanano, was considered, ordered to a third reading, read the third time, and passed.

The title was amended, so as to read: "An act for the relief of Romeo de la Torre Sanano and his sister, Julieta de la Torre Sanano."

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–258), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill, as amended, is to facilitate the entry into the United States in an immediate relative status of two children coming to the United States for adoption by citizens of the United States. The bill has been amended to correct a spelling error in the title of the bill.

ADELA KACZMARSKI

The Senate proceeded to consider the bill (H.R. 2336) for the relief of Adela Kaczmarski, which had been reported from the Committee on the Judiciary, with an amendment, in line 4, after the name "Adela" to strike out "Durda" and insert "Kaczmarski."

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–259), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill, as amended, is to grant to the adopted daughter of citizens of the United States the status of a first preference immigrant, which is the status normally enjoyed by the natural-born alien sons and daughters of U.S. citizens. The bill has been amended to reflect the beneficiary's name by adoption in the body of the bill.

Mr. MANSFIELD. Mr. President, that concludes the call of the calendar.

FLORISSANT FOSSIL BEDS NATIONAL MONUMENT

Mr. ALLOTT. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 253.

The VICE PRESIDENT. The bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 912) to provide for the establishment of the Florissant Fossil Beds National Monument in the State of Colorado.

The VICE PRESIDENT. Is there objection to the request of the Senator from Colorado?

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on Interior and Insular Affairs with amendments on page 1, line 8, after the word "donation," insert "condemnation"; and on page 3, line 1, after the word "than," strike out "$3,200,000" and insert "$3,727,000"; so as to make the bill read:

S. 912

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in order to provide for the protection, controlled collection, and scientific interpretation of the

unique insect and leaf fossils and related objects of scientific value which have been preserved in the ancient Florissant lakebeds in Teller County, Colorado, the Secretary of the Interior may acquire by donation, *condemnation*, purchase with donated or appropriated funds, or exchange such land and interests in land in Teller County, Colorado, as he may designate from the lands shown on the map entitled "proposed Florissant Fossil Beds National Monument", numbered NM–FFB–7100, and dated March 1967, and more particularly described by metes and bounds in an attachment to that map, not exceeding, however, six thousand acres thereof, for the purpose of establishing the Florissant Fossil Beds National Monument.

In exercising his authority to acquire property by exchange, the Secretary may accept title to any non-Federal property within the area designated, and in exchange therefor he may convey to the grantor of such property any federally owned property under his jurisdiction in the State of Colorado which he classifies as suitable for exchange or other disposal. The values of the properties so exchanged either shall be approximately equal to values shall be equalized by the payment of cash to the grantor or to the Secretary as the circumstances require.

SEC. 2. The Secretary of the Interior shall administer the property acquired pursuant to section 1 of this Act as the Florissant Fossil Beds National Monument in accordance with the Act entitled "An Act to establish a National Park Service, and for other purposes," approved August 25, 1916 (39 Stat. 535; 16 U.S.C. 1 et seq.), as amended and supplemented.

SEC. 3. There are authorized to be appropriated such sums, but not more than $3,727,000, as may be necessary for the acquisition of lands and interests in land for the Florissant Fossil Beds National Monument and for necessary development expenses in connection therewith.

Mr. ALLOTT. Mr. President, S. 912 is a bill to authorize the establishment of the Florissant Fossile Beds National Monument in the State of Colorado.

The Florissant Fossil Beds are located approximately 35 miles west of Colorado Springs in Teller County, Colo. The 6,000-acre monument area covers part of the ancient lakebed of Florissant Lake. These fossil beds are of significant scientific value and should be preserved for future exploration and interpretation.

Field hearings were conducted at Colorado Springs on May 29, 1969, at which time 24 witnesses were heard. I believe that it is significant that not one word of opposition was heard at those hearings, and well over a hundred petitions, letters, and other communications have been received subsequent to the hearings and none have opposed the establishment of the national monument.

The ancient lakebeds of Florissant preserve more species of terrestrial fossils than any other known site in the world. The insect fossils are of primary significance and approximately 60,000 specimens have been collected. They represent the evolution and modernization of insects better than any other known site in America. In addition, fossil plants, emphasized dramatically by the petrified tree stumps and the great variety of leaf fossils, add greatly to the primary values. Fossils of spiders, other invertebrates, fish, and birds have also been found in Florissant. Even fossils of tsetse flies have been found, indicating that the climate of the area was once tropical. There is no known locality in the world where so many terrestrial species of one time have been preserved. A total of 144 plant entities or species have been found there of which 30 are of uncertain affinity. The remaining 114 are identifiable with modern species. Almost all the fossil butterflies of the new world have been found at Florissant. Collections have been taken by the American Museum of Natural History, the British Museum, the Carnegie Institution of Washington, the Denver Museum of Natural History, the University of Colorado, Princeton University, and many others.

In likening Florissant to Pompeii, Italy, Dr. Betty Willard, who helped conduct the field inspection, made these observations at the Colorado Springs hearings:

At Florissant, Colorado, we have the same opportunity—except at Florissant we can be transported back in time 36 million years before the advent of man on this earth. The Florissant lake shales were formed in much the same way as the Pompeiian formation—by numerous violent, sudden eruptions of a nearby volcano that rained fine ash over the countryside. The ash fell into a large lake dammed up by earlier lava flows from the volcano. As it fell, it sieved from the air and water animals and plants that were living, breathing, eating in the region of Colorado 34 to 38 million years ago. The gentleness of this ash fall, broken by the water of the lake, captured intact and held far from the ravages of pressure and decay, all the forms of life extant at Florissant in the Oligocene—exactly as life was preserved intact at Pompeii.

There is urgency, however, in taking action to preserve this paleontological treasure trove. The bulldozers are almost poised on the boundaries of the proposed monument. Mountain home type commercial developments have come right up to the north boundary and are on the south boundary of the monument site. Recent information indicates that a contract of sale has been entered into covering 1,800 acres of land included within the proposed monument and lying generally along the eastern boundary. This accounts for nearly one-third of the monument area. The proposed use of this land is subdivision and development. In view of the imminence of this planned incompatible development, it is essential that the Senate and the House of Representatives move as quickly as possible to enact S. 912, in order to give the Secretary of Interior the appropriate tools with which to take action to preserve this important scientific deposit.

The committee considered and adopted two amendments. The first amendment inserts the word "condemnation" between the words "donation" and "purchase" on line 8 of page 1 of the bill. The purpose of this amendment is to make it unmistakably clear to all concerned that the power of condemnation is granted to the Park Service and can be employed swiftly, in the event it should become necessary to preserve the integrity of the monument.

The second amendment increased the authorization from $3,200,000 to $3,727,000. This was necessary in order that the authorization reflect the most current Park Service estimates relative to cost.

Mr. President, I would be remiss if I did not express my appreciation to at least some of the people who have worked so hard to bring this measure to its present point in the legislative process.

To our distinguished chairman of the Parks and Recreation Subcommittee of the Senate Committee on Interior and Insular Affairs (Mr. BIBLE) I wish to express my sincere appreciation for scheduling and holding these hearings at such an early date. Without his assistance and support, this bill could not be before the Senate today.

To Dr. Beatrice Willard and to Dr. Estella Leopold who have been the real sparkplugs behind this effort, I wish to express my thanks. However, their real reward will come from the knowledge that they have preserved for the Nation this scientific treasure trove.

To the chairman of the full committee (Mr. JACKSON) and to all of the members of the committee, I wish to express my thanks for acting upon this measure expeditiously and unanimously.

Mr. President, there are two typographical errors in the printed committee report that should be mentioned in order to perfect the legislative history. While neither of them are of a substantive nature, I wish to have the corrections noted as a matter of record.

On page 2 of Senate Report No. 91–263, at the end of the first line in the paragraph entitled "Geologic Resource," the word "terrestrial" should be substituted for printed word "terestial."

On page 3 of the report, near the bottom of the page, the heading "Commercial Encourgement" appears. This should read "Commercial Encroachment."

Mr. President, there are two recent articles in periodicals that I believe should be made a part of the legislative history on his legislation. They help to shed light upon the scientific significance of the fossil beds and also explain the present posture of the monument area. The first is an article in the Mines magazine for May, 1969, written by Dr. Rudy C. Epis, entitled "Proposed Florissant Fossil Beds National Monument." The second is an article from the June 6, 1969, issue of Science magazine entitled "Fossil Beds Are Endangered," and written by Philip M. Boffey. Mr. President, I ask unanimous consent that both of these articles appear in the RECORD at this point.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Mines magazine, May 1969]

PROPOSED FLORISSANT FOSSIL BEDS NATIONAL MONUMENT

(By Dr. Rudy C. Epis)

On Feb. 4. 1969, Colorado Senators Allott and Dominick introduced before the U.S. Senate, Bill S. 912, entitled, "A Bill to Provide for the Establishment of the Florissant Fossil Beds National Monument in the State of Colorado." The bill * * * is based largely on a study conducted by the National Park Service of the Department of the Interior. This study was published in May of 1967 and provides a master plan for the proposed monument, the purpose of which "* * * is to conserve a portion of the Florissant Fossil Beds and surrounding area for public use, study, and enjoyment; and to tell the story of the geological and fossil resources." The master plan considers such important items as land

acquisition, resource management, research programs, visitor use, and development. The illustrations used in this article are taken from the published report of the National Park Service.

The Florissant Lakebeds occupy a small, elongate basin situated 15 miles northwest of Pikes Peak in Teller County, Colorado. The basin is arcuate in plan and generally less than 1 mile in width. Its northwestern portion extends from Lake George to Florissant along the route of U.S. Highway 24. At Florissant, the basin bends somewhat sharply and continues southward 7 miles, paralleling Colorado State Highway 143 connecting Florissant with Cripple Creek. The total area of present outcrop of the beds is about 15 square miles. However, the proposed national monument would consist of no more than 6,000 acres lying immediately south of Florissant, as shown in Fig. 1.

It seems fitting that the Florissant Lakebeds be proposed as the site for a national monument. They contain a prolific assemblage of delicately and beautifully preserved fossil plants and insects the likes of which are unsurpassed anywhere in the world. In addition, excellent specimens of fossil fishes and birds are found within the beds. Perhaps no other deposits of such limited areal extent have received so much attention; during the past three-quarters of a century over 225 scientific articles have been written about the nature of these beds, especially their enclosed fossil forms. Public and private museums and famous geological collections the world over proudly display fossil materials gathered from the Florissant Lakebeds. The deposits were discovered by A. C. Peale in 1873 as part of his activities with the Hayden U.S. Geological and Geographical Survey. Among the many papers published about them, perhaps the most comprehensive and significant are those of W. Cross on the general geology, S. H. Scudder on the fossil insects, and H. D. MacGinitie on the fossil plants.

The Florissant deposits consist of a heterogeneous series of beds composed dominantly of intermediate volcanic detritus. They are less than 150 feet thick, and because of their general soft character are poorly exposed, except in road cuts and recent stream valleys and gullies. Major lithologic types include arkosic conglomerates; andesitic tuffs and mudflow breccias; thin-bedded tuffaceous shales, mudstones and sandstones; pumiceous tuffs; and volcanic conglomerates. The tuffaceous shales and mudstones, near the middle of the sequence, contain most of the delicately preserved fossil plant and insect remains; the andesitic tuffs and mudflows below them have preserved numerous petrified stumps and logs of giant Sequoia trees. Judging from the nature of the sediments and their enclosed flora and fauna, MacGinitie concluded that ancient Lake Florissant existed under climatic conditons similar to present-day climates of northeastern Mexico, northern Argentina east of the Andes, northeastern Australia, northeastern Africa, and northwestern India; that is, climatic conditions which were quite warm and humid, perhaps even sub-tropical, and considerably different from those existing in the region today.

Current studies by the writer, in cooperation with Prof. H. D. MacGinitie of the University of California at Berkeley and Dr. J. D. Obradovich of the U.S. Geological Survey in Denver, are underway to better define the geological age of the Florissant Lakebeds. Our preliminary results are based on K/Ar radiometric age determinations of volcanic rocks below, above, and within the deposits, as well as on correlations with dated stratigraphic units in the adjacent Thirty-nine Mile volcanic field. These results indicate that ancient Lake Florissant was in existence during the early and middle parts of the Oligocene epoch, about 34 to 38 million years ago; they agree well with previous age determinations of Gazin, based on a fossil marsupial, and of MacGinitie, based on the fossil flora. We intend to complete these studies in the near future in hopes of providing a better understanding of the sequence of geologic events involved in the formation of the Thirty-nine Mile volcanic field, the Florissant Lakebeds, and the nearby Cripple Creek volcano.

Following is a brief sketch of the geologic history of the Florissant Lakebeds as we now know it. During and after Laramide mountain building activity in late Cretaceous—early Paleocene time, the Front Range and adjacent areas to the west were subjected to considerable erosion, and near the end of the Eocene epoch the resulting terrain was one of moderately low relief underlain primarily by Precambrian crystalline rocks. Early in Oligocene time volcanic eruptions commenced in the Thirty-nine Mile volcanic field southwest of the Florissant area, and outflow material from these eruptions disrupted existing drainage regimes. Andesitic and basaltic lavas and mudflows spread laterally from local centers and such deposits created a barrier to a southerly drainage system now occupied by the Florissant Lakebeds. Ancient Lake Florissant formed behind this volcanic dam which is located about 7 miles south of Florissant. Continuing volcanic activity in the Thirty-nine Mile field contributed the abundant pyroclastic and volcaniclastic material which showered and poured into the lake, quickly entombing existing life forms. The intensity of volcanism increased and built a large composite volcano centered in the vicinity of Guffey about 18 miles southwest of Florissant. Lava flows and breccias along the northeastern flank of the Guffey volcano eventually reached the site of Lake Florissant; they are primarily responsible for preservations of the lakebeds as they finally engulfed the lake and buried its deposits beneath them. Erosion since Oligocene time has stripped away nearly all of this volcanic cover and exposed the lakebeds as we see them today.

[From Science magazine, June 6, 1969]

FAMOUS FOSSIL BEDS ARE ENDANGERED

Scientists fear that the Florissant fossil beds in central Colorado—considered one of the finest fossil concentrations in the world—may be destroyed in the near future by real estate development. Efforts are under way to preserve the fossil area as a national monument. But, on the eve of congressional hearings on the monument proposal, a Colorado real estate firm purchased roughly 30 percent of the land involved and revealed plans to subdivide the land for housing development. Almost all scientists familiar with the area agree that the construction of housing would destroy the fragile beds. "It will be an irreparable loss—just terrible," Harry D. MacGinitie, a paleobotanist who has worked in the area for more than 3 decades, told *Science*.

The fossil beds lie in a mountain valley, about 35 miles west of Colorado Springs, near the small community of Florissant. Some 34 to 38 million years ago, during the Oligocene period, an ancient lake covered much of the area. Volcanic eruptions apparently rained down clouds of dust and ash upon the lake and its forested shores, thus capturing and preserving thousands of insects, plants, and other forms of life with rare delicacy.

MacGinitie, who is an associate in the Museum of Paleontology at Berkeley, said the site is "known all over the world" as having "one of the finest concentrations of fossil plants, insects, and fishes all in one area." He said the insect fossils are "almost unrivaled" and that the plant specimens are "beautifully preserved." There are also unusual fossiles of *Sequoia* stumps, but only a few small mammals.

Estella Leopold, a paleobotanist with the University of Colorado, finds the area "unique in the enormous diversity of organisms present—everything from algae to higher plants." She also said there is an "incredible abundance" of fossils. "I worked an hour recently and got 40 really marvelous leaf specimens and two bugs," she said. "Usually you have to work hard to find one or two specimens an hour at even the best localities." According to the National Park Service, Florissant has yielded some 60,000 specimens of more than 1,000 different species of living things.

Three bills are currently pending in Congress that would designate 6,000 acres of the fossil bed area—which is known to exceed 12,000 acres—as a national monument. Similar legislation died in three previous congresses—largely because of apathy rather than outright opposition. But this year there seems to be more steam behind the proposal.

Colorado's two Republican senators—Gordon Allott and Peter H. Dominick—have cosponsored one of the bills. Allott, who is ranking Republican on the Senate Interior Committee which is handling the legislation, has expressed "a sense of urgency about the passage of this bill." Dominick has warned: "We must protect the area before it is too late." Last week the Interior Committee's parks and recreation subcommittee held hearings on the legislation in Colorado Springs.

Shortly before the field hearings began, however, Central Enterprise Realty Company of Colorado Springs purchased some 3000 acres in the Florissant vicinity from an out-of-state owner. Interested scientists say about 1800 of these acres lie within the boundaries of the proposed monument. K. C. Wofford, a partner in the firm, told *Science* his company plans to subdivide the land and sell it off "immediately" to people interested in putting up housing. Wofford said he had a "firm purchase contract" with the previous owner of the land and expected to close the deal "in a few days." He also said he is bargaining for more land in the area.

Meanwhile, Colorado conservation groups have asked the realtors to delay development until Congress has a chance to act. If negotiations fail, they plan to file suit. "We'll have to do something," one attorney said. "The bulldozers are ready to cut the road."

Mr. ALLOTT. Mr. President, I ask unanimous consent that the amendments be considered and agreed to en bloc.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. DOMINICK. Mr. President, I will be brief in my remarks in support of this bill. My distinguished senior colleague from Colorado, with whom I am honored to cosponsor this legislation, has fully stated the case for passage of this bill to authorize the Florissant Fossil Beds National Monument.

I participated in the hearings recently held in Colorado Springs. The support for this bill was overwhelming. Not a voice was raised in opposition. This support came from civic groups, local and State government, and the academic and private community. The distinguished senior Senator from Colorado has mentioned the efforts of Dr. Bettie Willard and Dr. Estella Leopold. I wish to underscore those remarks. Mention should be made also of the work and support of Mr. Joe E. Burns, chairman of the Teller County Board of County Commissioners and the other Teller County commissioners, John Bermingham, State senator for district 7, Carol M. Kenny, mayor of Woodland Park, Colo. In addition I would like to mention the support of the many clubs and organizations throughout the State, including the Colorado Women's Club, Colorado Open Space Council, the Sierra Club and the Izaak Walton League. Time does not permit mention of all the people and groups who have contributed in bringing this legislation to this point.

Mr. President, one point must be made very clear. The historic and scientific value of this site is unrivaled in this country. Commercial development is even now threatening its very existence. I wish to stress that unless immediate action is taken not only the scenic benefits of this site will be ruined, but the fossil beds themselves may be physically destroyed. We cannot permit such a tragedy to occur.

The site consists of 6,000 acres. We can place in the hands of the Secretary of Interior the authority to move rapidly in protecting this whole site. It is essential to preserve the whole 6,000 acres for this site to retain its true and intrinsic value.

I wish to express my sincere appreciation to Senator BIBLE, chairman of the subcommittee, and Senator JACKSON, chairman of the full committee for their realization of the value of this project. This realization is clearly evident by the prompt action taken by the committee to bring this matter promptly before the Senate. The Senate leadership has also recognized the need for timely and immediate action.

I urge your support for this bill. I wish only that each of you could visit and explore this site. We must pass this legislation today so that this scientific storehouse may be preserved for all people for all time. I thank my colleagues for their consideration.

The VICE PRESIDENT. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for the third reading, was read the third time, and passed.

Mr. ALLOTT. Mr. President, I move that the vote by which the bill was passed be reconsidered.

Mr. BYRD of West Virginia. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, announced that the House had passed the bill (S. 742) to amend the act of June 12, 1948 (62 Stat. 382), in order to provide for the construction, operation, and maintenance of the Kennewick division extension, Yakima project, Washington, and for other purposes, with an amendment, in which it requested the concurrence of the Senate.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 2461—INTRODUCTION OF A BILL TO AMEND THE RANDOLPH-SHEPPARD ACT, WHICH OPERATES SUCCESSFULLY FOR BLIND PEOPLE—AMENDMENTS OFFERED TO STRENGTHEN PROGRAM

Mr. RANDOLPH. Mr. President, 33 years ago today, President Franklin Delano Roosevelt signed into law the Randolph-Sheppard Act. This measure, authored by Senator Morris Sheppard and myself, established the program granting preference to blind persons in the operation of vending facilities in Federal buildings.

It was a privilege as a Member of the House of Representatives to sponsor with Senator Sheppard this legislation to provide the opportunity for blind men and women to become self-supporting, tax-paying citizens while demonstrating to the public that individuals with this handicap can be capable and productive workers. The Randolph-Sheppard Act was later broadened to cover stands on Federal property. I recall the pioneering work for the blind of many persons, in and out of Government, including Leonard P. Robinson, who first brought the vending-stand concept to my attention.

Congress authorized the program. Blind persons themselves did the rest. They have worked diligently as small business entrepreneurs serving Government employees and the public in snack bars and other types of vending facilities. In the late thirties, when employment opportunities for blind persons were severely limited and the public equated blindness with helplessness and the beggar on the street corner, these blind concessionaires contributed greatly to changing that image of helplessness into one of ability. Their demonstrations of ability facilitated the acceptance of all types of handicapped workers by industry and influenced the establishment of public policy to provide training and job opportunities for our handicapped citizens.

Since 1936, the vending stand program has grown, until now there are nearly 3,300 blind persons in the overall effort. On Federal property, there were 836 stands employing 972 blind persons at the end of the last fiscal year. In addition, the State agencies for the blind and State vocational rehabilitation agencies which license blind stand operators have opened employment opportunities for blind concessionaires in State and municipal buildings, as well as in nongovernmental buildings. There are 2,084 stands employing 2,287 blind persons on non-Federal installations. During fiscal year 1968, these concessions operated by blind persons did a gross business of $78,966,880. The average income of the blind operators was $5,580.

It is gratifying to have participated in establishing this program, which makes it possible for blind people to know the dignity and self-worth which comes from earning their own way. It is understandably a source of satisfaction for me that the law is known as the Randolph-Sheppard Act for the Blind.

But, as we know, the passage of time brings change; and laws establishing programs to serve people must be periodically revised in accordance with changing needs. Since its enactment in 1936, the Vending Stand Act has been amended only once—18 years later in 1954, when improvements to it were included in the Vocational Rehabilitation Amendments of 1954. Now, 15 years later, there is need for additional improvements. Today, I am introducing a bill to affect those changes.

This bill would change the term "vending stand" to "vending facility" to more accurately cover the wide variety of concessions operated on Federal property by blind persons. It also defines a vending facility to include various types of concessions, including vending machines. Since the assignment of vending machine income has adversely affected blind vending stand operators in some instances, the bill tightens the procedure for making this assignment.

Present law requires licensed blind operators to be at least 21 years of age. My bill would make it possible for the State licensing agency to license responsible and capable blind men and women who are under 21. Such individuals are now actually employed in vending stands but, because of the restrictive language, they are designated as trainees until they are 21.

The bill authorizes food, beverages, and other items—as may be determined by the State licensing agency—to be prepared on the premises, as in fact, is presently being done in many locations. It also eliminates the 1-year residence requirement as a prerequisite for licensing of blind concessionaires, an archaic provision already eliminated from the Vocational Rehabilitation Act.

An important new provision is the requirement for inclusion of sites for vending facility locations in the design, construction, or substantial alteration of Federal buildings or those leased by Federal agencies. This provision will help to assure growth of employment opportunities for persons while providing a valuable service to employees and the public. The requirement for consultation between the officials of the agency controlling property, the Department of Health, Education, and Welfare, and the State licensing agency will insure installation of the proper facility, if one is justified on the basis of potential business.

The fair hearing mechanism for aggrieved licensed blind operators now in the law is expanded to include an arbitration procedure if there is a dispute which cannot be settled otherwise. There is also a provision for arbitration of disputes between agencies controlling Federal property and State licensing agencies. In addition, a blind person or State licensing agency is authorized to seek judicial review of any agency action if they are adversely affected by that action.

Mr. President, these are the major provisions of my measure. If enacted into law, the bill will bring present law into conformance with accepted practice in the vending stand program and effect additional needed improvements. I ask unanimous consent that a section-by-section analysis be printed in the RECORD at the conclusion of my remarks.

The need for improvements in the Randolph-Sheppard Act was called to my attention by representatives of organizations of blind persons, and organizations of workers who serve blind persons in every State. Its provisions were carefully arrived at and agreed on after several conferences. The organizations giving active support are the major national organizations of and for the blind—the American Association of Workers for the Blind, American Council of the Blind, American Foundation for the Blind, Blinded Veterans Association, National Council of State Agencies for the Blind, and National Federation of the Blind. Their cooperation in working together to solve problems and meet changing needs is an excellent example of cooperation between consumers of service and providers of service.

Mr. President, I ask unanimous consent that the section-by-section analysis of my amendments and the most recent summary of the vending stand program be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the material will be printed in the RECORD.

The bill (S. 2461) to amend the Randolph-Sheppard Act for the blind so as to make certain improvements therein and for other purposes, introduced by Mr. RANDOLPH, was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

The material, presented by Mr. RANDOLPH, follows:

SECTION-BY-SECTION ANALYSIS

Section 1. Short title. This section provides that the Act may be cited as the "Randolph-Sheppard Act for the Blind Amendments of 1969."

Section 2. Preference for Vending Facilities on Federal Property. This section amends Section 1 of the Act of June 20, 1936, as amended, under which preference is granted to blind persons licensed by state agencies designated in the Act to operate vending facilities on Federal property. It provides for exclusive assignment of vending machine income in order to assure, achieve, and protect the preference granted. Inconvenience to departments and agencies of the Federal government is eliminated as a criterion for the establishment of a vending facility; however, such a facility would not be authorized if the interests of the United States would be adversely affected thereby.

Section 3. Concession Vending Surveys. This section amends Section 2(a)(1) of the Act by changing the term "concession-stand" to "concession vending".

Section 4. Vending Facility. This section substitutes the term "vending facility" or "vending facilities" for "vending stand(s)" or "stand(s)" throughout the Act in order to reflect the broader variety of concessions in the program.

Section 5. Age Requirements; Articles and Services Available. This section amends Section 2(a)(4) of the Act to eliminate the requirement that a licensed blind operator must be at least 21 years of age. It also alters language in the same section of the Act to broaden the types of articles and services available in vending facilities to accord with current actual practice.

Section 6. Deletion of Limitations. This section amends Section 2(b) of the Act to eliminate the unnecessary one year residence requirement before blind persons can become licensed operators. It also eliminates archaic wording contrary to rehabilitation principles referring to blindness as an infirmity.

Section 7. Provision of Locations. This section adds a new subsection (d) to Section 2 of the Act, providing for inclusion after January 1, 1970, of sites for vending facilities operated by blind persons, after consultation with the state licensing agency, in the design, construction, or substantial renovation or alteration of public buildings for use by the Federal government. Similar provisions cover public buildings rented or leased by the Federal government. The new subsection also requires agencies controlling Federal property to consult with the Secretary of Health, Education, and Welfare (or his designee) and the state licensing agency to insure inclusion of suitable vending facility sites unless it is determined that the number of persons using the building will not justify operation of a vending facility.

Section 8. Arbitration Between Operators and Licensing Agencies. This section amends Section 3(6) of the Act to expand fair hearing procedures for aggrieved licensed blind operators to include binding arbitration. It provides that the arbiters shall consist of one person named by the head of the state licensing agency, one person named by the licensed blind operator, and a third person selected by the two.

Section 9. Definitions. This section amends Section 6(b) of the Act to substitute the current legal definition of blindness for the obsolete terminology presently in the Act. It also adds a new subsection to Section 6 of the Act defining the term "vending facility" to cover the broad variety of concessions presently in use in the program, including automatic vending machines.

Section 10. Arbitration Between Agencies. This section redesignates Section 8 of the Act as Section 9 and establishes a new Section 8 providing for arbitration of disputes between a state licensing agency and an agency controlling Federal property. It provides that the three arbiters shall consist of a person designated by the Secretary of Health, Education, and Welfare; one person designated by the head of the agency controlling Federal property over which the dispute has arisen; and a third person selected by the two who is not an employee of the departments concerned. It also provides that all decisions of the arbitration board shall be published.

Section 11. Judicial Review. This section adds a new Section 10 to the Act providing for judicial review in the event a blind person or state licensing agency suffers a legal wrong or is adversely affected or aggrieved by the action of an agency.

Section 12. Effective Date. This section provides for an effective date of January 1, 1970, for the amendments made by the bill.

VENDING STAND MEMORANDUM 69–1

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, SOCIAL AND REHABILITATION SERVICE,

Washington, D.C., December 9, 1968.

To: All State Licensing Agencies under the Randolph-Sheppard Act.

Subject: Vending Stand Report for Fiscal Year Ending June 30, 1968.

An analysis of the vending stand program for fiscal year ending June 30, 1968, shows substantial growth in all major areas. *Continued momentum is evidenced by a 10.5 percent increase in gross sales, 4 percent in new locations, and 6.4 percent in average operator earnings, with total gross sales in excess of* $78.9 million.

It is gratifying to report a national 4.6 percent increase in the number of operators and a 12.5 percent increase in net proceeds to operators, with an *average income of $5,580* (an increase of $348 over last year). These gains reflect greater efficiency in management services, training, and supervision of operators.

We are pleased with a 7.2 percent increase in new stand locations on private property. However, we must accelerate our efforts in this direction if we are to achieve our goal of providing employment opportunities through the vending stand program for 5,000 blind persons by fiscal 1970.

We urge you to carefully study this report and evaluate your current efforts in the achievement of our national goal.

Table A presents national statistics comparing the vending stand program of fiscal 1968 with the program of fiscal 1967, showing percentages of increase.

Table B reports detailed figures on a State and regional basis relating to number of stands, operators, and average operator earnings.

Table C lists the States alphabetically, giving the number of stands per 100,000 population, the average annual income for operators, national ranking, and the set aside funds collected, less minimum return.

Table D contains regional data, including the number of vending stands, regional population, and stands per 100,000 population.

Table E shows the classification of vending stands on Federal property by the Federal agency granting the permit.

We hope you will find the attached data useful as you plan for future growth.

D. C. MACFARLAND, Ph.D.,
Chief, Division of Services to the Blind.

ABLE A.—BREAKDOWN OF FIGURES ON A NATIONWIDE BASIS FROM ANNUAL VENDING STAND REPORTS SUBMITTED BY STATE LICENSING AGENCIES FOR FISCAL YEAR 1968

	Fiscal year 1967	Fiscal year 1968	Percent increase over previous year
Total number all stands	2,807	2,920	4.0
Federal locations	814	836	2.6

Mr. BYRD of West Virginia. Mr. President, will the Senator yield?

Mr. RANDOLPH. I yield.

Mr. BYRD of West Virginia. Mr. President, I compliment my very able senior colleague on offering the amendments he has offered today to the original Randolph-Sheppard Act. I compliment him most of all for the great leadership he has long provided in this humanitarian endeavor. I believe it was over three decades ago that he, while serving as a Member of the House of Representatives, coauthored this act with the late Senator Sheppard from Texas. In so doing he rendered a service to thousands of people throughout the country who have been denied that most wonderful and most useful physical faculty, the faculty of sight.

TABLE D.—NUMBER OF VENDING STANDS PER 100,000 POPULATION BY REGION

Region	Number of stands	Population	Number of stands per 100,000
I	117	11,324,000	1.03
II	385	37,172,000	1.04
III	353	21,823,000	1.62
IV	659	23,042,000	2.86
V	357	39,199,000	.66
VI	183	15,988,000	1.14
VII	382	20,037,000	1.91
VIII	81	4,761,000	1.70
IX	403	27,304,000	1.48
National	2,920	200,650,000	1.46

Through his efforts at that time and since, many, many thousands of these less-fortunate individuals have been able to utilize their talents and to earn for themselves and their families an income at the vending counters in Federal installations, State installations, county installations, and in private facilities.

Mr. President, not very long ago I spoke at the Schools for the Deaf and Blind in Romney, W. Va. I was greatly impressed by the marvelous interest displayed by those youngsters in current events. I was even more greatly impressed and moved by the display of determination on the part of those young people, some of whom cannot see, some of whom have never seen, some of whom cannot hear, and some of whom cannot speak, to do for themselves and to make their own way. They start out with a disadvantage in life that none of us, who are more fortunate, can comprehend. Yet, they are desirous of getting an education and developing the talents they possess, so that they may then be better equipped to go out and make their own way, and earn a living for themselves.

The PRESIDING OFFICER (Mr. SPONG in the chair). The time of the Senator has expired.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the time of the Senator be extended by 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, as I watched those students and listened to them, I thought how wonderful it could be if other young people throughout the country, and some who are not so young, who have all the God-given faculties of sight, hearing, and speech, could just see how these children react. Perhaps there would be fewer in this country who would so complain about problems that confront them. Perhaps fewer people would look toward the Federal Government for this, that, and something else.

I noted that some of those young people, who could just barely see, apparently did not want to be helped; they wanted to find their own way. The children do not want sympathy. All they want is an opportunity to develop their talents and they will do the rest.

Mr. President, if we had more people like them in this country, who would display such an interest in utilizing the talents that are within them, and developing whatever God-given potential is theirs to begin with, and working and sweating and staying on the job, even though it involves a little overtime, we would not have witnessed, often in these recent years, so many people out in the streets breaking store windows, overturning cars, beating the drivers, and demanding that the Federal Government outlay more and more funds and that society owed them something in return for nothing. How different an attitude from that which I sensed in talking with these deaf and blind students. I was so favorably impressed by their attitude in the face of such incalculable disadvantages I wanted to say something about them.

In closing, the Senator's act 33 years ago was beneficial to such people and made it possible for them not to be burdens on society, but to contribute to society. I must compliment those people. My heart goes out to them. I must also compliment a man who foresaw 33 years ago a way in which to give the blind an opportunity to contribute, to serve, to build, and to develop. Not only the blind, but also the Nation for a long, long time, will remember with gratitude the services of JENNINGS RANDOLPH and the late Senator Sheppard in connection with this far-seeing, humanitarian, progressive, legislative act.

Mr. RANDOLPH. Mr. President, I deeply appreciate the thoughtful comments of my colleague. I am grateful for his references to me, but I am particularly grateful for the tribute that he expresses to the blind. They are the productive members of our society who have realized accomplishments under the programs I have discussed today.

Perhaps this is not the occasion, but as I look back upon legislative activities in which I have participated in the House of Representatives and in the Senate, I wonder sometimes if we have not tended to lessen the responsibility of the individual and to place the responsibility on Government. Possibly, we have created a sort of nebulous umbrella—so to speak—under which people live. My colleague from West Virginia has emphasized critical points in this regard.

Mr. President, in closing, I return to my earlier statement that there are reasons for amending the original bill. New situations and complexities, the type living in which we engage, and the operation of our buildings themselves, make it necessary to consider very promptly the amendments which will serve the blind and, through the blind, serve the public.

I think it important to state to my colleague from West Virginia and to the Senate that nearly 3,300 blind persons are now entrepreneurs and active members in society, conducting their own businesses. I hope that within the next year we shall have at least 5,000 persons carrying on this effort.

Mr. BYRD of West Virginia. Mr. President, I simply add one sentence with reference to the action that was taken 33 years ago. Generations will rise to bless my colleague's name.

WEST VIRGINIA MOVES AHEAD AS ITS PEOPLE CELEBRATE THE 106TH ANNIVERSARY OF STATEHOOD

Mr. RANDOLPH. Mr. President, this date marks the 106th anniversary of West Virginia statehood. Hence, we mountaineers are 6 years into the second century of our State and we feel that we are headed truly on a course of making the second century vastly more productive than was the first.

As Henry J. Kaiser—who brought to West Virginia one of her great industries—once noted:

> Count me among those who look upon our future as a great opportunity which can fill men's souls with hope.

It is obvious, as we take inventory of our payroll-producing industries, that many large corporations have shown their confidence in West Virginia and its people.

Again recalling Mr. Kaiser and his cogent and meaningful expressions, he said that there are other valleys just as wide as is the Ohio Valley—and there are other rivers just as deep as is the Ohio River, but the real reason why Kaiser Aluminum located its West Virginia plant near Ravenswood, in Jackson County, was faith in the stability and the productivity of the people.

Kaiser's Ravenswood plant, incidentally, is the largest integrated aluminum plant in the Kaiser industries complex. It had a relatively modest beginning in 1955 and now employs approximately 3,200 citizens with an annual payroll in excess of $21 million.

Then, too, Mr. President, it is appropriate that I call attention to the new General Motors Corp. facility off Interstate 81 near Martinsburg, W. Va. Dedicated only last week, the GM plant there will add to the local economy nearly $16 million annually, including a payroll in excess of $10 million per year. Edward N. Cole, GM president, stressed his confidence in the quality and character of our people.

American Electric Power, the Allegheny Power System, and the Virginia Electric & Power Co. have all announced substantial expansions to their systems in West Virginia. The AEP alone is launched upon a huge project west of Charleston that will cost approximately $200 million and bring to $750 million the total construction costs of all current projects of that system in West Virginia.

TWENTY-FIFTH ANNIVERSARY OF THE GI BILL OF RIGHTS

Mr. LONG. Mr. President, this coming Sunday marks the 25th anniversary of the signing of the World War II GI bill. This bill marked the culmination of more than a quarter century of Finance Committee efforts to help veterans adjust to civilian life.

Before World War I almost all veterans' benefit measures in the Senate fell within the jurisdiction of the Committee on Pensions. But as the Committee on Finance assumed jurisdiction of World War I veterans' benefits at the beginning of the war, an effort was made to bring about a change in the nature and philosophy of the whole system of benefits. The committee participated in the enactment of legislation to provide insurance and to provide new benefits in the form of vocational rehabilitation designed to return disabled veterans to useful employment.

The World War I programs had provided a new direction for veterans' benefits, but it was during the Second World War that the Finance Committee originated what was to become the best known veterans' legislation of all time: the Servicemen's Readjustment Act of 1944, better known as the GI bill of rights.

This act was based on the philosophy that veterans whose lives have been interrupted by military service, or who have been handicapped because of this military service, should be provided assistance for a limited time to aid them in becoming self-supporting and useful members of society. The act provided for unemployment allowances, education and training benefits, and home, farm, and business loan guarantee benefits through the Veterans' Administration. In addition, mustering-out payments were provided through the military departments. The Veterans' Administration has expended almost $20 billion in assisting World War II veterans to return to civilian life in this remarkably successful program.

The GI bill has served as a model for all subsequent legislation aimed at providing adjustment assistance to exservicemen. It is fitting that we mark the passage of a quarter century since the enactment of this legislative milestone.

Mr. President, I see in the Chamber the distinguished junior Senator from Georgia (Mr. TALMADGE). It was my pleasure to appoint Senator TALMADGE, a true friend of the veteran, chairman of the new Subcommittee on Veterans' Legislation which we established within the Committee on Finance. I must say that Senator TALMADGE is certainly aiming to continue his fine record of legislation on behalf of veterans. Four years ago a bill he initiated established the servicemen's group life insurance program, and he is now proposing to increase its value. Another of his bills would make comprehensive changes in the dependency and indemnity compensation.

As the Senator knows, I have introduced a few veterans' bills of my own recently. I know he plans to have hearings on these matters as soon as possible. I applaud the Senator for his initiative.

Mr. TALMADGE. Mr. President, I join the distinguished chairman of the Committee on Finance (Mr. LONG) in marking the passage of a quarter century since enactment of the GI bill of rights. The bill originated in the Committee on Finance, a committee of which I am proud to be a member, and on which I now serve as chairman of the newly created Subcommittee on Veterans' Legislation.

Our great Nation has never made a bigger or better investment in human resources than it did under the GI bill, and Congress has wisely chosen to use the

original Finance Committee's measure as a model for legislation affecting veterans of subsequent conflicts. I suspect that a good portion of our country's economic growth during this past quarter century may be attributed to this tremendous investment in human resources.

Under the original GI bill of rights, 7,800,000 veterans received $14.5 billion in educational assistance. More than 2¼ million World War II veterans use this program for college and university training, while 3,400,000 took below-college training. About 3½ million veterans of subsequent wars have received educational assistance under legislation patterned after the original GI bill.

The GI bill paid more than $3 billion in unemployment compensation to GI's while they sought employment, and provided loan guarantees so that veterans could purchase homes, farms, and businesses.

The GI bill has proven the value of our Government's investment in the future of dedicated, motivated persons. Because of the money our Government invested in these veterans, they were able to command higher paying jobs. The Veterans' Administration estimates that each year, these veterans trained under the GI bill pay a billion dollars more in taxes than they would have paid if they had not received this training. Thus, the Government has already profited from its investment. And the economic advantages do not show the immense benefits we have reaped in terms of human happiness and self-satisfaction.

RADIO STATEMENT BY SENATOR BYRD OF WEST VIRGINIA ON ESTABLISHING A MINE HEALTH AND SAFETY INSTITUTE

Mr. BYRD of West Virginia. Mr. President, on June 4, 1969, I made a statement for radio regarding the establishment of a Mine Health and Safety Institute.

I ask unanimous consent that the transcript of that statement be printed in the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

MINE HEALTH AND SAFETY INSTITUTE

Coal miners in West Virginia and elsewhere have long suffered the hazards and ill-health that for centuries have been associated with their occupation. And yet, remedies for many of these critical problems have still to be found. Though work in these areas has gone forward for some time, only recently has national attention focused on the largely forgotten miner and his working conditions. The reason for this attention is due in some measure to the terrible disaster last year in our state at Mannington. A renewed effort is now underway to eliminate the occupational hazards of mining.

The task of improving health and safety standards in the mines involves a coordinated effort among the state and federal governments, operators and miners themselves. But to do an effective job in eliminating the hazards of coal mining, we need qualified, highly skilled, specialized personnel to conduct mine inspections, and we need highly trained mining engineers, and superior caliber laboratory technicians. These are the people who will lead the way toward solving the health and safety problems plaguing miners today.

And so for this reason I am pressing for a program aimed at providing these sorely needed highly professional people to work in mine safety. The program would involve creation of a Mine Health and Safety Institute. The Institute will be designed to give specialized, long-term training to new federal, state, and other inspection people as well as short-term refresher courses to existing federal and state employes. In addition, the Institute would provide courses to auxiliary persons not actually engaged in underground operations.

Finding qualified people for these jobs has become a major problem. The Bureau of Mines must now rely on a pool of students graduating from mining schools throughout the country. But the number of mining schools has declined sharply from about three dozen just 15 years ago, to only 17 schools at the present time. This year, these 17 schools are graduating only about 120 mining engineers. So even if all these graduates went to the Bureau of Mines as inspectors (which of course they will not), this would still leave a considerable gap between supply and demand.

Obviously, something must be done very soon to remedy the critical shortage of trained personnel whose talents and training are of supreme importance to the health and safety of miners.

A Mine Health and Safety Institute would constitute a great step in the right direction. The recruiting and training of people to work in the field of mine safety is absolutely essential. Questionnaires have gone to various colleges and universities, and to nonprofit groups enlisting their views and suggestions on how best to establish and operate such an Institute. I am pressing for planning money for the Institute through the Senate Appropriations Subcommittee of which I am the chairman, and I will do everything in my power to see that this request gains approval in the United States Senate.

Also, I am urging additional funds to accelerate research on dust production and control. This research will include the gathering of dust samples during mining operations and the study of variables relating to dust production—such as mining machines, ventilation, and the kinds of coal being mined. The purpose is to solve the dust problem.

If we are ever to overcome the hazards both of accidents and of illness that daily threaten every coal miner in West Virginia and throughout the country, we must have the trained human resources necessary to carry out the job.

THE NATIONAL TRANSPORTATION ACT OF 1969

Mr. PELL. Mr. President, earlier this week the senior Senator from Washington introduced the National Transportation Act of 1969, S. 2425.

I rise today to commend the distinguished chairman of the Commerce Committee on his leadership in bringing forth this proposal. To my mind, this bill ranks as the most significant and potentially most beneficial transportation legislation to come before the Congress since the establishment of the Department of Transportation.

The proposed legislation, I believe, would provide at long last a mechanism for bringing into reality the long-sought goal of an adequate and balanced transportation system for our country.

As Senator MAGNUSON said in introducing it:

Our transportation needs will not be well served if we continue to develop each mode of transportation without due consideration to the overall transportation needs of our communities and careful appraisal of the appropriate mixing of alternate modes of transportation.

Mr. President, I have been advocating better balance in our transportation systems since I came to the Senate 8 years ago. My primary concern has been the utter neglect of the vast potential of ground transportation, the failure to modernize and utilize existing rail passenger transportation systems, and the need to begin development of high-speed ground transportation systems for the future.

The need and desirability of such high-speed ground transportation systems has appeared to me to be almost self-evident. In the northeast corridor, the prototype of developing megalopolitan corridors throughout our country, there is little question that almost exclusive reliance on highways and airport systems has reached a point of increasing public resistance and decreasing public convenience.

The High Speed Ground Transportation Act of 1965, to which I am proud to claim a paternal relationship, was a first and highly important step to redress the balance in transportation services. The Metroliner and turbo demonstrations of improved rail passenger service being conducted under that act has achieved a most gratifying public response. Indeed, the only complaints now voiced about that program is that it is not ambitious enough.

In advocating development and utilization of the potential of ground transportation systems, Mr. President, I have in essence been calling for a correction of the existing imbalance in our transportation systems.

The imbalance that exists, I would emphasize, is not the result of policy, but rather the result of a lack of policy. It is the result of having separate policies for each mode of transportation without reference to the overall transportation needs and requirements of our Nation, its regions, States, and communities. This is a fact that is widely recognized and acknowledged. What has been lacking is a mechanism that can provide for the formulation of balanced policies, a mechanism that can be effective while avoiding the creation of a central transportation bureaucracy with excessive powers.

The National Transportation Act, I believe, offers a most promising approach to this problem, by providing for establishment of regional transportation commissions, to prepare comprehensive regional transportation plans, and to conduct research, development, and demonstration programs in accordance with those plans.

The establishment of regional commissions is similar in its approach to the proposals I have made for the crea-

tion of regional rail transportation authorities, formed by States through interstate compacts to provide for the development of intercity rail passenger services. I might add that the National Transportation Act proposal for regional commissions is not incompatible with my proposal for regional rail authorities. Indeed, I think the proposals could well be considered complementary.

Mr. President, I again congratulate the senior Senator from Washington on his introduction of the National Transportation Act of 1969.

THE LATE SENATOR GUY CORDON

Mr. ANDERSON. Mr. President, I was saddened to hear of the death of our former colleague, Guy Cordon, of Oregon.

It was my pleasure to serve with Senator Cordon on the Committee on Interior and Insular Affairs. There I gained a great respect for his prowess as a legislative draftsman. I think that I have not met another man who, when given an assignment to prepare a piece of legislation, could put together wording so precise and exact as Guy Cordon. When he proposed language to tighten any measure before the committee, we could feel secure that it would satisfactorily explain the legislative intent we desired.

He was an active participant in matters related to the Interior. I especially remember his diligent assistance on two important pieces of legislation—the Submerged Lands Act and the Continental Shelf Act.

Mrs. Anderson joins me in expressing our condolences to Mrs. Cordon and his family.

JOE McCAFFREY—25 YEARS OF ABLE SERVICE

Mr. MUNDT. Mr. President, I am happy to join Senators in saluting Joe McCaffrey's 25th year as a Washington correspondent.

That the month of June—a particularly pleasant time of year—is the month of this anniversary is appropriate, for it typifies to some degree the type of person Joe McCaffrey is—a pleasant, warm individual, one whom we are happy to have as a friend.

Yet it should be noted that this great attribute of personal warmth and friendship never stands in the way of Joe McCaffrey's first obligation: to report the news fairly and fully.

So, in addition to a salute to mark the milestone of a quarter century of service, we also pay tribute to 25 years of honest, diligent, and fair reporting by Joe McCaffrey, reporting conducted in the highest standards of the journalism profession.

His record stands as a splendid example of service to all who are members of his profession. May he enjoy many more productive years as one of our important commentators on the Washington scene.

CPL. LARRY E. SMEDLEY, MEDAL OF HONOR

Mr. TALMADGE. Mr. President, today at the White House, the President of the United States conferred the Nation's highest military honor on a brave marine and a onetime resident of Georgia, whose father lives there now. Cpl. Larry E. Smedley, in an act of supreme gallantry and heroism, gave his life in Vietnam, and today the President presented him, posthumously, the Medal of Honor.

I praise his bravery and devotion, and extend my deepest sympathies to his family. All the Nation, and indeed all the free world, is indebted to the young men of America who are fighting so gallantly in Vietnam, and we are especially proud of those valiant men who have gone above and beyond the call of duty.

Corporal Smedley's gallant action is recorded in the citation accompanying his medal. I know the entire Senate joins me in my condolences to his family.

I ask unanimous consent that the citation be printed in the RECORD.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

The President of the United States in the name of The Congress takes pride in presenting the Medal of Honor posthumously to Corporal Larry E. Smedley, United States Marine Corps for service as set forth in the following citation:

For conspicuous gallantry and intrepidity at the risk of his life above and beyond the call of duty while serving as a squad leader with Company D, First Battalion, Seventh Marines, First Marine Division, in connection with operations against the enemy in the Republic of Vietnam. On the evening of 20–21 December 1967, Corporal Smedley led his six-man squad to an ambush site at the mouth of Happy Valley, near Phouc Ninh (2) in Quang Nam Province. Later that night, an estimated 100 Viet Cong and North Vietnamese Army Regulars, carrying 122mm rocket launchers and mortars, were observed moving toward Hill 41. Realizing this was a significant enemy move to launch an attack on the vital Danang complex, Corporal Smedley immediately took sound and courageous action to stop the enemy threat. After he radioed for a reaction force, he skillfully maneuvered his men to a more advantageous position and led an attack on the numerically superior enemy force. A heavy volume of fire from an enemy machine gun positioned on the left flank of the squad inflicted several casualties on Corporal Smedley's unit. Simultaneously, an enemy rifle grenade exploded nearby, wounding him in the right foot and knocking him to the ground. Corporal Smedley disregarded this serious injury and valiantly struggled to his feet, shouting words of encouragement to his men. He fearlessly led a charge against the enemy machine gun emplacement, firing his rifle and throwing grenades, until he was again struck by enemy fire and knocked to the ground. Gravely wounded and weak from loss of blood, he rose and commenced a one-man assault against the enemy position. Although his aggressive and singlehanded attack resulted in the destruction of the machine gun, he was struck in the chest by enemy fire and fell mortally wounded. Corporal Smedley's inspiring and courageous actions, bold initiative, and selfless devotion to duty in the face of certain death were in keeping with the highest traditions of the Marine Corps and the United States Naval Service. He gallantly gave his life for his country.

CPL. LARRY E. SMEDLEY, U.S. MARINE CORPS (DECEASED)

Larry Eugene Smedley was born March 4, 1949, in Front Royal, Virginia. He attended elementary schools in Berryville, Virginia; Augusta, Georgia; Union Park, Florida; and Howard Junior High School in Union Park, leaving the latter in 1964.

He enlisted in the U.S. Marine Corps, March 18, 1966, at Orlando, Florida; then reported to the Marine Corps Recruit Depot, Parris Island, South Carolina, and underwent recruit training with the 1st Recruit Training Battalion. In July 1966, he completed Individual Combat Training with the 2d Infantry Training Battalion, 1st Infantry Training Regiment, Marine Corps Base, Camp Lejeune, North Carolina.

Upon completion of recruit training, Private Smedley served as a Rifleman and Fire Team Leader with Companies "D" and "C", respectively, 1st Battalion, 8th Marines, 2d Marine Division, FMF, Camp Lejeune. He was promoted to private first class, September 1, 1966; and to lance corporal, January 1, 1967.

In July 1967, Corporal Smedley arrived in the Republic of Vietnam. He was assigned duty as a Rifleman and Squad Radio Man with Company "D", 1st Battalion, 7th Marines, 1st Marine Division; and was promoted to corporal, September 1, 1967. While on patrol in Quang Nam Province on December 21, 1967, he was mortally wounded.

His medals and decorations include: the Purple Heart; the Presidential Unit Citation; the National Defense Service Medal; the Vietnam Service Medal with one bronze star; and the Republic of Vietnam Campaign Medal.

Corporal Smedley is survived by his parents, Mr. Russell E. Smedley of Albany, Georgia, and Mrs. Mary E. Willis of Orlando, Florida; and a sister, Mrs. Vicki Whipple, of Honeye Falls, New York.

(Prepared June 1969 HQMC.)

RADIO STATEMENT BY SENATOR BYRD OF WEST VIRGINIA ON THE ANNOUNCED TROOP WITHDRAWAL FROM VIETNAM

Mr. BYRD of West Virginia. Mr. President, on June 12, 1969, I made a statement for radio regarding the announced withdrawal of 25,000 American troops from Vietnam.

I ask unanimous consent that the transcript of that statement be printed in the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

VIETNAM TROOP WITHDRAWAL

The announced withdrawal of 25,000 American troops from Vietnam is an encouraging step, hopefully toward eventual disengagement of our forces in Southeast Asia. While the withdrawal is relatively small by comparison with the more than 500,000-man force now in Vietnam, there can be no dispute that the action represents a further de-escalation in the war. Now we are waiting to see concrete evidence of a corresponding de-escalation on the part of North Vietnam. When and if that comes, President Nixon is likely to announce, as he has said, plans for additional replacements as such decisions are made.

Since last year, when former President Johnson ordered a halt to the bombing of North Vietnam, we have seen steady, albeit painfuly slow, steps which seem to be headed toward a de-Americanization of this costly war. There are also slight indications that the forces for reconciliation have gained a little momentum in the Paris talks.

While the negotiations are intricate and often submerged from public view, all parties now seem at least a bit more willing than heretofore to engage in some measure of substantive talks. The North Vietnamese and the National Liberation Front on the

one hand, and the United States and Saigon on the other have publicly put forward certain proposals for discussion. And along with other moves—President Nixon's limited withdrawal, for example—the momentum gives some appearance of picking up, and every American hopes that this will continue.

At the same time, we should not fault our leaders for their cautious approach. Both the previous and present administrations have resisted calls for any immediate unilateral withdrawal or unilateral ceasefire by the United States, and for good reasons, I think. Certainly we must keep in mind that such action would jeopardize the lives of American troops, would work against the possibility of a permanent peace, and would, in effect, reward Communist aggression.

Instead of this type of precipitious action, we should look to reasoned, measured steps for bringing about an honorable and a feasible, workable, more lasting peace in that area. No one wants to see an unnecessary prolongation of the war. And above all, no one should want a capitulatory action which would mean that 35,000 American boys have died in vain.

I wish we had never gotten so deeply involved in Vietnam. But we are there, and we find it exceedingly difficult to extricate ourselves from these most trying circumstances. We must be both patient and prudent—not too quick to criticise the President or find fault with his action. On him will rest the major burden of finding a solution to this terrible conflict—the kind of solution that will better assure us of being free from such conflicts in the future.

While it may be true that this nation with its overwhelming military superiority might with little ffort completely devastate the enemy in North Vietnam, it does not follow that such a victory would bring either peace or disengagement. As President Nixon has said, and President Johnson before him, peace is what we want, not military domination. I want peace for our country, and I want an honorable solution which does not reward Communist aggression in Vietnam.

ADDRESS BY HON. ROGER T. KELLEY, ASSISTANT SECRETARY OF DEFENSE FOR MANPOWER AND RESERVE AFFAIRS

Mr. GOLDWATER. Mr. President, on May 19, the Honorable Roger T. Kelley, Assistant Secretary of Defense for Manpower and Reserve Affairs, spoke before the City Club of Portland, Portland, Oreg.

Mr. Kelley's broad background in personnel work has brought to this sensitive office a new and thorough understanding.

I ask unanimous consent that his remarks be printed in the RECORD so that Senators might have the opportunity to know him a little bit better.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE ROGER T. KELLEY, ASSISTANT SECRETARY OF DEFENSE MANPOWER AND RESERVE AFFAIRS

I want to talk to you today about the military man. I do so from a background essentially the same as many in this audience. Until March 3, when I assumed my present duties, I was a business man and had not been associated with the military since my Navy days in World War II.

My opinions reflect the perspective of a parent. I have five sons—two of draft age and three more coming up. So I, too, have a special vested interest in young people and am concerned for their welfare.

Finally, by way of introduction, I should add that I have great affection for this nation and what it stands for. The invitation to serve it, particularly in a job so closely related to the interests of our young people, was a privilege I could not pass by.

So with this brief background about myself, let me tell you what I see in my recent but extensive contact with the military man.

First, what he is. He is bigger, stronger, better educated, smarter, and more devoted to the American dream than his counterpart of any previous generation. He loves life, but will risk his own to preserve its meaning. His acts of physical and moral courage defy description. He possesses great compassion for other human beings as seen in his many silent acts of mercy in Vietnam on behalf of the innocent victims of war. He responds to effective leadership—and his military leaders are among the very best. He is rich and poor, black and white; he is neither a big spender nor a vicious killer; he is the personification of the American ideal.

That's a quick profile of the typical American military man. You don't often read about him or see pictures of him going through his daily routine. Somehow it seems the untypical type, like the draft card burner, gets the news print instead. So let's spend a few moments talking about the typical GI Joe, 1969 edition—where he comes from, what he does, and why he wears the military uniform.

First, where he comes from. He comes from Everywhere, USA—Portland, Peoria, Phoenix, Pittsburgh—you name it, and he's from there. He comes from schools, factories, public services, banks, and retail establishments. He is the nearest thing to the all-American guy to be found anywhere.

He is not the product of a special military mold—rather, he is essentially a civilian with a strong sense of public service. Most men in military service were raised in civilian society and attended civilian schools. Two out of three service families live off-base among the civilian population. Over 90% of even so-called "career" military personnel assume a career in civilian life when they complete the portion of their life they spend in service. A military man is basically a civilian like you and me who is devoting a portion of his life to public service through military service.

Second, what he does. Contrary to the well advertised myth, our military man does mostly what he is best qualified for, which in many cases is what he has asked to do. I know this to be the fact, because I have reviewed selection and placement procecedures, and have visited with these young military men about their assignments. For those of you close to the placement practices of private business, as I have been, I report simply that the military does a better job of placing people than business does.

Our military man has a widely diverse collection of skills. He is not, as many people still think of him, a man trained only to fire a gun—whose main job is to use it. He is an electronics expert, a metal worker, a ship fitter, an IBM programmer, an aircraft mechanic, a writer, a lawyer, a manager, a skilled administrative specialist. To understand what he does, one needs to know that the majority of military men are engaged in these less visible occupations. Actual figures may surprise you. Even now, with the hostilities in Vietnam, enlisted men serving in jobs that require combat type skills represent only about 17% of the total. The remaining 83% are performing tasks that are directly transferable to many civilian jobs waiting to be filled—such as maintenance and repair 32%, clerical and administrative 19%, communications and intelligence 8%, and medical 4%.

Of course, nothing can or should downgrade the vital role of the combat soldier. It is he who lays his life on the line, and it is his job which all the other jobs support. But when you hear a recruiter talk about the "new Army" or the "aerospace team," realize that he is talking about a highly sophisticated and challenging range of occupations. The American military organization is a team composed of a rich mixture of professionals.

The military man works hard at what he does—putting in longer hours under conditions often more severe than most Americans encounter in a lifetime. And even though he works hard on his assigned task, he has time and heart left over to help those less fortunate than himself. Let me give you an example or two of what I mean.

Boys Town, Danang, is a Catholic home for orphaned boys operated by a native Vietnamese priest. The home is less than two years old and was constructed at a cost of $12,000, which was raised from contributions from individual American servicemen. There are 46 orphans living at Boys Town and receiving elementary and vocational education. $100 per month toward operating costs continues to be contributed by men stationed around Danang.

The Hoa Khanh (Wah Kahn) Children's Hospital was founded by yet another battalion. Two medical officers had the original idea, and a wooden structure with 11 beds was constructed by the Sea Bees. Now a new building has been built for the hospital with 70 beds. Medical service is still provided largely by volunteers on off-duty time.

Our military man is equally public spirited in this country. At Hanscom Field, near Boston, volunteer workers conceived and manned a clinic to discover Amblyopia, or "Lazy Eye," among children. 133 were tested in the first group, and 11 were detected as having eye problems. Plans for further such programs in the Boston area are now in the works.

Third, *why* does our military man wear the uniform. The cynic might say he wears it because he was drafted into it. But the few highly publicized defectors who run away from their draft obligation pale by comparison with the young man who, with countless others, steps up to his obligation either as a volunteer or as a draftee.

Really, our military man wears his uniform for you and me—and for our today. But he also wears it for his own tomorrow—which is to say for the life and kind of society he hopes for. And I'm sure he intends to leave our society in a better state than he found it.

Yes, it's true that he inherited from our generation the highest standard of material prosperity in the world's history. But in the area of moral prosperity, have we given him as much? What does he think of our adult permissiveness and double standards? How does he square the pious church-goer who cheats on his Income Tax? Or the four-martini man who protests righteously against pot smokers? How can he respect those who say the police should stay away even when mobs invade school buildings, give its occupants the physical heave-ho, and rifle through confidential files—and who prefer instead to establish "meaningful dialogue" with the invading forces? He sees many chinks in our moral armor, and many anomalies in our adult society. But he has the stuff of which solid reform is made, if we will but give him the opportunity.

Each year a well publicized few give up on this society. They decide the only alternatives are to destroy or leave this nation. They take the easy way out. The military man has not run away. He recognizes that any free society requires order. He knows that one day his generation will be in positions of leadership, but he has learned to

follow orders and to respect the authority of those that hold those positions today. He recognizes that the United States represents the hope of the world for the kind of nation he seeks. He also recognizes that she is far nearer to achieving her basic ideals than her critics will ever concede. The military man devotes a portion of his life—and if need be he gives his life—to protect the nation from all who would try to deny him the realization of his dream of America.

Now I want to direct my remarks to you as American parents. Each year, thousands of parents face the prospect that their son will become the military man I have been talking about. It is at that point the military man becomes a very special human being to each one of us. When our day comes, I hope we may have the courage and rare wisdom that has been displayed by the vast majority of American parents who have sent their sons to military service.

I want you to know that the Department of Defense and the Military Services accept humbly and responsibly our great trust in the person of your sons. Every effort is made—given the magnitude of the organization and the complexity of the military mission—to make the best possible use of a young man's talent, and to provide him opportunities for further education and personal growth while he is serving in this nation's defense. It is our objective to return to you a better man than you sent to us.

There is one important thing which everyone in this room can do—and I believe should do. That is to speak out on behalf of the American military man. I urge you to do this for two reasons. First, the military man deserves to know that you care, and that you appreciate the sacrifice he makes on our behalf. Second, it is important that civilian America understands the facts about the military profession rather than being misled by the histrionics of a few wild-eyed off-beats.

Even if the critics of the military man number only a few, if theirs are the only voices heard they can sound like quite a chorus. I believe that the quiet majority in this country still feel a sense of gratitude to our military men for their incalculable sacrifices on our behalf. I believe as well that the quiet majority recognizes the military man as the public servant that he is.

However, too often, I'm afraid, silent approval sounds the same to the serviceman as public apathy. The men in this room are among the most important opinion leaders in the Pacific Northwest. Your voices, publicly and among your acquaintances, raised in support of our military men and the significance of a career in military service can help our men to know their sacrifices are not forgotten.

While on the subject of misinformation, let me comment briefly on the Safeguard Anti-Ballistic Missile System. People, not missiles, is my line. I don't have the technical credentials to deal with the subject of missiles, but I have had the opportunity to observe a few things about the President's decision to proceed in the deployment of the Safeguard system and the decision makes great good sense to me.

You and I know that America is so morally constituted that we will never start a nuclear war. Our planning is aimed at deterring other nations from starting such a war. It is, therefore, essential that all other nations have absolutely no doubt about the effectiveness and the survivability of our capacity to strike-back. Safeguard does this by guaranteeing the protection of several hundred of our retaliatory missiles from enemy attack. The enemy thus would know that any attack on the United States would result in certain destruction for him.

There is nothing about the Safeguard System which would cause or start a nuclear war. It provides solely important defensive insurance.

All of us hope the day will come when all nations of the world will see that production of more and more arms is not in anyone's interest. But until that day comes, we cannot afford to be without the protection of the Safeguard System.

I want to thank the City Club for the invitation to address you today on one of my favorite subjects—the American military man.

I'll feel rewarded for coming here if you see our military man as I do, standing tall and doing his part to help rebuild the American dream. I hope that criticism of the military man, including his outstanding leaders, will stir you as it does me—and that you will speak out against the vicious defamation of his character. I hope you feel, as I do, eternally grateful to our magnificient military man.

PRESIDENT NIXON'S CUTS IN THE BUDGET

Mr. METCALF. Mr. President, I have gone over President Nixon's revisions of the budget presented by President Johnson. I note that he recommended cuts in appropriations for the agriculture conservation program, soil conservation, the Veterans' Administration, student loans, hospital and library construction, and Federal assistance to schools in federally impacted areas, among others.

These cuts remind me of the story of the group of artists who created the perfect female. They announced that they had taken Brigitte Bardot's nose, Rita Hayworth's mouth, Lana Turner's eyes, and Grace Kelly's chin.

When the report was read, a voice from the audience said: "I would sure like to have what they threw away."

I think many Americans would like to have what Mr. Nixon proposes to throw away.

NECESSITY FOR ALASKA MARINE HIGHWAY SYSTEM

Mr. STEVENS. Mr. President, the 1969 session of the Alaska State Legislature has passed a resolution relating to the necessity for the Alaska marine highway system, and the need for exempting an Alaska ferry from certain provisions of the Jones Act.

I ask unanimous consent that the resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

HOUSE RESOLUTION 29

Resolution requesting an amendment to the Jones Act to exempt the ferry vessel *M. V. Wickersham* from several of its provisions

Be it resolved by the House of Representatives:

Whereas the State of Alaska has established, at its own instigation and expense, a modern marine highway system connecting Alaska and the 48 contiguous states through the Port of Seattle; and

Whereas the Alaska Marine Highway System was devised and is operated to take the place of a highway because of the impossibility of actual road building in Southeastern Alaska; and

Whereas there is a tremendous movement in commerce, trade and tourism between the South 48 states and Alaska; and

Whereas, to better handle all of the traffic, the Alaska Marine Highway System purchased a foreign-bottomed vessel, the *M. V. Wickersham;* and

Whereas, due to the provisions of the Jones Act, the vessel is prohibited from transporting passengers and vehicles between U.S. ports, thus creating a burden on the residents of the state, on the flow of commerce and on the visitors to Alaska; and

Whereas, for the continued effective operation of the Alaska Marine Highway System, it is necessary that the *M. V. Wickersham* be exempted from certain provisions of the Jones Act;

Be it resolved by the House of Representatives of the Sixth Alaska Legislature that the United States Congress is respectfully urged to amend the Jones Act to allow the transportation of vehicles and passengers between United States ports on the *M. V. Wickersham.*

Copies of this Resolution shall be sent to the Honorable Richard M. Nixon, President of the United States; the Honorable John W. McCormack, Speaker of the House of Representatives; the Honorable Richard B. Russell, President Pro Tempore of the Senate; the Honorable Harley O. Staggers, Chairman of the House Interstate and Foreign Commerce Committee; the Honorable Warren G. Magnuson, Chairman of the Senate Commerce Committee; and to the Honorable Ted Stevens and the Honorable Mike Gravel, U.S. Senators, and the Honorable Howard W. Pollock, U.S. Representative, members of the Alaska delegation in Congress.

J. M. KERTTULA,
Speaker of the House.

Attest:

CONSTANCE H. PADDOCK,
Chief Clerk of the House.

U.S. LEGAL OBLIGATION UNDER THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, it is important to understand the basic international obligation the United States will assume under the Genocide Convention. In terms of practical application within the United States, genocide means the commission of such acts as killing members of a specified group and thus destroying a substantial portion of that group, as part of a plan to destroy the entire group within the territory of the United States. The convention does not purport to substitute international responsibility for national responsibility, but does obligate each nation to take steps within its own borders to protect entire human groups in their right to live.

The basic implementing language is contained in article V of the convention. This article states:

The Contracting Parties undertake to enact, in accordance with their respective Constitutions, the necessary legislation to give effect to the provisions of the present Convention and, in particular, to provide effective penalties for persons guilty of genocide or of any of the other acts enumerated in Article III.

A recurring argument against U.S. ratification of the conventions is that they are outside the scope of our treaty-making authority. Of course, the treaty power is expressly delegated to the President and the Senate by article II, section 2, of our Constitution. While the Supreme Court has held in *Geofroy* v. *Riggs* (133 U.S. 258, 267 (1890)) that the treaty power does not authorize what the

Constitution forbids, and again, in 1957, that the President and the Senate together cannot nullify constitutional prohibitions—*Reid* v. *Covert*, 354 U.S. 1, 17—the treaty power has been interpreted by the Court to extend beyond matters on which Congress can legislate.

I should like to answer the legalistic attacks upon these conventions by quoting from a report of the New York State Bar Association's Committee on International Law:

> No provision of any of these Conventions conflicts with express limitations on the United States and the States which are already contained in our Constitution, and particularly in the Bill of Rights.

Mr. President, the legality of this convention is apparent. Let the Senate perceive our moral obligation to mankind and ratify the Human Rights Convention Against genocide.

RECENT ARTICLE BY FORMER SECRETARY OF DEFENSE CLARK CLIFFORD

Mr. COOPER. Mr. President, the former Secretary of Defense, Mr. Clark Clifford, has written for the July issue of Foreign Affairs an important personal view of the situation in Vietnam. Mr. Clifford's role as Secretary of Defense and his growing awareness of the larger issues in our Vietnam policy are analyzed with the apparent purpose of bringing before the public his conclusions about what course this country should follow. His basic thesis is:

> We cannot realistically expect to achieve anything more through our military force, and the time has come to begin to disengage. [That was my final conclusion as I left the Pentagon on January 20, 1969.]

In most respects the intention implicit in Mr. Clifford's proposals to bring about a political solution in Vietnam were voiced by President Nixon in his press conference last night. The views gained by the personal experience of Clark Clifford should be helpful to the President in his most difficult task of bringing this war to a conclusion for which the President is working. President Nixon has taken a first and most important step by the withdrawing of 25,000 of our Armed Forces. I ask unanimous consent that Mr. Clifford's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A VIETNAM REAPPRAISAL: THE PERSONAL HISTORY OF ONE MAN'S VIEW AND HOW IT EVOLVED

(By Clark M. Clifford)

Viet Nam remains unquestionably the transcendent problem that confronts our nation. Though the escalation has ceased, we seem to be no closer to finding our way out of this infinitely complex difficulty. The confidence of the past has become the frustration of the present. Predictions of progress and of military success, made so often by so many, have proved to be illusory as the fighting and the dying continue at a tragic rate. Within our country, the dialogue quickens and the debate sharpens. There is a growing impatience among our people, and questions regarding the war and our participation in it are being asked with increasing vehemence.

Many individuals these past years have sought to make some contribution toward finding the answers that have been so elusive. It is with this hope in mind that I present herewith the case history of one man's attitude toward Viet Nam, and the various stages of thought he experienced as he plodded painfully from one point of view to another, and another, until he arrived at the unshakable opinion he possesses today.

Views on Viet Nam have become increasingly polarized as the war has gone on without visible progress toward the traditional American military triumph. There remain some who insist that we were right to intervene militarily and, because we were right, we have no choice but to press on until the enemy knuckles under and concedes defeat. At the other extreme, and in increasing numbers, there are those who maintain that the present unsatisfactory situation proves that our Viet Nam policy has been wrong from the very beginning. There are even those who suggest that our problems in Viet Nam cast doubt on the entire course of American foreign policy since World War II. Both schools share a common and, as I see it, an erroneous concept. They both would make military victory the ultimate test of the propriety of our participation in the conflict in Southeast Asia.

I find myself unable to agree with either extreme. At the time of our original involvement in Viet Nam, I considered it to be based upon sound and unassailable premises, thoroughly consistent with our self-interest and our responsibilities. There has been no change in the exemplary character of our intentions in Viet Nam. We intervened to help a new and small nation resist subjugation by a neighboring country—a neighboring country, incidentally, which was being assisted by the resources of the world's two largest communist powers.

I see no profit and no purpose in any divisive national debate about whether we were right or wrong initially to become involved in the struggle in Vietnam. Such debate at the present time clouds the issue and obscures the pressing need for a clear and logical evaluation of our present predicament, and how we can extricate ourselves from it.

Only history will be able to tell whether or not our military presence in Southeast Asia was warranted. Certainly the decisions that brought it about were based upon a reasonable reading of the past three decades. We had seen the calamitous consequences of standing aside while totalitarian and expansionist nations moved successively against their weaker neighbors and accumulated a military might which left even the stronger nations uneasy and insecure. We had seen in the period immediately after World War II the seemingly insatiable urge of the Soviet Union to secure satellite states on its western periphery. We had seen in Asia itself the attempt by open invasion to extend communist control into the independent South of the Korean Peninsula. We had reason to feel that the fate averted in Korea through American and United Nations military force would overtake the independent countries of Asia, albeit in some what subtler form, were we to stand aside while the communist North sponsored subversion and terrorism in South Viet Nam.

The transformation that has taken place in my thinking has been brought about, however, by the conclusion that the world situation has changed dramatically, and that American involvement in Viet Nam can and must change with it. Important ingredients of this present situation include the manner in which South Viet Nam and its Asian neighbors have responded to the threat and to our own massive intervention. They also include internal developments both in Asian nations and elsewhere, and the changing relations among world powers.

The decisions which our nation faces today in Viet Nam should not be made on interpretations of the facts as they were perceived four or five or fifteen years ago, even if, through compromise, a consensus could be reached on these interpretations. They must instead be based upon our present view of our obligations as a world power; upon our current concept of our national security; upon our conclusions regarding our commitments as they exist today; upon our fervent desire to contribute to peace throughout the world; and, hopefully, upon our acceptance of the principle of enlightened self-interest.

But these are broad and general guidelines, subject to many constructions and misconstructions. They also have the obvious drawback of being remote and impersonal.

The purpose of this article is to present to the reader the intimate and highly personal experience of one man, in the hope that by so doing there will be a simpler and clearer understanding of where we are in Viet Nam today, and what we must do about it. I shall go back to the beginning and identify, as well as I can, the origins of my consciousness of the problem, the opportunities I had to obtain the facts, and the resulting evolution of what I shall guardedly refer to as my thought processes.

II

Although I had served President Truman in the White House from May 1945 until February 1950, I do not recall ever having had to focus on Southeast Asia. Indochina, as it was then universally known, was regarded by our government as a French problem. President Truman was prompted from time to time by the State Department to approve statements that seemed to me to be little more than reiterations of the long-standing American attitude against "colonialism." If any of those provoked extensive discussion at the White House, I cannot recall. For the next decade, I watched foreign affairs and the growing turbulence of Asia from the sidelines as a private citizen, increasingly concerned but not directly involved.

In the summer of 1960, Senator John Kennedy invited me to act as his transition planner, and later as liaison with the Eisenhower Administration in the interval between the election and January 20, 1961. Among the foreign policy problems that I encountered at once was a deteriorating situation in Southeast Asia. Major-General Wilton B. Persons, whom President Eisenhower had designated to work with me, explained the gravity of the situation as viewed by the outgoing Administration. I suggested to the President-elect that it would be well for him to hear President Eisenhower personally on the subject. He agreed, and accordingly General Persons and I placed Southeast Asia as the first item on the agenda of the final meeting between the outgoing and the incoming Presidents. This meeting, held on the morning of January 19, 1961, in the Cabinet Room, was attended by President Eisenhower, Secretary of State Christian Herter, Secretary of Defense Thomas Gates, Secretary of the Treasury Robert Anderson and General Persons. President-elect Kennedy had his counterparts present: Secretary of State-designate Dean Rusk, Secretary of Defense-designate Robert McNamara, Secretary of the Treasury-designate Douglas Dillon and me.

At President-elect Kennedy's suggestion, I took notes of the important subjects discussed. Most of the time, the discussion centered on Southeast Asia, with emphasis upon Laos. At that particular time, January 1961, Laos had come sharply into focus and appeared to constitute the major danger in the area.

My notes disclose the following comments by the President:

"At this point, President Eisenhower said, with considerable emotion, that Laos was the key to the entire area of Southeast Asia.

"He said that if we permitted Laos to fall, then we would have to write off all the area.

He stated we must not permit a Communist take-over. He reiterated that we should make every effort to persuade member nations of SEATO or the International Control Commission to accept the burden with us to defend the freedom of Laos.

"As he concluded these remarks, President Eisenhower stated it was imperative that Laos be defended. He said that the United States should accept this task with our allies, if we could persuade them and alone if we could not. Headed, 'Our unilateral intervention would be our last desperate hope in the event we were unable to prevail upon the other signatories to join us.'"

That morning's discussion, and the gravity with which President Eisenhower addressed the problem, had a substantial impact on me. He and his advisers were finishing eight years of responsible service to the nation. I had neither facts nor personal experience to challenge their assessment of the situation, even if I had had the inclination to do so. The thrust of the presentation was the great importance to the United States of taking a firm stand in Southeast Asia, and I accepted that judgment.

On an earlier occasion, in speaking of Southeast Asia, President Eisenhower had said that South Vietnam's capture by the Communists would bring their power several hundred miles into a hitherto free region. The freedom of 12 million people would be lost immediately, and that of 150 million in adjacent lands would be seriously endangered. The loss of South Viet Nam would set in motion a crumbling process that could, as it progressed, have grave consequences for us and for freedom.

As I listened to him in the Cabinet Room that January morning, I recalled that it was President Eisenhower who had acquainted the public with the phrase "domino theory" by using it to describe how one country after another could be expected to fall under communist control once the process started in Southeast Asia.

In the spring of 1961, I was appointed to membership on the President's Foreign Intelligence Advisory Board. In this capacity, I received briefings from time to time on affairs in Asia. The information provided the Board supported the assessment of the previous Administration, with which President Kennedy concurred. "Withdrawal in the case of Viet Nam," President Kennedy said in 1961, "and in the case of Thailand could mean the collapse of the whole area." He never wavered. A year later, he said of Viet Nam: "We are not going to withdraw from that effort. In my opinion, for us to withdraw from that effort would mean a collapse not only of South Viet Nam but Southeast Asia. So we are going to stay there." I had no occasion to question the collective opinion of our duly chosen officials.

After President Johnson took office, our involvement became greater, but so did most public and private assessments of the correctness of our course. The Tonkin Gulf resolution was adopted by the Congress in 1964 by a vote of 504 to 2. The language was stern: "The United States is, therefore, prepared, as the President determines, to take all necessary steps, including the use of armed force, to assist any member or protocol state of the Southeast Asia Collective Defense Treaty requesting assistance in defense of its freedom."

When decisions were made in 1965 to increase, in very substantial fashion, the American commitment in Viet Nam. I accepted the judgment that such actions were necessary. That fall, I made a trip to Southeast Asia in my capacity as Chairman of the Foreign Intelligence Advisory Board. The optimism of our military and Vietnamese officials on the conduct of the war, together with the encouragement of our Asian allies, confirmed my belief in the correctness of our policy. In the absence at the time of indications that Hanoi had any interest in peace negotiations, I did not favor the 37-day bombing halt over the Christmas 1965–New Year 1966 holiday season. I felt such a halt could be construed by Hanoi as a sign of weakness on our part.

In 1966, I served as an adviser to President Johnson at the Manila Conference. It was an impressive gathering of the Chiefs of State and Heads of Government of the allied nations; it reassured me that we were on the right road and that our military progress was bringing us closer to the resolution of the conflict.

In the late summer of 1967, President Johnson asked me to go with his Special Assistant, General Maxwell Taylor, to review the situation in South Viet Nam, and then to visit some of our Pacific allies. We were to brief them on the war and to discuss with them the possibility of their increasing their troop commitments. Our briefings in South Viet Nam were extensive and encouraging. There were suggestions that the enemy was being hurt badly and that our bombing and superior firepower were beginning to achieve the expected results.

Our visits to the allied capitals, however, produced results that I had not foreseen. It was strikingly apparent to me that the other troop-contributing countries no longer shared our degree of concern about the war in South Viet Nam. General Taylor and I urged them to increase their participation. In the main, our plea fell on deaf ears.

Thailand, a near neighbor to South Viet Nam, with a population of some 30 million, had assigned only 2,500 men to South Viet Nam, and was in no hurry to allocate more.

The President of the Philippines advised President Johnson that he preferred we not stop there because of possible adverse public reaction. The Philippines, so close and ostensibly so vulnerable if they accepted the domino theory, had sent a hospital corps and an engineer battalion to Viet Nam, but no combat troops. It was also made clear to President Johnson that they had no intention of sending any combat personnel.

South Korea had the only sizable contingent of Asian troops assisting South Viet Nam, but officials argued that a higher level of activity on the part of the North Koreans prevented their increasing their support.

Disappointing though these visits were, I had high hopes for the success of our mission in Australia and New Zealand. I recalled that Australia, then with a much smaller population, had been able to maintain well over 300,000 troops overseas in World War II. They had sent only 7,000 to Vietnam. Surely there was hope here. But Prime Minister Holt, who had been fully briefed, presented a long list of reasons why Australia was already close to its maximum effort.

In New Zealand, we spent the better part of a day conferring with the Prime Minister and his cabinet, while hundreds of students picketed the Parliament Building carrying signs bearing peace slogans. These officials were courteous and sympathetic, as all the others had been, but they made it clear that any appreciable increase was out of the question. New Zealand at one time had 70,000 troops overseas in the various theaters of World War II. They had 500 men in Vietnam. I naturally wondered if this was their evaluation of the respective dangers of the two conflicts.

I returned home puzzled, troubled, concerned. Was it possible that our assessment of the danger to the stability of Southeast Asia and the Western Pacific was exaggerated? Was it possible that those nations which were neighbors of Vietnam had a clearer perception of the tides of world events in 1967 than we? Was it possible that we were continuing to be guided by judgments that might once have had validity but were now obsolete? In short, although I still counted myself a staunch supporter of our policies, there were nagging, not-to-be-suppressed doubts in my mind.

These doubts were dramatized a short time later back in the United States when I attended a dinner at the White House for Prime Minister Lee Kuan Yew of Singapore. His country, which knew the bitterness of defeat and occupation in World War II, had declined to send any men at all to Viet Nam. In answer to my questions as to when he thought troops might be sent, he stated he saw no possibility of that taking place because of the adverse political effect in Singapore.

Accordingly, I welcomed President Johnson's San Antonio speech of September 30, 1967, with far greater enthusiasm than I would have had I not so recently returned from the Pacific. I felt it marked a substantial step in the right direction because it offered an alternative to a military solution of the lengthy and costly conflict. Allied bombing of North Viet Nam had by now assumed a symbolic significance of enormous proportions and the President focused his attention on this. The essence of his proposal was an offer to stop the bombing of North Viet Nam if prompt and productive peace discussions with the other side would ensue. We would assume that the other side would "not take advantage" of the bombing cessation. By this formula, the President made an imaginative move to end the deadlock over the bombing and get negotiations started.

I, of course, shared the universal disappointment that the San Antonio offer evoked no favorable response from Hanoi, but my feelings were more complex than those of mere disappointment. As I listened to the official discussion in Washington, my feelings turned from disappointment to dismay. I found it was being quietly asserted that, in return for a bombing cessation in the North, the North Vietnamese must stop sending men and materiel into South Viet Nam. On the surface, this might have seemed a fair exchange. To me, it was an unfortunate interpretation that—intentionally or not—rendered the San Antonio formula virtually meaningless. The North Vietnamese had more than 100,000 men in the South. It was totally unrealistic to expect them to abandon their men by not replacing casualties, and by failing to provide them with clothing, food, munitions and other supplies. We could never expect them to accept an offer to negotiate on those conditions.

III

In mid-January 1968, President Johnson asked me to serve as Secretary of Defense, succeeding Secretary McNamara, who was leaving to become President of the World Bank. In the confirmation hearing before the Senate Armed Services Committee on January 25, I was asked about the San Antonio formula. The interpretation I gave was in accord with President Johnson's intense desire to start negotiations, and it offered a possibility of acceptance which I was convinced did not exist with the extreme and rigid interpretations that so concerned me. I said that I assumed that the North Vietnamese would "continue to transport the normal amount of goods, munitions and men to South Viet Nam" at the levels that had prevailed prior to our bombing cessation. This was my understanding of what the President meant by "not take advantage."

The varying interpretations of the San Antonio formula raised in my mind the question as to whether all of us had the same objective in view. Some, it seemed, could envision as satisfactory no solution short of the complete military defeat of the enemy. I did not count myself in this group. Although I still accepted as valid the premises of our Viet Nam involvement, I was dissatisfied with the rigidities that so limited our course of action and our alternatives.

I took office on March 1, 1968. The enemy's Tet offensive of late January and early February had been beaten back at great cost. The confidence of the American people had been badly shaken. The ability of the South Vietnamese Government to restore order and morale in the populace, and discipline and esprit in the armed forces, was being questioned. At the President's direction, General Earle G. Wheeler, Chairman of the Joint Chiefs of Staff, had flown to Viet Nam in late February for an on-the-spot conference with General Westmoreland. He had just returned and presented the military's request that over 200,000 troops be prepared for deployment to Viet Nam. These troops would be in addition to the 525,000 previously authorized. I was directed, as my first assignment, to chair a task force named by the President to determine how this new requirement could be met. We were not instructed to assess the need for substantial increases in men and materiel; we were to devise the means by which they could be provided.

My work was cut out. The task force included Secretary Rusk, Secretary Henry Fowler, Under Secretary of State Nicholas Katzenbach, Deputy Secretary of Defense Paul Nitze, General Wheeler, CIA Director Richard Helms, the President's Special Assistant, Walt Rostow, General Maxwell Taylor and other skilled and highly capable officials. All of them had had long and direct experience with Vietnamese problems. I had not. I had attended various meetings in the past several years and I had been to Vietnam three times but it was quickly apparent to me how little one knows if he has been on the periphery of a problem and not truly in it. Until the day-long sessions of early March, I had never had the opportunity of intensive analysis and fact-finding. Now I was thrust into a vigorous, ruthlessly frank assessment of our situation by the men who knew the most about it. Try though we would to stay with the assignment of devising means to meet the military's requests, fundamental questions began to recur over and over.

It is, of course, not possible to recall all the questions that were asked nor all of the answers that were given. Had a transcript of our discussions been made—one was not—it would have run to hundreds of closely printed pages. The documents brought to the table by participants would have totalled, if collected in one place—which they were not—many hundreds more. All that is pertinent to this essay are the impressions I formed, and the conclusions I ultimately reached in those days of exhausting scrutiny. In the colloquial style of those meetings, here are some of the principal issues raised and some of the answers as I understood them:

"Will 200,000 more men do the job?" I found no assurance that they would.

"If not, how many more might be needed—and when?" There was no way of knowing. "What would be involved in committing 200,000 more men to Viet Nam?" A reserve call-up of approximately 280,000, and increased draft call and an extension of tours of duty of most men then in service.

"Can the enemy respond with a buld-up of his own?" He could and he probably would.

"What are the estimated costs of the latest requests?" First calculations were on the order of $2 billion for the remaining four months of that fiscal year, and an increase of $10 to $12 billion for the year beginning July 1, 1968.

"What will be the impact on the economy?" So great that we would face the possibility of credit restrictions, a tax increase and even wage and price controls. The balance of payments would be worsened by at least half a billion dollars a year.

"Can bombing stop the war?" Never by itself. It was inflicting heavy personnel and matériel losses, but bombing by itself would not stop the war.

"Will stepping up the bombing decrease American casualties?" Very little, if at all. Our casualties were due to the intensity of the ground fighting in the South. We had already dropped a heavier tonnage of bombs than in all the threaters of World War II. During 1967, an estimated 90,000 North Vietnamese had infiltrated into South Viet Nam. In the opening weeks of 1968, infiltrators were coming in at three to four times the rate of a year earlier, despite the ferocity and intensity of our campaign of aerial interdiction.

"How long must we keep on sending our men and carrying the main burden of combat?" The South Vietnamese were doing better, but they were not ready yet to replace our troops and we did not know when they would be.

When I asked for a presentation of the military plan for attaining victory in Viet Nam, I was told that there was no plan for victory in the historic American sense. Why not? Because our forces were operating under three major political restrictions: The President had forbidden the invasion of North Viet Nam because this could trigger the mutual assistance pact between North Viet Nam and China; the President had forbidden the mining of the harbor at Haiphong, the principal port through which the North received military supplies, because a Soviet vessel might be sunk; the President had forbidden our forces to pursue the enemy into Laos and Cambodia, for to do so would spread the war, politically and geographically, with no discernible advantage. These and other restrictions which precluded an all-out, no-holds-barred military effort were wisely designed to prevent our being drawn into a larger war. We had no inclination to recommend to the President their cancellation.

"Given these circumstances, how can we win?" We would, I was told, continue to evidence our superiority over the enemy; we would continue to attack in the belief that he would reach the stage where he would find it inadvisable to go on with the war. He could not afford the attrition we were inflicting on him. And we were improving our posture all the time.

I then asked, "What is the best estimate as to how long this course of action will take? Six months? One year? Two years?" There was no agreement on an answer. Not only was there no agreement, I could find no one willing to express any confidence in his guesses. Certainly, none of us was willing to assert that he could see "light at the end of the tunnel" or that American troops would be coming home by the end of the year.

After days of this type of analysis, my concern had greatly deepened. I could not find out when the war was going to end; I could not find out the manner in which it was going to end; I could not find out whether the new requests for men and equipment were going to be enough, or whether it would take more and, if more, when and how much; I could not find out how soon the South Vietnamese forces would be ready to take over. All I had was the statement, given with too little self-assurance to be comforting, that if we persisted for an indeterminate length of time, the enemy would choose not to go on.

And so I asked, "Does anyone see any diminution in the will of the enemy after four years of our having been there, after enormous casualties and after massive destruction from our bombing?"

The answer was that there appeared to be no diminution in the will of the enemy. This reply was doubly impressive, because I was more conscious each day of domestic unrest in our own country. Draft card burnings, marches in the streets, problems on school campuses, bitterness and divisiveness were rampant. Just as disturbing to me were the economic implications of a struggle to be indefinitely continued at ever-increasing cost. The dollar was already in trouble, prices were escalating far too fast and emergency controls on foreign investment imposed on New Year's Day would be only a prelude to more stringent controls, if we were to add another $12 billion to Viet Nam spending—with perhaps still more to follow.

I was also conscious of our obligations and involvement elsewhere in the world. There were certain hopeful signs in our relations with the Soviet Union, but both nations were hampered in moving toward vitally important talks on the limitation of strategic weapons so long as the United States was committed to a military solution in Viet Nam. We could not afford to disregard our interests in the Middle East, South Asia, Africa, Western Europe and elsewhere. Even accepting the validity of our objective in Viet Nam, that objective had to be viewed in the context of our overall national interest, and could not sensibly be pursued at a price so high as to impair our ability to achieve other, and perhaps even more important, foreign policy objectives.

Also, I could not free myself from the continuing nagging doubt left over from that August trip, that if the nations living in the shadow of Viet Nam were not now persuaded by the domino theory, perhaps it was time for us to take another look. Our efforts had given the nations in that area a number of years following independence to organize and build their security. I could see no reason at this time for us to continue to add to our commitment. Finally, there was no assurance that a 40 percent increase in American troops would place us within the next few weeks, months or even years in any substantially better military position than we were in then. All that could be predicted accurately was that more troops would raise the level of combat and automatically raise the level of casualties on both sides.

And so, after these exhausting days, I was convinced that the military course we were pursuing was not only endless, but hopeless. A further substantial increase in American forces could only increase the devastation and the Americanization of the war, and thus leave us even further from our goal of a peace that would permit the people of South Viet Nam to fashion their own political and economic institutions. Henceforth, I was also convinced, our primary goal should be to level off our involvement, and to work toward gradual disengagement.

IV

To reach a conclusion and to implement it are not the same, especially when one does not have the ultimate power of decision. It now became my purpose to emphasize to my colleagues and to the President, that the United States had entered Viet Nam with a limited aim—to prevent its subjugation by the North and to enable the people of South Viet Nam to determine their own future. I also argued that we had largely accomplished that objective. Nothing required us to remain until the North had been ejected from the South, and the Saigon government had been established in complete military control of all South Viet Nam. An increase of over 200,000 in troop strength would mean that American forces would be twice the size of the regular South Vietnamese Army at that time. Our goal of building a stronger South Vietnamese Government, and an effective military force capable of ultimately taking over from us, would be frustrated rather than furthered. The more we continue to do in South Viet Nam, the less likely the South Vietnamese were to shoulder their own burden.

The debate continued at the White House for days. President Johnson encouraged me to report my findings and my views with total candor, but he was equally insistent on hearing the views of others. Finally, the

President, in the closing hours of March, made his decisions and reported them to the people on the evening of the 31st. Three related directly to the month's review of the war. First, the President announced he was establishing a ceiling of 549,500 in the American commitment to Viet Nam; the only new troops going out would be support troops previously promised. Second, we would speed up our aid to the South Vietnamese armed forces. We would equip and train them to take over major combat responsibilities from us on a much accelerated schedule. Third, speaking to Hanoi, the President stated he was greatly restricting American Bombing of the North as an invitation and an inducement to begin peace talks. We would no longer bomb north of the Twentieth Parallel. By this act of unilateral restraint, nearly 80 percent of the territory of North Viet Nam would no longer be subjected to our bombing.

I had taken office at the beginning of the month with one overriding immediate assignment—responding to the military request to strengthen our forces in Viet Nam so that we might prosecute the war more forcefully. Now my colleagues and I had two different and longer-range tasks—developing a plan for shifting the burden to the South Vietnamese as rapidly as they could be made ready, and supporting our government's diplomatic efforts to engage in peace talks.

To assess the range of progress in the first task, I went to Viet Nam in July. I was heartened by the excellent spirit and the condition of our forces, but I found distressingly little evidence that the other troop-contributing countries, or the South Vietnamese, were straining to relieve us of our burdens. Although there had been nominal increases in troop contributions from Australia and Thailand since the preceding summer, the Philippines had actually withdrawn several hundred men. The troop-contributing countries were bearing no more of the combat burden; their casualty rates were actually falling.

As for South Vietnamese officials, in discussion after discussion, I found them professing unawareness of shortcomings in such matters as troop training junior officer strength and rate of desertions. They were, I felt, too complacent when the facts were laid before them. I asked Vice President Ky, for example, about the gross desertion rate of South Vietnamese combat personnel that was running at 30 percent a year. He responded that it was so large, in part, because their men were not paid enough. I asked what his government intended to do. He suggested that we could cut back our bombing, give the money thus saved to the Saigon government, and it would be used for troop pay. He was not jesting; his suggestion was a serious one. I returned home oppressed by the pervasive Americanization of the war: we were still giving the military instructions, still doing most of the fighting, still providing all the materiel, still paying most of the bills. Worst of all, I concluded that the South Vietnamese leaders seemed content to have it that way.

The North had responded to the President's speech of March 31 and meetings had begun in Paris in May. It was, however, a euphemism to call them peace talks. In midsummer, substantive discussions had not yet begun. Our negotiators, the able and experienced Ambassador Averill Harriman and his talented associate, Cyrus Vance, were insisting that the Saigon government be a participant in the talks. Hanoi rejected this. President Johnson, rightly and understandably, refused to order a total bambing halt of the North until Hanoi would accept reciprocal restraints. Hanoi refused. With this unsatisfactory deadlock, the summer passed in Paris.

In Viet Nam, American casualty lists were tragically long, week after week. The enemy was not winning but, I felt, neither were we. There were many other areas in the world where our influence, moral force and economic contributions were sorely in demand and were limited because of our preoccupation with out involvement in Southeast Asia.

I returned from a NATO meeting in Bonn on Sunday evening, October 13, to find a summons to a White House meeting the following morning. There had been movement in Paris. There were no formal agreements, but certain "understandings" had been reached by our negotiating team and the North Vietnamese. At last the North had accepted the participation of the South in peace talks. We would stop all bombing of North Viet Nam. Substantive talks were to start promptly. We had made it clear to Hanoi that we could not continue such talks if there were indiscriminate shelling of major cities in the South, or if the demilitarized zone were violated so as to place our troops in jeopardy.

The President outlined the situation to his advisers. We spent a day of hard and full review. The Joint Chiefs of Staff were unanimous in stating that the bombing halt under these circumstances was acceptable. The State Department was authorized to report to Saigon that we had won a seat at the conference table for the Saigon government and to request the earliest possible presence of their delegation in Paris. I felt a sense of relief and hope; we were started down the road to peace.

These feelings were short-lived. The next three weeks were almost as agonizing to me as March had been. The cables from Saigon were stunning. The South Vietnamese Government, suddenly and unexpectedly, was not willing to go to Paris. First one reason, then another, then still another were cabled to Washington. As fast as one Saigon obstacle was overcome, another took its place. Incredulity turned to dismay. I felt that the President and the United States were being badly used. Even worse, I felt that Saigon was attempting to exert a veto power over our agreement to engage in peace negotiations. I admired greatly the President's ability to be patient under the most exasperating circumstances. Each day ran the risk that the North might change its mind, and that months of diligent effort at Paris would be in vain; each day saw a new effort on his part to meet the latest Saigon objection.

To satisfy himself that the bombing halt would neither jeopardize our own forces nor those of our allies, the President ordered General Creighton W. Abrams back from South Viet Nam for a personal report. Finally, on October 31, President Johnson anounced that the bombing of North Viet Nam would cease, peace talks would begin promptly and Saigon was assured of a place at the conference table. However, it took weeks to get the Saigon government to Paris, and still additional weeks to get their agreement on seating arrangements.

By the time the various difficulties had been resolved, certain clear and unequivocal opinions regarding the attitude and posture of the Saigon government had crystalized in my mind. These opinions had been forming since my trip to South Viet Nam the preceding July.

The goal of the Saigon government and the goal of the United States were no longer one and the same, if indeed they ever had been. They were not in total conflict but they were clearly not identical. We had largely accomplished the objective for which we had entered the struggle. There was no longer any question about the desire of the American people to bring the Viet Nam adventure to a close.

As Ambassador Harriman observed, it is dangerous to let your aims be escalated in the middle of a war. Keep your objectives in mind, he advised, and as soon as they are attained, call a halt. The winning of the loyalty of villagers to the central government in Saigon, the form of a postwar government, who its leaders should be and how they are to be selected—these were clearly not among our original war objectives. But these were the precise areas of our differences with the Saigon government.

As Saigon authorities saw it, the longer the war went on, with the large-scale American involvement, the more stable was their régime, and the fewer concessions they would have to make to other political groupings. If the United States were to continue its military efforts for another two or three years, perhaps the North Vietnamese and the Viet Cong would be so decimated that no concessions would be needed at all. In the meantime, vast amounts of American wealth were being poured into the South Vietnamese economy. In short, grim and distasteful though it might be, I concluded during the bleak winter weeks that Saigon was in no hurry for the fighting to end and that the Saigon régime did not want us to reach an early settlement of military issues with Hanoi.

The fact is that the creation of strong political, social and economic institutions is a job that the Vietnamese must do for themselves. We cannot do it for them, nor can they do it while our presence hangs over them so massively. President Thieu, Vice President Ky, Prime Minister Huong and those who may follow them have the task of welding viable political institutions from the 100 or more splinter groups that call themselves political parties. It is up to us to let them get on with the job. Nothing we might do could be so beneficial or could so add to the political maturity of South Viet Nam as to begin to withdraw our combat troops. Moreover, in my opinion, we cannot realistically expect to achieve anything more through our military force, and the time has come to begin to disengage. That was my final conclusion as I left the Pentagon on January 20, 1969.

V

It remains my firm opinion today. It is based not only on my personal experiences, but on the many significant changes that have occurred in the world situation in the last four years.

In 1965, the forces supported by North Viet-Nam were on the verge of a military takeover of South Viet Nam. Only by sending large numbers of American troops was it possible to prevent this from happening. The South Vietnamese were militarily weak and politically demoralized. They could not, at that time, be expected to preserve for themselves the right to determine their own future. Communist China had recently proclaimed its intention to implement the doctrine of "wars of national liberation." Khrushchev's fall from power the preceding October and Chou En-lai's visit to Moscow in November 1964 posed the dire possibility of the two communist giants working together to spread disruption throughout the underdeveloped nations of the world. Indonesia, under Sukarno, presented a posture of implacable hostility toward Malaysia, and was a destabilizing element in the entire Pacific picture. Malaysia itself, as well as Thailand and Singapore, needed time for their governmental institutions to mature. Apparent American indifference to developments in Asia might, at that time, have had a disastrous impact on the independent countries of that area.

During the past four years, the situation has altered dramatically. The armed forces of South Viet Nam have increased in size and proficiency. The political situation there has become more stable, and the governmental institutions more representative. Elsewhere in Asia, conditions of greater security exist. The bloody defeat of the attempted communist coup in Indonesia re-

moved Sukarno from power and changed the confrontation with Malaysia to cooperation between the two countries. The governments of Thailand and Singapore have made good use of these four years to increase their popular support. Australia and New Zealand have moved toward closer regional defense ties, while Japan, the Republic of Korea and Taiwan have exhibited a rate of economic growth and an improvement in living standards that discredit the teachings of Chairman Mao.

Of at least equal significance is the fact that, since 1965, relations between Russia and China have steadily worsened. The schism between these two powers is one of the watershed events of our time. Ironically, their joint support of Hanoi has contributed to the acrimony between them. It has brought into focus their competition for leadership in the communist camp. Conflicting positions on the desirability of the peace negotiations in Paris have provided a further divisive factor. In an analogous development, increased Soviet aid to North Korea has made Pyongyang less dependent on China. The Cultural Revolution and the depredations of the Red Guards have created in China a situation of internal unrest that presently preoccupies China's military forces. The recent border clashes on the Ussuri River further decrease the likelihood that China will, in the near future, be able to devote its attention and resources to the export of revolution.

These considerations are augmented by another. It seems clear that the necessity to devote more of our minds and our means to our pressing domestic problems requires that we set a chronological limit on our Vietnamese involvement.

A year ago, we placed a numerical limit on this involvement, and did so without lessening the effectiveness of the total military effort. There will undeniably, be, many problems inherent in the replacement of American combat forces with South Vietnamese forces. But whatever these problems, they must be faced. There is no way to achieve our goal of creating the conditions that will allow the South Vietnamese to determine their own future unless we begin, and begin promptly, to turn over to them the major responsibility for their own defense. This ability to defend themselves can never be developed so long as we continue to bear the brunt of the battle. Sooner or later, the test must be whether the South Vietnamese will serve their own country sufficiently well to guarantee its national survival. In my view, this test must be made sooner, rather than later.

A first step would be to inform the South Vietnamese Government that we will withdraw about 100,000 troops before the end of this year. We should also make it clear that this is not an isolated action, but the beginning of a process under which all U.S. ground combat forces will have been wtihdrawn from Viet Nam by the end of 1970. The same information should, of course, be provided to the other countries who are contributing forces for the defense of South Viet Nam.

Strenuous political and military objections to this decision must be anticipated. Arguments will be made that such a withdrawal will cause the collapse of the Saigon government and jeopardize the security of our own and allied troops. Identical arguments, however, were urged against the decisions to restrict the bombing on March 31 of last year and to stop it completely on October 31. They have proven to be unfounded. There is, in fact, no magic and no specific military rationale for the number of American troops presently in South Viet Nam. The current figure represents only the level at which the escalator stopped.

It should also be noted that our military commanders have stated flatly since last summer that no additional American troops are needed. During these months the number of South Vietnamese under arms in the Government cause has increased substantially and we have received steady reports of their improved performance. Gradual withdrawal of American combat troops thus not only would be consistent with continued overall military strength, but also would serve to substantiate the claims of the growing combat effectiveness of the South Vietnamese forces.

Concurrently with the decision to begin withdrawal, orders should be issued to our military commanders to discontinue efforts to apply maximum military pressure on the enemy and to seek instead to reduce the level of combat. The public statements of our officials show that there has yet been no change in our policy of maximum military effort. The result has been a continuation of the high level of American casualties, without any discernible impact on the peace negotiations in Paris.

While our combat troops are being withdrawn, we would continue to provide the armed forces of the Saigon government with logistic support and with our air resources. As the process goes on, we can appraise both friendly and enemy reactions. The pattern of our eventual withdrawal of noncombat troops and personnel engaged in air lift and air support can be determined on the basis of political and military developments. So long as we retain our air resources in South Viet Nam, with total air superiority, I do not believe that the lessening in the military pressure exerted by the ground forces would permit the enemy to make any significant gains. There is, moreover, the possibility of reciprocal reduction in North Vietnamese combat activity.

Our decision progressively to turn over the combat burden to the armed forces of South Viet Nam would confront the North Vietnamese leaders with a painful dilemma. Word that the Americans were beginning to withdraw might at first lead them to claims of victory. But even these initial claims could be expected to be tinged with apprehension. There has, in my view, long been considerable evidence that Hanoi fears the possibility that those whom they characterize as "puppet forces" may, with continued but gradually reduced American support, prove able to stand off the communist forces.

As American combat forces are withdrawn, Hanoi would be faced with the prospect of a prolonged and substantial presence of American air and logistics personnel in support of South Viet Nam's combat troops, which would be constantly improving in efficiency. Hanoi's only alternative would be to arrange tacitly or explicitly, for a mutual withdrawal of all external forces. In either eventuality, the resulting balance of forces should avert any danger of a blood bath which some fear might occur in the aftermath of our withdrawal.

Once our withdrawal of combat troops commences, the Saigon government would recognize, probably for the first time, that American objectives do not demand the perpetuation in power of any one group of South Vietnamese. So long as we appear prepared to remain indefinitely, there is no pressure on Saigon to dilute the control of those presently in positions of power by making room for individuals representative of other nationalist elements in South Vietnamese society.

Accordingly, I anticipate no adverse impact on the Paris negotiations from the announcement and implementation of a program of American withdrawal. Instead, I would foresee the creation of circumstances under which true bargaining may proceed among the Vietnamese present in Paris. Unquestionably, the North Vietnamese and the National Liberation Front would do so in the hope that any political settlement would move them toward eventual domination in South Viet Nam. But their hopes and expectations necessarily will yield to the political realities, and these political realities are in the final analysis, both beyond our control and beyond our ken. Moreover, they are basically none of our business. The one million South Vietnamese in the various components of the armed forces, with American logistics, air lift and air support, should be able, if they have the will, to prevent the imposition by force of a Hanoi-controlled régime. If they lack a sense or a sufficiency of national purpose, we can never force it on them.

In the long run, the security of the Pacific region will depend upon the ability of the countries there to meet the legitimate growing demands of their own people. No military strength we can bring to bear can give them internal stability or popular acceptance. In Southeast Asia, and elsewhere in the less developed regions of the world, our ability to understand and to control the basic forces that are at play is a very limited one. We can advise, we can urge, we can furnish economic aid. But American military power cannot build nations, any more than it can solve the social and economic problems that face us here at home.

This, then, is the case history of the evolution of one individual's thinking regarding Viet Nam. Throughout this entire period it has been difficult to cling closely to reality because of the constant recurrence of optimistic predictions that our task was nearly over, and that better times were just around the corner, or just over the next hill.

We cannot afford to lose sight of the fact that this is a limited war, for limited aims and employing limited power. The forces we now have deployed and the human and material costs we are now incurring have become, in my opinion, out of all proportion to our purpose. The present scale of military effort can bring us no closer to meaningful victory. It can only continue to devastate the countryside and to prolong the suffering of the Vietnamese people of every political persuasion.

Unless we have the imagination and the courage to adopt a different course, I am convinced that we will be in no better, and no different, a position a year from now than we are today.

At current casualty rates, 10,000 more American boys will have lost their lives.

We should reduce American casualties by reducing American combat forces. We should do so in accordance with a definite schedule and with a specified end point.

Let us start to bring our men home—and let us start *now*.

GUN REGISTRATION: AN ERRONEOUS PREMISE

Mr. HANSEN. Mr. President, several proposals have been introduced this year which would require either Federal or State registration and licensing of firearms, or both.

The people of Wyoming and other Western States do not feel that registration of firearms is a matter for Federal legislation. In fact, the people of many States share this sentiment. They feel, and I feel, that in this matter, the State legislature can best decide the gun control needs of the people who live in their States.

Ownership of firearms by citizens is an area in which we must recognize that the States have completely different requirements in the different areas of the country.

In Wyoming, for example, at least one firearm of some sort is kept in almost every home. Many of these weapons have

been handed down from generation to generation. At the same time, the knowledge of how to use these firearms safely and for lawful purposes has been handed down from generation to generation. Many families are able to keep meat on their tables for their children through the legal use of these firearms during the hunting seasons when Wyoming's abundant game is harvested.

Firearms also are part of the money economy in Wyoming. Many of our people are professional guides and outfitters, who serve sportsmen from throughout the Nation who visit our State for sport and relaxation.

And while it may seem strange to some from the highly developed States, predators remain a problem in Wyoming. Firearms are necessary for the protection of livestock in our State.

The feeling in our State, and I think in a big majority of the States, is that if a State has a need for stringent firearm control measures and for gun registration, let the State legislature of that particular State decide, not Congress. If the State that a Member of Congress represents has not found it in that State's best interest to enact a firearm registration law, it seems that Member should not ask Congress to inflict such a law on his own constituency, and all the other States as well.

But the main point against the various moves to register guns is made in contained an editorial published in the Washington Evening Star of June 19, 1969, concerning the gun control law in the District of Columbia. The editorial points to estimates that less than a third of the estimated number of weapons in this city have been registered. It notes that the people of Washington readily comply with a "reasonable law," but have not complied with this gun law.

A key sentence in the editorial is this:

The basic failure, however, results from an erroneous premise that this regulation might prove to be of productive help in keeping firearms out of the hands of criminals.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THIS IS GUN CONTROL?

At the last report the formal deadline for registering firearms under the District's new gun-control law has passed with less than a third of the estimated number of weapons in the city signed up.

So what does the city government intend to do now? Launch a house-to-house search, perhaps, for the missing items? The silence from the District Building on the subject is quite deafening.

No doubt the exceedingly cumbersome and time-consuming requirements of the new ordinance contributed in large degree to the poor statistical performance, for the Washington public is not this contemptuous of any reasonable law. The basic failure, however, results from an erroneous premise that this regulation might prove to be of productive help in keeping firearms out of the hands of criminals.

Obviously no such ineffective law can be left unattended, and we await with interest the inventiveness of the city government as to what comes next. As to crime deterrence, however, the City Council should, as a first step, shift its focus on guns from registration to the support of some means of imposing really strong penalties upon anyone who actually uses a gun in the commission of a crime.

HOUSE TASK FORCE PROVIDES REPORT FOR CAREFUL CONSIDERATION OF CONGRESS CONCERNED WITH CAMPUS DIORDERS—SENATOR RANDOLPH STRESSES NEED TO LOWER VOTING AGE TO BRING YOUTH INTO ACTIVE POLITICAL PROCESS

Mr. RANDOLPH. Mr. President, news media yesterday carried extensive reports on the findings of a House task force which has conducted a study and survey of the situation on our Nation's campuses. The 22-Member group, headed by Representative WILLIAM BROCK III, of Tennessee, has performed an extremely valuable service for our Government and the people of this country. I commend them.

Mr. President, this study group submitted to the President a number of affirmative recommendations to resolve our student crisis. They also have said what not to do in calling for "no repressive legislation" which will label and punish the overwhelming majority in the effort to deal with the few perpetrators of violence and unlawful acts. I stress my conviction that the lawbreaker, off or on the campus, must be punished. Violence must not be condoned.

Their warning is clear on the deficiency of dialog with our young people; on the complexity and the variation of campus problems; on the depth of student unrest; on the urgency to act constructively; and more importantly, on the need to recognize the "candor, sincerity, and basic decency of the vast majority of students" who have not lost faith in our system, and wish to contribute to making it work even better.

The danger we face if we fail to recognize that the vast majority of students harbor genuine concerns is stressed in the conclusion of the report:

It is clear that if violence on our campuses does not end, and if the reaction to it is on the one extreme too lax, or on the other extreme too harsh and indiscriminate, the vast moderate student majority may be forced into the arms of the revolutionaries, and those few who seek to destroy the fabric of higher education will have succeeded.

This is a frightening prospect.

Let there be no mistake. Our colleagues in the House have not rationalized violence with high sounding philosophical arguments. They recognize that there are persons—although few in number—who seek to destroy our educational institutions. But they also have forcefully presented a realistic appraisal of the attitude and motivation of the larger segment of our student population. Implicit in their comments is the answer to the question of why our moderate students have not risen in arms to stop disorders. I again quote from the report:

There is on the campus today a new awareness of potential student power and the emergence of a large group, probably the vast majority of student leaders and a substantial number of intelligent, concerned and perplexed young people, which has genuine concern over what it feels is the difference between the promise and performance of America.

While these students have no monolithic leadership or single set of goals, they are fairly united in questioning many of the values of our system. The revolutionaries on campus who desire to destroy our system are few in number. The vast majority of students are not poised on the edge of revolution and have not lost faith in our system.

However, many students can be radicalized when violence or confrontation on campus occurs. Also, disillusionment in our system by students can grow, even without violence, if we place one label on all students and fail to understand that they raise many areas of legitimate concern.

Mr. President, there will be understandable disagreement in this body with my comments on the findings of the House Members. Their statements—especially their emphasis—will be challenged. This is a part of our democratic process. But evaluation of any study or report must be formulated with a view toward the source. In this regard, the comments of our colleagues are particularly significant. The group was not composed of ivory tower theorists. They are not members of a commission who conduct their study, make their report, hold their news conference, and then return to primary occupations which might be a world away from the issue. No, Mr. President, the men who made this report are politicians, whose futures in great part could be influenced by the tone and substance of their statements. They have signed a document which they must justify in response to their constituents who are deeply perplexed, troubled, and in many cases outraged by the happenings on our campuses. Often overreaction can do damage. Because of this danger, I believe the report of the House task force takes on added significance and meaning.

The findings and recommendations indeed merit careful consideration and study by the President and his advisers and by the Congress. Although indirect solutions compose a part of the report, there are realistic proposals which the executive branch and the Congress—in concert—can move to implement. I particularly call attention to the proposal that the voting age be lowered to 18.

The report strongly recommends lowering the voting age to permit "active involvement in the political process which can constructively focus youthful idealism on the most effective means of change in a free society."

To this I say, "Amen." For years in the House and in the Senate, I have advocated lowering the voting age to 18. I have introduced several bills for a constitutional amendment approach to this goal of youth voting. I am now encouraged by 34 Senators cosponsoring my Senate Joint Resolution 7.

Today, I believe this is a crucial issue. And it is one of the most important ways through which our society can express a belief in our young people. Extending the franchise to those between the ages of 18 and 21 would constitute a meaningful and constructive step in allowing the majority of our college students—described in the report as possessing

candor, sincerity and basic decency—to participate in our system.

Mr. President, this is something on which the Congress can initiate action immediately. The mechanism is there. And I place the burden on the Congress because the approval of a constitutional amendment is the only action which will give impetus to lower the voting age. As I have stated time and again, if we wait for the States to act individually, many years will pass before our 18- to 21-year-olds will be voting. But a constitutional amendment will place the issue foursquare before the States. And it is my belief it would be ratified.

Even though it takes time to approve a constitutional amendment, the submission of such a proposal to the States by the Congress will be a vital start toward bringing our young people into full partnership in our society. It will be an appropriate forerunner of other measures which recognize the new awareness, idealism, and talents of our young citizens.

It is particularly critical that we afford our young people the opportunity to seek answers, to express their views, and to use their influence in the development of our national policies. Young persons want to do this—and they want to do it in an orderly and effective manner. That youth can participate—and participate in a constructive manner—was evidenced in the political campaigns of 1968. Those campaigns are over. Now it is not sufficient for us to look back and praise young people for their persevering efforts. Rather, our responsibility is to renew the efforts to bring youth into the discussion, formulation, and implementation of our policies. This is a worthy objective. Its accomplishment will benefit our Republic.

My support for this proposal is basically twofold. It is my belief that those in the age group of 18 to 21 are capable of discharging the right to vote in an intelligent and conscientious manner. And a democracy thrives when its base is broadened and additional persons are brought into the democratic process. Full participation is the ideal for which we strive. We accomplished this in giving women the right to vote, in eliminating the poll tax, in passing the Voting Rights Act, and in other measures. Now is the time to further extend our base by affording young people the opportunity for full participation.

Seven percent of our population is in the age group of 18 to 21. These approximately 13 million persons are actually adults in our society. They are in the education process; they have jobs. And for the most part, they can marry, buy insurance, sign wills, and are treated as adults in the courts of law and are brought into the Armed Forces to defend their country. Additionally, our young persons participate in the Peace Corps, in VISTA, and the community action and charitable programs. I feel the youth of today are better educated and more aware. And, more importantly, I think our young people possess a greater social conscience; are more perplexed by the injustices which exist in the world; and are more anxious to rectify these ills.

The future, in large part, belongs to youth. It is imperative that they have the opportunity to help set the course of that future.

My estimate of young people is high. It continues to grow. I feel that our youth is equal to the challenges of today and tomorrow. They will aid in bringing into being a better world than those of past generations have been able to create.

Mr. President, I realize that voting age lowering is only one facet of the report by the House Members. But I believe so strongly in this proposition that I have commented at length. It is gratifying that our colleagues determined that the recommendation for a lower voting age should be one of their key recommendations.

ABM SUPPORTED WITHOUT RESERVATION

Mr. HANSEN. Mr. President, a great verbal battle has raged in the Senate for many weeks over the merits of the anti-ballistic-missile system proposal.

While some observers have called this a battle for headlines, and because of numerous publications on the issue have also termed the controversy "the battle of books," I am aware of the deep-rooted misgivings some Senators have about the wisdom of the Safeguard proposal.

Nationwide polls have indicated that the American people by a substantial majority favor the deployment of the Safeguard proposal in the interest of the national security, and a vast majority do have an opinion on whether an ABM system is in the best interest of the security of the people.

It is time we heard from the experts whose whole concern is the protection of life and property in these United States. One such organization is the Civil Defense Association of Wyoming. The Wyoming Association on May 15, 1969, approved unanimously a resolution supporting the Safeguard proposal "without reservation." From personal knowledge, I categorically assert that the motives of this association cannot be impugned.

I ask unanimous consent to have printed in the RECORD the complete text of the resolution adopted by the Civil Defense Association of Wyoming.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION—APPROVED UNANIMOUSLY BY THE CIVIL DEFENSE ASSOCIATION OF WYOMING, MAY 15, 1969

Whereas Civil Defense is concerned with the protection of life and property under any condition; and:

Whereas the National posture for the protection of all citizens should be the concern of all elected officials at all levels of government, and:

Whereas the proposed Anti-Ballistic Missile System would provide the best known protection from a nuclear threat of an aggressor nation, and:

Whereas the National Fallout Shelter Program is the primary and only element of Civil Defense planning and programming for the protection of the population from nuclear accident or attack, and:

Whereas time is the most limited commodity during periods of international tension:

Now therefore be it resolved that the Civil Defense Association of Wyoming supports without reservation President Richard M. Nixon's proposed Anti-Ballistic Missile System, and encourages the Congressional delegation from the State of Wyoming and all other states in Region Six, Office of Civil Defense, to assist in bringing this protection to the population of the United States at the earliest possible date, and:

Be it further resolved that this resolution be forwarded to the United States Civil Defense Council through its Region Six representatives meeting at Joplin, Missouri, on 17, 18, and 19 June 1969, begging that body to endorse this action in support of President Nixon and his proposed national defense effort.

FACT BOOK ON ANTIBALLISTIC MISSILE

Mr. MONDALE. Mr. President, as the vote on the Safeguard ABM system draws near, it becomes increasingly important for each Senator to inform himself fully on this critical issue.

In recent months we have received a deluge of material on both sides of the question. Unfortunately, much of this material tends to be colored by the views of the author, whether it be a prominent scientist opposing deployment or the Department of Defense trying to justify it.

For a fair, lucid, and factual presentation of the basic facts about the Safeguard system and an excellent summary of the best arguments for and against deployment, I commend to the attention of Senators, particularly those who have not yet made up their minds on the issue, the Democratic study group fact book entitled "ABM." The Democratic study group booklet provides all the basic information one requires to come to an informed judgment on deploying the Safeguard systems, in addition to a bibliography for further study of material available from the CONGRESSIONAL RECORD. It has been praised by Representatives who support and those who oppose the Safeguard system. I have found the booklet most useful.

Mr. President, I ask unanimous consent that the Democratic study group fact book entitled "ABM," prepared by the Democratic study group in the House of Representatives, be printed in the RECORD.

There being no objection, the study was ordered to be printed in the RECORD, as follows:

ABM—DEMOCRATIC STUDY GROUP, U.S. HOUSE OF REPRESENTATIVES, 1969

I. INTRODUCTION

This DSG Fact Book is designed to provide Members of Congress with a basic understanding of the proposed SAFEGUARD ABM system, a history of anti-ballistic missile development and the ABM debate, and a fair and factual exposition of the arguments for and against SAFEGUARD deployment.

The controversy over the proposal to deploy an anti-ballistic missile system is certain to rank as one of the key issues of the 91st Congress. In addition to the immediate defense and foreign policy considerations involved, the ABM debate has other ramifications as well. It has helped stimulate a critical examination of national commitments and the size of the defense establishment needed to fulfill these commitments, and it is expected to produce closer Congressional scrutiny of future defense proposals.

SAFEGUARD authorization bills are currently being considered by both the House and Senate Armed Services Committees. The first vote on the issue, however, is expected to come in the Senate. If authorization is approved, funds for SAFEGUARD will be included in both the Department of Defense (DOD) and Atomic Energy Commission (AEC) appropriation bills later in the year.

II. HOW SAFEGUARD WORKS AND WHAT IT WILL COST

An anti-ballistic missile (ABM) is a missile armed with a warhead designed to destroy an enemy incoming intercontinental ballistic missile (ICBM) warhead. In order to accomplish its goal an ABM system such as Safeguard depends on the perfect working of three subsystems—radars, computers, and missiles—plus interconnecting communications and controls.

Radars

Safeguard uses two kinds of radar. A long range Perimeter Asquisition Radar (PAR) picks up the incoming ICBM at a range of 1,000 to 2,000 miles (8 to 15 minutes flight time) from its target and fixes its trajectory. As the ICBM closes, a second radar, the Missile Site Radar (MSR) takes over and guides the ABM to the point of intercept. The MSR can handle many ICBMs and ABMs at the same time.

Computers

The computer system involved in Safeguard will be the largest and most complex ever built—the equivalent of 100 large commercial computers. Its function is to interpret radar signals, identify potential targets, track incoming objects, predict trajectories, distinguish between warheads and decoys, eliminate false targets, reject signals from earlier nuclear explosions, correct for blackout effects, program, arm, and fire the ABMs—and correct itself—all in ten minutes.

Missiles

Two kinds of missiles are used in Safeguard. The *Spartan* has a range of about 400 miles and employs a warhead in the megaton range (1 megaton equals 1 million tons of TNT). *Spartan* intercepts its target above the atmosphere and destroys the incoming missile by radiation from the explosion of its warhead.

The second missile, *Sprint*, has a range of about 25 miles. It has an extremely rapid rate of acceleration and is designed to take care of those enemy missiles that get past the *Spartans*. Because it intercepts in the atmosphere, it has a much smaller warhead of a few kilotons (1 kiloton equals 1 thousand tons of TNT) and must therefore come much closer to the incoming missile. *Sprint* does not have to deal with decoys and other penetration aids as they will have burnt up or fallen behind the incoming missile as it enters the atmosphere.

A typical site

An ABM installation in the Safeguard system might have a PAR but would definitely have an MSR, computer installations, 35 or so *Spartans*, slightly more *Sprints* (many more if it were in the Minuteman fields), command and control structures, and personnel barracks. The site itself, particularly the MSR, would be almost as vulnerable as a city or a bomber base and far more vulnerable than a missile silo.

Sentinel and Safeguard Compared

While SAFEGUARD and SENTINEL consist of the same components and are essentially similar in deployment, the following differences should be noted:

1. Most of the SENTINEL installations were to have been near major cities. The SAFEGUARD installations have been moved from the vicinity of cities (except for the National Command Authority at Washington, D.C.), and reduced in number from 15 to 12. The same geographic coverage is given, except that the area around New Orleans, La., is left unprotected. The seven installations not located in the Minuteman fields (Malstrom AFB-Montana, Grand Forks AFB-North Dakota, Warren AFB-Wyoming, Whiteman AFB-Missouri) and Washington, D.C., are to be located at or near SAC bases to protect the manned bomber deterrent.

2. SAFEGUARD would have two additional PARs, located in Southern California and Georgia or Florida, to give the system the capability to respond to attack from any direction. 15 faces have been added to the PARs and the MSRs to permit a 360 degree scan.

3. While SENTINEL had *Sprints* only at the PARs, SAFEGUARD will have *Sprints* at all sites. The sites in the Minuteman fields will have considerably more *Sprints* than the other sites.

4. Work was to have begun on all of the sites in the SENTINEL system. A deployment timetable is attached to the SAFEGUARD proposal; funds requested in Secretary Laird's FY 1970 DOD budget revision are to be used to begin work on the Malstrom and Grand Forks sites and procure land for the other ten installations.

Status of Safeguard components

The PAR is in the design stage; performance will be simulated by a radar operating at the Kwajalein test site and the first PAR built directly at an operational site. The first MSR has completed factory tests and is now being tested at Kwajalein. *Spartan* is in the flight test stage. *Sprint* is in the test firing stage. The computer system is partially operational at the contractor's plant, but the "time shared" approach necessary to govern the complete computer system is still being developed by data-processing theorists. The first two SAFEGUARD sites are expected to be operational by 1973.

Cost

The cost of the complete SENTINEL system was estimated by DOD at $5.5 BILLION. The cost of SAFEGUARD is estimated at between $6.6 and $7 BILLION. However, DOD estimates do not include $1.2 BILLION for Spartan and Sprint nuclear warheads, which appears in the AEC request. Thus SAFEGUARD would cost between $7.8 and $8.2 BILLION. DOD anticipates modifications in the system as it is deployed to take advantage of technological developments and to offset adversary improvements in offensive weaponry which would lead to additional funding requests.

The use of FY 1970 ABM monies is compared as follows:

[In millions of dollars]

	Sentinel	Safeguard
Research and development	335	401
Procurement	736	361
Construction	647	97
Operations and maintenance	70	23
Military pay and allowances		10
Total	1,788	892

In addition, a total of $235 million unobligated FY 1969 SENTINEL money will be allocated for the SAFEGUARD program.

III. THE EVOLUTION OF THE ABM—AND THE ABM DEBATE

Summary

The debate over an ABM began in the mid fifties when the Army instituted studies of the application of the NIKE AJAX and NIKE HERCULES anti-aircraft systems to defense against missiles. Rapid development of the ICBM by both the Soviet Union and the United States at the end of the 1950s provided the impetus for ABM development. By 1959 the official consensus was that an ABM system that would protect the United States from massive missile attack was unworkable. President Eisenhower therefore halted NIKE ZEUS deployment.

Pressure for deployment, however, did not abate. In 1960 Secretary of Defense McElroy rejected Army requests for $400 million for NIKE ZEUS production; when Congress appropriated the money anyway he refused to spend it. The Kennedy Administration opted for a strategy of deterrence through an "assured destruction" capability on each side and kept the ABM in the research and development phase. Technological advances and an emerging Chinese capability, however, caused the Johnson Administration to authorize deployment of a "thin" cities-protecting ABM system in September of 1967. During 1968, heated controversy over the decision to deploy developed in the scientific community, in the Senate, and in the public at large.

In March of 1969 President Nixon announced the deployment of a modified SENTINEL, to be called SAFEGUARD, and in the course of defending this proposal during March, April, and May the Administration developed a number of justifications, some of them contradictory, for going ahead with an ABM. These justifications also represented policy reversals of positions taken by the Johnson Administration.

Chronology

February 1955. DOD contracts feasibility studies for the proposed Nike Zeus ABM with Bell Telephone Laboratories.

July 1955. Research and development focuses on the ICBM as the primary target of any emergent ABM system.

January 1957. Full system deployment of Nike-Zeus is ordered by the Army.

September 1957. The Atomic Energy Commission completes a feasibility study of the Nike-Zeus warhead.

June 1959. Joint AEC-Army activities commence on development engineering for a *Zeus* missile warhead.

August 1959. First *Zeus* missile is fired at the White Sands Missile Range.

November 1959. President Eisenhower orders cessation of Nike-Zeus deployment (radar ineffective, easily overwhelmed by decoys) but authorizes continuation of research and development.

April 1961. The Kennedy Administration decides to keep United States ABM development in the research and development phase.

July 1962. First successful ICBM-*Zeus* missile intercept is conducted.

January 1963. DOD authorizes the Army to begin research and development on the Nike X ABM system, which employs two types of missile and electronically operated radars that can handle numerous targets simultaneously.

March 1963. Contract for the *Sprint* missile—short range, rapid acceleration component of Nike X—is awarded.

Summer 1963. The Senate Armed Services Committee, in an attempt to force an Executive decision for the deployment of an ABM system, seeks the addition of $196 million for ABM deployment to the defense authorization bill for FY 1964. The full Senate, however, rejects the move at the insistence of the Administration.

Fall 1963. The Soviet Union announces that it has produced a prototype of an effective anti-missile missile.

January 1964. President Johnson orders cutbacks in U.S. manufacture of fissionable materials and manufacture of arms, and urges the Soviet Union to do likewise as a step toward the "eventual abolition of arms."

July 1964. Testing of new multiple-array radar (MAR) system, a radically improved radar designed for Nike X, is initiated.

October 1964. Communist China detonates a low-yield atomic bomb—its first.

May 1965. Communist China detonates its second atom bomb, one of low-intermediate yield.

October 1965. NIKE X development study completed by the Army and presented to the Secretary of Defense.

November 1965. First successful flight conducted of the maneuverable *Sprint* missile, short range NIKE X component.

May 1966. China detonates its first hydrogen bomb.

October 1966. China tests its first missile-delivered device, equipped with a low-yield fissionable warhead.

November 1966. Secretary McNamara announces that the Soviet Union has begun deployment of the Galosh (Nike-Zeus-type) ABM defense system around Moscow.

December 1966. China detonates its second hydrogen bomb.

Congress approves $167.9 for ABM procurement without the request of the Secretary of Defense.

January 1967. President Johnson declares that no U.S. ABM deployment will be made until completion of arms control negotiations with the Soviet Union, and requests discussions for control of ABMs.

Defense Secretary McNamara, in his defense posture statement, presents a detailed argument *against* deployment of a complete, Soviet-oriented ABM system: "It is a virtual certainty that the Soviets will act to maintain their deterrent, which casts grave doubts on the deploying of the NIKE X system for the protection of our cities against the heavy, sophisticated missile attack that they could launch in the 1970s."

General Wheeler, Chairman of the Joint Chiefs of Staff, expresses disagreement with the McNamara position and recommends a "measure of defense" for the country. The JCS recommends a two stage deployment plan: (a) $9.9 BILLION to provide 25 cities with ABM defense; (b) $19.4 BILLION to add 25 more cities and thicken *Sprint* defense.

February 1967. The Soviet Union announces that it has developed an ABM system capable of protecting it against attack.

Dr. John Foster, then as now DOD Director of Research and Engineering, says: "As a matter of technical judgment I believe that these larger (ABM) deployments carry with them technical risks. The likelihood of large and sophisticated attacks with the deployment of significant U.S. defense increases the technical uncertainty of the defense system."

June 1967. The House Appropriations Committee report on the DOD appropriations bill for FY 1968 states: "It would appear that the initiation of deployment of 'light' or 'thin' defense, now, may very well be a most useful first step toward whatever level of ballistic missile defense ultimately appears necessary."

At the Glassboro Conference President Johnson declares his hope to work with the Soviet Union in limiting development of strategic nuclear weapons, including ABM systems.

Summer 1967. The FY 1968 military budget, containing a total of $782.9 million for anti-ballistic missiles, is approved by the 90th Congress. Of these funds, $297.6 million are allocated for ABM procurement, $421.3 million for ABM research and development, and $64 million for ABM construction. Of this amount, $366 million is specified for the Sentinel system, an allocation that President Johnson requested in anticipation of a decision to deploy.

Heated controversy over the question of ABM deployment develops in Congressional debate over appropriations for FY 1968.

September 1967. Secretary McNamara outlines the futility of erecting a Soviet-oriented ABM but announces that "there are marginal grounds for concluding that a light deployment against this possibility (a U.S. Chinese nuclear clash) is prudent." Intelligence estimates a Chinese nuclear capability of 20–30 ICBMs by 1975.

November 1967. DOD announces that the ABM system to be deployed (named Sentinel) is a thin configuration of the Nike X system, and identifies the first ten areas to be surveyed as possible site locations.

March 1968. President Johnson says the Sentinel program is of the highest national priority.

April 1968. In opening debate on the DOD appropriations bill for FY 1969 the Senate rejects, by a vote of 28–31, an amendment to delay deployment of the ABM until certified as "practicable" by the Secretary of Defense.

June 1968. The Senate rejects by a vote of 34–52 an amendment to delay ABM construction funds for one year.

Foreign Minister Gromyko announces Soviet willingness to engage in talks with the United States about strategic arms limitations: "The Soviet Union is ready to enter an exchange of opinions . . . (on) the mutual limitation and later reduction of strategic weapons, both offensive and defensive, including anti-ballistic missiles."

The House of Representatives rejects an amendment to the Defense Appropriations Act for FY 1969 to delete acquisitions of property and construction of related ABM facilities 37–106, on a teller vote.

August 1968. A Senate amendment to delete all funds for ABM construction is rejected 27–46.

The Soviet invasion of Czechoslovakia serves to jeopardize proposed arms control talks and stimulates pressure for ABM deployment in the U.S.

September 1968. Secretary Clifford directs that Sentinel be exempted from the expenditures reduction program.

October 1968. The Senate rejects, by a 25–45 vote, a proposal to delay construction of SENTINEL for one year.

December 1968. Citizen opposition to proposed sites at Boston, Chicago, and Seattle becomes vocal.

January 1969. Secretary Clifford in his report accompanying the DOD FY 1970 budget request concludes: ". . . even if the Soviets attempt to match us in numbers of strategic missiles we shall continue to have, as far into the future as we can now discern, a very substantial qualitative lead and a distinct superiority in the numbers of deliverable weapons and the overall combat effectiveness of our strategic offensive forces."

President Nixon takes office and initiates a DOD review of strategic offensive and defensive priorities.

February 1969: President Nixon on the 6th says: "I do not buy the assumption that the ABM was simply for the purpose of protecting ourselves against attack from Communist China."

On the 13th Secretary Laird stresses the priority of a Chinese-oriented ABM: "I am more concerned about that defense (against the Chinese threat) than I am about any other kind of defense at the present time."

On the 20th Secretary Laird says that an ABM system is necessary because the Soviet Union is deploying a "sophisticated new ABM system."

March 1969. At a press conference on March 14 President Nixon announces deployment of a modified Sentinel, to be called Safeguard, because: "The Soviet Union has engaged in a buildup of its strategic forces larger than was envisaged in 1967."

On the 20th Secretary Laird reverses his earlier position and says the Soviet Union is not deploying a "third generation" ABM system around Moscow but is only testing such an improved system.

The following day Secretary Laird says the Soviet Union is "going for a first-strike capability, and there is no question about it."

On the 27th Secretary Laird submits his amendments to the FY 1969 supplemental and FY 1970 DOD budget to the House Armed Services Committee and requests $900 million for Safeguard procurement and construction. In addition to this, $330 million from FY 1969 could be carried over to FY 1970 for Safeguard costs. Secretary Laird estimates the total cost of the system at $6–$7 billion, an increase of $500 million to $1.5 billion over the Johnson Administration request. In the report accompanying his requests, Secretary Laird says Safeguard deployment is necessary because "the option of safeguarding our deterrent forces against this potential threat (the Soviet threat) cannot be preserved by research and development alone."

April 1969. Following Secretary Laird's "first-strike" remark, a controversy develops within the Administration over Soviet capabilities and intentions. Secretary Rogers at a press conference on the 7th seems to contradict Secretary Laird: ". . . insofar as whether they (the Soviets) are doing it (deploying the SS–9 with the intention of actually having a first strike, I don't believe that."

Spokesmen for the Administration contradict Secretary Laird's statement on the necessity for going beyond the research and development stage. On the 15th, Vice President Agnew characterizes SAFEGUARD as "really just a rather small research and development project, with two test sites, at Minuteman bases." Two weeks later, Deputy Secretary Packard echoes Agnew and calls SAFEGUARD "really a prototype deployment—a kind of research and development."

Doubt begins to arise over Secretary Laird's estimate of the Soviet threat. Former Deputy Secretary Nitze, testifying on behalf of SAFEGUARD before the Senate Armed Services Committee, declines to endorse Secretary Laird's view that the Soviet Union is working toward a first-strike capability. CIA Director Helms, testifying before a closed session of the Foreign Relations Committee, reportedly characterizes the Soviet threat as the same that faced the previous Administration.

Public and Congressional controversy continues. Governor William Guy of North Dakota, slated to receive one of the first two SAFEGUARD sites, announces his unqualified opposition to the project and concludes "our Nation is being swept along by contrived hysteria to keep the pipeline of the defense industries full." Administration and opposition head-counters agree that the decision in the Senate will hinge on how six uncommitted Senators divide on the issue.

May 1969. It is learned that the total cost of the SAFEGUARD system as announced by Secretary Laird and Deputy Secretary Packard ($6–$7 billion) does not include the costs of the nuclear warheads. The warheads are in the AEC budget and will add at least $1.2 billion to the original estimate.

Later in the month the Defense Marketing Survey, a McGraw-Hill service for defense contractors, concludes DOD costs for SAFEGUARD will be $12.2 billion.

On the 9th, Governor Forrest Anderson of Montana, site of one of the first two SAFEGUARD installations, states: "I have concluded that the proposed ABM system—called SAFEGUARD—would not be in the best interest of Montana and I seriously question whether the system would enhance our national defense posture."

On the 10th, Rear Admiral Levering Smith, Director of Strategic Systems Projects for the Navy questions Secretary Laird's evaluation of the future vulnerability of the Polaris submarine deterrent: "I am quite positive that the new generation of Russian submarines that are getting close to operational status, that are now being tested, will not be able to follow our Polaris submarines." Admiral Smith also denys that the Soviet Union has new anti-submarine warfare methods,

such as superior sonar or a satellite detection capability, that would make the Polaris fleet vulnerable.

On the 12th, Dr. John Foster, DOD Director of Research and Engineering, upgrades the possible SS–9 threat as stated by Secretary Laird and Packard (500) to 600 by 1975. He takes heated issue with those scientists who question SAFEGUARD's reliability.

May 1969. On the 13th, Deputy Secretary Packard reverses an earlier position and says that SENTINEL monies are being used for production of SAFEGUARD missiles and radars. Packard previously had taken the position that new Congressional authority was required for work on SAFEGUARD.

On the 19th, House Speaker McCormack tells the Democratic and Republican leadership that he prefers to have the House vote on SAFEGUARD after the Senate rather than first.

The nation's two largest unions, the UAW and the Teamsters, announce their opposition to SAFEGUARD deployment, and a number of city councils and big city Mayors question the need for the system.

At the end of the month, new groups supporting SAFEGUARD are founded. Dean Acheson is announced as the organizer of one and it is revealed that a second has been organized among financial supporters of President Nixon by a White House aide. These groups join the American Security Council and the Liberty Lobby in backing SAFEGUARD.

June 1969. Controversy develops over a classified Pentagon chart that reportedly shows SAFEGUARD to be a very poor defense of retaliatory Minuteman Missiles. Sources say that the chart shows the addition of only a few SS–9s would overcome the SAFEGUARD ABM.

Later in the month the Pentagon releases a White Paper that says the Soviet Union is testing MIRVs in the Pacific. The next day other intelligence sources outside the Pentagon, particularly the CIA, support Secretary Roger's contention that the Soviet warheads being tested are not independently targeted.

Secretary Laird tells the House Appropriations Committee that a projected Chinese deployment of 25 ICBMs would justify going from the two-site configuration currently requested to the complete 12-site Safeguard system.

IV. POINTS OF CONTROVERSY

A number of points of controversy have arisen in the course of the debate over the SAFEGUARD system. The following fifteen questions are those that are most often raised by supporters and opponents of deployment. Because in most cases the opposition is responding to arguments for deployment advanced by supporters, the *Con* arguments require somewhat more space than the *Pro* for elaboration.

Will the United States second strike capability be vulnerable by 1975?

Pro

Yes. Recent Soviet developments in the weapons field pose a threat to all three elements of our retaliatory mix (Minuteman and Titan, Polaris, and our manned bomber force):

1. The Soviet Union is continuing to deploy the large SS–9 missile; its present force of 200 may go to 500 by 1975.

2. The Soviet Union is testing Multiple Re-entry Vehicles and will be able to deploy them on SS–9 missiles by 1975.

3. The Soviet Union is developing a fractional orbiting bombardment system (FOBS) and serially producing Polaris-type submarines. A FOBS capability and a large Polaris-type force could neutralize our bomber deterrent in 1975.

4. The Soviet Union is developing an anti-submarine warfare capability (ASW) that by 1975 could neutralize our Polaris deterrent.

5. The Soviet Union has deployed the GALOSH (NIKE ZEUS-type) ABM around Moscow.

Con

No.

Recent developments in the weapons field were known to the previous Administration which concluded that the U.S. second strike capability was invulnerable for the foreseeable future:

1. The accuracy of the SS–9 against hard targets is very doubtful; by 1975 we will still vastly outnumber the Soviet Union in accurately deliverable megatonnage.

2. The Soviet Union is far behind the U.S. in targeting Multiple Re-entry Vehicles independently and their progress in this field is more than matched by ours.

3. The U.S. has discarded FOBS as impractical and is far ahead of the Soviet Union in ASW capability, which will neutralize any Polaris capability they may develop. 40% of our bomber deterrent is on ground alert and could avoid FOBS or Polaris-type attack.

4. There is no evidence that the Soviet Union has made a break-through in the ASW field; on the contrary, the evidence indicates they are far behind us.

5. The Soviet Union has halted work on GALOSH. In any event, we have more than overcome whatever advantage the Soviet Union may have obtained by limited deployment.

Even granting Soviet superiority in all strategic weapons categories and assuming we did not launch on warning, it would still be impossible for the Soviet Union to reduce our second strike capability below a level that would destroy 70% of the industry and 30% of the population of the Soviet Union. A perfectly working SAFEGUARD might increase our retaliatory capability marginally, if it were not offset by Soviet MIRV deployment.

Will Safeguard deter arms control talks?

Pro

No.

The Soviet Union agreed to arms talks only four days after former President Johnson decided to deploy SENTINEL. Since June of 1968, the Soviet Union has been pressing for initiation of these talks, despite the fact that the U.S. was, until March of 1969, proceeding with the full SENTINEL program.

Further, there has been no slackening of Soviet interest during the months SENTINEL was under review by the new Administration.

Finally, the U.S. has agreed to include defensive systems in any arms control discussions and is prepared to abandon SAFEGUARD if an agreement is reached.

Con

Yes.

SENTINEL had a very minor anti-Soviet capability, while SAFEGUARD is increasingly being justified in terms of the Soviet Union.

If the U.S. deploys SAFEGUARD and MIRV, it is likely that Soviet defense planners will assume that the U.S. is going for a first strike capability and delay the start of talks until parity, in their eyes, has once more been achieved. The current Soviet line, perceived from diplomats, is that parity has been reached in offensive and defensive capability. In their eyes a major spending program on new weaponry, such as SAFEGUARD, would upset the balance and make agreement impossible because the Soviet Union refuses to negotiate from a position of inferiority. Soviet comment since March is becoming increasingly critical of SAFEGUARD.

In addition, a newly deployed ABM system and the danger inherent in that deployment seems quite contrary to the spirit and intent of the non-proliferation treaty.

Will Safeguard strengthen our bargaining position with the Soviet Union?

Pro

Yes.

SAFEGUARD will give the Soviet Union an added incentive to come to the bargaining table and enter into meaningful agreement on the limitation of both offensive and defensive strategic weapons systems.

It will also give the U.S. an additional counter to be used in the talks.

Con

No.

The deployment of SAFEGUARD ties the hands of the United States in future negotiations. To deploy the system would strengthen the position of those in the Soviet Union who argue that the U.S. is too committed by its economic system and its pressure groups to an arms race to be seriously interested in its abatement.

The Kremlin defense establishment will certainly demand a new Soviet weapons system to use as a bargaining card against SAFEGUARD. Once new systems are initiated on either side, they become almost impossible to dismantle because they create their own constituencies.

Although both President Nixon and Secretary Laird have talked about using SAFEGUARD as a bargaining card with the Soviet Union, a question on whether or not the U.S. would consider abandoning SAFEGUARD if the Soviet Union showed a similar willingness elicited the following response from the President: "The abandoning of the entire system, particularly as long as the Chinese threat is there, I think neither country would look upon that with much favor."

There is an inherent contradiction in using SAFEGUARD both as a bargaining card with the Soviet Union and as protection against the Chinese threat.

Will Safeguard escalate the arms race?

Pro

No.

SAFEGUARD is defensive in nature and will not provoke the Soviets; the Soviets have always favored defensive systems.

Since the proposed system is designed to protect the nation's retaliatory capability it is not provocative and will require no reaction at all from the Soviet Union.

While U.S. attitudes are presently mixed with some favoring offensive systems and others supporting defensive systems, the Soviet attitude seems almost universally to favor emphasis on defense. Thus, it appears that similar U.S. emphasis on defense would probably be the most stable method of avoiding an offense-defense arms race.

Con

Yes.

We reacted to the Soviet GALOSH (NIKE ZEUS-type) deployment around Moscow by building up our multi-warhead (MIRV) capability with Poseiden and Minuteman III. On March 19, DOD requested authorization of $12.4 million to improve Poseiden's effectiveness against hard targets, or second strike missiles, thus increasing our preemptive first strike capability. $100 million has been requested for an Advanced Manned Strategic Bomber (AMSA) to counter GALOSH. These developments with the deployment of SAFEGUARD will make the Soviet Union extremely uneasy about U.S. first strike intentions and lead them to take similar actions bringing a new and dangerous degree of uncertainty into the strategic balance.

Since the most likely Soviet response to SAFEGUARD will be to accelerate their MIRV program, and ours is proceeding at a rapid pace, the time when the strategic balance can be stabilized by agreements that can be verified is rapidly disappearing. Once MIRVs are operational, unilateral policing by satel-

lite of an arms control agreement will be impossible. It is very unlikely that either the U.S. or the Soviet Union would sign an agreement without a unilateral policing capability.

Do we need Safeguard because the Soviets have Galosh?

Pro

Yes.

SAFEGUARD is necessary to retain nuclear parity with the Soviet Union and to show that we, too, are defense-minded rather than offense-minded.

If we lose the lead time necessary to build and install a defensive system of our own, there would be no way to redress the balance. We would be subject to the Soviet nuclear blackmail we have avoided for 20 years.

If there is no ABM in the Soviet Union or in the U.S., any country with a Polaris submarine becomes a superpower. Therefore, many countries would be tempted to acquire nuclear missiles.

Con

No.

This action-reaction reasoning will only lead to further escalation of the arms race; the U.S. currently has the capability in offensive weapons to easily overcome Galosh, which is deployed only around Moscow.

Former Secretary of Defense Clifford said in 1968 that Galosh resembles "the Nike-Zeus system which we abandoned years ago because of its limited effectiveness." We do not need to react to a Soviet ABM system by building one of our own, particularly as the Soviets have slowed down, if not actually halted, their deployment efforts because of technical difficulties scientists say our system will have.

As for the Tallinn system, which has in the past been used to justify a U.S. ABM, current intelligence shows it to be a very thin Nike-Hercules anti-aircraft defense.

Is Safeguard reliable?

Pro

Yes.

DOD states that all of the components will work and the system as a whole will work. *Spartan* and *Sprint* have both been flown. PAR is a variant of a radar in existence and a prototype MSR is being tested. The complex computer systems required to operate these components are feasible and have been demonstrated in Apollo.

The problems confronting Safeguard are no more insurmountable than those confronting the development of the hydrogen bomb.

Con

No.

The scientific community is almost unanimous in questioning Safeguard's reliability. Safeguard has the most elaborate, sophisticated, dynamic combination of rocketry, radars, computers, electronics, and other technology ever proposed; moreover, it can never be tested as a system.

With regard to the missiles, *Spartan* and *Sprint* have a probability of failure of 34% to 59%, thereby requiring at least 3 missiles to achieve 97 percent probability of destroying an incoming warhead.

As far as the radars are concerned, statistically there is a 72% chance that one or more radars will be out of service at any particular time in a system of 12 MSRs. The remaining 11 are subject to blackout, which even proponents admit has not been overcome. The MSR is ten times as vulnerable to overpressure as the silos it is defending and will therefore be targeted first because its destruction destroys the entire installation.

In the case of the computers, it is debatable whether a program could ever be written to deal with the various forms of attack that can be anticipated.

Moreover, the entire command and control network upon which the system depends is as vulnerable as any of its components.

The hydrogen bomb analogy in specious; the scientific issue over the H-bomb was whether a specific design concept could in theory be developed into a workable weapon. The questions surrounding Safeguard are not theoretical but practical and technological.

Will penetration devices render Safeguard ineffective?

Pro

No.

Penetration devices other than real or dummy warheads of the same size and weight as the real one will fall behind or burn up in the atmosphere and expose the real warhead to *Sprint*.

By forcing an opponent to use penetration devices of weight equal to the weight of a warhead one cuts down the weight of the destructive payload each ICBM can deliver, forcing him to achieve almost pinpoint accuracy if his target is a hardened Minuteman.

Con

Yes.

Against *Spartan*, the following penetration devices could be employed:

1. Decoys and chaff clouds, which need not survive re-entry to fool *Spartan*.
2. Active radar jamming.
3. The defense radar, particularly the PAR, can be blacked out with precursor nuclear explosions. In heavy, well-timed attack the defense's radars could even be blacked out by the defense's own nuclear explosions.

Against *Sprint*, an attacker could send several warheads in the same missile and rapidly exhaust the supply of *Sprints* at a particular installation.

Will Safeguard be obsolete by the time it is operational?

Pro

No.

SAFEGUARD is expected to be effective well into the 1980s against the threats it is designed to counter. Careful study has provided reasonable assurance that the system can evolve to handle future penetration aids developed by China or the Soviet Union.

SAFEGUARD, which will be deployed in phases, takes into account the development of new weapons technology.

Neither China nor any other nation new to the nuclear missile field can leapfrog decades of development of highly sophisticated weapons systems.

Con

Yes.

By the time SAFEGUARD is even partially operational, in 1973, the Chinese will have developed penetration devices, thus rendering the system ineffective against them. It is already obsolete against the Soviet penetration capability, should they choose to deploy it.

While the defense may be able to develop more sophisticated technology which could offset some of the penetration devices, the offense is capable of the same thing. All SAFEGUARD will do is to escalate this technological buildup into a never-ending spiral.

Is SAFEGUARD necessary to meet the Chinese threat?

Pro

Yes.

While the Chinese nuclear program has slipped recently, it is anticipated that by 1975 they could have 20–30 ICBMs. Because the Chinese are more unpredictable than the Soviets, they may make an irrational attack despite such a small force.

There is also the possibility that the Chinese might, in the absence of an offsetting U.S. defensive capability, be able to exploit a limited strategic offensive capability for purposes of nuclear blackmail to the detriment of the U.S. interest in Asia.

It seems both imprudent and unreasonable for the U.S. and the Soviet Union to be completely without protection against any country with less nuclear power, such as China. If both countries have no defensive systems, any country with ten missiles is a superpower—it can destroy ten large cities.

Con

No.

Our deterrent power would certainly prevent the Chinese from launching an attack, the Chinese could penetrate the city-defense aspects of SAFEGUARD in any event, and there is no basis for assuming China would commit national suicide by launching an attack on the U.S.

We have deterred the Soviet Union's very powerful nuclear missile force for many years. There is no need for a system to deter a Chinese nuclear capability that is 1/10 of the Soviets and 1/50 of our own.

The Chinese need to deploy only a small number of ICBMs in order to penetrate SAFEGUARD and attack our cities. It is much more likely that the Chinese are developing ICBMs to be in a position to deter us—something they cannot do now.

As for being irrational, despite verbal support, China has done no more than the Soviet Union in rendering open aggressive support for foreign insurgencies and much less in risking nuclear retaliation on behalf of such insurgencies. If China is determined to attack us, there are more effective methods than ICBMs. A nuclear weapon could be smuggled aboard a neutral ship or a biological weapon carried in a suitcase, for example.

If one were to concede the possibility of blackmail, it would be more likely that China would target her ICBMs against U.S. missile bases on China's periphery or against the cities of our allies than against the continental United States.

Will Safeguard defend the United States against accidentally launched ICBMs?

Pro

Yes.

One cannot eliminate completely the possibility of an accidental launch in a world where thousands of missiles are ready to be launched on a moment's notice.

If such an accident occurred, even a thin ABM system is likely to work well since there would presumably be only one, or at most a few, missiles to destroy.

It could repay the entire cost of the missile system several times over if one accident were prevented.

Con

No.

Unless SAFEGUARD is expanded beyond the Administration's current request, it could only defend against such an accident were the missile launched at one of the two Minuteman sites currently scheduled for deployment, and then not until 1973.

Accidental launch should be controlled instead by an agreement with the Soviet Union on the installation of self-destruct mechanisms so that accidentally launched missiles can be destroyed in flight. Should this be impossible, defense against accidental launch could be obtained at a fraction the cost of SAFEGUARD by deploying a few *Spartans* and unprotected radars designed for this purpose.

Will Safeguard erode Presidential control over the launch of nuclear weapons?

Pro

No.

While specific details of the decision-making process must remain classified, the decision to fire will completely reflect the authority of the President.

While the decision to launch must be made in a short period of time, the decision to arm the warhead of the missile can be made after the missile has been fired.

Con

Yes.

The time from verification to decision to fire would not be more than a few minutes if there is to be any chance of a successful intercept. The President is therefore given only the opportunity to ratify what the computers say is inevitable, and cannot weigh evidence or consult with advisors, particularly if at the moment of attack he is away from the National Command Authority in Washington, D.C. Most proponents of the system maintain that it will not work unless the launch process is begun at the moment of detection. In the case of an accidental launch, the necessity to activate the system with no delay would be even more urgent.

Does Safeguard give the U.S. an extra option?

Pro

Yes.

Instead of having to resort to our retaliatory force in case of attack, SAFEGUARD would give us the option of sending up anti-ballistic missiles to destroy the incoming missiles.

The reliance on a missile to destroy another missile rather than a retaliatory force to destroy people and property is an added protection in preventing nuclear holocaust.

Con

No.

Since the system, in its entirety, can never be tested, U.S. planners would be more inclined not to trust SAFEGUARD than to wait out a first strike attack. We would in all probability fire our Minutemen at our attacker in the 10–30 minute warning time available—thus leaving SAFEGUARD defending empty holes.

Having an extra option could actually work against us. If the Soviet Union believed that we would rely on SAFEGUARD and not send up our Minutemen and they thought they could break through SAFEGUARD, they would be more confident of a successful first strike.

Defensive missile systems generally add the option of limited strategic nuclear war and thereby increase its possibility. Very few strategic planners think such an exchange could be kept limited.

Is Safeguard worth the cost—in terms of money and national priorities?

Pro

Yes.

Due to the phased deployment plan for Safeguard, the government will not ask for large sums of money at one time. Therefore, we can afford to deploy the system and still meet our domestic needs.

If the system changes in character, thereby costing more money, the decision would be based on the judgment of a conscious government and public debate.

Con

No.

The Safeguard system will almost certainly increase in cost, as has been the case with virtually every other military project. In the two years since ABM deployment was first proposed, the cost has more than doubled—from $3.5 billion in 1967 to $8.2 billion now. The 12 major systems developed by DOD since 1950 exceeded their original estimated cost by an average of 220% and as much as 700%.

U.S. expenditures can be more effectively used for domestic needs and preventing war through arms negotiations. Also, the continual buildup of armaments, of which Safeguard is a part, has caused the longest inflationary period and the highest taxes in the history of the country.

Will Safeguard eventually grow into a thick system?

Pro

No.

Safeguard does not provide the city base necessary for a thick system and the phased deployment called for preserves the option of curtailing and re-orienting the system.

Safeguard would be more difficult than Sentinel to convert to a thick system because the emphasis has been shifted from the defense of cities to the defense of our deterrent forces.

The President has directed the Foreign Intelligence Advisory Board—a nonpartisan group of private citizens—to make a yearly assessment of the threat which will supplement our regular intelligence estimate. Based on the advice of this group and our intelligence agencies, the President will decide whether to halt or expand the system—but not without the proper public debate.

Con

Yes.

The forces that have been pushing for an ABM system since the late 1950s regard the two initial installations in Montana and North Dakota as just the beginning of a full system. The Pentagon this year is requesting appropriations to purchase land for all 12 Safeguard sites. Once Safeguard has been completed, these same political and economic forces will push for its expansion to a thick defense against all possible contingencies, at a cost of $100 billion.

Because Safeguard already provides some defense for our cities, the addition of more *Sprints* and some re-deployment could convert the system to a thick cities defense fairly easily. The Soviet defense planner must allow for this possibility and expand and adjust his capability accordingly. *Any* cities defense weakens the Soviet deterrent and enhances the U.S. first strike capability.

The cities defense mission of Safeguard must already be considered its primary mission because two thirds of the monies requested by the Administration are to be allocated for components for this type of defense and one third for components designed to defend our deterrent capability.

Is not Safeguard better than no system at all?

Pro

Yes.

SAFEGUARD deployment will create a basis for further improvement, innovation and growth as the threat develops.

Deployment of SAFEGUARD will allow an operating military organization to exist, manufacturers to make equipment, and serious research and development and planning of strategy to take place.

Useful, vital data will be collected, and our understanding of the problems confronting missile defense improved, including estimates of future costs, performance, deployment time, and situational impact.

In matters concerning the national security, it is better to err on the side of over-protection than in the other direction.

Con

No.

Lives are threatened because SAFEGUARD disrupts the nuclear balance, accelerates the arms race, and increases world tension—particularly if it is not effective. By raising the threshold of anxiety, SAFEGUARD will inhibit those shifts in policy necessary to a more peaceful co-existence.

Even conceding the need for defense of the U.S. retaliatory capability, SAFEGUARD is ineffective because it is made up of components designed for the defense of cities. A cost-effective defense of our deterrent would in the first place concentrate on the number of ICBMs needed for assured retaliatory capability—say two Minuteman wings—and not try to defend bomber bases. Secondly, it would not use long range PARs or *Spartans*, which are useless against a heavy and sophisticated attack, but would use cheaper, harder radars and a cheaper, lower altitude-intercept version of *Sprint* deployed in great numbers for terminal defense. Defense of hard targets does not require the range or the cost of the SAFEGUARD system. Finally, such a system could rely on simpler computer programming because the tactics available to an attacker are limited if a hard silo is his target.

V. SUMMARY OF ARGUMENTS ON EACH SIDE

The Case for SAFEGUARD

SAFEGUARD is essential to the national security of the United States. With its recent buildup in offensive and defensive strategic force, the Soviet Union could acquire a first strike capability by 1975. If we are to counter this threat to our retaliatory force in time, it is necessary to begin deployment of the SAFEGUARD system. Sufficient progress in this field cannot be maintained by research and development alone.

Should the U.S. and the Soviet Union reach agreement on the limitation of strategic weapons systems, we are fully prepared to halt deployment of the system. In the meantime, SAFEGUARD provides an added incentive for the Soviet Union to come to the bargaining table and gives us an additional bargaining card for use in the discussions. The Soviet Union generally favors defensive systems and has expressed no concern with SAFEGUARD.

SAFEGUARD will also protect us from attack by China, which is expected to have between 20 and 30 ICBMs with which to strike at the United States by 1975. In addition to guarding our cities from Chinese attack, SAFEGUARD will provide defense against accidentally launched missiles.

There is no question that the United States has the technical capacity to build SAFEGUARD. The components have been developed and tested over a period of fifteen years and there is no doubt that the system as a whole will operate effectively. The system is well within the economic resources of the country. In fact, the current deployment schedule will permit a saving in FY 1970 of $1 billion over the SENTINEL request of the previous Administration.

It is important that the President have the option of countering an attack with defensive missiles. With such an option, the decision to launch a second strike can be delayed and the possibility of nuclear holocaust avoided. Finally the SAFEGUARD system will serve to strengthen any agreement on reducing the level of offensive weaponry by reducing the temptations to cheat on such an agreement.

In sum, it is the judgment of the Administration that the initial deployment of SAFEGUARD system is the minimum step necessary to protect the national security of the United States at this time.

The case against SAFEGUARD

The proposed SAFEGUARD system is unreliable, unnecessary, uneconomical and undesirable in that it would be detrimental to the national security of the United States. The system threatens the national security because it offers no protection from our adversaries while setting off another round in the arms race and making agreement on the control of strategic weapons systems impossible to obtain.

The Soviet Union will clearly respond to SAFEGUARD by accelerating its MIRV program, just as we responded to GALOSH with Poseidon and Minuteman III. Our MIRVs are close to operational; MIRV deployment on both sides will make a unilaterally verifiable agreement impossible. Soviet spokesmen are increasingly expressing concern with SAFEGUARD, once we begin deployment, those in the Soviet Union who oppose Soviet participation in arms control talks will control Soviet defense policy. SAFEGUARD is also undesirable because there is danger it will erode Presidential control over firing of nuclear weapons. In fact, some ABM proponents say delegation of Presidential authority will be required for SAFEGUARD to be effective.

SAFEGUARD is unreliable because it can be easily overwhelmed by an enemy offense and can never be tested except under combat conditions. It is unnecessary because with its Minuteman, Polaris, and bomber forces the United States has more than sufficient power to absorb an attack and retaliate devastatingly against the Soviet Union—and this capability will be retained for the foreseeable future without SAFEGUARD. It is uneconomical because its proponents see it only as the first step toward a thick system which will cost 100 billion and seriously erode our ability to deal with our pressing domestic needs.

China will be incapable of attacking us without committing national suicide for the foreseeable future; should she wish to attack us, she will have by 1975 the capability to wipe out one or two U.S. cities in spite of SAFEGUARD. As for protection against accidental attack, such protection should be obtained by agreement with the Soviet Union on the installation of self-destruct mechanisms on all ICBMs. Finally, if the President had SAFEGUARD and considered it an extra option in the event of attack, an opponent might come to the conclusion that he would use it and not launch our retaliatory capability and thereby be tempted into a first strike.

SAFEGUARD, like NIKE ZEUS, will be obsolete by the time it is deployed. While research and development on ballistic missile defense should continue at the Kwajalein island facility, the decision to deploy should be deferred until the conclusion of arms control negotiations with the Soviet Union. Our national security requires that we give highest priority to bringing the nuclear arms race under control.

VI. SELECTED LIST OF SAFEGUARD SUPPORTERS AND OPPONENTS

Pro

Professor Zbigniew Brzezinski, Columbia University, political scientist.

Dr. Lee Dubridge, Science Advisor to President Nixon.

Dr. Freeman Dyson, Princeton University, nuclear physicist.

Dr. Richard Foster, former Director of Strategic Studies, Stanford Research Institute, strategic analyst.

Dr. Richard Latter, Rand Corporation, nuclear physicist.

Dr. Philip Mosley, Director of the European Institute, Columbia University, political scientist.

Dr. Frederick Seitz, President of the National Academy of Sciences, nuclear physicist.

Dr. Edward Teller, founding Director of the Livermore Laboratories, nuclear physicist.

Dr. Alvin Weinberg, Director of the Oak Ridge Laboratories, nuclear physicist.

Dr. Eugene Wigner, Princeton University, nuclear physicist.

Con

Dr. Jerome Weisner, a former Science Advisor to Presidents Kennedy and Johnson, Provost of MIT.

Dr. George Kistiakowsky, former Science Advisor to President Eisenhower, chemist.

Dr. Donald Hornig, former Science Advisor to President Johnson, physicist.

Professor Marshall Shulman, Director, Russian Institute, Columbia University, political scientist.

Dr. Herbert York, former DOD Director of Research and Engineering, nuclear physicist.

Dr. James Killian, former Science Advisor to President Eisenhower, Chairman of the Board of MIT.

Professor Allen Whiting, Center for Chinese Studies, University of Michigan political scientist.

Dr. George Rathjens, Director of Weapons Systems Evaluation, Institute for Defense Analysis, strategic analyst.

Dr. Wolfgang Panofsky, Director, High-Energy Physics Laboratory, Stanford, nuclear physicist.

Dr. Jack Ruina, former Director of Advanced Research Projects Agency, DOD.

VII. GLOSSARY

ABM (anti-ballistic missile).—A missile, or combination of missiles, radar, and computers designed to intercept and destroy incoming missiles before they reach their intended targets.

Area defense.—A concept of ABM defense in which areas of the country, hundreds of miles across, are given protection from attack by exo-atmospheric interception of incoming missiles by long range defensive missiles tipped with large nuclear warheads. This type of defense is effective only against small attacks.

Assured destruction.—That level and deployment of nuclear capability which serves to deter deliberate nuclear attack by an opponent by maintaining at all times a highly reliable ability to inflict an unacceptable degree of damage upon the opponent, or combination of opponents, at any time during the course of a strategic nuclear exchange, even after absorbing a surprise first strike.

AMSA (advanced manned strategic aircraft).—A Mach II-plus aircraft designed to launch a nuclear missile along a flat trajectory to avoid an opponent's defensive system.

Blackout.—The temporary disabling of defensive radar by ionizing the air at about 45 miles altitude with the beta radiation of a nuclear explosion. This radiation and the fireball itself cause reflection or absorption of radar waves for a ten minute period thereby screening the incoming missiles from the defense.

Damage limitation.—The ability to reduce the damage of a nuclear attack by deploying ABMs to defend cities and/or targeting offensive missiles on an opponent's missiles silos.

Deterrence.—A defense strategy that depends on each side having the ability to inflict unacceptable damage on the other after absorbing a surprise first strike.

First strike capability.—The ability to launch a nuclear attack upon an opponent without receiving an unacceptable loss in return.

FOBS (fractional orbit bombardment system).—A nuclear delivery system intended to deliver its warhead to a target on a trajectory about 100 miles above the earth rather than along a ballistic trajectory outside the atmosphere, in order to avoid defensive radar. A fractionally orbited missile carries a smaller payload and is less accurate than an ICBM.

Galosh.—A Soviet ABM system comparable to the NIKE ZEUS, comprising 67 missiles on launchers around Moscow. It has been partially deployed but work has now ceased on the system.

Hardening.—Re-inforcing the geological surroundings of a missile silo to withstand the overpressure of a nearby nuclear explosion. The harder the silo, the greater the accuracy required on the part of an attacker to destroy the missile in its silo.

ICBM (inter-continental ballistic missile).—A long range (6,000–8,000 miles) multistage rocket capable of delivering nuclear warheads to enemy targets.

Kiloton.—The nuclear explosive equivalent of 1,000 tons of TNT (Hiroshima bomb equals 20 Kilotons).

Launch on warning.—A concept of defense that depends on assuring an opponent that one's retaliatory capability will be launched upon detection of incoming missiles rather than absorbing the first strike and then launching the retaliatory attack.

Megaton.—The nuclear explosive equivalent of one million tons of TNT.

Minuteman.—The basic U.S. ICBM. Minuteman I yields one megaton, Minuteman II has a higher yield and/or trade off with penetration aids, Minuteman III is designed to carry MIRVs.

MIRV (multiple independent reentry vehicle).—A system of multiple warheads in which several carried by one re-entry vehicle can be maneuvered on independent courses to different targets.

MRV (multiple reentry vehicle).—A system of multiple warheads carried in one reentry vehicle but cannot be directed to different targets.

MSR (missile-site radar).—Performs surveillance and detection, target track, missile track, and command functions for the anti-ballistic missiles in the SAFEGUARD system. It is of shorter range than the PAR and takes over from it after initial acquisition.

NIKE X.—The thick U.S. ABM system, designed in 1963 but never deployed, utilizing the components of the SENTINEL and SAFEGUARD systems.

NIKE ZEUS.—A first-generation U.S. ABM system, utilizing unsophisticated radars and the *Zeus* missile, authorized in 1957 but never deployed.

PAR (perimeter acquisition radar).—A long-range detection radar designed to detect incoming missiles at a range of 1,000–2,000 miles and track them until they come into the range of the MSR.

Penetration aids.—Devices such as decoys, chaff, radar jamming, and precursor nuclear explosions used to assist the offense in overwhelming the defensive ABM system.

Polaris.—The basic U.S. submarine-launched missile, with a range of approximately 2,800 miles. 16 Polaris missiles are carried on each of 41 Polaris submarines.

Poseidon.—A U.S. submarine-launched missile, scheduled to replace Polaris missiles on 31 of the 41 Polaris submarines and to carry up to ten independently targeted warheads.

Re-entry vehicle.—That part of an ICBM that separates from the launching stages and carries the warhead(s) along a ballistic trajectory outside the atmosphere and then back into the atmosphere, where it then continues to target.

Reprogram capability.—A system in which an offensive missile signals its launch-control point if it has launched its re-entry vehicle properly thereby allowing the offense to program a backup missile if something has gone wrong.

Sambis (sea-based anti-ballistic missile intercept system).—A concept proposed for future development by the U.S., involving a network of anti-ballistic missiles on surface and/or submarine vessels.

SS–9.—A large (20–25 megaton), reportedly inaccurate, Soviet missile, also capable of delivering a number of smaller yield warheads and capable of knocking out Minuteman missiles in their silos.

SS–11.—The basic Soviet ICBM, equivalent to the Minuteman I.

Safeguard.—An ABM system configured from the components of the NIKE X system, including PAR and MSR radars and Sprint and Spartan missiles, to be deployed in two phases, the first phase to protect U.S. retaliatory Minutemen at two sites and the second phase to protect two more Minuteman sites, seven SAC bases, and Washington, D.C., and to protect U.S. cities from Chinese or accidental attack.

Sentinel.—The Johnson Administration's deployment of the basic NIKE X components, designed to protect U.S. cities from Chinese and accidental attack and provide eventually some protection of the U.S. retaliatory force, now abandoned.

Spartan.—A long-range (400 mile) missile component of SAFEGUARD, three stage, solid fueled with a nuclear warhead in the megaton range, fired from an underground silo.

Sprint.—A short-range (25 mile) missile component of SAFEGUARD, two stage, solid fueled with a nuclear warhead in the kiloton range, fired from an underground silo,

highly maneuverable and with a high rate of acceleration.

Tallinn system.—Soviet anti-aircraft defense system having no ABM capabilities, installed around Moscow and Leningrad.

Terminal defense.—A concept of ABM defense that relies on short range missiles close to the target to intercept those missiles in a heavy attack that get by the long range ABMs. This type of defense is used to protect high value targets (cities, bomber bases, Minuteman fields) tens of miles across.

Thick system.—A thick ABM system provides defense against heavy attack with long range missiles and large numbers of short range missiles located close to targets.

Thin system.—A thin ABM system provides defense for large areas of the country against light or accidental attack with long range missiles designed to intercept the incoming ICBMs outside the atmosphere.

Titan.—A large (5–18 megaton) liquid-propellant U.S. ICBM. (The Titan II, of which 54 are deployed, is to be replaced by 1970 with Minuteman II.)

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

NATIONAL COMMITMENTS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business be laid before the Senate.

The PRESIDING OFFICER. The clerk will report the resolution.

The legislative clerk read as follows:

Senate Resolution 85, expressing the sense of the Senate relative to commitments to foreign powers.

The PRESIDING OFFICER. Without objection, the Senate resumed the consideration of the resolution.

Mr. CHURCH obtained the floor.

Mr. MANSFIELD. Mr. President, will the Senator from Iowa yield, without losing his right to the floor?

Mr. CHURCH. I yield.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. CHURCH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

OF PRESIDENTS AND CAESARS—THE DECLINE OF CONSTITUTIONAL GOVERNMENT IN THE CONDUCT OF AMERICAN FOREIGN POLICY

Mr. CHURCH. Mr. President, the Roman Caesars did not spring full blown from the brow of Zeus. Subtly and insidiously, they stole their powers away from an unsuspecting Senate. They strangled the Republic with skillful hands. Gibbon describes their method in this stately passage from the "Decline and Fall":

It was on the dignity of the Senate that Augustus and his successors founded their new empire . . . In the administration of their own powers, they frequently consulted the great national council, and *seemed* to refer to its decision the most important concerns of peace and war . . . The masters of the Roman world surrounded their throne with darkness, concealed their irresistible strength, and humbly professed themselves the accountable ministers of the Senate, whose supreme decrees they dictated and obeyed . . . Augustus was sensible that mankind is governed by names; nor was he deceived in his expectation, that the Senate and the people would submit to slavery, provided they were respectfully assured that they still enjoyed their ancient freedom.

Senators of the United States may still enjoy their ancient freedom to debate and legislate, but through our own neglect, we have come to deal increasingly more with the form than with the substance of power. Again and again, the Senate has acquiesced, while American Presidents have steadily drawn to themselves much of the power delegated to Congress by the Constitution. In the process, especially in the field of foreign commitments and the crucial matter of our military involvement abroad, Congress as a whole—and the Senate in particular—has permitted a pervasive erosion of the bedrock principle on which our political system was founded, the separation of powers.

For this reason, the national commitments resolution—Senate Resolution 85—may be the most significant measure that the Senate will consider during the current session of Congress. It seeks to set in motion a process pointing toward the restoration of the vital balance in our system prescribed by the Founding Fathers. The erosion of congressional power in the field of foreign policy has gone so far that a full return of the pendulum cannot be expected with passage of a single sense-of-the-Senate resolution. But here we must make our start.

The resolution, as reported with but one dissenting vote by the Committee on Foreign Relations, speaks for itself:

Whereas accurate definition of the term "national commitment" in recent years has become obscured: Now, therefore, be it

Resolved, That it is the sense of the Senate that a national commitment by the United States to a foreign power necessarily and exclusively results from affirmative action taken by the executive and legislative branches of he United States Government through means of a treaty, convention, or other legislative instrumentality specifically intended to give effect to such a commitment.

THE CONSTITUTIONAL ISSUE

As crisis has followed upon crisis in these last 30 years, the concentration of power in the hands of the President has grown ever more rapidly, while the Congress has been reduced to virtual impotence in the making of foreign policy. The cause of this change has been the climate of crisis itself, each one of which necessitated—or seemed to necessitate—decisive and immediate action. As each crisis arose, the President assumed, and the Congress usually agreed that the

Executive alone was capable of acting with the requisite speed. No one thought very much about the constitutional consequences of Presidential dominance in foreign policy; we tended to think only of the crisis we were dealing with, of the assumed need for speedy action, and of the importance of national unity in a time of emergency.

Now, however, we must think about constitutional problems, because nothing less than the survival of constitutional government is at stake. Our democratic processes, our system of separated powers, checked and balanced against each other, are being undermined by the very methods we have chosen to defend these processes against real or fancied foreign dangers. There is no end in sight to the era of crisis which began some 30 years ago. We cannot safely wait for quieter times to think about restoring the constitutional balance in our own Government. For as we delay, the fact of prolonged crisis, itself, will further erode our constitutional principles. The extended crisis of our own time was measured by President Nixon in the unsettling remark he made in his speech at the Air Force Academy. He said the United States, since 1941, "has paid for 14 years of peace with 14 years of war."

The corrosive impact that such an exorbitant payment invariably imposes upon democratic systems was described long ago by Alexis de Tocqueville, who wrote:

> No protracted war can fail to endanger the freedom of a democratic country. War does not always give over democratic communities to military government, but it must invariably and immeasurably increase the powers of civil government; it must also compulsorily concentrate the direction of all men and the management of all things in the hands of the administration. If it leads not to despotism by sudden violence, it prepares men for it more gently by their habits.[1]

COMMITTING OUR COUNTRY ABROAD

Our protracted engagement in warfare has produced, first of all, a striking discrepancy between the ways in which many of our foreign commitments have been made in recent years and the treaty process through which they were meant to be made. Article II, section 2 of the Constitution states that the President "shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur." Keeping this clear language of the Constitution in mind, consider the following:

On August 25, 1966, Secretary of State Rusk told the Senate Preparedness Subcommittee:

> No would-be aggressor should suppose that the absence of a defense treaty, Congressional declaration or U.S. military presence grants immunity to aggression.

The statement was meant to convey a stern warning to potential aggressors. It did that, and that was all to the good, but it also put Congress on notice that, with or without its consent, treaty or no treaty, the Executive will act as it sees fit against anyone whom it judges to be an aggressor, and that is not to the good. It is indeed nothing less than a statement of intention on the part of the Executive to usurp the treaty power of the Senate.

The denigration of treaties goes back at least to 1940, when the current era of world crisis began. In the summer of that year, when France had fallen and Britain was in imminent danger of German invasion, President Roosevelt made an agreement with Great Britain under which 50 overaged American destroyers were given to her in exchange for certain naval bases on British territory in the Western Hemisphere. The arrangement was made by executive agreement despite the fact that it was a commitment of the greatest significance, an act which, according to Churchill, gave Germany legal grounds for declaring war on the United States. It is unlikely that President Roosevelt wished to usurp the treaty power of the Senate; he acted as he did because he thought the matter to be one of the greatest urgency and he feared that Great Britain might be invaded and overrun before the Senate would act on a treaty. In retrospect this seems unlikely but, granting that the danger may have seemed real at the time, the constitutional effects of President Roosevelt's action would have been mitigated if he had frankly stated that he had acted on an emergency basis in a manner which may have exceeded his constitutional authority. Instead, he had the Attorney General prepare a brief contending that the President had acted entirely within his constitutional powers. Instead, therefore, of a single incursion on the Senate's treaty power, acknowledged to be such, the act was compounded into a precedent for future incursions on the constitutional authority of the Congress.

The destroyer deal was the first of a long series of significant foreign commitments made by Executive agreement, each one of which has constituted an added precedent for the taking over by the President of the treaty powers meant to be exercised by the Senate. So far have things gone that treaties are now widely regarded, at least within the executive branch, as no more than one of a number of available methods of committing our country to some action abroad.

Indeed, executive branch officials have at times sought by simple statement to create "commitments" going far beyond those agreed to under normal treaty processes. Thailand is a case in point. Under the SEATO Treaty, the United States is obligated to "act to meet the common danger in accordance with its constitutional processes" should Thailand be attacked, and, should Thailand be threatened with subversion, the United States and other treaty signatories are obligated to "consult." But in 1962, Secretary of State Rusk and the Thai Foreign Minister, Thanat Khoman, issued a joint statement in which Secretary Rusk expressed "the firm intention of the United States to aid Thailand, its ally and historic friend, in resisting Communist aggression and subversion"—a commitment going far beyond that contained in the SEATO Treaty to "consult" in case of subversion.

One of the newest devices used to circumvent the treaty power of the Senate is the congressional resolution, framed in such sweeping language as to give advance consent to unspecified future action by the President. As used in recent years, these resolutions have not been specific and carefully considered grants of power but blank checks on the constitutional authority of Congress written in an atmosphere of commanding emergency. As the Executive has made increasingly extravagant use of these resolutions—about which I shall comment further later on—Congress has begun to develop a belated but healthy wariness of such vague and hasty grants of authority.

Two years ago, for example, the Senate was asked to adopt a sweeping resolution promising large new sums of aid money for Latin America. The Senate was asked to approve this resolution in great haste so that President Johnson might carry it with him to his meeting with the other hemispheric presidents at Punta del Este. The Foreign Relations Committee judged that it simply could not assess the merits of the proposal in the short time allowed and, since the proposed measure was not urgent, the committee declined to act on the President's request, adopting instead a substitute resolution promising to give due consideration, in accordance with its normal procedures, to any proposals for increased aid to Latin America which the President might later submit. The substitute resolution, which the committee adopted by a vote of nine to nothing, was rejected by Presidential Advisor Walt Rostow as "worse than useless." Mr. Johnson went to Punta del Este without his resolution and the effects, I think, were salutary. Having no gifts to dispense, the United States was obliged to deal with the Latin Americans as a friend rather than as a patron; having no new bauble dangled before them, the Latin Americans were obliged to deal with the United States as equals rather than as suppliants.

The significance of the Foreign Relations Committee's rejection of the proposed Latin American resolution had much more to do with executive-legislative relations at home than with the committee's attitudes toward Latin America. The committee was exhibiting a new but well-founded reluctance to grant the Executive any more blank-checks. The Executive was being put on notice that its account with Congress is overdrawn, not only in matters affecting treaties but even more in matters of deciding on war or peace, to which I now turn.

THE WAR POWER

Unlike the treaty power, the Constitution did not divide the war power equally between the two branches of Government but vested it predominantly in Congress. Article I, section 8 of the Constitution states that—

> Congress shall have the power to declare war; to raise and support armies; to provide and maintain a navy; to make rules for the Government and regulation of the Armed Forces; to provide for calling forth the militia to execute the laws, suppress insurrections, and repel invasions; to provide for organizing, arming, and disciplining the militia; and to make all laws necessary and proper for executing the foregoing powers.

[1] Alexis de Tocqueville, *Democracy in America*, London. Oxford University Press, 1946. Translated by Henry Reeve, p. 533.

Article II, section 2 of the Constitution states that the President shall be Commander in Chief of the Army and Navy.

The language of the Constitution is clear and the intent of the framers beyond question: the war power is vested almost entirely in the Congress, the only important exception being the necessary authority of the President to repel a sudden attack on the United States. Only in recent years have Presidents claimed the right to commit the country to foreign wars, under a sweeping and, in my opinion, wholly unwarranted interpretation of their power as Commander in Chief.

The framers of the Constitution very deliberately placed the war power in the hands of the legislature, and did so for excellent reasons. All too frequently, the American Colonies had been drawn, by royal decree, into England's wars. The leaders of the newly independent Republic resolved to make certain that their new country would never again be drawn into war at the direction of a single man; for this reason they transferred the war power to the legislative branch of the newly created Government. In so doing, they recognized that the President might sometimes have to take defensive action to repel a sudden attack on the United States, but that was the extent of the war-making power they were willing for him to exercise.

The intent of the framers is made quite clear in the proceedings of the Constitutional Convention and in the subsequent writings of the Founding Fathers. In a letter to James Madison in 1789, Thomas Jefferson wrote:

> We have already given in example one effectual check to the Dog of war by transferring the power of letting him loose from the Executive to the Legislative body, from those who are to spend to those who are to pay.[2]

Alexander Hamilton, who generally favored extensive Presidential power, nonetheless wrote as follows concerning the President's authority as Commander in Chief:

> The President is to be commander in chief of the army and navy of the United States. In this respect his authority would be nominally the same with that of the king of Great Britain, but in substance much inferior to it. It would amount to nothing more than the supreme command and direction of the military and naval forces, as first General and Admiral of the Confederacy, while that of the British king extends to the *declaring* of war and to the *raising* and *regulating* of fleets and armies—all which, by the Constitution under consideration, would appertain to the legislature.[3]

During the first century of American history most of our Presidents were scrupulously respectful of Congress' authority to initiate war. When President Jefferson sent a naval squadron to the Mediterranean to protect American commercial vessels from attack by the Barbary pirates, he carefully distinguished between repelling an attack and initiating offensive action. When he thought the latter necessary, he sent a message to Congress asking for the requisite authority.

Stating that he himself was "unauthorized by the Constitution, without the sanction of Congress, to go beyond the line of defense," he requested authority to take offensive action, acknowledging that such authority was "confided by the Constitution to the legislature exclusively."[4]

The Monroe Doctrine is often cited by proponents of unrestricted Presidential power as a precedent for executive authority to commit the country to military action abroad. In fact, President Monroe himself regarded his declaration as no more than a policy statement. When the Government of Columbia inquired, in 1824, as to what action the United States might take to defend the newly independent Latin American states against European interference, Secretary of State John Quincy Adams replied:

> With respect to the question, "in what manner the Government of the United States intends to resist on its part any interference of the Holy Alliance for the purpose of subjugating the new Republics or interfering in their political forms" you understand that by the Constitution of the United States, the ultimate decision of this question belongs to the Legislative Department of the Government . . .[5]

In 1846, President Polk sent American forces into disputed territory in Texas, precipitating the clash which began the Mexican war. Abraham Lincoln, then a Republican Member of the House of Representatives from Illinois, was certain that the President had acted unconstitutionally, and he wrote:

> Allow the President to invade a neighboring nation whenever *he* shall deem it necessary to repeal an invasion, and you allow him to do so, *whenever he may choose to say* he deems it necessary for such purpose—and you allow him to make war at pleasure. Study to see if you can fix *any limit* to his power in this respect, after you have given him so much as you propose . . .
>
> The provision of the Constitution giving the warmaking power to Congress, was dictated, as I understand it, by the following reasons. Kings had always been involving and improverishing their people in wars, pretending generally, if not always, that the good of the people was the object. This, our convention undertook to be the most oppressive of all kingly oppressions; and they resolved to so frame the Constitution that *no one man* should hold the power of bringing this oppression upon us.[6]

Nonetheless, by the end of the 19th century, precedents had been established for Presidential use of the Armed Forces abroad for certain limited purposes, such as suppressing piracy and the slave trade, "hot pursuit" of criminals across frontiers, and protecting American lives and property, as well as for repelling sudden attack. But in the early 20th Century, Presidential power over the commitment of the Armed Forces abroad was greatly expanded. Presidents Theodore Roosevelt, Taft, and Wilson, acting without authority from Congress, repeatedly intervened militarily in Mexico, Central America, and the Caribbean. The Congresses of that period, most unwisely, failed to resist these Presidential incursions on their constitutional authority, with the result that they became corrosive precedents for the further and much greater incursions that were to follow during and after World War II.

I have already noted how President Franklin Roosevelt usurped the treaty power of the Senate in making his famous destroyer deal with Great Britain; he also went further than any previous President in expanding Executive power over the Armed Forces. In the course of the year 1941, he committed American forces to the defense of Greenland and Iceland, authorized American warships to escort, as far as Iceland, convoys which were bound for Britain, and ordered American naval vessels to "shoot on sight" against German and Italian ships in the western Atlantic. Well before Congress declared war on the Axis Powers, President Roosevelt had already taken the country into an undeclared naval war in the Atlantic. Few would deny that he did these things in an excellent cause, that of assisting Britain in those desperate days when she stood alone against the tide of Nazi aggression. But in doing what he did for a good cause, President Roosevelt enabled his successors to claim the same authority in the furtherance of causes much more dubious.

After World War II, the trend toward Presidential dominance accelerated greatly and the real power to commit the country to war is now exercised by the President alone. As one historian, Prof. Ruhl Bartlett, has pointed out:

> The positions of the executive and legislative branches of the Federal Government in the area of foreign affairs have come very close to reversal since 1789 . . .[7]

In other words, the intent of the Constitution has been virtually negated.

In 1950, President Truman committed the Armed Forces of the United States to the Korean war without any form of Congressional authorization. The President himself made no public explanation of his action, but an article in the Department of State Bulletin, which is the official record of State Department policy, asserted:

> The President, as Commander in Chief of the Armed Forces of the United States, has full control over the use thereof.[8]

No one in Congress protested at the time, but some months later, in January 1951, Senator Taft asserted that the President had "simply usurped authority" in sending troops to Korea.[9]

When the Korean war went badly, President Truman's political opponents, who had supported him at the outset, charged him with responsibility for the war and accused him of exceeding his authority. In order to protect themselves from this kind of accusation, subsequent Presidents have adopted the practice of asking Congress for joint resolutions when they contemplate taking military action in some foreign country. Presidents Eisenhower, Kennedy, and Johnson all have requested such resolutions and Congress has readily complied. Resolutions were adopted pertaining to Formosa, the Middle East, Cuba and, finally Southeast Asia. Couched in the broadest of terms, these resolutions have generally expressed Congress' advance approval of any military action the President might see fit to take in the area concerned.

The most important and fateful of all these was the Gulf of Tonkin resolution adopted in August 1964, after only 2 days of hearings and debate. The resolution expressed congressional approval of any measures the President might choose to take to prevent aggression in Southeast Asia and further stated that the United States was prepared to take any action the President might judge to be necessary to assist a number of Southeast Asian states, including Vietnam.

The Gulf of Tonkin resolution has been cited, again and again, as proof of Congress' approval of the war in Vietnam. It was later said by Under Secretary of State Katzenbach to be the "functional equivalent" of a congressional declaration of war. In my opinion, Congress neither expected nor even considered at the time of the debate on the resolution that the President would later commit more than half a million American soldiers to a full-scale war in Vietnam.

WHY CONGRESS ABDICATED

How did it come about that Congress permitted itself to be so totally and disastrously misunderstood? And why has Congress tamely yielded to the President powers that, beyond any doubt, were intended by the Constitution to be exercised by Congress?

As to the first question, Congress failed to state its intentions clearly in the case of the Gulf of Tonkin resolution, because it assumed that those intentions were generally understood. A national election campaign was then in progress and President Johnson's basic position on Vietnam was that "we are not about to send American boys 9,000 or 10,000 miles away from home to do what Asian boys ought to be doing for themselves." [10] In adopting a resolution supporting the President on Vietnam, the great majority in Congress believed that they were upholding the position of moderation which President Johnson was expressing in his campaign. The failure of Congress to make its purpose clear was nonetheless a grave error.

With respect to the second question, the abdication of Congress in the field of foreign policy, the reasons are varied and several. To begin with, the politics of crisis is that of anxiety in which Congress, like the country, tends to unite behind the President. Because the United States has exercised its role as a world power for only a short time, we have not really gotten used to dealing with foreign emergencies and, more important still, to discriminating between genuine emergencies and situations that only seem to require urgent action. Lacking experience in dealing with such flaps as the Gulf of Tonkin incident in 1964, we have tended to act hastily with insufficient regard for the requirements of constitutional procedure, assuming, quite wrongly, that it would somehow be unpatriotic to question the President's judgment in a moment of assumed emergency.

Then there is the way our history has been taught since the end of the First World War. It is now part of the conventional wisdom that the Senate's refusal to ratify the Versailles Treaty not only destroyed Woodrow Wilson's dream of world order, but actually accounted for the failure of the League of Nations to prevent World War II. The theory persists, despite the anemic peacekeeping record of the United Nations in which we have so actively participated, and, though outdated, its continued respectability has doubtlessly had an intimidating effect on Congress. But even if the Senate blundered in 1919, it does not follow that the President must, therefore, be regarded as infallible. The myth that the Chief Executive is the fount of all wisdom in foreign affairs today lies shattered on the shoals of Vietnam. The lesson to be learned may well be found in the observation of James Bryce, the British statesman, who said:

> In a democracy the people are entitled to determine the ends or general aims of foreign policy. History shows that they do this at least as wisely as monarchs or oligarchies, or the small groups to whom, in democratic countries, the conduct of foreign relations has been left, and that they have evinced more respect for moral principles.[11]

The "small groups" to whom Bryce refers have themselves induced Congress to underrate its own competence in foreign affairs. The executive branch of our Government is populated with specialists and experts. These men have added greatly to the Government's skill in conducting foreign relations, but they have also shown a certain arrogance, purveying the notion that anyone who is not an expert, including Congressmen, Senators, and ordinary citizens, is simply too uninformed to grasp the complexities of foreign policy. Now, modesty and self-effacement are not characteristics usually associated with politicians but, curiously enough, many Members of Congress seem to have accepted the view that foreign policy is best left to the experts. This view is patently false: Clemenceau said that war was too important to be left to the generals; similarly, the basic decisions of foreign policy are too important to be left to the diplomats. As Professor Bartlett puts it:

> There are no experts in wisdom concerning human affairs or in determining the national interest, and there is nothing in the realm of foreign policy that cannot be understood by the average American citizen.[12]

No discussion of congressional abdication in the realm of foreign policy would be complete, however, without mention of the great impetus given the growth of Presidential prerogative by the general acceptance, following World War II, of the doctrine of bipartisanship in the conduct of our foreign relations. The lure of that beguiling slogan, "politics stops at the water's edge," led us to the erroneous conclusion that any action taken by the President abroad demanded bipartisan backing at home. Ironically, it never seems to have occurred to us that bipartisanship, as actually practiced, has neither eliminated partisanship or politics from foreign policy matters. In 1952, for example, the Republicans rode to power on the issue of Korea, while Castro's takeover of Cuba became a major political argument in the Kennedy campaign of 1960. Far from removing foreign policy from the arena of partisan politics, the doctrine of bipartisanship has simply gathered more power into the hands of the President by eliminating, between elections, any semblance of organized opposition in Congress. When the duty to oppose no longer rests, as it normally must, upon the "loyal opposition" in Congress, the day-to-day responsibility for holding the President to account, for the timely questioning of his chosen course, and for the posing of alternatives, falls much less effectually to the scatterfire of individual Members expressing their personal dissent. All in all, the proposition is well summed up by Mr. James O'Gara, the distinguished editor of Commonweal, who observes:

> As it is usually interpreted, all we get from the exhortation to keep politics out of foreign affairs is the illusion of agreement. This result may make us feel more secure, but it does not really help us. It only papers over real differences and prevents that discussion and debate which could lead to better policies and a stronger, more effective position abroad.[13]

THE CONSEQUENCES OF ABDICATION

As a result of the passing of the war power out of the hands of Congress, perhaps the most important of our constitutional checks and balances has been overturned. For the first time in our history, there has come into view the possibility of our President becoming a Caesar, because, as Gibbon wrote in "The Decline and Fall":

> The principles of a free constitution are irrevocably lost, when the legislative power is nominated by the executive.[14]

It is no exaggeration to say that the President of the United States now holds the power of life and death for 200 million Americans and, indeed, for most of the human race. That power is vividly described by the brilliant columnist, James Reston, who wrote of the ascendancy of the Presidency in these words:

On the great acts of foreign policy, especially those involving the risk or even the act of war, he is more powerful in this age than in any other, freer to follow his own bent than any other single political leader in the world—and the larger and more fateful the issue, the greater is his authority to follow his own will.[15]

No human being can safely be entrusted with such enormous powers. Prof. Henry Steele Commager wrote not long ago:

It is that the possession of power encourages and even creates conditions which seem to require its use, and that the greater and more conclusive the power the stronger the argument for its use. Those who possess authority want to exercise it: children, teachers, bosses, bureaucrats, even soldiers and statesmen . . . Men who possess power think it a shame to let power go to waste and sometimes, perhaps unconsciously, they manufacture situations in which it must be used—as in Santo Domingo, for example. All this was dangerous but not intolerable in the pre-atomic age; it is no longer tolerable.

Even the wisest and most competent of Presidents is still a human being, susceptible to human flaws and human failures of judgment. The greatest insight of our Founding Fathers was their recognition of the dangers of unlimited power exercised by a single man or institution; their greatest achievement was the safeguards against absolute power which they wrote into our Constitution.

The resolution before the Senate will not, of and by itself, restore the constitutional balance which has been lost. It will not, of and by itself, restore to Congress the war power, now abdicated away. The resolution is, however, designed to initiate that process; it is designed to remind Congress of its responsibilities and to help create a new state of mind.

What, one may ask, could be expected to come of a new congressional attitude toward foreign policy? First, one may hope that it would encourage Congress to show the same healthy skepticism toward Presidential requests pertaining to foreign relations that it shows toward Presidential recommendations in the domestic field. One may hope that Congress hereafter would exercise its own judgment as to when haste is necessary and when it is not. One may hope that, in considering a resolution such as the Gulf of Tonkin resolution, Congress would hereafter state as explicitly as possible the nature and purpose of any military action to be taken and, more important still, that it would make it absolutely clear that the resolution was an act of authorization, granting the President specific powers which he would not otherwise possess. One may hope, finally, that Congress would never again forget that its responsibility for upholding the Constitution includes the obligation to preserve its own constitutional authority.

One hears it argued these days—by high officials in the executive branch, by foreign policy experts, and by some political scientists—that certain of our constitutional procedures, including the power of Congress to declare war, are obsolete in the nuclear age. This contention, in my opinion, is without merit. Nothing in the Constitution prevents—and no one in Congress would ever try to prevent the President from acting in a genuine national emergency. What is at issue is his authority to order our military forces into action in foreign lands whenever and wherever he judges the national interest calls for it. What is at issue is his right to alter constitutional processes at his option, even in the name of defending those processes.

I do not believe that the Constitution is obsolete; I do not believe that Congress is incapable of discharging its responsibilities for war and peace; but, if either of these conditions ever should arise, the remedy would lie in the amendment process of the Constitution itself. As George Washington said in his Farewell Address:

Let there be no change in usurpation for though this in one instance may be the instrument of good, it is the customary weapon by which free governments are destroyed.

Mr. President, I ask unanimous consent to have printed in the RECORD an article written by Joseph C. Harsch, which appeared in yesterday's edition of the Christian Science Monitor, entitled "Which Caesar?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHICH CAESAR?

(By Joseph C. Harsch)

WASHINGTON.—There is a favorite after-dinner game played here in Washington these days which is always fascinating though never conclusive. It consists of trying to match up Roman emperors with modern American presidents.

The object of the game is to decide when the United States ceased to be a republic and became an empire. Some go further and raise the question whether the republic can be restored.

In practical terms the question is whether the Congress can reclaim a veto over the freedom of the president to make war.

PRESIDENTIAL AUTHORITY

The Constitution specifically reserved to Congress the right to declare war.

Yet twice within the last 19 years the president has committed the United States to war without ever obtaining a declaration of war from the Congress, or ever calling it a war.

According to Sen. Frank Church (D) of Idaho the usurpation by the White House of the power to make war dates from 1940 when Franklin Delano Roosevelt gave 50 destroyers to Britain without the approval of Congress; and claimed that he had acted within his constitutional powers. Actually, the destroyers were in exchange for 99-year leases on eight British bases.

The extreme limit to which the new doctrine of presidential authority has been carried, to date, came in August of 1967.

The Senate Foreign Relations Committee held hearings to review the Gulf of Tonkin resolution (of 1964) on which President Johnson based his commitment of American armed forces to combat in Vietnam. Members of the committee were threatening to repeal the resolution. The then Under Secretary of State, Nicholas Katzenbach, argued that it would be unfortunate, but legally unimportant because, he claimed the president had every right to do what he had done with or without the Tonkin resolution.

EMERGENCY ACT?

There it was. The bald assertion that because of the nature of modern war the president is free to act in any emergency as he sees fit without consulting the Congress.

Members of the committee have been mulling over that assertion of presidential power ever since. They are currently proposing to the Senate a resolution which would attempt to reclaim for Congress some restraint on the war-waging freedom of the president.

Senator Church sees this effort in terms of the occasional efforts made by the Roman Senate during the middle phases of the Roman Empire to reclaim some of the lost power of the senate.

In the case of Rome, it never worked. According to Senator Church, who has been rereading his Gibbon ("Decline and Fall of the Roman Empire") it was Caesar Augustus who "strangled the republic with skillful hands." From the time of Augustus the Roman Senate was always a puppet of the reigning emperor.

Have we gone that far in Washington yet? Was Franklin Roosevelt the equivalent for us of Caesar Augustus? It was during his reign that American armies spread across the face of the earth. And most of them are still posted where he placed them.

MARTIAL CEREMONIES

But the trappings of empire came later. Not until John F. Kennedy did we begin to have those martial ceremonies with honor guards and fanfares of trumpets on the White House backyard every time some visiting celebrity arrived. Harry Truman met his guests on the front porch with a handshake, unaided by "ruffles, flourishes, and 'Hail to The Chief.'"

If Roosevelt was our Augustus where does Richard Nixon fit into the pattern?

Americans have so far been fortunate. They have not had a modern Caligula; although extreme critics of Lyndon Johnson have been heard to mutter "Nero." Perhaps Nixon can be matched to Claudius who sincerely did try to restore the authority of the Roman Senate.

The essential fact is that Rome ceased to be a republic when it became a world empire. It proved to be impossible in those times to manage and administrate an empire by the "collective leadership" of the old senate.

Does that rule apply to the United States today?

It makes for a lively after-dinner game.

Mr. PELL and Mr. McGEE addressed the Chair.

Mr. CHURCH. Mr. President, I am happy to yield first to the Senator from Rhode Island.

The PRESIDING OFFICER (Mr. EAGLETON in the chair). The Senator from Rhode Island is recognized.

Mr. PELL. Mr. President, I merely wish to say that I was not able to be in the Chamber during the entire time the Senator was speaking. I did have an opportunity to read his speech. I congratulate the Senator on his speech and on the thrust of it. I think it is an excellent speech and he has done a great service to the Senate.

I think the point should be made that in our Government, which is tripartite in form, we sometimes tend to think that

[15] James Reston, *The Artillery of the Press; Its Influence on American Foreign Policy*, New York, Harper & Row, 1967, p. 45.

all three parts of our Government are intended to be equal checks and balances but that is not so in the ever flow of events and personalities.

In previous years, we in Congress have been perhaps a little remiss in not having demanded explicit and as strong authority as we should have.

Perhaps actions, such as the pending resolution, and speeches, such as the speech the Senator has just made, will restore to the Congress the position I believe it should have.

Mr. CHURCH. I thank the Senator for his remarks. I concur completely that the division of powers contemplated by the Constitution is not guaranteed by providence. It depends on the Congress, in general, and the Senate, in particular, in the case of foreign policy, to assert the powers vested in it by the Constitution. If we fail to do that, as we have largely failed, I submit, on many occasions in the last 50 years, precedents are established which steadily erode away the powers themselves, and then it is argued that on the basis of the precedents the powers no longer exist, or that they have come to adhere in the presidency instead of the Congress. To preserve the power of Congress is our responsibility, and I hope this resolution will have the effect of reminding us of that responsibility.

I thank the Senator for his remarks.

Mr. McGEE. Mr. President, will the Senator yield?

Mr. CHURCH. I am happy to yield to the Senator from Wyoming.

Mr. McGEE. Mr. President, I wish to join my voice with that of my colleague in applauding the contribution of the distinguished Senator from Idaho to the legislative record of the issues that are attendant to the proposition of the Senate's role in foreign policy, particularly in times like the present. I think that only in this way are we going to be able to answer to ourselves as to what is the wisest way for us to proceed. However, I would like to raise several points specifically with the Senator that his speech has brought out. I not only have read his speech but I listened very carefully to the Senator's eloquent presentation of that speech.

I think that the principal focus in the speech might well hang on the point just raised by the Senator from Rhode Island, namely, that the Constitution does not in absolute terms determine what is the balance between the executive and the legislative branches, and that throughout our history that balance has gone up and down the scale, either reflecting moments of crises at a particular time, or reflecting contrasts between strong Presidents and acquiescent Congresses, or vice versa. Therefore, there is no hard and fast rule we can draw, nor is there an assumption in the Constitution. This is where I think the Senator is in error. There is no hard and fast rule or assumption in the Constitution that prescribes that we have some kind of balance to restore. It seems rather that it is incumbent on us, in the framework of the Constitution, to try to constantly reassesses the processes.

Would the Senator care to respond?

Mr. CHURCH. Yes, I would be happy to respond to the Senator's observation.

First of all, I would agree that the precise limit of the authority delegated to the Congress by the Constitution, or the precise limit of the presidential authority, is subject not only to reasonable argument but, from time to time, in the ebb and flow of history, there have been changes in the precise lines of demarcation.

I have tried to point out that during the last century—with the possible exception of the Mexican War, which I think historians might well agree was a war initiated by Presidential action—there was no substantial incursion by the President on the war power of Congress.

I have tried to point out that, since the turn of the century, Presidential power has grown at the expense of Congress; first, with the action taken by Presidents Woodrow Wilson, Theodore Roosevelt, and William Howard Taft to send American troops into Central America and the Caribbean, where they were, on occasion, committed to combat without authorization from Congress.

I noted in my address that the failure of the Congress to object to this assertion of Presidential prerogative established unfortunate precedents upon which subsequent Presidents have built. Beginning in 1940, with President Franklin Roosevelt's decision to exchange American destroyers for certain leaseholds in British territory in the Western Hemisphere, the power of the Presidency was greatly enlarged. It has nearly swept away the last vestiges of Congress' war power as defined by the Constitution.

I have tried to demonstrate that, far from representing a healthy ebb and flow, in which the legislative branch asserts itself in times of an acquiescent president, while the Presidency asserts itself in times of a strong and determined president, the current has all been in the direction of presidential usurpation of congressional power, to the point where the real decision for war or peace now rests with the presidency. I think it is incumbent upon us to recognize what has happened.

We must look at the extent of the erosion of congressional power. We need a resolution of this kind to remind Congress of its responsibility under the Constitution, so that this process of steady erosion can be reversed, and we can begin to retrieve the prerogative that is ours under the supreme law of the land.

Mr. McGEE. It occurs to me that some of our misunderstanding or confusion, or however we wish to describe it, derives from a mixture in the comments which have been made as to the President's prerogatives under the Constitution in the field of foreign policy, and what they are as delineated in the clause reserving the power to declare war to an act of the Congress.

Mr. CHURCH. Both issues are involved in this resolution.

Mr. McGEE. Would the Senator suggest, then, that in the realm of projecting foreign policy, as he says on the first page of his speech, it involves the basic principle of returning to the separation of powers between President and Congress in the field of foreign policy itself?

Mr. CHURCH. Yes, indeed. I try to spell that out by pointing to the denigration of the treaty power. Take, for example, this account in today's New York Times, regarding the Spanish bases arrangement. The Senator is aware of the background, that we have been committed to a certain relationship with Spain by executive agreement, parts of which were never even disclosed to Congress. I heard the Senator say yesterday that he felt this was a clear case of abuse of Presidential power. I agree with him. But when we are bound to a government like that of Spain by Presidential action, without even so much as a full disclosure to the Senate, and without ever having been called upon either to approve or reject that relationship by passing upon a treaty, when such matters as ordinary commercial and fishery agreements and tax agreements and consular conventions are routinely brought here for our approval, I suggest to the Senator that there has been a very serious abuse of Presidential prerogative in the circumvention of the treaty power.

It used to be a general rule that anything that had major importance came to the Senate in treaty form, and that other matters of lesser importance, such as technical and commercial matters, were often made by Presidential agreement. But the line between the two is no longer observed.

I recall when we were once considering a very technical and relatively unimportant tax treaty with Thailand. It was brought dutifully to the Senate in accordance with constitutional requirements, and we were considering it in the Committee on Foreign Relations. During the same period, the President shipped some 30,000 American troops to Thailand, where they could well be the cause of our becoming involved in a war in that country, and he acted without even consulting the Senate.

I suggest to the Senator that these are examples of serious erosion of what was meant to be the responsibility of the Senate under the Constitution.

Mr. McGEE. May I, then, observe, in response to the Senator, that under the Constitution itself, even the literal words of the Constitution, I would suppose we would have to agree that the initiative in foreign policy, the overwhelming bulk of that responsibility in making foreign policy—I repeat, making it—devolves upon the Executive in the system. That is the reason I asked the preceding question. We must separate policy formulation from the declaration of war.

Let me continue on that. The President is restrained under the Constitution in all foreign policy matters only in three areas; namely, first, in the treatymaking power; second, in the appropriation of funds involved in the execution of foreign policy; and, third, in the actual declaration of war itself.

But more than that, there is no legacy in the constitutional language, as I see it, which requires some kind of separation of powers between the Senate and the Executive. The President has the initiative in that.

President Monroe had the initiative to pronounce a doctrine. President Truman had the initiative to pronounce a doctrine. It did not require, under any terms I know of, a followup by the Senate per se. The lines have already been set. Who could determine what the consequences of either the Monroe Doctrine or the Truman doctrine would ever be? Because of their promise it might well have required a confrontation somewhere down the line, and Congress would have found, in substance, its constitutional prerogatives already limited in terms of what options it could choose between. But there was no questioning of the President's right, or of the President's authority, or of the President's responsibility, if you will, that lay out these lines.

A President can refuse to recognize a nation. He can also recognize a nation. That is policy. Yet, doing that, or failing to do that, can also commit.

What I am getting at is that, in the field of foreign policy, the President has the initiative under the Constitution and probably must continue to have it, especially so in these days; and that the options of Congress are narrowly drawn as a result.

I think that we should keep this in perspective. In my judgment, the Senator threw the whole bag of unpleasantness and unhappiness into this. I think we have to separate it from war declaration.

Mr. CHURCH. Let me say, first of all, that I think the Senator has set up a fine strawman and then has proceeded to demolish him. But the strawman does not relate to the propositions I have advanced.

No one denies that the President has great powers in the field of foreign policy. No one denies that he is the initiator and the chief architect. No one denies that he can recognize or refuse to recognize foreign governments. No one denies that he can declare doctrines.

Mr. McGEE. Without consulting the Congress.

Mr. CHURCH. The argument is not that the President does not have enormous powers which are quite uncontested. The argument is that it was not intended that he have all the powers. He has taken them. That is the argument.

Let us go back to the Monroe Doctrine. The Senator referred to it as an example of presidential power. Let us consider that. It is true that President Monroe, in his own right, declared the doctrine. Then some of the new republics in South America became interested in how it was going to be implemented. They were concerned because of the threat posed by the Holy Alliance against which the doctrine had been, as the Senator well knows, asserted. Thus, they inquired of our Secretary of State as to how the doctrine would be implemented, and he replied in terms completely consistent with the Constitution.

This is what he said:

> With respect to the question in what manner the Government of the United States intends to resist or to prevent any interference of the Holy Alliance for the purpose of subjugating new republics or interfering in their political forms, you understand that by the Constitution, the ultimate decision of the question belongs to the legislative department of government.

What could be clearer?

I simply say to the Senator that he makes a good argument, but I do not think it is relevant. The President has broad power under the Constitution to conduct foreign relations, but it is subject to the right of the Senate to pass upon treaties. I have tried to indicate how that right of the Senate has been circumvented by Presidential policy, by executive agreements and other kinds of resolutions, in order to avoid the necessity of securing a two-thirds vote of the Senate, which treaties require.

History is replete with examples, and we should know them, because they have come so fast and furiously in our own time. I have referred to the war power, to which the Senator also alludes, and the treaty power. Both have been eroded away. Today we must, in all honesty, admit that the war power has been lost. Our last two wars have been Presidential wars. It is not enough to say that Congress still has the power to declare war, if the President wants it declared. I do not think that really is a sensible argument.

Mr. McGEE. I think that puts the finger on part of the problem. Let us go back in terms of what the Senator is saying here. He alone can tell us what he is contending, but if I read his remarks correctly, he talks in his speech about the separation of powers between the President and the Congress having been eroded in a pervasive way. The Executive has, in effect, run away with the ball. I am trying to pin it down as to whether it is in the making of policy or whether it is in the war declaration that that is involved.

If it is the latter, I assume, from what the Senator has said, it is the conflict in Vietnam that has been at least the current element that has triggered concern in this field. He himself talked at some length about the Gulf of Tonkin resolution.

Is it the argument that it was an improper thing or that Congress did not take the right step? Where was this a violation of what the Senator is talking about?

Mr. CHURCH. I think the argument is very clearly set out in the text of my remarks. As far as the Gulf of Tonkin resolution is concerned, the Senator has listened to that part of the remarks—I thank him for it—and he has also read the remarks.

Mr. McGEE. I have also studied the remarks.

Mr. CHURCH. I could repeat them once more.

Mr. McGEE. No; do not read them again. I ask the Senator to answer on the point I have suggested.

Mr. CHURCH. I said that Congress made a grave error, in my judgment, when it worded the Gulf of Tonkin resolution so vaguely and so broadly. I also referred to the event as an example of a trend in recent years, whereby the Executive seeks to secure blank-check authority from the Congress to cover future vague and unspecified Presidential actions.

I think we have learned something from the Gulf of Tonkin resolution, namely, that we ought not to do that. I hope we have learned that lesson. I have learned it. I voted for the Gulf of Tonkin resolution, as did the Senator from Wyoming, as did most other Members of the Senate. There were only two very perceptive Members of the Senate who did not, Senator Morse, of Oregon, and Senator Gruening, of Alaska. But I admit that, when I voted for it, I did so within the context of a situation in which an American destroyer had been attacked on the high seas and retaliation had followed. We were then asked for the resolution.

In all honesty, I do not think many Members of the Congress had it in their minds, when they voted for the resolution, that they were conferring authority on the President for sending half a million combat troops into Southeast Asia. But we must, nonetheless, accept responsibility for having adopted the resolution in that form. I think we must also learn a lesson from it.

Mr. McGEE. Here I think the Senator is straining his remarks and referring to the war-declaring policy, which he has stated articulately, and going into the field of policy, involving congressional action. Let me read the high phrases of the Gulf of Tonkin resolution. I think this is important. Unlike the Senator from Idaho, or the chairman of the committee, who made the declaration yesterday, I think I understood what the Gulf of Tonkin resolution was. I read it and I voted for it. I had no illusions as to what it meant. I am not sure what the Senator's source is for the statement he makes that most Members of Congress did not mean that. It seems to me the Gulf of Tonkin resolution was clear Therefore, I object to its being used as an illustration of some devious device that somehow trapped Congress into adopting it when its Members were unhappy about doing so. Listen to what the Tonkin resolution said:

> That the Congress approves and supports the determination of the President, as Commander in Chief, to take all necessary measures to repel any armed attack against the forces of the United States and to prevent further aggression.
>
> SEC. 2. The United States regards as vital to its national interest and to world peace the maintenance of international peace and security in southeast Asia. Consonant with the Constitution of the United States and the Charter of the United Nations and in accordance with its obligations under the Southeast Asia Collective Defense Treaty, the United States is, therefore, prepared, as the President determines, to take all necessary steps, including the use of armed force, to assist any member or protocol state of the Southeast Asia Collective Defense Treaty requesting assistance in defense of its freedom.

Mr. CHURCH. I suggest, respectfully, that the Senator is only pushing an open door. I know what is in the Tonkin resolution. I know it was drafted downtown. We bought it in 2 days. That is where I think we made our mistake.

When it comes to conferring authority on the President to make war anywhere in the world, we should be very careful about the language we use. I think the lesson to be learned from the Gulf of

Tonkin resolution is that we ought not to give carte blanche authority any more.

We could take all afternoon on what the Senate meant when it passed the resolution. I suppose we could not answer that question unless we had the sworn testimony of all who were present at the time, not only in the Senate but in the House.

I can only speak for myself. I remember the occasion very well. The Senator may have voted, as he said, to confer authority to make major war in Southeast Asia. He may have thought that was what he was doing. Certainly, the language would permit it. But at the time a political campaign was underway. Does anybody here fail to remember what the nexus of that campaign was? It was a campaign between Mr. GOLDWATER, on the one hand, and Mr. Johnson on the other, and the whole focus of the campaign was upon Mr. GOLDWATER's proposals, which were dramatized by Mr. Johnson, having to do with defoliation and the wider use of American military forces in Vietnam.

The whole emphasis of Mr. Johnson was upon restraint and responsibility. I am sure the Senator remembers that the President said:

> We are not about to send American boys 9,000 or 10,000 miles from home to do what Asian boys ought to be doing for themselves.

In that atmosphere, I do not think it unreasonable that many of us may have felt that in passing the resolution we were upholding a position taken by President Johnson which was one of restraint. I do not think it unreasonable that many of us may have thought that, having made these statements in the campaign, he did not intend to commit half a million American men to war in Southeast Asia.

Whatever the Senator from Wyoming thought, he can testify to. I testify to what I thought at the time.

The lesson to be drawn is that never again should we confer the war-making powers on the President in such indiscriminate terms, unless that is how it is asked, that is how we consider it, and that is what we want to do.

We were not even acting on a full disclosure of the proper information when we passed the Tonkin Gulf resolution. So I disagree with the Senator. I think there is a very important lesson for this body to learn from the Gulf of Tonkin experience.

Mr. McGEE. May I say first to the Senator, I think a little chronology is probably in order. First, President Johnson's statement about not sending American boys 9 or 10 thousand miles away, I think, was made on the 24th of October or thereabouts. The Gulf of Tonkin incident had preceded that by more than 2 months.

Mr. CHURCH. The Senator makes a debating point there.

Mr. McGEE. No, not at all.

Mr. CHURCH. Yes, because——

Mr. McGEE. No; may I finish my statement?

Mr. CHURCH. I yielded to the Senator, and I think he makes a debating point, because the whole campaign had this character, from start to finish.

Mr. McGEE. But on August 4, the campaign was not really underway. The major part of the campaign began around the first of September.

May I say to the Senator that in his speech, where he voices the opinion that somehow there was violence done here, even by political verbiage of a presidential candidate on the campaign trail, his argument does not hang together. Before the campaign rhetoric had really surfaced in this country, it was not clear that the future of Southeast Asia was really at stake. By election day, in November, there had been no overt breach in Southeast Asia. The first discovery that our side made that the north had committed large numbers of its own regular military forces became obvious only as late as December, after the election. The verification of the introduction of a new family of weapons from the outside into the south, the AK–47 family, came only after the election.

These elements are after the fact; and the point of this, it seems to me, is that the President was protected, and required by the Tonkin Gulf resolution, previously passed by this body, and overwhelmingly to respond to the new developments, uncontrollable by Republicans and Democrats at the voting booth. Those developments, he felt, required the decision that he made, and he was empowered to make it by the resolution itself; and this body had seemed to be conveying it to him.

There was no mandate in the congressional vote anywhere, that I can discover, that said, "The day after the election, you had better come back and see if this squares with what you promised on the campaign trail."

Mr. CHURCH. I would submit to the Senator that, first of all, his argument goes to a different proposition: whether or not the President was justified in taking the action he took in the light of the new evidence that may have come to light.

That really is not the point at issue. I would say, though, even on the basis of the Senator's own argument, that if these changes in circumstances were so important as to justify the reversal of the President's position during the campaign taken immediately after the campaign was over, the President, I think, should have come back to Congress and said, "These dramatic changes have occurred, and in view of them, I am asking Congress for authority to commit a large expeditionary force to Vietnam."

But he did not. So even on the grounds of the argument presented by the Senator, I am not impressed. I believe, however, that his argument goes to a different question.

When we acted upon the Gulf of Tonkin resolution, the language chosen, in my judgment, was too broad; and thus, afterward, the language allowed the President to say that everything he had done was within the embrace of the resolution. I hope the lesson we draw from that experience is that we should become better draftsmen in the future.

Mr. McGEE. Yes. I think that the point that the Senator makes probably comes closest, now, to his definition of where we got into trouble, and that was that we did not use the right words in drafting the Gulf of Tonkin resolution.

But we did the best we could with what we knew at the time, in the circumstances that prevailed at that time. No President that I know of, a GOLDWATER, a Johnson, a Nixon, a Humphrey, a McGOVERN, a McCARTHY, a Kennedy, or whoever it might have been, would have been able or willing to ignore what might transpire after election day.

As I remember, Franklin Roosevelt with the threat of Hitler hanging over us, made his great statement in October of 1940, in his campaign for a third term:

> I promise you fathers and mothers, again and again and again, that no American boys will be sent abroad.

Now, there again, the campaign produced that statement, but it did not remove from him the responsibility to be President of the United States.

Mr. CHURCH. Very well. But before he took the United States into war against Hitler, Mussolini, and Tojo, he came to Congress and asked for a declaration of war.

Mr. McGEE. The Senator is now again shifting the ground over to another point that was not at issue at this particular stage here. Let us take them one at a time.

Mr. CHURCH. Moreover, as I need hardly remind the Senator, the war was precipitated by an attack upon the territory of the United States.

Mr. McGEE. And the United States, as I think the Senator was arguing earlier, had already been committed to war with Hitler by the actions of President Roosevelt, because of the nature of the agreements and the steps he had taken.

Mr. CHURCH. I cite those instances, and the Presidential movement toward a naval war in the western Atlantic, an excessive use of Presidential power.

Mr. McGEE. Right.

Mr. CHURCH. I was documenting the general usurpation of power, toward which my entire address is pointed.

Mr. McGEE. And my point with the Senator is that the President, within the prerogatives of his office, in his responsibility in projecting foreign policy, has it within his jurisdiction under the Constitution—not by stealing something from the Senate—to undertake commitments by laying out lines of policy that circumscribe the free field of options that the Senator suggests in his able address about restoring the balance of the separation of powers between the Executive and the Legislature. That is what it is about. That is what the Tonkin Gulf Resolution is about, because the best I can understand from the Senator's proposal is that the Senate would be asked again to pass another Tonkin Gulf Resolution, only this time we would change the wording.

But there is nothing in the format that the Senator is now proposing that would suggest that the Senate would do any differently the next time; therefore, why fault the circumstances?

Mr. CHURCH. Let me say, first of all, none of us can forecast what future action Congress may take in the matter of

a war. In the second place, let me say there is no question but that the Tonkin Gulf resolution falls within the embrace of the pending commitments resolution. In other words, no one argues that there was no congressional action involved.

I have said I think we should learn from our mistake, that there are lessons in it, and that we ought not to write resolutions that way any more, if the circumstances will permit us to avoid that error.

I cannot forecast whether or not we will learn the lesson. Nor do I undertake to define for the President the limits of Presidential power. The President, depending on who he may be, will assert such power as he believes he possesses; and we cannot, by any words of ours on this floor, either make that decision for the present incumbent in the White House, nor for any future incumbent.

However, our responsibility is to assert our power under the Constitution. That is our duty, and we can do that, if we will. My complaint is that we have been more and more reluctant to do it, and we have thus permitted our power to slowly erode away, until today there are those who say it does not exist any more, and cite the very Presidential usurpations of the power as evidence to demonstrate that it no longer exists.

When we come to that point, as we have now, I think that a responsibility falls upon us to begin to reassert some of our powers within the structure of our Constitution.

Mr. McGEE. Mr. President, I think that our trouble is in what we mean by words. I go back again to the remarks of the Senator in his speech. I think they make the point as to how difficult it is for us to talk the same language with words that have a different meaning.

The Senator said on page 8 of his speech:

> As to the first question, Congress failed to state its intentions clearly in the case of the Gulf of Tonkin Resolution, because it assumed that those intentions were generally understood.

We have already demonstrated here that the intentions were not too well understood, that we each thought we understood how we measured up to what we voted on here for the Gulf of Tonkin Resolution.

Mr. CHURCH. Each of us has his opinion. I expressed mine.

Mr. McGEE. The Senator said, as shown on page 8:

> A national election campaign was then in progress and President Johnson's basic position on Vietnam was that ". . . we are not about to send American boys 9,000 or 10,000 miles away from home to do what Asian boys ought to be doing for themselves." In adopting a resolution supporting the President on Vietnam, a great majority in Congress believed that they were upholding the position of moderation which President Johnson was expressing in his campaign.

It is more than a debating point that it had not already been expressed. It is more than a debating point that the President's language and that resolution simply said that the President, and not the Congress, should be empowered to employ armed forces in Southeast Asia.

It was just as unadulterated as that. So, I object to the Senator's using an incident like the Tonkin Gulf resolution and casting over it an aura of suspicion and having a bit of the black of conspiracy involved in it as the reason for proceeding to this resolution, when in the resolution he is asking that the Senate do again exactly what it did on August 4, 1964, in the Gulf of Tonkin incident, namely the act of ratifying what the President had been requesting, or debating it if that were the case. I do not see where the Senator has advanced a reason for the resolution, Senate Resolution 85. I do not think it is a relevant citation.

Mr. CHURCH. Mr. President, I am sorry. I am unable to follow the Senator's argument. However, I will come back to it in a minute.

Mr. President, I see no point in rehashing again the question of our two interpretations of the events that led up to the congressional decision to approve the Gulf of Tonkin resolution. I have my opinion; the Senator from Wyoming has a different opinion.

I think we made a mistake. He does not. In any case, it was a congressional action, and, as such, it would fall within the purview of the pending resolution. I think it is pointless to continue to belabor our individual interpretations of what may have been congressional intent at the time that the decision was taken. I see it one way. The Senator from Wyoming sees it another way.

Mr. McGEE. Mr. President, I appreciate that point. I think there is a point presented there that makes it more relevant than the mere fact that the two of us have a different interpretation.

What is relevant is that in the process there was no violation, there was no overstraining, and there was no abuse of the procedures already on the books and underway and being practiced, and practiced on those occasions, by the Executive and the Senate regardless of how one interprets the resolution.

Mr. CHURCH. Nor have I contended that. I do not understand why the Senator keeps arguing a proposition that I have not offered or made.

Mr. McGEE. I have to interpret the Senator's paragraph in that way, in the way in which he treats the Gulf of Tonkin resolution; namely, that this is an illustration in his talk about the abdication of Congress and the Executive running away with the ball.

Mr. CHURCH. Mr. President, if the Senator will permit me to correct him, when I referred to the Gulf of Tonkin resolution, I did so in these words:

> How did it come about that Congress permitted itself to be so totally and disastrously misunderstood?

Then I went on to give my reasons for believing that it did so with certain assumptions in mind which were not borne out.

The Senator disagrees with me. He is entitled to his opinion as to why Congress drafted the resolution as it did, and acted in such haste upon it, and what it intended and what it foresaw at the time it enacted it.

That is for history. That is for later Senators to reflect upon if and when a similar resolution is brought before the Senate at a subsequent date.

Mr. McGEE. Mr. President, I think it comes down to the suggestion that there is no point in Senate Resolution 85 in this case.

The Senator has other citations in his speech which have other elements of relevancy in them, but that is not the case with regard to the Gulf of Tonkin resolution.

Mr. CHURCH. The resolution is a very small part of the case. I base the case on the erosion of the senatorial role over the past 40 or 50 years.

Mr. McGEE. Mr. President, I will be glad to turn to each of the others.

As I remember our colloquy on a part of this particular point on yesterday, we referred to some of the decisions that had been made at the time of the Berlin airlift crisis. It was stated then that these decisions stemmed from other commitments we had already made, that were ratified by Congress.

I suppose that would suggest there was no violation or straining of this principle during the Berlin crisis when the President might have decided, instead of an airlift, to have the supplies brought over the ground and challenged the Soviets at that particular point. Is that a fair conclusion?

Mr. CHURCH. Yes. And I said yesterday that our defense of Berlin was a part of an obligation that we had assumed under the NATO treaty.

Now, the Senate approved that treaty. And I have never complained that the President exceeded his authority in attempting to implement the treaty in West Berlin or elsewhere in Europe. But there was a treaty.

Mr. McGEE. Could that have led to war?

Mr. CHURCH. Of course, but it would have been pursuant to a treaty that had been properly ratified, as the Constitution prescribes.

Mr. McGEE. Then it takes us back to this much lamented Gulf of Tonkin resolution. Could that have led to war?

Mr. CHURCH. It did.

Mr. McGEE. This language—could it not?

Mr. CHURCH. Yes.

Mr. McGEE. We are talking about political science now, not the politics of disagreement. Therefore, what does the Senator change?

Mr. CHURCH. I have tried to make it clear. I think the Senator must understand the point. I have reiterated it a number of times.

Mr. McGEE. I am a slow learner but I am not stubborn.

Mr. CHURCH. My argument against the Gulf of Tonkin resolution is not that Congress failed to act or that the President acted beyond the language of the resolution. My argument in the case of the Gulf of Tonkin resolution is that we acted unwisely, that we should learn from that experience. The Senator thinks we acted wisely, but he and I have been in long-standing disagreement about the wisdom of our course in Southeast Asia.

Mr. McGEE. What about President Truman and Korea?

Mr. CHURCH. I think President Tru-

man's initial action in sending American troops into combat in Korea would have to be considered contrary to this sense-of-the-Senate resolution, because it was a commitment to war in a foreign place and it occurred under circumstances which did not constitute an immediate threat to the safety of the United States itself. In other words, it was not a defensive action. It was a decision to go to war in a distant country; and I think that, consistent with our Constitution, the proposition should have been brought to Congress, so that Congress could have exercised its collective judgment on the decision to go to war in Asia.

Mr. McGEE. It was not without some kind of measure of obligation in a pact we had agreed to in the Security Council in the United Nations?

Mr. CHURCH. I think that stretches the matter very far. I suppose you could say that because we are a member of the United Nations and have generally endorsed the principle that countries should not resort to war in the settlement of foreign disputes, the President could walk under the umbrella anywhere, but not go to war at his pleasure, wherever a dispute erupts. I think that would be straining the treaty obligation owed the United Nations beyond the breaking point.

Mr. McGEE. I think what the Senator leaves out is the fact that a policy position that is approved by this body may in fact lead to a confrontation that it was hoped would be avoided, that might not have happened, but that in these particular instances finally did happen. That puts the finger on our problem, does it not—that in this age, in a nuclear age, we do not have the same good old days, when diplomats got together and broke off relations and served an ultimatum, and finally war was declared? You can have a war that is waged, but not declared, and the question is, "Where do you repose the responsibility to make a sudden decision?" If we had had to debate, as the Senator implies, in the Korean crisis, North Korea would have been all over South Korea before we would have had a quorum of the Senate. It is not quite that simple.

Mr. CHURCH. I just do not believe that. I do not believe that Congress is so irresponsible that in an emergency situation it will not act with the dispatch necessary to protect the vital interests of this country. If the Senator believes that, then he really wants to repeal the Constitution. He wants to repose all the power in the President's hands. That is what he argues. When he says that any time the President decides that an emergency abroad is of such urgency that the United States should go to war, and that the requirements of the nuclear age are such that this is necessary and proper, he is simply casting aside the constitutional system.

Mr. McGEE. Not only do I not intend to cast aside the constitutional system, but also, I think we are capable of living up to this new responsibility under the constitutional system. It is the Senator from Idaho who talks about restoring the balance, about restoring a separation of powers which I argue never existed in fact in the foreign policy field.

Mr. CHURCH. Indeed, I do argue for restoring the balance. I find it in the whole history of the United States, plainly set out. I do not want the Presidency to become a Caesardom.

I yield to the Senator from North Carolina.

(At this point Mr. BYRD of Virginia assumed the chair.)

Mr. ERVIN. I invite the attention of the Senator from Idaho to three provisions of the Constitution, and then I will put to him the question whether he does not think that these three provisions of the Constitution answer the question put to the Senator from Idaho by the distinguished Senator from Wyoming.

The first provision is article I, section 8, clause 11, which says that Congress shall have power "to declare War, grant Letters of Marque and Reprisal, and make Rules concerning Captures on Land and Water."

Now, that vests the power in Congress to declare war and grant letters of marque and reprisal, and in that way determine what the rules will be for fighting as those ships used to do. This is a general provision.

Now, the Constitution recognizes in at least two places that the United States might be attacked, and I invite the Senators attention to article IV, section 4, which says:

> The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion.

Does not the Senator from Idaho agree with the Senator from North Carolina that under that provision—that is, section 4 of article IV—it recognizes that if a State is invaded, the United States shall forthwith go to the protection of that State and the defense of that State, without any declaration of war?

Mr. CHURCH. The Senator is correct.

Mr. ERVIN. I invite the attention of the Senator from Idaho to another provision of the Constitution which is so seldom mentioned that I think most of us have a tendency to forget it is even in the Constitution. That is article I, section 10, clause 3, which says:

> No State shall, without the Consent of Congress . . . keep Troops, or Ships of War in time of Peace, enter into any Agreement or Compact with another State or with a foreign Power, or engage in War, unless actually invaded, or in such imminent Danger as will not admit of delay.

I ask the Senator if that is not a constitutional recognition that in addition to the United States protecting itself against invasion—that is, fighting a defensive war without a declaration of Congress—this is a recognition of the fact that it may be necessary in time of emergency even for a State, itself, to fight a foreign foe which is either invading the State or is putting the State in imminent danger of being invaded; and that it recognizes that even a State, without getting the consent of anybody on a national level, or from Congress, can fight a defensive war.

Mr. CHURCH. I would interpret the language that way.

Mr. ERVIN. My question is this: Does not the Senator from Idaho agree with the Senator from North Carolina that these three provisions of the Constitution provide, in substance, that the United States cannot engage in an offensive war without a declaration of war by Congress, or at least without congressional permission; and on the contrary, that the President, or even the parties of the State can engage in a defensive war without permission from Congress or anybody else?

Mr. CHURCH. Yes, and I would say the Senator has delineated the general argument that took place at the constitutional convention where it was recognized that, as Commander in Chief, the President had a responsibility to defend the Nation should the Nation be attacked; but it would have been quite meaningless to repose the war power in Congress, if the Founding Fathers had not intended that the decision to go to war in a foreign land, made under circumstances which did not involve an immediate threat to our own security in our own land, should be made by many men, the elected representatives of all the people, rather than with one man.

We had had such an unfortunate experience with the kingly power to make war during the period preceding our War for Independence. When we established our republican form of government, the drafters of the Constitution did not want to repose the same war-making power in the hands of the President that they had suffered from at the hands of the British Kings.

Mr. ERVIN. Does not the Senator from Idaho agree with the Senator from North Carolina that these provisions of the Constitution which denied the power of President to place our Nation in an offensive war, but give the right to take steps when we are attacked to fight defensively, without the consent of Congress, are just as valid today as when they were placed in the Constitution?

Mr. CHURCH. I say they are valid. I cannot accept that argument that because nuclear weapons exist, and time and distance factors have shrunk the world, that somehow Congress can no longer or should no longer assert its right to declare war in a case that does not involve an immediate threat to the safety of the United States. It is only in such a case that such an argument has relevancy; not in connection with a decision to send troops into Laos or Thailand. Does anyone contend that Ho Chi Minh was about to drop nuclear bombs on this country, or that this was a factor in sending troops to Southeast Asia? Of course not.

Mr. ERVIN. Does the Senator from Idaho agree with the Senator from North Carolina in the thought that the provision of the Constitution which sets out the right of the President to defend the United States is just as efficacious now as it has been at any time in the past, because if there is a nuclear attack on the United States the President has the power to put the United States in a position to resist that attack as he would

have had at the time the provision was originally adopted?

Mr. CHURCH. The Senator is correct, and no one raises any question about the authority of the President to defend the country when necessary.

Mr. ERVIN. And he has that power without the authority of anybody else if the United States is subjected to an attack by nuclear weapons by anyone on earth.

Mr. CHURCH. As an example, when the Japanese attacked Pearl Harbor, the Armed Forces went into combat without a declaration of war by Congress. But then the President came to the Congress and asked for a declaration of war against, not only Japan, but also Germany and Italy, as well. He complied with the Constitution in that case.

I am only deploring the fact that subsequent Presidents have not always chosen to scrupulously comply with the Constitution.

Mr. ERVIN. So this power of the President to take such steps as necessary to immediately defend the United States against foreign attack exists regardless of whether the attack is made on us with bows and arrows or with nuclear weapons.

Mr. CHURCH. Of course. I fail to see how the choice of weapons has much relevance to the constitutional question involved in this debate.

Mr. EAGLETON. Mr. President, will the Senator yield?

Mr. CHURCH. I yield to the Senator from Missouri.

Mr. EAGLETON. Mr. President, as a relative newcomer to the Senate, I have not had the privilege of hearing all of the presentations by the Senator on the floor of the Senate. However, I can say that in my brief tenure as a Member of this body I think today's speech of the Senator from Idaho is perhaps the most thought-provoking and erudite that it has been my privilege to hear in this Chamber.

I would like to direct a few questions to the Senator. He is a member of the Committee on Foreign Relations and, of course, is eminently knowledgeable of our mutual assistance commitments.

Does the Senator have a rough figure as to the number of countries with which we have some kind of verbal, Executive, or treaty agreement of mutual assistance, one country to another, in the event of attack?

Mr. CHURCH. As I recall, we presently have treaty commitments to go to the defense of some 42 foreign governments. I think this alone is unprecedented in history. We also have some fuzzy relationships which seem to constitute de facto mutual defense arrangements, as with Spain, which were never brought before the Senate in treaty form for ratification.

With respect to the treaty obligations, the constitutional provisions have been complied with. Whether or not these were wisely assumed is quite a different question. Whether or not we are now overcommitted is quite a different question. As to the Spanish arrangement, I suggest this is another example of Presidential abuse.

Mr. EAGLETON. That was precisely the point I was trying to extract by propounding my question. It is with respect to those arrangements, which the Senator has euphoniously referred to as "fuzzy," that I am so deeply disturbed.

In the 5 months I have been in the Senate, the Senate has ratified four treaties. The most significant treaty, of course, was the Nuclear Nonproliferation Treaty on March 13. In addition, we have ratified a treaty on aircraft defense on May 13, the Niagara Power Agreement on May 13, and two radio agreements with Mexico yesterday, June 19.

Yesterday I was in the Chamber and voted affirmatively, as did 89 other Senators. I am not aware of the knowledge of the other 88 Senators who voted in the affirmative, but I frankly had to ask the distinguished Senator from Alabama who is seated behind me what the treaty was all about and what we were going to vote on. He referred me to our distinguished colleague to his right, and by that time it was too late to get much information, so we voted in the affirmative.

With the exception of the Nuclear Nonproliferation Treaty, we are frequently called upon to ratify trivia, matters which are innocuous and routine. With respect to things that matter and which affect the destiny of the Nation, we frequently leave them up to unilateral executive decision.

Mr. CHURCH. I could not agree more. This has been the sad story of the steady decline of Congress within our constitutional system. Nothing has grieved me more than to be witness to this decline during my 12 years in the Senate. The Senator can be certain that if a treaty is relatively inconsequential; that is, if it has to do with some mercantile arrangement, or the exchange of shoe leather, it will be brought dutifully to the Senate, and we will spend time in hearings, and the matter will be brought to the floor of the Senate and in due course we will ratify it because there is no controversy in it, and there is no importance in it. But, if the matter has to do with the life and death of thousands of American citizens; with young men who will be drafted into the Army and told that they must go and fight or go to prison if they refuse; if it is a matter of great moment to the country, then, likely as not, it will not be brought here at all.

I do not overstate the case. I think my address today illustrates that Presidential authority has grown beyond limits. I do not know of any other free government in the world which vests such vast authority in its chief executive. There is grave danger in this, not because our Presidents are untrustworthy. We have been blessed with great and able men in the Presidency. But they are not infallible men.

Our Founding Fathers understood the importance of recognizing human limitations when they reposed the power of making war in the many elected Representatives who sit in Congress, rather than in the one Executive who sits in the White House. They were wise in doing that. In fact, there is no greater genius to be found in the Constitution than the division of power, the balancing of power, so that its concentration would not come, at last, to usurp the liberties of the people.

But, I submit, we had better get busy. We had better start to reassert some of the constitutional power that was meant to lie with Congress, or we will become an irrelevancy on anything that really matters insofar as the destiny of our land is concerned.

I thank the Senator for making his observation. It is extremely pertinent and bears out the argument I make here today.

Mr. ERVIN. Mr. President, I should like to ask the——

Mr. CHURCH. May I first yield further to the Senator from Missouri, and then I shall be glad to yield to the Senator from North Carolina.

Mr. EAGLETON. I should like to propound two more questions to the Senator from Idaho, if I may have the indulgence of the Senator from North Carolina.

I was very much interested in the exchange between the Senator from Idaho and the Senator from Wyoming with respect to the Gulf of Tonkin resolution which was voted on by the Senate on August 10, 1964, in which the Senator from Idaho and the Senator from Wyoming explained what was on their minds at the time they cast their affirmative votes.

The Senator from Wyoming stated that he was fully cognizant of the implications contained in the very broad language of the resolution, but the Senator from Idaho was not so fully cognizant of the full-blown implications to the extent of having 540,000 troops in South Vietnam.

May I ask the Senator from Idaho this question, which is truly, I admit, in the nature of a hypothetical question. Since the Senator from Idaho and the Senator from Wyoming have engaged in some reflective, soul-searching examinations of what they were thinking about on August 10, 1964, I ask indulgence for that same practice again.

My question is: If, on assuming that the Gulf of Tonkin resolution matter which took place on August 4, 5, and 6, 1964, had occurred in the same way as Pearl Harbor in 1941, and President Johnson on August 7 had come before a joint session of Congress and had opened his remarks with, "Members of Congress, yesterday, August 6, a day that will live in infamy, the mighty armies and armament of the country of North Vietnam, with stealth and in the dark of night, provoked great devastation on the Armed Forces of the United States in a sneak attack and, therefore, I ask that Congress declare a state of war,"—as did, of course, President Franklin D. Roosevelt on December 8, 1941, the day following Pearl Harbor, what would have been on the Senator's mind, insofar as the request of President Johnson was concerned, had he made it in that form?

Mr. CHURCH. I can reply only in personal terms.

What would have been on my mind if President Johnson had said to a joint session of Congress that the Government of North Vietnam had by stealth invaded

and attacked the Government of South Vietnam, on a day that would live in infamy?

I would have said, "Where is the evidence?"

After all, we had been involved in Vietnam for some years prior and debate was already underway as to the nature of the conflict there.

It was my opinion, and indeed the opinion of many of the most eminent authorities on the Vietnam situation, that the struggle was a civil war in character, and that the initial uprising against the South Vietnamese Government had been undertaken by indigenous South Vietnamese. Indeed, even today, by our own figures, we concede that the bulk of those engaged in the Vietcong assaults to overthrow the Saigon government are indigenous South Vietnamese.

In other words, I do not think that the President would have gotten away with such an assertion. It is very much unlike the day that President Roosevelt said would live in infamy, when the territory of the United States had been attacked by the Imperial Government of Japan. I think there would have been a spirited debate in Congress; that we would not have laid back and taken such an interpretation of the circumstances when there was so much evidence to the contrary.

I cannot predict what the final vote would have been, but at least we would have discharged our constitutional responsibilities, debated the question, and made the decision.

That is what this resolution calls for.

Mr. EAGLETON. I thank the Senator, and would like now to ask one final question.

Mr. McGEE. May I ask, was it the Senator's intent for me to respond also to that question, since he bracketed me in with the Senator from Idaho in his question?

Mr. EAGLETON. Yes. May I propound the same question to the Senator from Wyoming?

Mr. CHURCH. The Senator may feel free to respond to that question, so long as I retain my right to the floor.

Mr. McGEE. Of course. The Senator has the floor and I appreciate his courtesy in allowing me to respond, since my name was introduced by the Senator from Missouri.

I think it is obvious that the President did not request this. The circumstances were not those of 1941. Hanoi is not about to take over the world. The point of the Senator's question, I think there is no doubt about it, is that it puts the finger on the changing nature of the tests for some kind of policy position, particularly by a nation that now finds itself cast in a new role in the world; namely, a powerful role, for better or for worse, and that it is to the interest of this debate to try to determine whether, under our present system, we can make the kinds of decisions which have to be made, hopefully to head off the "day that lived in infamy" from ever happening again.

What we surely have learned from that original day of infamy was that its beginnings did not start with the dropping of the first bomb on Pearl Harbor, but began somewhere way back along the road, which caused us to search our consciences to find out whether, in the future, we could act somehow with more wisdom, with greater decisiveness, and avoid another day that might live in infamy.

That is the question that the issue in Southeast Asia raises. In a day of nuclear weaponry, large nations hardly dare—I think dare not, let us be blunt about it—resort to all-out war as an instrument of national policy. But in its place has come the peripheral war, or the fringe war, or the little war—whatever we may call them—even though, as we well know, the price already paid in Southeast Asia is very considerable. But it does not alter the fact that it is one of those tests that may well have been met at another time in history in Manchuria, preceding Pearl Harbor, or at the Rhineland with Hitler, preceding World War II.

I think that is the point of this dialog, whether in a nuclear age we have the wisest processes for protecting the national interest, whether we can repose authority in a different way. Central to the whole question which the Senator from Idaho has brought up so articulately, is the question of where they can best rest. In my judgment, difficult as it it, dangerous as it is, I think the lesser of the evils confronting us is to put the responsibility at least where we can pin it, and that is on the President. Let Congress reestablish its role on a much higher level and in a much more aggressive way in anticipation of the areas of discussion around the world.

I think the question illustrates our point. The answers to that question are quite irrelevant in terms of comparing Pearl Harbor to the issues in Southeast Asia, but the contrast in those answers makes the point that is well made by the injection of the question.

I thank the Senator for the privilege of replying.

Mr. CHURCH. It seems to me the Senator from Wyoming is simply arguing that the nuclear age has replaced the Constitution. I do not share the Senator's view as to where we should repose these life-and-death decisions; that they have to be reposed solely with the Executive in all such situations. Furthermore, I do not think the Senator's views on that question really go to the issue. The issue is: Where does the Constitution repose authority for making such decisions? That is the issue.

President Eisenhower, in the matter of Vietnam, understood the Constitution. Back at the time when Mr. Nixon was calling for unilateral American intervention, I note, from the records of the committee, that President Eisenhower recalled in his memoirs that Vice President Richard Nixon laid the groundwork for unilateral Presidential action in a speech by stating that if necessary to avoid further Communistic expansion in Asia and Indochina—that is the peripheral-type war the Senator from Wyoming refers to—the President should make the politically unpopular decision and do it. The President—that is, Eisenhower—expressed a more reserved attitude by saying that part of his fundamental concept of the Presidency was that, under the American constitutional system, only a "sudden and unforeseen emergency" permitted the President to place the Nation into war without congressional action.

That was Eisenhower's view. It is a sound view historically. How can one read the Constitution and come to any other view?

If the Constitution is obsolete, let us abandon it. Let us amend it out of existence. Let us say the time has come when a President must be Caesar; that all power must be in his hands to decide the life and death of the Nation, under all circumstances, anywhere. But let us at least do it. Let us not permit it to happen by usurpation, which, in truth, we have done.

Mr. EAGLETON. Mr. President, will the Senator yield?

Mr. CHURCH. I yield.

Mr. EAGLETON. I fully share the comments made by the Senator from Idaho. I would add the footnote that to adopt the rationale of the Senator from Wyoming would be to say that the President of the United States has the unilateral, exclusive power to conduct and declare little wars, little wars that we hope do not become big wars, or little wars in Asia, for example, in Korea and Vietnam; but that the only time the declaration of war authority of the Congress comes into play is when it is a big war. Thus, of course, we would be injecting into this situation a very subjective test between black, gray, and white; big, not so big, and pretty big. We would be leaving it solely to the whim of the executive branch, and we would hope the President would always be intelligent and responsible enough to do so, to decide when a war was big enough to take it to the Congress for a declaration of same.

Mr. McGEE. Mr. President, will the Senator from Idaho yield to the Senator from Missouri so he may yield to me to respond to the comments he made about my comments?

Mr. CHURCH. Yes. However, I have a gastronomical problem, it being 25 minutes to 3, and I not having had any lunch. I do not want in any way to inhibit the Senator from participating while I am holding the floor, but I feel the pangs of hunger pounding. I will, nevertheless, yield to the Senator.

Mr. McGEE. I do not want to contribute to any complications. The Senator ought to understand that I have a bowl of strawberries waiting for me. He knows what that means, in my language.

Mr. CHURCH. Yes. The Senator might at least buy my lunch.

Mr. McGEE. In exchange for the strawberries?

My response to the Senator from Missouri in his observation is that, no, the President cannot run around declaring, deliberately, little wars in order to avoid declaring big wars through an act of Congress. I think that is not really the central question. The times set up different threats. The President, I would assume, would hope, in taking a position, that the decisions of some other potential side, whoever is on the other side, would

still hold the balance how far they would go. The President cannot determine that.

That brings us to the basic decision as to whether or not, in a nuclear age, we can really risk declared wars, in the old, formal, rigid sense, or whether we are trapped in a new system in which we dare not declare them, and whether or not this body should consider some other process to deal with such situations. So it is not a matter of reposing this authority in the President in a singular way and letting him dictate it, as the Senator from Idaho declares it; it is a question of how best to preserve the Constitution, rather than shatter it. I think we all agree that the President has this responsibility and power under the Constitution. The question is whether we want him to have it.

Mr. CHURCH. We have not agreed to that. At least the Senator from Idaho did not agree to that.

Mr. McGEE. Mr. President, have I been yielded to?

Mr. CHURCH. No; I have the floor.

Mr. McGEE. I wondered if I had been yielded to, to respond.

Mr. CHURCH. I just wanted to make it clear that the Senator from Wyoming stated a proposition which I did not agree to.

Mr. McGEE. I thought the Senator had yielded.

Mr. CHURCH. I am sorry. I did not mean to offend the Senator, if he wants to continue.

Mr. McGEE. Very well.

Mr. CHURCH. I will be happy to have him take the floor again, if he so desires.

I merely wanted to say that I cannot follow the argument that the distinguished Senator from Wyoming makes. He says that under certain circumstances it may not be advisable to declare a war. Of course that is true. But this resolution does not insist that a war be declared. All that the resolution says is:

> A national commitment by the United States to a foreign power necessarily and exclusively results from affirmative action taken by the executive and legislative branches of the United States Government through means of a treaty, convention, or other legislative instrumentality specifically intended to give effect to such a commitment.

In other words, it is not necessary; the Constitution does not require that Congress assert its war power by a formal declaration of war.

I think the important point is that the authority to make the decision rests with Congress, though Congress may make that decision either through a formal declaration or by authorizing the President to go to war in some other way.

In the Gulf of Tonkin resolution, at least as interpreted later by the President, we did authorize the President to go to war. It was not a declared war. As I have said earlier in the debate, the fact that Congress did take the action would bring that act within the purview of this resolution.

So I simply cannot accept the argument that the times have somehow rendered the declaration of war obsolete, and that since the interests of the country may require a war to remain undeclared, Congress therefore is without the authority to make the decision.

I think the authority lies with Congress, under the Constitution, to decide whether the war is declared or undeclared. I merely wanted to make that point.

Mr. McGEE. Does the Senator from Idaho have the floor?

Mr. CHURCH. I yield again to the Senator from Wyoming with apologies, and assure him I shall not interrupt him further.

Mr. McGEE. Here, again, I think we are getting close to the nub of the case for Senate Resolution 85. That is why the question was propounded by the Senator from Missouri in terms of a limited war, in terms of a fringe war, or whatever we want to call it. The Senator from Idaho has just clarified the situation for us by saying that it is conceivable it would not require a formal declaration; that it could be done in some other way, I think I understood him to say.

We did it this other way in the case of the Tonkin Gulf resolution. Congress did act; it did vote; it did commit itself, in the case of the Tonkin Gulf resolution, a resolution which says that the President shall be entitled to commit the Armed Forces to the security and peace of Southeast Asia.

So this resolution, I think, makes the point again that Congress has not given up something; someone did not take it away from us. In hindsight, a good many wish we had not done it that way, but again, we do not have the chance to wait for hindsight when we make our decisions on these matters; we have to do it the best we can. There is nothing we cannot communicate as a result of the Gulf of Tonkin incident, or the Southeast Asian war, which the Senator from Missouri has asked his question about—a limited war. That is the reason I say we have got to resolve in our own minds whether we need a new mechanism, or whether we can, in fact, continue under the present method. The Senator is suggesting that in the Gulf of Tonkin resolution we probably now have the mechanism for doing it. I think I agree.

Mr. CHURCH. I submit that the difficulty concerning the Gulf of Tonkin resolution arises from other collateral considerations; that is to say, it came to us at a time when an attack had occurred upon an American destroyer on the high seas. Retaliation had taken place, and the President then asked for the Gulf of Tonkin resolution.

I have no doubt in my mind that the action that Congress then took constitutes congressional action as contemplated by the pending resolution. The difficulty concerning the Gulf of Tonkin matter subsequently developed when the committee discovered what it felt was a failure on the part of the Executive to make a full disclosure of the facts before asking Congress to act. As I have stated in my address, the whole problem was compounded by the haste with which Congress acted and by the great latitude of the language which Congress adopted. That was a mistake on the part of Congress, in my judgment.

In any case, I think that the episode makes it clear that it is not necessary for Congress to declare war in order to exercise its constitutional power.

Mr. EAGLETON. With due deference to the endurance of the Senator from Idaho, and with recognition of the gastronomical niceties and necessities involved, I shall ask one final question, which takes up where the Senator just left off in his remarks.

Each of us is the product of his own individual memory. I think perhaps the incident that caused me to give the most thought to this important concept that is being debated was the action by former Secretary of State Rusk in the summer of 1967, at the request of President Kasavubu, of the Congo, by which we sent to the Congo, as I recall, some 200 or 300 American troops and three or four aircraft. Almost by return phone call, as though Kasavubu had picked up the overseas phone and said, "Mr. Secretary, please send us a few troops," and off they went.

I was not a Member of the Senate at that time. Would the Senator from Idaho, with his privity of knowledge gained as a member of the Committee on Foreign Relations, state how that incident relates to the principle he is espousing in his remarks here today?

Mr. CHURCH. Yes, I shall be glad to comment on that case. I have to rely upon my memory; but as my memory serves me, the use of American personnel in the Congo, if this is the incident to which the Senator refers, was in connection with a rescue operation. The American Armed Forces, it was claimed, were needed to bring out certain people who were endangered by the civil war in that country, including citizens of the United States. In the 19th century, the President came to use American Armed Forces for rescue operations in foreign lands. That came to be pretty much accepted as within the prerogative of the Presidential office.

I have tried to show in this address that the serious transgression of congressional authority commenced at the turn of the century with the administrations of Theodore Roosevelt, William Howard Taft, and later Woodrow Wilson, when the President went further than to use American military forces for the purpose of a rescue operation, and actually committed them, sometimes, to combat in the Caribbean and in Central America.

Then, I have tried to show how the Presidential authority has grown still larger under President Franklin Roosevelt and subsequent Presidents.

The resolution refers to national commitments; and necessarily implied in that is a commitment of a grave and important nature to a foreign government. I should not think that a rescue operation represents a grave and weighty commitment to a foreign government of the character contemplated by the resolution.

However, the Senator from Missouri (Mr. EAGLETON) does touch upon one of those points where a Presidential decision might commit the United States to a position which, in turn, might lead to the involvement of the United States in fighting in a foreign land. We cannot

prescribe in advance the exact limits of Presidential authority. Suffice to say that, if we concede the right of the President to conduct a rescue operation, it seems to me that the character of such an operation is quite different from the intent of the resolution, which seeks to prevent the combat forces of this country from fighting on foreign soil without congressional authorization.

Mr. HOLLAND. Mr. President, will the Senator from Idaho yield?

Mr. CHURCH. I am happy to yield to the distinguished Senator from Florida.

Mr. HOLLAND. I commend the Senator from Idaho, and I commend the chairman of the Committee on Foreign Relations, the distinguished Senator from Arkansas (Mr. FULBRIGHT). I think they are subjecting us to a soul-searching operation, as the Senator from Idaho has described it, and that it will be good for the Senate and for the country if we are subjected to that kind of operation.

I wish equally to commend the Senator from Wyoming (Mr. MCGEE). As a matter of fact, his standing out as the one member of the committee who was present when the resolution was reported to dissent from his associates on the committee was an act of courage, and I find strong reason to commend him for the action then taken and for what he has been saying in the course of the debate.

I shall not trespass further upon the desire of the distinguished Senator from Idaho to consult with an Idaho potato in the dining room, or with the desire of the Senator from Wyoming, who seems already to have gone to find the strawberries he was talking about awhile ago.

Mr. MCGEE. I am here.

Mr. HOLLAND. I see the Senator from Wyoming now. I shall not trespass upon their time by discussing any lengthy questions. But there is one subject that interests me greatly. I have spoken with the chairman of the committee, the Senator from Arkansas, and with the chief of staff of the committee, Dr. Marcy. I have not received any great enlightenment on the subject.

What is the number and what is the significance of the outstanding executive agreements that have been entered into in recent years and are now current? The reason I ask that question is that I realize perfectly well that what might have been a reasonable course of action some years ago, when we had diplomatic relations with only a few countries, and when our problems were few, could not govern us now, when we have diplomatic relations, as I am told, with well over 100 countries, and when an enormous group of problems concern us.

I realize that there must be a place in the picture for executive agreements. From what I know about some executive agreements, I think they do constitute what are stated in the resolution to be national commitments of the United States.

The question I ask first is, Can we have by next week, when this debate will be resumed, an authoritative statement of the number and—if we can have it—the classification in any manner that the Senators may care to classify them, of the group of outstanding executive agreements, of which I have been told by the chief of staff there are probably thousands at this time? Can we secure such information?

Mr. CHURCH. Yes. I have the list that the Senator asks for. And I will be happy to have it printed in the RECORD.

Mr. HOLLAND. My reference to the figure of several thousands comes from my discussion with Dr. Marcy on yesterday afternoon, when he indicated to me that there were probably several thousands outstanding. I would be glad to have any information that the Senator has.

Mr. CHURCH. The Senator is quite right in his understanding. Between 1942 and 1967, there were a total of 5,477 treaties and executive agreements in existence. Of those entered into between 1963 and 1967, 47 were treaties, while 1,136 were executive agreements.

In 1968, 283 treaties and executive agreements were entered into, of which 57 were treaties and 226 were executive agreements.

Mr. President, I ask unanimous consent to have the list printed at this point in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

TREATIES AND EXECUTIVE AGREEMENTS: NUMBERS EXECUTED, 1942-67

	Treaties and executive agreements	Treaties	Executives agreements
1942-62	4,294		
1963	257	9	248
1964	244	13	231
1965	202	5	197
1966	252	10	242
1967	228	10	218
1942-67	5,477	47	1,136
1968	283	57	226

Source: Information from Department of State, Treaty Division, Sept. 2. 1968.

Mr. HOLLAND. Mr. President, I thank the Senator for having the list printed in the RECORD.

My second question is this, In the opinion of the able Senator, are any of those executive agreements of such a nature as to constitute, in his opinion, national commitments? I think those are the words used in the pending resolution.

When I began the colloquy, the Senator from Arkansas had been called off the floor. I had intended to address the whole series of questions to the Senator from Arkansas, as I think I indicated yesterday. The reason I am going into it now is that I hope that any information which may not be readily available now may be made available when we resume the debate on next Monday.

Mr. CHURCH. Yes, indeed. That is very important. We did have a list prepared of these agreements that in the opinion of the committee were of such gravamen and importance that they ought to have been submitted in treaty form for the ratification of the Senate.

I am happy to have that list printed at this point in the RECORD so that it will be available to the Senator for his review between now and the time the debate resumes on Monday.

Mr. HOLLAND. I appreciate that.

Mr. CHURCH. Mr. President, I ask unanimous consent to have the list I have referred to printed at this point in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

London 9-Power Conference: Final Act, London 9-Power Conference, Declaration by the Governments of the United States, the United Kingdom, and France, Oct. 3, 1954. (regarding Berlin).

Western European Union: Statement by President Eisenhower on U.S. Policy toward the Western European Union, Mar. 10, 1955.

(In a message to the Prime Ministers of the signatories to the Western European Union protocols: Belgium, France, Federal Republic of Germany, Italy, Luxembourg, the Netherlands, and the United Kindgom. President Eisenhower referred to a similar statement of principles he had made on Apr. 15, 1954, in anticipation of the European Defense Community, and to the fact that the latter had evolved into the Western European Union plan.

Relevant Passages

I am glad to affirm that when the Paris Agreements (establishing the Western European Union arrangements) have been ratified and have come into force, it will be the policy of the United States:

• • • • • • •

(3) To continue to maintain in Europe, including Germany, such units of its armed forces as may be necessary and appropriate to contribute its fair share of the forces needed for the joint defense of the North Atlantic area while a threat to that area exists, and will continue [sic] to deploy such forces in accordance with agreed North Atlantic strategy for the defense of this area;

• • • • • • • •

(6) • • • to regard any action from whatever quarter which threatens the integrity and unity of the Western European Union as a threat to the security of the parties to the North Atlantic Treaty calling for consultation in accordance with Article 4 of that Treaty.

NATO: Communique, North Atlantic Council ministerial session, Athens, May 6, 1962 (regarding nuclear weapons).

LATIN AMERICA

Monroe Doctrine: Seventh Annual Message of President Monroe to Congress ("The Monroe Doctrine"), Dec. 2, 1823.

Relevant Passages

• • • The occasion has been judged proper for asserting, as a principle in which the rights and interest of the United States are involved, that the American continents, by the free and independent condition which they have assumed and maintain, are henceforth not to be considered as subjects for future colonization by any European powers. • • • The political system of the allied powers [the "Holy Alliance"] is essentially different • • • from that of America. • • • We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. • • • With the Governments who have declared their independence and maintained it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling in any other manner their destiny by any European power in any other light than as the manifestation of an unfriendly disposition toward the United States. • • •

GENERAL U.S. STATEMENTS OF POLICY AND DECLARATIONS ON THE MIDDLE EAST		
	Tripartite declaration (United States-United Kingdom-France) regarding security in the Near East, May 25, 1950. The 3 Governments take this opportunity of declaring their deep interest in and their desire to promote the establishment and maintenance of peace and stability in the area and their unalterable opposition to the use of force or threat of force between any of the states in that area. The 3 Governments, should they find that any of these states [i.e. the Arab States and Israel] was preparing to violate frontiers or armistice lines, would, consistently with their obligations as members of the United Nations, immediately take action, both within and outside the United Nations, to prevent such violation.	Joint Resolution to Promote Peace and Stability in the Middle East ("The Eisenhower Doctrine"), March 9, 1957. Geographic Scope of the Joint Resolution I.Excerpt from Report of the Senate Committees on Foreign Relations and Armed Services. The phrase "the general area of the Middle East" recurs throughout the resolution and requires some definition. It would be unwise to attempt to draw a precise geographical line around the area to which this resolution applies. This follows the pattern of the resolution (Public Law 4, 84th Cong.) authorizing the use of armed force to defend Formosa. That resolution named Formosa and the Pescadores and also covered "related positions and territories of that area."

See footnote at end of table.

Treaties	Joint declarations	U.S. statements of policy

GENERAL U.S. STATEMENTS OF POLICY AND DECLARATIONS ON THE MIDDLE EAST—Continued

Joint Resolution to Promote Peace and Stability in the Middle East ("The Eisenhower Doctrine"), March 9, 1957—Con.

Geographic Scope of the Joint Resolution—Continued

As used in Senate Joint Resolution 19, "the general area of the Middle East" means the area between Libya on the west, Turkey on the north, Pakistan on the east, and Saudi-Arabia and Ethiopia on the south. Any attempt to be more precise, or to spell out the nations in the resolution itself, would raise further questions as to inclusions and omissions and would carry an inference of lack of American concern over nations not specifically named.

II. Excerpt from Report of the House Committee on Foreign Affairs.

This legislation involves the general area of the Middle East. The term "Middle East" like the more familiar term "Near East" has had no precise definition. Secretary of State Dulles in our hearings said, "The term 'Middle East' as used in this resolution includes the area lying between and including Libya on the west, Pakistan on the east, Turkey on the north, and the Arabian Peninsula on the south." Ethiopia and the Sudan are also in the area. This identification of countries does not rule out the inclusion of other countries around the perimeter. The committee decided, however, to accept the view of the executive department that a complete listing of countries would restrict the freedom of action of the United States in carrying out the purposes of this resolution.

Reply by President Kennedy to a news conference question concerning the Middle East, May 8, 1963.

Relevant Passage

* * * * * * *

We strongly oppose the use of force or the threat of force in the Near East, and we also seek to limit the spread of communism in the Middle East which would, of course destroy the independence of the people. This Government has been and remains strongly opposed to the use of force or the threat of force in the Near East. In the event of aggression or preparation for aggression, whether direct or indirect, we would support appropriate measures in the United Nations, adopt other courses of action on our own to prevent or to put a stop to such aggression, which, of course, has been the policy which the United States has followed for some time.

Remarks of President Johnson during exchange of toasts with President Shazar of Israel, August 2, 1966.

Relevant Passage

* * * * * * *

[Reaffirming President Kennedy's statement of May 8, 1963, which expressed American support for the security of both Israel and her neighbors, President Johnson said:]

We subscribe to that policy.

Statement by President Johnson on the Near East Situation, at the White House, May 23, 1967.

To the leaders of all the nations of the Near East, I wish to say what three American Presidents have said before me—that the United States is firmly committed to the support of the political independence and territorial integrity of all the nations of that area. The United States strongly opposes agression by anyone in the area, in any form, overt or clandestine.

Address by President Johnson at a Foreign Policy Conference for Educators Sponsored by the Department of State, June 19, 1967.

Relevant Passages

* * * * * * *

Our country is committed—and we here reiterate that commitment today—to a peace [in the Middle East] that is based on five principles:

First, the recognized right of national life;
Second, justice for the refugees;
Third, innocent maritime passage;
Fourth, limits on the wasteful and destructive arms race; and
Fifth, political independence and territorial integrity for al\

[1] Resolution VI, of the Final Act of the Eighth Meeting of Consultation of Ministers of Foreign Affairs of the American Republics, Punta del Este; signed Jan. 31, 1962, excluded "the present Government of Cuba, which has officially identified itself as a Marxist-Leninist government" from participation in the inter-American system.

[2] Included (for the purposes of article IV) by the protocol to the Southeast Asia Collective Defense Treaty, TIAS 3170, signed Sept. 8, 1954; entered into force, Feb. 19, 1955. Cambodia has indicated disinterest in the protection of the Southeast Asia Treaty. In the Geneva Declaration on the Neutrality of Laos, the Royal Government of Laos declared that it will not "recognize the protection of any alliance or military coalition including SEATO," and the United States and other nations agreed to "respect the wish of the Kingdom of Laos not to recognize the protection of any alliance or military coalition, including SEATO."

Thailand	SEATO		Joint statement, Secretary of State Rusk and Foreign Minister Thanat Khoman of Thailand, Mar. 6, 1962. Relevant Passages * * * * * The Secretary of State reaffirmed that the United States regards the preservation of the independence and integrity of Thailand as vital to the national interest of the United States and to world peace. He expressed the firm intention of the United States to aid Thailand, its ally and historic friend, in resisting Communist aggression and subversion. The Foreign Minister and the Secretary of State * * * agreed that the Treaty [Southeast Asia Collective Defense Treaty] provides the basis for the signatories collectively to assist Thailand in case of [direct] Communist armed attack against that country. The Secretary of State assured the Foreign Minister that in the event of such aggression, the United States intends to give full effect to its obligations under the Treaty to act to meet the common danger in accordance with its constitutional processes. The Secretary of State reaffirmed that this obligation of the United States does not depend upon the prior agreement of all other parties to the treaty, since this treaty obligation is individual as well as collective. In reviewing measures to meet indirect aggression, the Secretary of State stated that the United States regards its committments to Thailand under the Southeast Asia Collective Treaty and under its bilateral economic and military assistance agreements with Thailand as providing an important basis for U.S. actions to help Thailand meet indirect aggression. In this connection the Secretary reviewed with the Foreign Minister the actions being taken by the United States to assist the Republic of Vietnam to meet the threat of indirect aggression.	See Tonkin Gulf Resolution Above. Remarks of President Johnson in offering a toast To the King of Thailand, Bangkok, October 28, 1966. Relevant Passages * * * * * Tonight we stand as allies in a common cause. * * * We know the risks that we both run to meet the common dangers. But we know, also, that we act from a joint conviction of common interest. Let me assure you in this regard that Thailand can count on the United States to meet its obligations under the SEATO treaty. The commitment of the United States under the SEATO treaty is not of a particular political party or administration in my country is but a commitment of the American people. I repeat to you: America keeps its commitments.

Vietnam, Republic of	SEATO		Declaration of Honolulu, President Johnson, Chairman Nguyen Van Thieu, and Prime Minister Nguyen Cao Ky, Feb. 8, 1966. Relevant Passage The President of the United States and the Chief of State and Prime Minister of the Republic of Vietnam are thus pledged again— To defense against aggression; To the goal of free self-government; To the attack on hunger, ignorance, and disease; To the unending quest for peace; To the work of social revolution; Manila Conference on Vietnam, Oct. 25, 1966.	See Tonkin Gulf Resolution Above. Statement of Congressional Policy, Mar. 16, 1967. The Congress hereby declares— (1) its firm intentions to provide all necessary support for members of the Armed Forces of the United States fighting in Vietnam; (2) its support of efforts being made by the President of the United States and other men of good will throughout the world to prevent an expansion of the war in Vietnam and to bring that conflict to an end through a negotiated settlement which will preserve the honor of the United States, protect the vital interests of this country, and allow the people of South Vietnam to determine the affairs of that nation in their own way; and (3) its support for the convening of the nations that participated in the Geneva Conferences or any other meeting of nations similarly involved and interested as soon as possible for the purpose of pursuing the general principles of the Geneva accords of 1954 and 1962 and for formulating plans for bringing the conflict to an honorable conclusion.
Yemen				See Above, Eisenhower Doctrine and General Statements on the Middle East.

Mr. HOLLAND. Mr. President, as I understand, the list shows, in the opinion of the distinguished Senator and his committee—and I assume that he speaks for the committee in this instance—that a substantial number of executive agreements should have been handled in the form of treaties or legislation.

Mr. CHURCH. The Senator is correct. In fact, this has been one of the very important areas of abuse by which the Executive has circumvented the treaty power of the Senate by making important arrangements with foreign nations by means of executive agreements. And they need not be brought to Congress at all, neither to the Senate nor to the House, for ratification.

Mr. HOLLAND. I think it is the opinion of the Senator that the substance of that particular group of executive agreements which he mentions now was such as to create national commitments on our part toward other nations.

Mr. CHURCH. Yes, indeed. I would also refer the Senator to an illustration in my earlier address of the executive agreement made by President Roosevelt in 1940 whereby he transferred 50 so-called obsolete destroyers to Great Britain in return for leasehold rights on British territory in the Western Hemisphere, on which we subsequently constructed military bases.

At the time of that agreement, Churchill himself said that it was of such importance that it could have legally justified a German declaration of war upon the United States. Yet, it was made by Presidential agreement and never submitted to the Senate in treaty form.

Mr. HOLLAND. The Senator from Florida has known of some matters which began as executive agreements under the War Powers Act during the World War II period that eventually came to the floor of the Senate as legislative matters, because it became his duty at one time to handle the Rama Road matter which had resulted from an agreement made by President Franklin Roosevelt under the War Powers Act which was in force at that time.

I remember that the Senate and the House as well were divided on the question as to whether legislation should be passed affirming the agreement made under the War Powers Act by President Franklin Roosevelt. I strongly felt that it should be affirmed.

I took that position in the debate, and that position finally, as the Senator knows, became law. The fact of the matter is that there was distinct consideration given by the Republic of Nicaragua to the United States for the assumption of the obligations toward Nicaragua which were assumed by President Franklin Roosevelt under that wartime agreement which was subsequently confirmed during the time of peace by legislation passed by Congress.

I realize that there are various types of executive agreements and that they have been made for different reasons. The thing that bothers me is the generality of the terminology of the pending resolution.

Mr. CHURCH. Mr. President, with the permission of the Senator from Florida,

the able Senator from Arkansas, the chairman of the Committee on Foreign Relations, has agreed to take the floor at this point so that I may leave and get some lunch. If that is acceptable to the Senator from Florida, I would ask the Senator from Arkansas to step in. He can handle the questions much more ably than I can.

Mr. HOLLAND. I regret the necessity of the Senator from Idaho leaving, but I respect his desire to leave. So we will gladly allow the Senator from Arkansas to take over.

May I say this one thing, though, before the Senator leaves: The very fact that he picks out of the huge array of executive agreements a certain number which he says he thinks—and his committee thinks—should have been submitted in treaty form indicates that there are a tremendous number of matters which can be handled by executive agreement.

Mr. CHURCH. Without any question. And for many, many years it was understood that the enlargement of American relationships abroad, the growing complexity of those relationships, made it necessary and proper for the President to act by way of executive agreement, with the understanding that any matter of grave importance to the country, of real consequence, should come to the Senate in treaty form; otherwise, the Constitution would be circumvented. That understanding was pretty well adhered to through the years; but I think, as the record will disclose, there has been less and less attention given in the State Department to this old rule. Now, from all appearances, it is the feeling in the State Department that the President is free to decide whether he will proceed by way of executive agreement or treaty, regardless of the importance of the subject matter.

I say to the Senator from Florida that such a position cannot be upheld without conceding that in doing so the President is enabled to circumvent the treaty power of the Senate whenever he so pleases.

Mr. HOLLAND. With that conclusion I certainly agree. One instance which I regard as a flagrant departure is the matter of the Spanish airbases and other United States rights created in Spain.

However, I still have the grave question about the adequacy of this resolution, and I regretfully excuse the Senator from Idaho and will turn to the distinguished chairman of the committee.

I realize from talking with the Senator yesterday or the day before that he thinks—I believe he used this word at that time—that "substantial" matters involving the United States should be committed to treaty and less substantial matters—perhaps I am not quoting him accurately—could properly be handled in executive agreements.

I realize that there is a very difficult question in drawing a line between the two, and I also realize that it is rather dangerous to leave the drawing of that line exclusively to the decision of one man, the President of the United States. But I still think that the wording of this resolution is so general as to perhaps make trouble for the Senate and for the Executive and for our friends in other nations. I have thought so even more strongly after listening to the distinguished Senator's speech yesterday and the various colloquies in connection with it. I did have the pleasure of listening to them, and I complimented the Senator in his absence a few minutes ago because I thought his speech was an exceedingly able one, and I think he has initiated a discussion in the Senate which is soul-searching and which is worthwhile.

But my own feeling is that this resolution, in the first place, does not go far in meeting the announced intention. The intention is in the preamble:

> Whereas accurate definition of the term "national commitment" in recent years has become obscured: Now, therefore, be it resolved,

After reading the resolution, I think that the definition of the term "national commitment" is still obscure and will still be obscured even if the resolution is adopted as written.

But, to proceed to the resolution itself: I noted that in spite of the fact that the resolution speaks of national commitments or a "national commitment," without confining that to the field of national security either of our Nation or of the nation with which we are dealing, without confining it to any stated field, the resolution goes so far that it seems to me to question the right of the Executive to enter into any executive agreement which might later be construed as constituting a national commitment, something to which we in honor are obligated.

I thought that point was well substantiated when I listened to the Senator's debate yesterday and to most of the debate today, because nothing has been mentioned except national security of either our Nation or the powers with which we are dealing; whereas, I think that the Senator means to affect many other fields or at least several other fields. For instance, a commitment that would bind us to pay money for something, to exchange territory with someone, and other objectives could easily be included. I wonder if it is possible to write much more specific language than to have this, which still leaves quite obscure in my opinion, the question of what is the real definition of the term "national commitment."

Mr. FULBRIGHT. First, as to executive agreements, most of these executive agreements have been made in pursuance either of a law or of a treaty, a pre-existing treaty. Very often there will be a treaty, and in subsequent years, in carrying it out, there will be a number of executive agreements that are within the purview of the treaty; or a law will be passed, and a law, of course, could be the basis of an executive agreement. Executive agreements often are made in pursuance of a law.

I once tried to state the difference between an executive agreement and a treaty, both of which would be submitted to Congress, the difference being, on one hand, that the executive agreement is endorsed by a joint resolution approved by a majority of both Houses, and the same material could have been put in a treaty and passed by two-thirds of the Senate.

When I was a Member of the House, I once tried to argue that the Senate arrogated to itself too much authority and that many of these agreements in the form of treaties should have been submitted to both Houses; because when I was a Member of the House, I was a little like the President as to his own powers—I thought the House was the better of the two bodies of the Legislature.

In any case, I did a great deal of research on what kind of agreement should be presented to Congress as an executive agreement and what kind as a treaty. I was not saying that any of these things should be done by the President on his own.

I want to make it clear. Many executive agreements completely comply with the intent of this resolution. They would not be outlawed nor would they be frowned upon in any respect.

All this resolution says is that these matters should be considered by Congress. What we are really considering, or what bothers us, are some of these so-called executive agreements. I do not admit that they are executive agreements which commit this country.

Mr. HOLLAND. Mr. President, will the Senator yield?

How does the Senator think they can commit this country if they are executive agreements and should not be such?

Mr. FULBRIGHT. I would like to complete my thought at this moment, and then answer the Senator.

Look at this hearing on Senate Resolution 151 in August 1967. Look how big it is. This contains a list submitted by the State Department of all these various agreements, some of which are treaties, some of which are executive agreements, and a great many are nothing more than a statement, made by some executive of this Government, which he may have regarded as an executive agreement binding this country. I say it is not an executive agreement binding this country. It was his idea as to what should be done. It was a statement of policy. This occurs in some of these instances. It is difficult to be too precise in the beginning until we gradually find out what we are talking about. I say there are many things mentioned in this list that I do not really agree are commitments of the United States. Perhaps they were statements made by the Secretary of State or the Vice President, and I do not think they had the authority to commit this country in such a fashion. That is what we are talking about.

I shall tell the Senator what I think this resolution means. We are not talking about agreements made in pursuance of law or treaties which were made in the past or which will be made in the future. We are raising a question as to the effects when an executive representative goes off and signs a joint communique in country X and ends up by saying, "We hereby pledge ourselves to support the redevelopment of this country, and so forth." Then we are eternally sworn that we are going to give them whatever they want by way of money, as in the

case of Spain. We say to them, "If you get in trouble, either foreign or domestic, we will come to your aid."

We are trying to say in this resolution, "We are giving you notice that no longer are we going to accept these agreements as binding commitments. You have said they are binding because Mr. X was there in 1949 and made this statement." We say that from here on we are going to look at these agreements carefully and not admit we are bound by them.

I am not trying to say that no executive agreements are binding. In many cases they are binding. The best way I might put it is that in the old days matters of really great importance that required the most serious thought, that really did involve perhaps sending troops and the transfer of territory should be in the form of a treaty. A vote of two-thirds is required in that instance and it is presumed that it is more difficult to get a two-thirds vote than a majority. I do not know if that is true. This is the distinction I found and I think it is still found in the books where they delineate the type of matter that should be submitted to the Congress in the form of an executive agreement or a treaty.

I do not think the Senator should be concerned about executive agreements because there are hundreds of executive agreements that are perfectly agreeable to me and to which I have no objection. This resolution is not trying to say that everything must be put into treaty form, not by any means. What we are trying to say is that we want anything that is a commitment to be in the form of either a treaty or an executive agreement, depending on the degree of solemnity.

The President may choose to take a matter and say, "I want this as an executive agreement." There is no reason why I or anybody else could challenge it. It might have great importance and is so important it should be a treaty, but I could not in any way challenge that. However, at least Congress should have a look at it.

I mention that process in contrast to a situation where he does it on his own authority and says that we are morally bound and that we have to appropriate the money, and we never had anything to do with it either as an executive agreement or as a treaty.

Mr. HOLLAND. I think the Senator is clear but his resolution is not clear. I discussed this matter with the Senator either yesterday or the day before. He then used the words "matters of substantial importance" should be in treaties, and other matters in executive agreements.

Now, I have heard two other words, one relating to "grave importance" and the other—what was the recent term the Senator used? Was it "great dignity"?

Mr. FULBRIGHT. Solemnity. Matters of great importance.

Mr. HOLLAND. Yet I do not find any of those words or anything indicative of those words and I do not find a real difference between those things that do require either a treaty or legislative action.

Mr. FULBRIGHT. That is because that is not the purpose of the resolution. It is not intended to make any such distinction. I am not trying to draw a distinction between an executive agreement and a treaty. I am trying to draw a distinction between those cases where executive agreements and treaties have been submitted to the Senate and where nothing has been submitted to either body. That is the distinction.

What we are saying is that, for any arrangement to be regarded as a significant commitment. Congress, in some form or another, should participate. That is the only distinction.

Mr. HOLLAND. Is the Senator trying to say in the resolution that there cannot be any national commitment except by joint action of the Executive and the Congress, either by ratification of a treaty by the Senate or by legislative action?

Mr. FULBRIGHT. Or by executive agreement.

Mr. HOLLAND. And the Senator feels that none of these executive agreements can create any national commitment upon the United States?

Mr. FULBRIGHT. Will the Senator repeat his question?

Mr. HOLLAND. Does the Senator feel no executive agreement can create a commitment upon the United States?

Mr. FULBRIGHT. Maybe I am clumsy in my semantics. I used the term "executive agreement" to mean agreements by the President, submitted to or authorized by Congress. What I am trying to say is that substantial matters—perhaps that is not the proper word—require congressional consent.

I would not mind the President's going down to greet the President of Mexico on the border and saying, "I am going to send you a flag on July 4." I would be perfectly willing to accept that as a formal agreement, if I may use that term. That is not a national commitment. I do not think that is of enough significance to be in this picture.

There was a time when executive agreements, or most of them, were submitted to, or authorized by, Congress. It is those which were not submitted to Congress that bother me.

Does the Senator understand what I am trying to get at?

Mr. HOLLAND. I am concerned about it. I find it difficult to understand why the matter of preserving wood ducks, which is an important matter to me as a conservationist, should be submitted in the form of a treaty between Canada and the United States and gravely considered, ratified on the floor of the Senate; and the whole matter concerning our relations with Spain and recent relations in connection with our airbases there and naval bases there and other activities there should be regarded as a proper subject for executive agreement.

I share the Senator's concern in such a division. I do not see any division. It seems to me the executive decision in that case is gravest and most substantial and by far the nearest national commitment, on grave grounds, or substantial grounds, whatever grounds the Senator wishes to use——

Mr. FULBRIGHT. I wish to say to the Senator that I am not concerned in this resolution with the distinction between the treaty and the executive agreement. That is submitted to Congress. I do not want to try to make that distinction. I would resist the Senator trying to use this vehicle to draw such a distinction. That is not my purpose. I have my view about whether it should be an executive agreement or treaty. That is a different subject and is not what I deal with here. I would object to trying to lay down in this resolution or any resolution such a distinction in connection with what I am trying to do. If, on another occasion we would develop and attempt to amend the Constitution in a proper way in order to make such a distinction, that is a different matter.

I am trying to say I hope the Senator will not inject in this resolution a distinction between an executive agreement and a treaty. That is not my purpose. I do want to draw the distinction, if I can, as best I can, between those two legitimate ways of making a national commitment and the way used in the Spanish case. It is a classic case. It is a recent case. There was no executive agreement approved or authorized by Congress. I have no objection, under most circumstances, to an executive agreement that is submitted to or authorized by Congress.

Mr. HOLLAND. Many executive agreements are not submitted to either House of Congress, as the Senator well knows.

Mr. FULBRIGHT. If they are of no consequence, I do not regard that as a constitutional matter.

Mr. HOLLAND. Let us have a clear statement on that. Is it the Senator's opinion in his statement, as one of the bedrocks of this debate, that no executive agreement not submitted to Congress can possibly constitute a national commitment?

Mr. FULBRIGHT. And not in pursuance of any existing law or treaty; yes. I want to make that clear, because there are executive agreements made in consequence of previous actions of Congress and which are perfectly legal. But as to one made without reference to existing law, or treaty, which deals with anything of a substantial nature, I do not think the President or his agent has proper authority to make it. That is the whole point.

Mr. HOLLAND. Who supplies the definition of what is substantial?

Mr. FULBRIGHT. I think that is difficult, as we run into them, in many cases. I gave an example of what I did not think was either a treaty or duly authorized executive agreement. I do not know how to define "subtantial" off the cuff. Something of consequence. I could try to enumerate those things which are of consequence, but I think we have to use the rule of reason in this matter in arriving at what is of any consequence. Certain things would clearly be involved, such as the use of troops. That is easy. The expenditure of funds in any large amount.

The former Senator from Illinois, Mr. Douglas, used to draw the line, the Sen-

ator will remember, at $2.50 as being something of consequence and all below it was of no consequence. All above it was. The Senator will remember that, I am sure. It depends in large part on the circumstances whether it is of consequence or not. I do not think the Senator should expect me to make that definition, off the cuff. I think we should use the rule of reason in a thing of this kind. If it involves U.S. troops, or any substantial amounts of money, or the transfer of territory, they are most clearly items of consequence.

Let me read one sentence here from the committee's report.

> The traditional distinction between the treaty as the appropriate means of making significant political commitment and the Executive Agreement as the appropriate instrument for routine, nonpolitical arrangements, has substantially broken down.

I have drawn this language from the best authorities; that is, writers, historians, constitutional lawyers; they use these words. They are, I suppose we could say, imprecise, but they are the best we can do. The reason I think the language of this resolution fixes the case very well is that I think it is impossible to draw a distinction that would be satisfactory between routine nonpolitical agreements and substantal or important commitments which would require either an executive agreement submitted to or authorized by the Congress or a treaty. But it is clear in those cases which I have in mind, and which are the reason for this resolution. There is no doubt, I think, that the Spanish bases are of such consequence, certainly, to warrant either an executive agreement approved by Congress or a treaty.

Personally, I think it is of such consequence that it warrants a treaty. However, if it is submitted in the form of an executive agreement for the approval of both Houses of Congress, I would not lose too much sleep about it. It is proper practice. It should be achieved.

Mr. HOLLAND. I think I understand what the distinguished Senator is trying to do. I am not out of sympathy with what he is trying to do. I think, however, instead of ending by making a definition of the term "national commitment" which is obscure, as he says it now is, he still leaves it obscure. What I am hoping is that there may be included some specific fields of coverage such as those pertaining to national security, the commitment of troops, and the exchange of territory and perhaps, I assume, others; and then with a general clause. So a general clause would still have to be subject to some of the obscurity. I want the Senator to remove, if possible, as much of the obscurity as he can because I think his resolution is well intended—and I have already commended him for bringing up this soul-searching matter to the people of the United States and particularly to the Senate—but I think he can make his resolution much clearer and much less objectionable to some of us, and much more in fulfillment of his announced intention to remove the obscurity which he says now exists in trying to define "national commitment" by such a course of action. I base that upon two or three things.

First, there have been only three or four fields mentioned here which everyone would clearly say should be within the field of treatymaking. Second, the Senator and the Senator from Idaho, and others, have confined themselves largely, as has my good friend from Wyoming (Mr. McGEE), to the discussion of matters which vitally affect the security of the Nation. Certainly, they should be spelled out as one of the things to be definitely covered. I realize that there are many developments in that field. Congress did not appropriate hundreds of millions of dollars to create a nuclear submarine fleet, to create the nuclear weapons with which they are fitted, and have them cruising around in close proximity to Western Europe on every hand, with any thought that in the event, let us say, of an invasion of Western Germany by our only potential enemy, with the same speed that they recently invaded Czechoslovakia, that we should have to be called back from the various corners of the earth to a special congressional session, 535 of us, to consider the submission of a request for a declaration of war, before any action could be taken.

We all know that no such thing is contemplated. We all know that under NATO, we have some commitments, and that we would be expected to fulfill those commitments. I cite that as only one example of many, many things that could be cited which are as new to the field of defense as are the new things in the field of Federal jurisdiction. We did not have Federal jurisdiction of the airwaves until aviation, radio, and television came into existence. We did not have Federal jurisdiction of the whole nuclear field until we learned how to develop nuclear power. We are going to have other developments which will create new fields of Federal jurisdiction. And we will have changes, I think, in this field, as to what the Executive in a modern world must be expected to do in the event of certain emergencies.

I think it could be easily held that, by implication, we have given him that authority.

Why mention the creation of the fleet of nuclear submarines? Why mention the creation of nuclear weapons with which they are armed and deploy them so as practically to surround as far as the oceans will permit, Western Europe, if we do not expect them to be used quickly in the event of an emergency?

So I am hoping the Senator from Arkansas will give thought to the one suggestion which I am making—and that is all—that thought be given to specifying, as nearly as possible—and I agree with the Senator I do not think it will be possible to specify completely—all the fields of coverage of his resolution. I think, as drawn here, the resolution, instead of making clear the subject matter which he wishes to make clear, leaves it in obscurity. I think it will give trouble to our neighbors and friends around the earth. I think it will give trouble to the Senate and to the Executive in the future. In short, I think it should be more specific.

The Senator realizes that I always listen to him carefully and cordially. I remember having some colloquies with him in connection with the Gulf of Tonkin resolution, and other matters he has handled. I rely greatly upon his much superior wisdom, as compared with mine, in the field of international relations and his scholarship in many fields. I think he can greatly improve his resolution and keep it from being misunderstood in the various quarters on the earth where we might want it understood, and keep us from having a difference with our Executive, by making it much more distinct.

Mr. FULBRIGHT. I agree with the Senator's remarks. Certainly among the senior Members of this body, I think he pays greater and closer attention to matters of this kind, and particularly to my speeches, than any other Member of this body. I am always complimented by that fact.

I know the Senator from Wyoming wants to proceed——

Mr. COOPER. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. COOPER. I note the inquiry made by the Senator from Arkansas and the Senator from Idaho with respect to executive agreements. The Senators said thousands have been made. I think it is well known, however, that most of those agreements are routine. Many deal with trade, economic and tariff matters.

Mr. FULBRIGHT. They are made in pursuance of law.

Mr. COOPER. Yes. But executive agreements have been made, notably with Pakistan, Iran, and Turkey, in which we do pledge, in case of aggression against these countries, to take appropriate action, including the use of our Armed Forces, in accordance with the Constitution of the United States.

Mr. FULBRIGHT. Thailand is also an example.

Mr. COOPER. I would consider that this resolution addresses itself to the use of any troops under those executive agreements. The President would have to come to Congress under those conditions. Is that correct?

Mr. FULBRIGHT. That is a clear case.

Mr. COOPER. One other point——

Mr. HOLLAND. Mr. President, if the Senator will allow me to interject, I have no difference with him on that. I think the matters he refers to should have been submitted as treaties. That still does not clarify this resolution.

Mr. COOPER. The Senator gave the example of NATO. In addition to the NATO treaty we have entered into a great number of treaties since World War II in which it is agreed that, upon the happening of certain events, the parties would act to meet the common danger in accordance with its constitutional processes. They do not specify the particular action to be taken, but those treaties do require some action. Every one of them, except one that I examined —the Treaty of Rio dealing with the Latin American States—requires action under constitutional processes. They do

not define "constitutional processes." A purpose of the resolution is to define the constitutional process which should be followed before our troops are committed to hostilities.

There might be some cases when there would not be enough time. That is a matter for the President to determine. But the force of the resolution, or any other resolution of this nature, is to bring the views of the Senate to the attention of the President, and that he use the constitutional process of coming to Congress before the sending of our forces into hostilities.

Does the Senator agree with that?

Mr. FULBRIGHT. I do agree with that.

Let me take just a moment to say this further to the Senator from Florida, because he has been, as I have said, very attentive, not only this time, but on other occasions. No man in this body has been more conscientious, in my opinion, in the discharge of his duty to the people of his State and to the Nation than the Senator from Florida.

I hope he will not take amiss what I say. I am only trying to be helpful. Sometimes I express myself too vehemently, but I am only trying to make a point.

Let me say first—and this is no final answer—that this resolution grew out of conversations with our mutual friend, the Senator from Georgia (Mr. RUSSELL). This version was the original version which was approved by the Senator from Georgia. A different version was attempted, primarily at the insistence of the Senator from Iowa at that time, Senator Hickenlooper, who was on the committee last year. He attempted to be more precise, I think at least to some extent, to meet some of the points the Senator from Florida has made.

In my capacity as chairman, trying to work out something that was agreeable and would attract the support of the then Senator from Iowa and other members of the committee, I went along with those changes—not because I felt they improved the resolution, but because the Senator from Iowa felt strongly about it. Since this is only a sense of the Senate resolution, it is intended to affect the attitude of the Senate in the future toward future agreements that may be made. I hesitate now to call them executive agreements. I am referring to the type of agreement that is not submitted to the Congress in any form. I went along with it.

This year I went back to the Senator from Georgia, he being the President pro tempore and chairman of the Appropriations Committee and a very respected Member of this body. I asked him, "Which do you prefer?" We had a little exchange about this. He said, in effect: "On reflection, I prefer the original version. It does not attempt to be restrictive. It does not attempt to draw lines. If you draw it precisely, there is an interpretation around here that everything not mentioned is excluded." He said, "This is a very simple statement of principle on national commitments." He said, "I realize it is difficult, if not impossible, to attempt a definition of 'national commitment' that would not be subject to all kinds of differences of view and cause confusion."

In any case, I relate that as a little background of why I, as chairman of the committee, reintroduced the original version. That is a simple explanation of why I did that. He is very important. He has always been interested in the Constitution. The Senator from North Carolina also had agreed last year to this version. I am not trying to place the responsibility for it. I am only explaining, as a historical matter, why I went back to the original version.

Coming to this resolution itself, the Senator has suggested one or two things that alarm me. I am not sure I understood him. He said we authorized the building of submarines, which may cruise around the world, the implication being that, having authorized them, we have conferred upon the President the right and the constitutional authority to use them whenever he thinks right and proper, to intervene with these submarines wherever he might wish to, because we have given him the power to do so.

I reject that wholeheartedly. I think it is a dangerous doctrine. I would not conclude from the fact that we have given him power in the way of new weapons that we have given him authority to use them under any circumstances other than the circumstances already included in the Constitution long before those weapons were ever heard of—in other words, the right to respond to an attack on this country, whether he would use bows and arrows or the Minuteman or any other missile. The fact that the President has additional instruments does not give him any additional legal power. I reject that doctrine.

Last year the Senator from Georgia (Mr. RUSSELL) objected to the fast logistics supply ships, as I think they are called. I remember one reason why he objected was that if we had them all over the world, with all kinds of modern equipment, there would be a temptation to use them whenever trouble broke out. He succeeded in deleting them from last year's appropriation.

In this case, or any case where a commitment to use those submarines or any other ships is going to be made, I say it should be submitted to Congress, in one form or another, either in the form of an executive agreement for both Houses to pass upon, or a treaty to by acted on by the Senate—one or the other. The President should not have the authority to use them unilaterally, I mean on his own authority, whenever he thinks he should intervene.

Mr. HOLLAND. Will the Senator permit me to intervene at that point?

Mr. FULBRIGHT. In a moment. I do not accept it. I am trying to prevent this President or any other President in the future from believing that he has the authority to intervene because we have provided some kind of instrumentality that will enable him to do so.

One last point, because I am afraid I will forget it. In one of the hearings last year or the year before, the then Secretary of State, Secretary Rusk, made the argument—and it was very offensive to me, not personally, but in a legal or political sense—that, having supported the foreign aid bill, and having given a great deal of aid to South Vietnam, we had created a kind of constitutional climate that gave authority to our Government to do what we were doing.

That really turned me on. If I had dreamed that, by supporting foreign aid, I was giving him or any other administration authority to intervene with 500,000 men, I would have cut my throat. I had no such idea, nor do I have in this case with regard to the submarines.

I wish to make one further distinction, and then I shall yield. The declaration of war is provided for in the Constitution. This resolution does not take away nor add to the requirements of the Constitution with regard to a declaration of war. I think that the President should abide by it.

I do think that this debate and this resolution, in a sort of indirect, oblique manner, should remind the President—any President, of course; this is not directed at the present President, specifically, at all—should remind all of them that we are expecting them to live up to the Constitution, and we hope they will not take us into a war in the future without asking for a declaration. But this particular resolution does not attempt to arrogate to itself or to Congress or to the Senate the powers under the Constitution. Those powers are existing. We say we would like to return to the Constitution.

I yield to the Senator from Florida.

Mr. HOLLAND. Of course, that is fundamental.

Mr. FULBRIGHT. Yes.

Mr. HOLLAND. First, I think the Senator overlooked the fact that my illustration of what might happen in the case of an attack by our only potential enemy involved only West Germany, and that we have some four divisions-plus of American troops there. I think if there were a swift attack made there, similar to the one recently made on Czechoslovakia, and it immediately endangered and destroyed the lives of some of our men there, there would not only be justification, but almost necessity for the President to call into play at once the use of the nuclear submarines.

Be that as it may, I simply wish to say that I have talked to some of the members and the former members of the distinguished Senator's committee. I talked last year to the then Senator from Iowa, Mr. Hickenlooper. I also talked last year to the then Senator from Ohio, Mr. Lausche. I might say that Senator Lausche, as I understand him, had even graver doubts about this resolution than did Senator Hickenlooper. The Senator from Arkansas will know better about that than I.

Mr. FULBRIGHT. As I recall, Senator Lausche objected to it, I think, in either form. I think Senator Hickenlooper approved of it in the form I mentioned a moment ago.

Mr. HOLLAND. With some specifics in it.

Mr. FULBRIGHT. Which he had put in it. It was the version that he had spent much time with.

I think the case the Senator has stated would not be affected in any respect whatever by this resolution. I think, in the example the Senator used, it is not only the President's right, it is his duty to respond. That is why those troops are there; they are certainly there in protection, I think, of our undertaking under the NATO treaty, which was a clear case of the result of a long debate by this body, in which all aspects were discussed and so forth, and it lived up to the Constitution. I do not see why that hypothetical case in any way disturbs them, I mean with regard to this resolution. The resolution certainly would not in any way apply to that situation.

Mr. HOLLAND. It does not disturb me. The point I am making is that I thought the Senator from Arkansas would agree with me that the illustration was a proper one, and a good one when made applicable only to West Germany.

Mr. FULBRIGHT. I do not want to go too far, because I do not quite accept the Senator's characterization of—I assume he meant—Russia as the only possible or potential enemy, whatever word he used. These relationships change quickly. It was not long ago that Germany was our enemy and Russia was our ally. So I do not like to use this language in such definitive, permanent fashion.

I would not say "only" or "only potential." I would say the current, or perhaps the most fashionable, one. I would prefer to limit myself to a little bit different language.

Mr. HOLLAND. The Senator is more expert in the field of semantics than I, but I think we understand each other completely, and there is no difference between us. If there were an attack from that possible enemy, if the Senator will permit me to use that word——

Mr. FULBRIGHT. Yes.

Mr. HOLLAND. With our four divisions of troops stationed in West Germany, under the obligations imposed by the NATO Treaty, I think it would not be regarded as an idle thing that those nuclear submarines were riding in the North Sea or off the North Gate, or wherever they might be.

Mr. FULBRIGHT. Oh, no.

Mr. HOLLAND. And that, without waiting on any declaration of war, the President would be under the duty of immediately using the weapons which they carry.

Mr. FULBRIGHT. I would think the Senator is correct.

Mr. HOLLAND. I thank the Senator.

Mr. FULBRIGHT. I do not think this proposal in any way interferes with that. I thought the Senator said that in the words he used before he had given the hypothetical conditions under which they would be used. Suppose the submarines were lurking off the coast of Africa, and a civil war broke out in Rhodesia; does the Senator think it would be justified, because he thought we ought to intervene, for the President immediately to jump in there, where we have no business whatever in intervening?

Mr. HOLLAND. I certainly do not think that.

Mr. FULBRIGHT. I do not, either.

Mr. HOLLAND. What I said was they would be surrounding Western Europe, meaning they were in range of that only possible or potential enemy, or whatever words the Senator would like me to use relating to that terrible prospect.

Mr. President, I hope the Senator will consider using some words that are descriptive and specific, and I think he will strengthen his resolution if he does so. I think he will avoid misunderstanding by friendly nations all around the world if he does so. I would suggest also that he might consider making this resolution forward-looking only.

Mr. FULBRIGHT. It is forward looking only.

Mr. HOLLAND. Without relation to existing executive agreements.

Mr. FULBRIGHT. We tried to do that, in our report, and so on, and we did it. I have no objection whatever to any way we can make it forward looking. I mean it is not intended to undo any genuine obligations.

On the other hand, I do not wish this resolution to be interpreted as a confirmation of everything that currently may be called an executive agreement and a national commitment, which I do not accept as being such. I think there are a number of things that are called national commitments by persons other than the committee or myself, which I think need examination. There are a lot of them that are clear, either by treaty or otherwise, that are acceptable. There are a number of others that I question, and I question them very seriously. There are some which, if I have an opportunity—and I expect to have—to vote, for example, for funds to implement them, which I do not think are binding, I expect to vote against their implementation.

This is merely an expression of personal views, and making argument about it. But I certainly hope that the Senator will accept the language of the committee and my own assurance, because this was thought of last year.

It has no relation to the present President and contains no criticism of the present President. He has done nothing that I can think of, or that I know of, at least, that has violated the intent of the resolution.

He has initiated nothing. Even the Spanish Bases Agreement was initiated in the former administration. The recent change is of great importance. I still think it ought to be handled as a treaty because it is such an important matter.

Let me inject one thought here. It is a very difficult thing to try to deal with definitions in this area. And when we try to reach precise agreements or to vest grants of authority in the President, I think we fairly well understand the general area and the clear-cut areas and what ought to be executive agreements and what treaties.

Here is a thought that impressed me. It is in the report. I think it is good to read it in the RECORD.

It reads:

> Finally, should the President find himself confronted with a situation of such complexity and ambiguity as to leave him without guidelines for constitutional action, it would be far better for him to take the action he saw fit without attempting to justify it in advance and leave it to Congress or the courts to evaluate his action in retrospect. A single unconstitutional act, later explained or pronounced unconstitutional, is preferable to an act dressed up in some spurious, precedent-setting claim of legitimacy. As a member of the Nation's first Congress, Alexander White, of Virginia, said:
>
> "It would be better for the President to extend his powers on some extraordinary occasions, even where he is not strictly justified by the Constitution, than the legislature should grant an improper power to be exercised at all times * * *."

We have a very sound principle to be applied in the gray area cases that one could not easily define or explain. We can deal fairly well with the obvious cases in which action has been taken, but in the attempt to deal with the extraordinary cases of great complexity and ambiguity, it is better constitutional practice to let the President assume that responsibility and then explain it. In 99 times out of 100, or perhaps even more, the Congress and the courts and the people will understand it and abide by it.

I cannot give an example, because by definition this is an extraordinary case which does not occur very often. However, in general the cases we have in mind to be covered by this resolution, in my opinion, are pretty clear. They are not cases of great urgency. They are cases in which there is plenty of time to consult Congress.

The cases which have offended the committee and me that have given rise to this action certainly were cases in which there would have been time to consult Congress.

Mr. HOLLAND. Mr. President, I am sure I would have no disagreement with the Senator on the matters he has mentioned and perhaps on other cases which he has not mentioned.

I am sure it is made very clear by the report that he is not attacking the present President, because one of his leading paragraphs starts off by saying:

> The denigration of treaties goes back at least to President Franklin Roosevelt's destroyer deal of 1940, referred to in section 3 above.

Then there is another discussion of the same kind through various other administrations.

Mr. FULBRIGHT. It does not relate to this President at all.

Mr. HOLLAND. I find much in what the Senator has said with which I can completely agree. I am still of the opinion that the resolution itself ought to state that it is forward-looking only and not create doubts in the minds of Spain, Pakistan, India, or Iran, to mention just a few, as to what our attitude toward them is. I think from what I have heard and from what I have seen in the papers over the years, that there is general agreement that we have rather close arrangements with them which I would

not like to see questioned and which I do not think the Senator is trying to question, but which I think may be questioned as the result of leaving the resolution in its general wording.

There are two things that I hope may be done. One is to write some specifics into the resolution, and there may be a conditional general clause which would call for decision by the President as to what is grave and what is not, and it would be subject to later review by Congress.

My other suggestion is that it be made completely clear that the resolution looks ahead completely and not at the existing structure.

I thank the Senator for yielding.

Mr. FULBRIGHT. Mr. President, certainly looking forward is the main import. However, does the Senator wish to leave the impression that, if anything has been done up to now, we now approve it, and that we would be foreclosed from questioning any of the agreements that have been made in the past without any reference to Congress?

Mr. HOLLAND. I do not, at all. I think that the words making it clear that the pending resolution looks forward do not have to question anything now in existence, but would simply confine themselves to the future. In a very few words, that is it.

Mr. FULBRIGHT. The Senator knows this resolution does not intend and does not seek to have the force of law. It does not seek to nullify anything in a legal or constitutional sense.

What it seeks to do is to influence the attitude of Senators and executives and other people in the future as to the way they would approach this very difficult area of reconciliation or adjustment between the branches of the Government. It specifically does not intend or pretend to have the force of law.

In any respect, how could it affect any existing agreement if it is an agreement? However, suppose there is something that purports to be an agreement and calls itself an executive agreement which has never been submitted to anyone anywhere. The Senator would not want to make a pronouncement and say that we are foreclosed from even talking about it. That is all we could do about it.

I again emphasize that this is not a legal binding instrument. It is simply a statement of our intentions, of our sense of proper procedure under our constitutional system.

Mr. HOLLAND. Mr. President, the Senator has been extremely kind. I will not detain him further. Of course, I do not want to preclude the Senator or any other Senator from raising questions about anything now existing about which he does not approve.

I would expect him to do so. I would expect to do so. However, to put the other shoe on the other foot, I do not want to do anything here which seems to say in advance, with reference to executive agreements I have never heard of and have never seen, that unless they have been negotiated in the way stated by the resolution, I cannot regard them as national commitments. I would much prefer to look at them in the light of what happened, in the light of what the conditions were at that time, in the light of what has been done since that time and decide for myself. Just as the Senator prefers to decide for himself when such agreements are not national commitments, I prefer to be able to decide that they are or may be national commitments.

So, it would be my feeling that the Senator would make his resolution much more appetizing to some of us if he made it very clear in the terms of the resolution by the use of the words, "in the future," or, "from the date of the passage of this resolution," that this is a principle which is now announced.

Mr. FULBRIGHT. I could pursue the matter further, but I hesitate to impose upon the Senator from Wyoming.

I should like to ask one last question. It is a hypothetical question to the Senator from Florida. I will not pursue it any further.

Can the Senator really imagine an agreement that has already been made that would involve what I would call a national commitment of this country to use our Armed Forces, not in the defense of the country, but abroad in defense of some other country, that he knows nothing about and that I know nothing about, that takes effect in the future and has never been submitted to Congress, that he would be inclined to agree to. Does he believe that a reasonable possibility?

Mr. HOLLAND. My reply to the Senator would be this. I prefer to look at the situation and what has been done. I know that both he and I—at least I—have voted money for the support of our troops in Spain. I know that I have voted money, and I believe the Senator has, for the creation of our airports in Spain and the furnishing of our naval bases in Spain. Those things have doubtless been done since whatever was done in the original instance between the Executive and the Spanish Government. I want to have the chance to look at the whole situation before I decide what the situation is.

Therefore, I think that this resolution becomes much stronger, certainly much less objectionable to anyone, if words are placed in it that show that we are going to follow this policy in the future and that confine it to the future operations of the Senate; because we do have responsibilities under the Constitution both to advise and consent, and responsibilities as part of Congress generally to appropriate and to do other things in that field of legislation. I want to be completely free from any hangover that might result from this resolution as it is now worded, as it may apply to situations now existing.

I thank the Senator. He has been most gracious and most helpful in putting in the RECORD information that is helpful to me. He has not satisfied me entirely. I believe my comments have shown that.

I do ask that the list of executive agreements and a classification of them, if possible, be placed in the RECORD.

I ask that the Senator consider two clarifying statements in the resolution: first, specifically covering certain fields with general words, leaving a practice to develop what they may mean with reference to particular situations; and, second, the inclusion of words making it clear that we are talking about our future actions in the Senate. He is asking Members of the Senate to vote for a resolution. Personally, I think that it applies to our future consideration of national affairs.

I would like to see such words included, so as to make it inescapably clear that that is what we are talking about.

Mr. FULBRIGHT. I may say that a list of commitments has been put into the RECORD by Senator CHURCH.

Mr. HOLLAND. May I ask if that pronouncement in the RECORD by Senator CHURCH, which I did not have the pleasure of hearing, is to be regarded as an official statement from the committee.

Mr. FULBRIGHT. The list of the treaties, executive agreements and declarations was provided by the Department of State.

Mr. HOLLAND. I understand; but not the classification.

Mr. FULBRIGHT. The document I hold in my hand is a report of the hearings of the committee in which the list that we received is printed. We requested the Department to supply us with everything they had in the categories about which we are talking.

Mr. HOLLAND. Mr. President, the fact that I have not been satisfied with that list, flows from the fact that the Senator from Idaho stated that there had been something like 5,000 plus such agreements, and the list copied in the hearing record is by no means of that length.

Mr. FULBRIGHT. We will try to clarify that. I do not know what the discrepancy is. This is supposed to be a complete list. It is what the State Department offered to us as a complete list.

Mr. President, I yield the floor.

Mr. McGEE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TALMADGE. Mr. President, in the past 20 years, there has been a tremendous extension of Executive authority in foreign affairs. The scope of the President's power in this field has been broadened to such an extent that the Congress has virtually been relegated to the background.

In short, such has been the exercise of Presidential authority in foreign affairs in recent years that the Congress has been put in the position of simply reacting after the fact, rather than being given its constitutional role in helping to make foreign policy decisions that greatly affect the lives of Americans and the security of our Nation.

We have seen the United States become greatly overextended throughout the world, both militarily and economically. Most of our commitments are based on

little more than vague promises. The United States Armed Forces, our national honor, and the American flag have been committed to full-scale shooting wars in two instances—in Korea and Vietnam—which have been fought and paid for with American lives and American tax money, but without any expressed congressional mandate. We have also seen the U.S. Government pursue a policy of armed intervention, such as in the Dominican Republic, again solely at the direction of the Executive.

I have become increasingly concerned like many other Members of Congress over this usurpation of congressional authority. The U.S. Constitution grants Congress the exclusive power to wage war, with only one exception. That exception is to enable the President, acting in his capacity as Commander in Chief of the Armed Forces, to employ them as he sees fit in the event of a sudden and unexpected attack against our country.

Serious questions have been raised about the President's authority to deploy American troops in large numbers as they are now being deployed in Vietnam, as they were utilized a few years ago in the Dominican Republic, and 18 years ago in Korea—in the absence of positive congressional determination. There is in fact no expressed constitutional authority that gives the President such a free hand with U.S. Armed Forces.

I support Senate Resolution 85 in the hope that it will restore the proper constitutional balance between the Executive and the legislative branches in the field of foreign relations.

Neither this resolution nor any of my comments are intended as criticism of the present administration or any previous President in the conduct of U.S. foreign affairs. The past two decades have been troublesome and perilous indeed. I feel that our Government has endeavored to act in the best interests of the United States and the free world in containing the spread of communism and in turning back aggression that threatens our security.

This resolution is an expression of our desire, which I believe reflects the thinking of the American people, that any future involvement of U.S. forces, where they are committed to any battlefield, will directly involve congressional decision and action.

Based on past performances, the President virtually has the power to determine whether we follow a course of war or peace. But it is the people who should decide this course, through their elected representatives. Senate Resolution 85 will be a step in the right direction toward restoring this authority to the people, and it will at the same time create a better and more effective partnership between the Congress and the executive branch in foreign affairs.

ORDER FOR ADJOURNMENT TO MONDAY, JUNE 23, 1969

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 12 o'clock noon on Monday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

NATIONAL COMMITMENTS

The Senate resumed the consideration of the resolution (S. Res. 85) expressing the sense of the Senate relative to commitments to foreign powers.

Mr. McGEE. Mr. President, I rise to express the reasons why I have serious doubts about the need for the implications of Senate Resolution 85.

The question that I think surfaces, which leaves me apprehensive in some way, is that the executive and the legislative branches often have found it difficult to agree upon the measures of responsibilities that at best are ill-defined and sometimes not defined at all in the Constitution. The issue that we experience here, which does legitimately concern all sides in this question, is in some of its manifestations as old as the history of our Republic. But its currency, at the moment at least, derives from the war in Southeast Asia. Its roots go back very far in the story of our country.

I think it is not without point to remind ourselves that our land began with a basic, ingrained sense of distrust and suspicion of executive authority. When the 13 Colonies broke their connections with the mother country, they did so with a new structure under the confederacy that had no Executive at all. But they learned the hard way, and almost entirely in the realm of foreign relations, that a Chief Executive was very important. It was only after their near debacle as 13 Colonies that they sought to restructure the new Government in ways that would provide for executive leadership.

In that process; namely, in the Constitutional Convention of 1787, they sought, with what wisdom could be commanded by mortals, to separate, divide, and hopefully, in some areas, to balance those responsibilities.

John Marshall probably remains as the most distinguished Chief Justice of the United States in our history. But, as a Member of Congress at the end of the 18th century, he noted that "the President," under our new system, "is the sole organ of the Nation in its external relations and its sole representative with foreign nations."

During his term of office the Nation's first President experienced a run-in with this body—the Senate—in the very first test of what the Constitution may or may not have meant in regard to the separation of powers. When George Washington went in person to submit a treaty for the Senate's advice and consent, he felt that he had been so badly treated at that particular confrontation that he said he would "be damned" if he would ever go back.

The hearts and the spirits of many distinguished leaders in succeeding administrations continued to reflect distrust, suspicion, and jealousy. I underscore jealousy, because it has constantly been present, clear down to the present day.

The issue of executive power in foreign policy has always been present, but it has been present in more intense ways in an uneven pattern throughout the country's history. At times of great national crisis, it would rear its head. In times of strong Presidents and weak legislatures, it would rear its head. I mention this very quickly merely to remind us that it is not something that is a freakish development of current times, but has been constantly present throughout the history of the Republic.

If there be those who support Senate Resolution 85 and believe that the increasing presidential power in foreign relations is a modern phenomenon, I think the record of our history would not support that conclusion. An ascendency of the President over Congress has occurred repeatedly in the realm of foreign relations, even from the first days of the first President and his new Congress. A part of it stems from the conflicts built into the constitutional fabric itself, from ambiguities, from omissions, and from interpretations.

The constitutional powers of the Senate affecting foreign policy, in part, derive from the treaty-making process. But beginning again with the first President's aggravation in 1796, many Chief Executives have developed a counter-disrespect for senatorial activities involving even the treaty process.

Secretary of State John Hay at the turn of the century once noted:

> A treaty entering the Senate is like a bull going into the arena. No one can say just how and when the final blow will fall. But one thing is certain—it will never leave the arena alive.

There is, again, another personal, warm, but overreactive attitude from the executive level toward the senatorial presence. The real point of it all is that it fosters this attitude of hostility between the branches and of suspicion, distrust, and jealousy. In fact, it probably, as much as anything, prompted a whole succession of Presidents to find ways of conducting the responsibilities of the Presidency in foreign relations that did not include advising the Senate.

The most significant changes between the executive and legislative roles have occurred since the beginning of World War II. Under President Franklin Roosevelt the use of executive agreements experienced a sharp increase. In particular his commitments to the transfer of destroyers for bases, the extension of the Monroe Doctrine principle to Iceland and Greenland, and the "shoot on sight" edict to American naval forces in the Atlantic are often cited as serious encroachments by the Executive office on the assumed foreign policy "partnership" between the President and the Congress.

Concomitant with the incidents preceding American involvement in World War II was a second characteristic that had something to do with the increasing frequency of the use of the executive agreement, and that was the emergence of the United States as the most powerful nation in the world—some say the most powerful nation, but certainly a great power—largely as a result of that

conflict. As a great power, American actions cause reverberations all around the globe and must therefore, be carefully weighed and delicately executed. Not infrequently they must be carried out swiftly.

Therefore, we come to the decisionmaking process. Under tradition within the Constitution, and in practice, in the last two or three decades, on more than one occasion the time allotted by a crisis incident to those who had to make the decisions have been less than the time it would take to assemble a quorum of Congress.

At other times the time has been so limited as to render impossible protracted discussion else the crisis that provoked it would long since have produced the debacle that was feared.

This brings me, then, to the developments that conditioned or provided the substance or atmosphere of the setting for these debates, and that is the responsibility of power in a nuclear age. We live in a time when in some instances 15 minutes could spell the difference between life and death for millions of people. The past 25 years have been times when the only thing that could be said with certainty was that no one really knew whether the world would be plunged into the great war, the big war—whatever the phrases are necessary to describe it—within the next 24 hours. So complicated is the nuclear age that large wars in most instances have virtually been eliminated as instruments of national policy. That simply means there was presumably a time in the good old days when a nation could deliberately declare war as a matter of policy in order to achieve its objectives; but with the capabilities that mankind has acquired, that option has been rendered unrealistic.

The place of the old-fashioned war, the big war, has been partially taken at least by the only kinds of conflicts that a nuclear age dare afford—if the word "afford" does not beg the question too severely—and that is the limited or isolated conflict, the police action, whatever one wishes to call it. It can still mean bitterness and war in the old-fashioned sense.

We have learned that allowance can be made for wars that are fought but never declared, and that stems from the conviction that a war, once declared, becomes so rigid and fixed in many of its dimensions that it hampers the possibilities for dampening it down or for discovering options to terminate it readily. This is a complicated and an almost 50–50 kind of question where one cannot be sure, in Southeast Asia or in other crises where there has been an actual loss of life, what the effect of an open declared war would have meant. But, in general, a succession of Executives and many scholars in the field have reasoned that the odds are better for containing an action or quarantining it without a formal declaration rather than with it. But this, too, approaches the heart of the problem in a resolution like Senate Resolution 85. This has been the question in much of the dialog we have had on the floor in the past 2 days. There has been expressed the deepest kind of concern about the warmaking powers of Congress, mainly that clause in the Constitution which reserves specifically to Congress the right to declare war.

What the nuclear age may have thrust at us is the necessity to examine what we have available to us in our constitutional system. First of all we must find out if there is some way under that structure by which we can come to grips with this modern phenomenon, a phenomenon that may have much to recommend resorting to it, and that is the necessity for fighting a warlike engagement without formally declaring it, and thus throwing it into the realm of our traditions, our laws, and all the other things that enter the debate. I think we should be exploring that very carefully, as we see the implications of Senate Resolution 85, because our problem then becomes one of where, under our system, could we best, or with the least disastrous consequences, lodge the responsibilities for making the decisions that might ultimately lead along that path.

I am compelled to interject at that point that no President I know of, with the best of intentions, could know with certainty what may lie along that path, that ever so many times a President with the best of intentions, by his own decision, would have entered into the kind of commitment that would have been salutary, that could have headed off something much worse. If it succeeds, this body is delighted that he did so. No one, to my knowledge, has raised the question of his taking powers away from the Senate whenever those instances may have happened. It is only when something finally goes wrong and the cost goes up that we are, in most instances, determined by a force beyond the control of Democrats, Republicans, and other Americans, or even the Western world, if you will, and that therefore we have that never-never-land in there, that gray area, in which we need to determine, or someone needs to determine, when does a foreign policy become a commitment? What dimensions are envisaged by those supporting this resolution, and at what point has it crossed the line toward an open conflict meeting the criteria for defining war?

To explain or to illustrate the difficulty of that sort of thing, I have alluded to the events that preceded Pearl Harbor. Pearl Harbor was an act of war. It was more than that. Some act might have preceded Pearl Harbor which brought it on or that might have averted it. We cannot know with certainty. History is not kind enough to let us run a replay to see how to do it better the next time around. But we do think that we are entitled to our experiences from the last time, and at least we should learn how not to do it. From the rhetoric we have had on the floor in the past 2 days, I gather the impression that the only thing we really have reached clear agreement upon is that the President can act instantaneously if we are attacked directly on our shores, or in our establishment. But I think from history we are entitled to ask: Is that enough?

Is there not something to be said for trying to head off the tragic sequence of aggressions, for example, in Western Europe that began with Hitler's occupation of the Rhineland in 1936, which led to Austria, which led to Czechoslovakia, which led to Poland, and which finally led to World War II in the West.

What does it mean in the replay of history if we were to experience that luxury? What would it have meant if the Japanese warlords had been stopped in Manchuria in 1931, 10 years in advance of Pearl Harbor? We cannot know.

What we do know is that by not stopping them, it led to a direct attack that united this country. If that is the best we can offer in these times, where the world has been shrunken literally to the size of an apple or an orange by the scientific genius of man, where his destructive capability has acquired the dimensions of a god, are we not entitled to ask if there are not wiser places to stand sooner, even in the remote areas which have been alluded to here, even in faraway places? For, I submit, the proximity of Pearl Harbor requires the presence of ever so many tens of thousands of Americans along the Burma Road, which is about as far away from anything as we can get. The world has not changed. We have not seized control of the world. We have not ordered the relations of nations in a way in which they resort only to peaceful change. So I think what we are calling into questions with this resolution is the heart of our decisionmaking process in the national interest and who should bear that responsibility.

Now, in determining the judgment of this body, I think it is important that we not cling to what I regard as generalities expressed here in this debate which are not borne out historically.

I think one of those generalities is that the Constitution ever intended a 50–50 role for the President and the Congress in foreign policy, that the Constitution ever intended a balance of powers between the executive and the legislative in foreign affairs, that the Constitution ever intended clearly to define the separation of powers that could be added up and sketched. In fact, I think the failure of the Constitution to do precisely that is one of its attributes which has permitted its survival over many generations of men and problems that have continued to change.

I think, likewise, if the assumption continues to prevail, as has been intimated here in this dialog, that Presidents today have invented this complication, that one reaches that conclusion only by blotting out the history that has preceded us to the Senate floor at this time.

I had occasion yesterday to cite a judgment by Prof. Hans Morgenthau. I cited him not because he and I are in agreement on this question—we have real differences on it—or because of the difference which provoked a good deal of our conversation; namely, the fighting in Southeast Asia, but because he is a respected political scientist in the field of political structures, in the implication of those structures in the constitutional procedures.

Hans Morgenthau articulated very

well, in a recent article of his, that in the realm of foreign relations the President of the United States can do almost anything—almost. He is circumscribed by three clauses of the Constitution. One of them requires the Congress to appropriate the moneys for whatever reasons he seeks to do. He is circumscribed by a second proviso that the Senate must approve all of the treaties into which the executive wishes to enter. He is circumscribed in the third instance by being limited in a formal declaration of war. The Congress was assigned that responsibility.

But in the practicalities of trying to live in a world without law, over a period of 180 years now, precedent, practice, and court decisions have sustained the actions of Presidents who have laid out foreign policy positions, set out foreign policy directions, without the advice and consent of the Congress.

The Monroe Doctrine is a case in point of the policy. The Truman doctrine is a case in point of the policy. That is why it behooves the Members of this body to examine how we best must proceed in days when it is imperative that we move quickly sometimes or that we commit ourselves quietly without a show, on some occasions in the interest of heading off a war, or how best we assign responsibilities and perfect the mechanism that will make that possible. In my judgment, Senate Resolution 85 contributes no element to the resolution of that problem. It can even, as I shall suggest in a moment, introduce some complications in regard to it.

The scope of the resolution itself remains, to me at least—and I followed with interest the colloquy of the Senator from Florida—rather substantially ambiguous, and at least lends itself to misunderstanding and misinterpretation.

We are told on the one hand, for example, that the resolution is simply designed to wag a finger of warning at the Chief Executive to be sure to remember Congress in whatever he does. In almost the next breath, we are told that the President has usurped the constitutional processes of the Senate and that this is the first step in restoring the balance under the Constitution—which, in my judgment, begs many questions in history.

I am afraid that, in laboring the cause of the resolution, we are trying to strain all we can out of the many sides of the same question. I do not think we can play it both ways.

According to this national commitments resolution, it is specified that the President can make no move that would involve in any way a commitment without an affirmative action by the Congress—an affirmative action. That does not mean that we have a closed session and we take confidential information and be thus advised. It requires public, almost promiscuous, action on the part of this body itself.

Again, I hark back to this day and age where the chances of avoiding a major blowup are often greater behind the scenes and off the front page and off the floor of the Senate than they are if undertaken in the goldfish bowl of TV cameras and black headlines and senatorial speeches.

The proposal that is pending at least raises some serious questions about the constitutional powers of the President, and because, by its vagaries, it leaves unanswered not only the questions of the Senator from Florida, but leaves unanswered how far the President himself can go under a treaty or under an executive argeement. I think my colleague from Arkansas, the chairman of the committee, suggested to us a while ago, very properly, that he was not proposing to change the procedures under treaties or even under executive agreements. He simply did not want a commitment to be made under either device or agency without an affirmative vote by the Congress.

Mr. President, it seems to me that would place a considerable strain on the realities of trying to avoid explosions in this day and age. At what point, I think we need to ask, does a President, in carrying out his responsibilities, finally arrive at a place where the danger of a war will have been arrived at? Is it at that point that the new resolution comes into play, or does it come into play only when somebody on some other side seeks to strike at an American presence in an area that was not under violence, and even at the request of another country?

There are the fuzzy areas that are present in the pending resolution that do call into question the prerogatives of the President in the projection of foreign policy itself.

The Constitution says the President is the Commander in Chief of the Armed Forces of the United States. Reasonable men may well disagree as to the conditions under which he is the Commander in Chief either inside the country or outside it. The President has the power under the Constitution, however, to send U.S. military forces, when he deems it to be in the national interest, to any part of the world.

Of singular significance, I think, in the dialog that has taken place here in the last 2 days is the recurring suggestion that there has been no real violation of the Constitution until now; but those who are supporting the resolution have left the strong implication that Presidents have stolen the ball away from the Senate. And yet we are agreed, I think, that in the case of the war in Vietnam, as the Senator from Idaho agreed, there may be a case for not declaring war, but there could be a case for an undeclared conflict, and that all was done that was required to be done through the Tonkin Gulf resolution.

In the case of the Korean war, with Mr. Truman, a resolution through the Security Council, endorsed and ratified by the United States as a United Nations action, became the instrumentality, a matter to which we were committed as a member of that body.

In earlier crises in what we have chosen to call the cold war, the President in almost every instance consulted this body and sought to arrive at some kind of consensus in regard to it.

So I think we need to modify or temper our judgment in regard to the executive role in what has transpired up to this point. I seriously question whether the President and Congress can effectively share that responsibility on an equal, 50–50 basis. They have not been able to until now in our history, and I think that the "now" of this moment makes it even less likely that they can work it out.

Senate Resolution 85 would fail, it seems to me, to address itself, then, to the importance of pinning responsibility for fateful decisionmaking in a nuclear age. I suggested yesterday, by citing an article of a few years back, that the problem of producing expeditious action in pinning responsibility in the Senate is one which raises many questions; and by agreement, until now, we have found that when the Senate has been consulted and has voted, as in Tonkin Gulf, it did ratify a Presidential request.

So it leaves one, then, wading through a limbo of confused intentions among those who are sponsoring Senate Resolution 85. That resolution, if this body were to adopt it, is loaded with mischiefmaking as well; for whatever the avowed limitations that some of the sponsors of the resolution ascribe to it, there should be no doubt in our minds as to its impact around the world—that if it is taken seriously here at home, under no circumstances thereafter would any other nation, impelled to move quickly with great force in a specific area, have to fear or contend with a quick response, let us say, from the United States, if that were a relevant area.

Likewise, it could appear to afford the opposite; namely, that at the risk of a quick move, as by the Soviets in Cuba, or as by the Soviets in Berlin, or as by the North Koreans along the 38th parallel, it would seem to suggest that at least if a quick strike could be effected, they might get by with it, and the consequences, at the very most, would be a delay that would allow the consummation of their immediate objective; and only after this body had chosen to debate the matter at whatever length it saw fit would they then have to face the prospect of an open, violent confrontation.

I think, in other words, that through this resolution we would be impinging upon the kind of forthrightness of action, of quickness of action, for which we alone would have to pay a price, rather than someone else. I think this, too, calls the wisdom of the resolution into question. The resolution, as I see it, could hobble the President in the execution of his legitimate duties.

It is conceivable, and has occurred in instances, that, in times of crisis in the last few years, a quiet word from the President of the United States became a deterring voice in a crisis that was, at that particular moment, looming, which might well have acquired more serious proportions. There is no question that President Kennedy's tough speech at the outset of the 1962 Cuban missile crisis served one of those purposes. We were told yesterday that this resolution would not apply to another Cuban crisis, because that would be regarded as an at-

tack on the United States, that it is an obvious case of proximity to our shores.

Does that not suggest, then, Mr. President, that we ought to begin to define where we think our interests are, where they best ought to be lodged, in anticipating the kinds of applications that have a way, historically, of engulfing us in the major conflicts of the world?

At present, the President has a full range of options in the peace-keeping field. But through the process invested in Senate Resolution 85, he could be hobbled, hampered, and slowed down to the point of considerable detriment. In a world in which many of the governments that concern us most are monolithic in structure, a world in which decisions often can be made elsewhere without legislative consultation, I think it is important that we retain for ourselves this optional repository of decisionmaking in that kind of a time of crisis.

It is not fair, in my judgment, to suggest that we have thus created out of this a form of dictatorial monstrosity in the form of a new President. This suggests that he is without power. This suggests that he could become a tyrant, as in the days of old, and acquire the prerogatives of kings. I think that is not realistic, Mr. President. Our President is elected. He is checked in many ways by Congress—in ways specifically alluded to in these remarks—in the Constitution, in the general policy field. He is subject to impeachment. He is subject to being denied funds. But most of all, he is visible, he is judgeable, and there is no evading the responsibility for what he does.

I think perhaps this may have to exercise a major place in our ultimate judgment of the system under which we can best survive and preserve the constitutional principles that we believe in very strongly. In short, what I am trying to say is that I believe we can exercise our responsibilities, we can preserve our national interests under this Constitution, with the existing instrumentalities, provided we do not hamper it, or try to roll back the clock, as it were.

The point that is makes is that the President's executive responsibilities pin that responsibility, and Congress itself then should address its concern to how we can wisely and best retain and develop a role for this body in our policy processes.

Mr. CHURCH. Mr. President, will the Senator yield?

Mr. McGEE. I yield.

Mr. CHURCH. What is the role that the Senator envisions for the Senate in foreign policy?

Mr. McGEE. The role of the Senate, in my opinion, would well be in readdressing itself now in advance to the big question. We are trying to leave the past behind us, as I understand from the chairman today, and not fight those battles over again if we can avoid it and not try to redo what has already been done in the past, but conduct ourselves more wisely in the future.

In my opinion, the Senate Foreign Relations Committee has illustrated specific ways in the last few weeks how to go about this.

The Symington committee that is taking a broad and sweeping look at the commitments of this country around the world, I think, is making a constructive contribution in the role of the Senate.

I hasten to add in regard to that committee that if it is genuinely looking at our commitments around the world and what our commitments ought or ought not to be, we might well be better placed in our posture and prestige in this august body by suspending our action on the commitments resolution until we see what we find out. That is why we are studying it. We have laid out a 2-year spectrum for that study.

I think the Gore committee, as an illustration, is making a very constructive contribution to a problem area in advance.

I think we ought to be developing completely in every way we can here, publicly in this body, our collective thoughts on what our policy ought to be vis-a-vis China, or what our posture ought to be in the Far East.

These are things we have often failed to do until after we have had a blowup. Therefore, we find ourselves making do as best we can.

We have a Tonkin Gulf joint resolution that we ratified, and then we all get mad at it after the fact.

We have requests that we all approve and then denounce when they do not work well.

I think this is what has contributed in part to a forfeiting of what I would regard as the responsible rule of the Senate in foreign policy.

Mr. CHURCH. Mr. President, the Senator is a good historian and a very able political scientist.

I am sure that senatorial studies, either by the Foreign Relations Committee itself, or by subcommittees thereof, or indeed senatorial debate on policy matters, would be rendered relatively meaningless if the debate is not coupled with the power to decide.

If all of the decisionmaking power resides with the President—and that is how I must interpret the thrust of the Senator's remarks—it really does not matter much what we debate here.

The Senator is recasting the Senate in the role of a kind of debating society. We could discuss indefinitely the grand design of American policy here, there, and elsewhere. But once we lose our power of decision, the debate becomes largely meaningless.

This is the reduced role of the House of Lords in England. Once the power of decision is divorced from inquiry and debate, then the importance attached to whatever inquiry the Senate may make depends entirely upon such notice as the President may deign to give it.

I think the Senator's concept of the senatorial role is one in which he divides the forensics of this country into three categories, high school debate, college debate, and Senate debate. However, that was not the role envisioned by the Constitution for the Senate of the United States.

I am surprised that a Member of the Senate would make an argument which could only reduce the Senate to the level of comparative irrelevance.

I know from our recent experience how reluctant the Executive is to take the advice of the Senate, in cases where the President or the Secretary of State or other agents of the State Department disagree. Once we concede away our power, the Senate is reduced to a level of little consequence.

Mr. McGEE. My response to the Senator is that I do not think he gives the Senate its due in its record, even until now.

I suppose that the vague level at which we find American policy right now in respect of China, as a case at point, both in its implication on Taiwan and the mainland, more than anything else reflects the attitude and the debates in the Senate on another day and that we may still be imprisoned by the debates of the late forties as a consequence. Let us not sell out the importance of the Senate in its impact on the Executive downtown.

Mr. CHURCH. I am not the one, I suggest, who is selling it out. I am not the one who suggests in this debate that we have no power under the Constitution, that we lack the right to place our imprimature on the foreign policy of the country.

The Senator from Wyoming has suggested that. It is he who argues that all the power resides in the Presidency.

I cannot read the Constitution or the history of the country in that way. However, if the Senator is correct, then it follows that the debating role he leaves to the Senate can only have less and less consequence in the future.

Abdicate away the power of decision and the power of policymaking, and the Senate's future role in debate will amount to little more than debate amounts to in the House of Lords in England, where the discussions are extremely erudite. Anyone who takes the trouble to go through the dusty records will find that the Lords are really in there talking. However, no one cares to do so. The reason that no one cares to do so is because it really does not matter. It does not matter because the Lords have no power.

I suggest that this is really the role envisioned for the Senate of the United States by the argument presented here by the Senator from Wyoming.

Mr. McGEE. The position of the Senator from Wyoming is that the Constitution in spelling out its portion of responsibilities among the branches of the Government did not go as far as the Senator from Idaho has spelled out in his very able speech and in his colloquies that followed, that the President—in his powers in making foreign policy, not in declaring war—was placed under the limitations of the Constitution only in the three categories singled out by the Constitution itself, that it left him rather free by court interpretations since, by the experience in the practical art of foreign policy over the generation since, and by the interpretation of many students of constitutional intent even at the time.

I think we make a very serious mistake—this is where I disagree basically with the Senator—in assuming that under the Constitution there was ever a balance of that power or intended to be

a separation of powers in the dimension that the Senator has been talking about. Therefore, I seek in these exchanges to begin in fact where we are under our constitutional system, with a President who can go to great ends if he so desires. Fortunately, a President operates with restraints—all our Presidents have—and with measured consideration.

I just think that the constitutional mechanism gives this body no checks of the types referred to by the Senator from Idaho. I think the limitations are imposed on the declaration of war, under the appropriation of funds, and in the ratification of treaties. I think the Constitution is explicit in that regard. But within the range of foreign policy, projecting policy, the President can inhibit very materially the options that, as individual Senators, we might wish we had. I say that with great care as a Member of this body. I think we all like some measure of power, but we have to be realistic under the terms of the system in which we live.

Mr. CHURCH. The power that the Senator would retain for the Senate is very little different from the power exercised by the members of the Council of Foreign Relations. That is a club that holds meetings and conducts foreign policy inquiries and, from time to time, sponsors debates.

Mr. McGEE. I am a member of that body.

Mr. CHURCH. I am a member, also. If being a Member of the Senate is no more consequential than being a member of the Council of Foreign Relations. I do not know why I worked so hard to come here. Yet, that really is the role that the Senator is suggesting for the Senate, a kind of glorified Council of Foreign Relations, to sponsor symposiums and conduct debates on American foreign policy, which, under such circumstances, would receive no more attention from the Nation than those which are presently sponsored by the Council of Foreign Relations. And I must say that it is a rarefied and limited audience, indeed, that attends them.

Mr. McGEE. Let me say to the Senator that I see it entirely differently. I see it as our chance to involve the Senate in a meaningful role in guidelines, in directions, even in substance, in foreign policy.

No President can ignore the Senate or defy the Senate for long. The whole system requires rapport, cooperation, and consultation. The closer it is, the more successful, usually, the President in achieving whatever his goals may be.

We are confining this now to the matters of foreign policy. The President has always made foreign policy. The Senate has had a role that it exercised in passing judgment upon it, carrying out its constitutional functions in regard to it. So the Senator is not only unfair to the Senate; he is also unfair to the intent of the Senator from Wyoming in trying to compare this either to the House of Lords or the Council on Foreign Relations.

Mr. CHURCH. I think it follows from the general thrust of the Senator's argument. The Senator cannot say, on the one hand, that all the power in the matter of foreign policy really belongs to the President, all the power to make the critical decisions, and that is where it properly belongs—that is what the Senator from Wyoming has said—and then suggest that the Senate is going to have what he has described as a higher role, that of engaging in general debate upon what American policy ought to be.

I know that historically—and the Senator knows it, also—the significance of the role played by the Senate ultimately depends upon the power that the Senate wields in implementing its decisions. If all the power lies with the President, then I have not exaggerated the case a bit to say that the role envisioned for the Senate by the Senator from Wyoming is a kind of glorified Council of Foreign Relations, or a kind of house of lords proposition, insofar as foreign policy decisions are concerned. I cannot accept it. That is not what the Constitution provides.

All that this resolution is for is to reassert the sense of the Senate that the constitutional division of power should be honored. That is why I am for it; that is why I think the Senate, as an institution, should be for it, if we desire to retain our historic place in our form of government.

Mr. McGEE. I think the Senator is begging the question when he talks about restoring a balance of power under the Constitution, when no balance was there. It was not there at the beginning; it has not been there at any time since. The President has had prescribed responsibilities in the field of foreign relations. As John Marshall said, the President has almost the total responsibility in foreign relations. The reservation was on commitment to war, declaration of war; and, as I understood from the Senator's remarks earlier today, this was the field that concerned him.

Mr. CHURCH. The Senator knows that my concern is not limited to declaration of war, because the Senate is given express power to ratify treaties—that is a very important power—unless it is circumvented through the use of executive agreements, so that the President can make his arrangements with foreign countries without coming to the Senate. This is very definitely a power given to the Senate under the Constitution of the United States.

So it does no good to say it is only the war power which is in question, and then define the war power as being confined to declaring war, and then say that declaring war is obsolete, and therefore the power of Congress is obsolete; we do not declare war any more; the Constitution just says that Congress has the power to declare war. This is the argument of the Senator.

Now, inasmuch as the war power was placed in Congress by the Constitution, what must have been intended was the power of decision, the power to authorize war. Whether it be done by formal declaration or by congressional resolution does not really matter. But, in the one case, the Senator ignores the treaty power and, in the other case, he defines the war power in a way that renders it meaningless. Then he objects when I conclude that he has left no role for the Senate which matters.

What else is there to conclude from the Senator's argument?

Mr. McGEE. I would have to ask the Senator from Idaho wherein anything I have suggested here changes what has happened to the Senate over 180 years in a role in foreign policy. Through that history, a President can recognize or refuse to recognize another government, no matter what the Senate thinks. Through that history, the President without consultation with the Senate, can pronounce a new policy, such as the Truman doctrine, such as the Monroe Doctrine. The President has that authorization, that responsibility, under the Constitution at this time. The Senator has not changed anything under the existing role with his resolution.

Mr. CHURCH. I must say that we have gone over this ground several times today. No one here in support of the resolution is arguing that the President does not have vast powers in foreign policy. All we are saying is that under the Constitution he does not have all the power, that the trend has been in the direction of lodging all the power with him, and that this is contrary both to the spirit and the letter of the Constitution.

I think this is well borne out and documented, and would be generally supported by constitutional lawyers.

It simply does not follow from our argument that we contend that the power is divided 50–50, as the Senator has suggested. Of course, it is not. The preponderance of the power in foreign policy matters might well rest with the President under the Constitution from its original conception.

Mr. McGEE. And that is all the Senator from Wyoming said.

Mr. CHURCH. No, the Senator from Wyoming goes much further than that: because substantial power, very important power indeed, was vested with the Senate—the treaty power, while the war power was vested in Congress as a whole.

One cannot dismiss such power as inconsequential. But when one disregards the treaty power and then redefines the war powers as the Senator from Wyoming has done, so as to render it virtually meaningless, the effect is to circumvent the Constitution, to replace it with a consolidation of total power in the hands of the President.

I do not think that one can make a constitutional case, a historical case, or a logical case for it. If the Senator believes that then he has not left much of a role for the Senate to play. The Executive would pay precious little attention to us if we had no more power to exercise than that which the Senator from Wyoming suggests.

Mr. McGEE. Quite to the contrary, I think what I spelled out earlier when the Senator was forced to be absent from the Chamber, which we have insisted on qualifying now, is that the Constitution has given the President a very strong hand, and that limitations imposed upon him we have continued to honor and respect. The two exceptions have been dealt with. One was with regard to executive agreements to get around the treatymaking process. I know nothing along the line which the Senator proposes that would exempt executive agreements. The second exception was

with respect to declarations of war. I was careful to spell out the phenomena of the nuclear age where there has arrived the undeclared war as perhaps the only exception left at all in a world of sovereign nations, and that may not be a wise one, and that this poses a new question of living up to the war declaring proprieties of the legislative body.

At what point does war have to be declared? I think the Senator agreed with me earlier today that there is something to be said for not declaring war in certain crises. It may only complicate the situation. This is what we should be talking about here.

Who, then, has the responsibility, and at what stages for taking steps that might lead to war? The Senator gave me a partial answer with regard to the Berlin airlift where a different decision by the President or a different decision by the Russians in response could have plunged us into a war. That would be a declaration of war that would be different than a commitment we had under NATO. He is willing to go that far. The President could have decided not to send troops in there.

Mr. CHURCH. The Senator knows full well that his illustration does not support his argument because, as I have said several times, the action of the President in that case was taken pursuant to a treaty that had been ratified by the Senate. I may have been overanxious in conceding, for the purpose of raising no rankles this late in the day, that the Constitution places predominate power with the President in foreign affairs. That certainly is an arguable proposition. It can be argued that the tripartite division of power under the American Constitution, as I have previously noted, is not in three equal parts. Historically the ultimate and final power rests in Congress.

Article I, section 8, of the Constitution states that Congress shall have the power to declare war; to raise and support Armies; to provide and maintain a Navy; to make rules for the government and regulation of the Armed Forces; to provide for calling forth the militia to execute the laws, suppress insurrections and repel invasions; to provide for organizing, arming, and disciplining the militia; and to make all laws necessary and proper for executing the foregoing powers. Article II, section 2, of the Constitution states that the President "shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur."

I think that a fair reading of the Constitution, without requiring us to decide whether the proponderant power in foreign affairs lies with Congress or with the President, nonetheless compels the conclusion that the powers allocated to Congress were very large, indeed. We are not asserting them as I think we should.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. McGEE. I have the floor. I am glad to yield to the Senator.

Mr. COOPER. Mr. President, I have not heard the debate on this important resolution to date in its entirety but I did have an opportunity to review this matter in the Committee on Foreign Relations and I participated in the committee's debate. I have read the speeches made on the floor yesterday. However, the discussion in committee—and I know both Senators remember—and the report bear out the committee's intent. The report states at page 6:

> The primary purpose of the resolution is understood by the committee to be an assertion of congressional responsibility in any decision to commit the Armed Forces of the United States to hostilities abroad, be those hostilities immediate, prospective, or hypothetical. The committee intends the resolution to apply only to future decisions involving the use or possible use of the Armed Forces of the United States. The resolution will not alter existing treaties, acts of Congress including joint resolutions, or other past actions or commitments of the Government of the United States. As used in Senate Resolution 85, the term "commitment" is understood to refer to the use of, or promise to a foreign state or people to use, the Armed Forces of the United States either immediately or upon the happening of certain events.

I believe this to be the first purpose of the resolution. Had it been understood that the debate would go to purposes other than the use of Armed Forces abroad and their commitment to hostilities, if it were limited only to the latter, I think the debate could be made much more direct.

Mr. McGEE. I am afraid it has gone much beyond that. The Senator remembers the history of the evolution of the resolution and how, after this form was first introduced, it was modified with the substitute and that was never actually reported by the committee. Then, this winter we returned to this particular resolution.

Mr. CHURCH. This was the original resolution.

Mr. McGEE. Yes. We are now facing the original form of the resolution. But the committee tried to specify it more carefully in a substitute resolution.

Mr. COOPER. The report reads:

> As used in Senate Resolution 85, the term "commitment" is understood to refer to the use of, or promise to a foreign state or people to use, the Armed Forces of the United States either immediately or upon the happening of certain events.

Of course, the language itself is broad.

Mr. McGEE. The language is exceedingly broad.

Mr. COOPER. It includes or comprehends many other situations. I know it would be much easier for me if the resolution were limited to the use of the Armed Forces, rather than directed to a large area of promises, declarations, or agreements that the President might make.

Mr. McGEE. It would eliminate much of the dialog that has taken place in the last 2 days, because we have ranged over a rather wide field, and the suggestions that have been made address themselves to very broad fields.

Mr. COOPER. Last year, in committee, I think I was the first to offer as a substitute for these general terms, very specific language dealing with the commitment of our Armed Forces abroad. Later, my amendment was not adopted, but language was worked out by the chairman and, by former Senator Hickenlooper, restricting the resolution's scope to the use of the Armed Forces.

Now, with respect to Senate Resolution 85, I thought that that was the purpose, from a reading of the language of the report, which interprets the meaning and intent of the resolution.

Mr. CHURCH. Mr. President, will the Senator from Wyoming yield?

Mr. McGEE. I yield.

Mr. CHURCH. I think the Senator from Kentucky rightly raises the point, and it needs attention. "National commitments," as used in the resolution, does not connote the great range of agreements or understandings that are minor in nature. From the language of the report on page 6, I read:

> As used in Senate Resolution 85, the term "commitment" is understood to refer to the use of, or promise to a foreign state or people to use, the Armed Forces of the United States either immediately or upon the happening of certain events.

Mr. COOPER. The subject of the resolution, however, is national commitments.

Mr. CHURCH. But it is defined in that language.

Mr. COOPER. But the report limits it to just one area—the commitment of the Armed Forces abroad. I would agree that looking at the language of the resolution by itself broadly and generally, it could comprehend almost anything, such as the declaration of Ambassador Goldberg at the United Nations that the United States would go to the assistance of any power threatened by nuclear attack or nuclear blackmail, the declarations by Presidents Eisenhower, Kennedy, and Johnson to defend Berlin and all types of executive agreements. The resolution could cover foreign aid.

It is my view that the concern of the Senate and the American people today relates to wars and the possibility of wars that we may become involved in the nature of our vast global commitments, the stationing of our troops around the world and treaties to which we are a party whereby we promise in some way to come to the assistance of some 43 countries.

It is these situations, in my view, that concern the nation the most today.

To this end I have prepared a substitute resolution. I do not know whether I will offer it. Let me read it as I have prepared it:

> That a national commitment for the purpose of this resolution means the use of, or promise to a foreign country, government, or people to use, the Armed Forces of the United States either immediately or upon the happening of certain events.
>
> SEC. 2. It is the sense of the Senate that a national commitment by the United States involving the use of its Armed Forces in hostilities outside the United States for the purpose of providing military assistance to a foreign country, government, or people results only from affirmative action taken by the legislative and executive branches of the United States Government by means of a treaty, statute, or concurrent resolution of both Houses of Congress specifically providing for such commitment.

Mr. President, as I read the report, I understood that it was directed solely to the commitment of troops, and then recognizing the very broad scope of the language contained in Senate Resolution

85, I decided to draft a resolution which I thought, if it became appropriate during debate, I would submit. It proposes that the Armed Forces could not be used in hostilities abroad for the purpose of providing military assistance to a foreign country unless the President has come to Congress for approval in one of the three ways provided in the resolution, recognizing, of course, that the President has powers under the Constitution as Commander in Chief of the Armed Forces in situations involving defense of the country, as well as the protection of American lives and property. But those areas would be left to his judgment and discretion. We cannot anticipate every situation, but we can, by using language similar to this, or that noted in the report, bring to the attention of the President of the United States the fact that we believe, in cases where it is possible, that he should come to Congress for approval.

Mr. President, I wanted to raise this question because I feel the terms of the resolution we are debating are extremely broad and cover, for example, executive agreements, foreign aid, and military arms and equipment.

But I do believe that the commitment of the Armed Forces is what the Senator is talking about more than anything else. Is that not correct?

Mr. CHURCH. Mr. President, this was the prime consideration which led to the committee's adoption of this resolution. The language of the report, which forms a part of the legislative history, should be consulted in interpreting the meaning of the resolution.

Mr. McGEE. Mr. President, let me say in regard to the proposed modified language by the Senator from Kentucky, that it would have narrowed the range of many of the colloquies in the Senate, and many of the very broad and sweeping things which have been said here, and the many suggestions which have been made in regard to the relative powers of the President and Congress and how best to exercise them. At least his proposal would have the advantage of narrowing the field and would leave open, I would suggest, the kind of questions which I think we still have to resolve in this body; that is, the other options to offer to a President that could be made that are of consequence and would require a follow-up with troops, under some circumstances, and at what point, then, does this body become involved, and is there a point at which this is better done in the quiet of a committee room, in an executive session, or with a committee of Senators selected by the Senate in the interest of the national security, or classified information, and that sort of thing.

The promiscuous way in which the machinery of the resolution would bring it about, I think, leaves genuine doubts, and legitimate doubts, as to whether that is the machinery to achieve this.

The sponsors of the resolution say that it does not mean the President does not have to listen to it, that they are not going to do anything about what the President can or cannot do, that it is simply stating a view or a judgment.

If that, in truth, is our motivation, we have not gotten anywhere at all. If it is all as bad, and Caesar is as black as he is beginning to appear, in the vernacular of those who are supporting the resolution, either we should come to grips with the sordid side of the usurpation of power, to borrow a phrase from the supporters of the resolution, and do something about it constitutionally and procedurally, or we should face up to the fact that the resolution itself is not going to do anything about it, and they probably did not even have that intent, that the role of the President in foreign policy is an almost preemptive one. I would hasten to amend the repetitions from the Senator from Idaho, that it was either/or.

We have been very careful to spell out that the Senate has a role, that there are limitations imposed upon the President, that the Senator was merely contending the President has it within his existing power now to go so far in so many areas that he leaves to the Senate, in point of fact, a very limited amount of room in the decisionmaking realm. There is nothing that has been said here today, nothing being proposed here today, that alters that. I am a little bit surprised that some Members of this body would argue otherwise. That is the political history of the country. That is political science as it has emerged in our time. I am simply asking that we make sure we do not go about it in the wrong way.

I have very grave doubts about Senate Resolution 85 at a time of crisis, when it is important to move fast; and whether, because of the existence of it, if we gave it the force of law or direction to the President, it would be possible for a President to cope with an exploding crisis in time, if he had to have a display of senatorial oratory and a vote here in the process.

What would have happened on June 25, 1950, in the case of South Korea, if that had taken place? North Korea would have had all of South Korea before the Senate had gotten into session.

What would it have meant any number of times one could mention in the last 25 years when it was important that quick decisionmaking and immediate action be forthcoming? This is the thing that worries me.

I do not think we ought, by passing a resolution, to complicate and make worse the problems of a democracy trying to live within its constitutional structures in an age of monolithic governments and monolithic decisionmaking in other parts of the world, or in an age in which we are always reminded of the clumsiness of a democracy, and yet when we are required, as a world leader, to move forthrightly and precisely and quickly.

I think we are not making sense by hiding behind a sense-of-the-Senate resolution and not dealing with the problem of decisionmaking in a way that makes realistic sense in a nuclear world. I think this is where there has been a real evasion of the issue.

Mr. President, I ask unanimous consent to have printed in the RECORD the text of the speech on this subject that I had prepared, and three editorials.

There being no objection, the speech and editorials were ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR MCGEE

Mr. MCGEE. Mr. President, Senate Resolution 85 is in substance an ill-advised way in which to seek to achieve some sort of balance in foreign policy matters between the executive and legislative branches. It could even jeopardize the fixing of ultimate responsibility in foreign policy decisions.

The issue is not a new one, however. It is as old as the history of the American Republic. Its currency derives from the war in Vietnam, but its roots go back to the founding of our country.

In fact, the American ship of state was launched in 1776 upon waves of discontent with executive authority. The Thirteen Colonies, therefore, embarked upon their new course without a chief executive. Only after the near debacle of colonial independence was the need for strong, centralized control of the national government openly recognized. Nowhere was the necessity for executive power more clearly in evidence than in the realm of foreign relations.

As a Member of Congress in 1799, John Marshall noted that "the President is the sole organ of the Nation in its external relations and its sole representative with foreign nations . . ."

And during his term of office the nation's first President experienced a run-in with the Senate in his very first test of constitutional intent. When George Washington went in person to the Senate to submit a treaty for its advice and consent, he was so badly treated that he stomped out, and would, he said, "be damned" if he ever went back.

There remained in the hearts and souls of the leaders of the new government thereafter an ingrained distrust of the powers of the President. This has continued down to the present day.

The issue of executive power in foreign policy has tended to rear its head during the administrations of strong Presidents and to languish through inattention during the administrations of weak Presidents. And without exception the trend toward a stronger and stronger executive role in foreign policy has coincided with the rising pre-eminence of the United States in world politics during the 20th Century. Presidents Theodore Roosevelt, Taft, and Wilson expanded that role materially.

But if there be those supporting S. Res. 85 who believe that the increase of Presidential power in foreign relations is a modern phenomenon they should disabuse themselves of that notion. As Professor Hans Morgenthau of the University of Chicago has reminded us, the ascendancy of the President over the Congress goes back to the first days of the Republic, and stems from conflicts built into the constitutional fabric and confirmed by constitutional practice.

The constitutional powers of the Senate affecting foreign policy derive from the treaty making process. But, beginning with President George Washington's aggravation in 1796, many chief executives developed a disrespect for Senatorial shenanigans involved with treaties.

Secretary of State John Hay once noted, "A treaty entering the Senate is like a bull going into the arena. No one can say just how and when the final blow will fall. But one thing is certain—it will never leave the arena alive."

As a consequence of this hostility, a whole succession of Presidents has found ways of circumventing the constitutional requirements, principally by means of executive agreements.

The most significant changes between the executive and legislative roles have occurred since the beginning of World War II. Under President Franklin Roosevelt the use of executive agreements experienced a sharp increase. In particular his commitments to the transfer of destroyers for bases, the extension of the Monroe Doctrine principle to Iceland and Greenland, and the "shoot on sight"

edict to American naval forces in the Atlantic are often cited as serious encroachments by the Executive Office on the assumed foreign policy "partnership" between the President and the Congress.

Concomitant with the incidents preceding American involvement in World War II was the sudden emergence of the United States as the most powerful nation in the world, largely as a result of that conflict. As a great power, American actions cause reverberations all around the globe and must therefore, be carefully weighed and delicately executed. Not infrequently they must be carried out swiftly. The decision-making process may be reduced by events to a matter of a single day, or even hours. On more than one occasion the time allotted by crisis incidents to those who must make the decisions have been less than the time it would take to assemble a quorum of the Congress.

Possibly an even greater factor which presses for increasing the power of the President in making foreign policy in recent decades has been the advent of the nuclear age. We live in a time when fifteen minutes could spell the difference between life and death for millions of people—possibly even for life itself on earth. In the past 25 years there have been times when the only sure thing that could be said about the next 24 hours was that no one really knew if we would live through them.

A further complication of the nuclear age, moreover, is that *major* wars virtually have been eliminated as instruments of national policy. Their place has been filled by "undeclared wars," "peripheral wars," or "police actions." A world without law must still face up to the violence of international confrontations—but with one difference. Wars may have to be waged, but rarely declared, especially between the great powers. It is this factor which very largely aggravates of the age-old controversies between the relative warmaking responsibiliites of the President and the Senate.

Because of the limitations of undeclared wars, (a circumstance dictated by nuclear capabilities) the authority to make decisions and take action supporting them must be located in one place. From the rather meager beginnings of our constitutional system when Congress shared more directly with the President some of the policy processes, we have now come to an age when the pressure of time and the multiplicity of other issues scarcely allow the Congress more than a passing glance at some of the most important decisions in the history of mankind.

It is imperative, therefore, that in determining a judgment on Senate Resolution 85 we recast the role of the Congress—and more particularly of the Senate—in foreign affairs against the backdrop of the nuclear age. Whether the division of responsibility between the President and the Senate can follow the lines of other years is a *question central to the present dispute.* Whether Senate Resolution 85 goes to the heart of that dispute moreover, is also open to serious doubts. The implications of its intent, furthermore, may raise more questions than its enactment could resolve.

It is the purpose of the following argument to explain in detail why Senate Resolution 85 should not be adopted by the Senate of the United States.

At the outset, it is necessary that we reexamine the order of things in determining the respective roles of the President and the Senate in modern foreign policy crises. Hopefully, most students of government might agree that the constitutional provisions be reassessed against the backdrop of current circumstances in the nation as well as the world rather than confined to Constitution Hall in 1787. To determine what the times require of us today rather than what the times permitted a century and three-quarters ago should be of paramount importance.

Thus, it is probably more to the point to determine what the national interest requires rather than what the Founding Fathers may or may not have intended. In truth, therein lies the explanation for the successful survival of a constitutional structure which has survived for nearly two centuries—namely, the resourcefulness of each generation to reinterpret the constitution through successive generations in terms relevant to the changing times.

In judging Senate Resolution 85, therefore, the basic question which this body ought to be weighing is: Can the United States in a nuclear age develop relevant foreign policies in the national interest and still preserve the constitutional structures within which our country has existed for 180 years?

I believe the answer to be "Yes."

If "Yes" is to become a relevant response, however, it is necessary to disabuse ourselves of certain notions which lack a substantive base in our history.

One such notion is that the powers of the President and the Senate were ever in balance. Both under the constitution and in practice, the President can do virtually anything in foreign policy. Those powers, according to the Supreme Court, are "exclusive." Only in the expenditure of monies the conclusion of treaties, and the actual declaration of war is the Chief Executive curbed. And in each of those limitations, he has alternatives open to him.

Without consultation he can publicly announce a new policy—like the Truman Doctrine. He can establish relations with a new government or withhold them. Advice, promises, and informal commitments are his to give if he believes it to be a move in the national interest. He can, moreover, send the armed forces anywhere, at anytime, and can commit them to hostile acts short of formal declaration of war. These things the President can, has, and is entitled to do under the Constitution.

So it seems to this Senator, at least, that we are dealing with irrelevancies when we talk about "restoring the checks and balances" which assertedly have been lost or stolen by someone. They never existed either by intent or by application from the very first beginnings of the American republic.

If the sponsors of Senate Resolution 85 really believe a balance of power between the two branches of government would be best for the country, then it would be more forthright of them to propose an amendment to the constitution.

A second notion laden with irrelevancies is that the Congress through its own special insights could prevent a President from taking those steps which, in his judgment, the interest of the country seemed to require.

The President can, without consultation, send troops anywhere and commit them to acts leading to war. Both in the Berlin crisis of 1948 and the Cuban affair of 1962, the President had it within his power to respond with actions which in effect could have forced the hands of Congress on an actual declaration of war. Even if the Senate, for example, had thought otherwise, it would have had little choice.

In World War II American policy toward both Germany and Japan was largely predetermined by Presidential action. What was left to the Congress, in fact, was the process of ratifying accomplished facts.

Or, take the case of the Tonkin Gulf resolution. Assume for the moment that the Senate had not ratified it with only two dissenting votes—but rather had rejected it. A President who believed it important to bomb North Vietnam could have done so in other ways, through other devices.

As Hans Morgenthau has summarized it, the President by his own unilateral actions "can narrow the freedom of choice which constitutionally lies with Congress to such an extent as to eliminate it practically altogether."

SENATE RESOLUTION 85 WOULD ONLY CONFUSE

The scope of the resolution is ambiguous and thus lends itself to misinterpretation and misunderstanding. It would seem to be impossible to pin down the substance of such an attempted codification. Confusion arises from the explanation of intent by the sponsors of the resolution. Its sponsors say specifically that Senate Resolution 85 would not be legally binding upon the President in the conduct of foreign relations. Also, it should go without saying that a sense-of-the-Senate resolution could not change the constitutional responsibilities of the President.

According to the proposed resolution, in creating a national commitment of the United States to a foreign power, such action must be affirmative by both the executive and the Congress. The resolution further specifies that this affirmative" action would have to be taken "through means of a treaty, convention, or other legislative instrumentality specifically intended to give effect to such a commitment." It is easy to understand how the sense of the Senate would be achieved without serious complications in such routine procedures as statutes, advice and consent to treaties, Senate resolutions, and joint resolutions. This already takes place in an orderly and undisputed manner.

What happens, however, when the President proceeds in making commitments by executive order which flow automatically from the authority contained in a prior treaty or in furtherance of a policy stated in an earlier joint resolution of the Congress? Do these subsequent steps likewise require additional affirmative action by the Senate? Like the ripples flowing outward from a falling pebble's impact on the water of a quiet pond, so it must be obvious this could become a farcical process when carried on into infinity.

SENATE RESOLUTION 85 THREATENS CONSTITUTIONAL POWERS OF THE PRESIDENT

It would appear to invade areas of responsibility reserved under the Constitution for the President alone. Two areas of executive responsibility will illustrate the point:

One, the President alone under the Constitution has authority to recognize foreign governments and to enter into commitments which implement that recognition. In the conduct of the foreign relations of the United States, the President necessarily must have the power to make many commitments to foreign governments.

Two, as Commander-in-Chief of the Armed Forces of the United States, the President has the sole responsibility over them either within our country or outside it. Reasonable men may well disagree as to the conditions under which he should do so. The President has the constitutional power to send U.S. military forces abroad when he deems it to be in the national interest.

Because Senate Resolution 85 implies that the President and the Congress together would be the exclusive means by which the government of the United States in the future could enter into commitments with a foreign power, it runs counter to constitutional intent.

The sponsors of Senate Resolution 85 have gone to great pains to assure us that they have no intentions of tampering with the constitutional powers of the President. Yet, the majority report on Senate Resolution 85 is replete with references to and charges against a "constitutional imbalance" which, it is asserted, has resulted from power grabs by a succession of Chief Executives. Whatever the intent of the sponsors, the mere language of the resolution calls to the forefront current constitutional misgivings loaded with serious implications.

It is difficult to believe that the press, or students of constitutional principles for that matter, would permit Senate Resolu-

tion 85 to go by unnoticed. Or that friend, foe, and especially the Chief Executive would take such an ambitious thrust by means of a Senate resolution to mean so little as its sponsors almost apologetically claim to intend it to mean.

MISCHIEFMAKING AT BEST

At best, Senate Resolution 85 has only the capabilities of mischief-making with the responsibilities of the President of the United States in foreign affairs, particularly in times like the present.

Throughout our country's history the rivalry for power between the executive and legislative branches is legendary. Too much of the present thrust behind Senate Resolution 85 appears to reflect a legislative jealousy of presidential power in foreign policy.

It was the late Edwin J. Corwin who said that the U.S. Constitution "is an invitation to struggle for the privilege of directing American foreign policy." To contend openly at this late date in our country's history for the responsibility of shaping policy is open to serious challenge.

In a world of 130-odd sovereign nations, some of the more powerful of which are monolithic in structure and capable of quick decision-making, the need for a President of the United States to act with dispatch has already arisen. It will surely recur again and again. Presidential decision-making in foreign policy provides a quality of leadership superior to the alternatives available under our system. At the very least it becomes the lesser of evils—among the choices available to us.

SENATE RESOLUTION 85 COULD DANGEROUSLY HOBBLE THE PRESIDENT

Does it strengthen the security of our country or serve the national interest to hobble the executive branch in times of crisis? The answer must be no. Mindful as we all are of the risk involved in increasing executive power in the field of foreign affairs, there would appear to be no reasonable alternative to assuming those risks save at the price of confusion, delay, and even inaction through some series of yet unspecified procedures implied in the commitments resolution.

There is no doubt that President Kennedy's tough speech at the outset of the 1962 Cuban missile crisis served its purpose well. This resolution, had it been in existence, would have acted to undermine if not destroy the credibility of the President's words when he announced the missile blockade.

However, Senate Resolution 85 would handcuff the President privately as well as publicly.

At present, the President has the option of talking tough behind the scenes should conditions seem to warrant his doing so. Let no one doubt that this is a vital area of international politics, for when international crises are handled behind the scenes, the prestige of the nations involved is not engaged openly and directly. The President would be weakened in his ability to head off a crisis before it becomes a question of national prestige if Senate Resolution 85 is adopted.

Much as one may hesitate to repose such frightening authority in the executive branch alone, it is necessary to acknowledge that the alternative of joint dialog with the Congress in crisis circumstances would more likely obfuscate rather than clarify the issues. To have to revert to Senate debate and discussion at a time like that would be cumbersome at the very least and disastrous to the national interest in the extreme.

It serves to point up what has happened to the foreign policy-making process in a time of instant communications. The machinery of policy decisions assembled nearly two centuries ago simply has not been able to keep pace with the changing requirements of present-day realities.

SENATE RESOLUTION 85 SMACKS OF NEOISOLATIONISM

At a time when the world is getting smaller and when the problems among nations are becoming more complex, it ill behooves the leader of the Free World to move away from its share of responsibility in coping with international crises. Yet, Senate Resolution 85 would have the effect of doing just that. Its point is not unrelated to the Ludlow amendment of the 1930's, which would have prevented a declaration of war by the Congress and President without first going to the people through a national referendum. As the Ludlow proposal would have diffused national responsibility in relation to the Congress, so the national commitments resolution would water down the responsibility which reposes with the President.

It is conceivable, should this resolution be enacted, that some President at some time would be required to plunge into a military crisis—say of the dimensions of Lebanon or Laos—in which he reached the conclusion that it was in the national interest to commit a limited number of troops in quick order. Two such situations come immediately to mind. Should the Arab-Israeli war threaten to burst out of control, the necessity of a peace-keeping mission in the Middle East would be more than a remote possibility. Or, in another instance, the likelihood of further belligerent moves against South Korea by the North cannot be shrugged off.

In the wake of passage of Senate Resolution 85, an American decision to act quickly would instantly become clouded with an aura of illegitimacy. The public doubts which would quickly surface in that circumstance could only impair the efforts of the President of the United States to act with dispatch and to conclude successfully the commitment. The implications of Senate Resolution 85 are heavily laden with overtones of neoisolationism.

If the democratic process is to be salvaged, we must be prepared to move toward more clean-cut presidential authority in foreign policy.

SENATE RESOLUTION 85 WRONG WAY TO STRENGTHEN THE ROLE OF THE SENATE

Senate Resolution 85 is not the way to redress the balance of power in the making of foreign policy. Yet, its appealing intent is to try to do just that. It fails in that purpose by not binding the President and by flying in the face of the increasing need to repose the responsibility for critical decision-making in a place where it can be exercised quickly in time of crisis and with an opportunity to pin it down in fixing the responsibility for it. Neither of these latter two requirements could be met by simultaneous Senate affirmative action.

What would have been the complications had the above procedures been required at the time of the Lebanon crisis of 1958, or the Laotian crisis in 1962, both of which resulted in the landing of Marines for a short but successful show of force?

Or for that matter, what would the sponsors of Senate Resolution 85 have had the Senate do differently in regard to the Tonkin Gulf resolution of August, 1964? On that occasion there was Senate debate and a vote with only two nays. However that action may be construed by some Vietnam critics in hindsight, it does nothing to enhance either the role of—or confidence in—the Senate to assent that the Members were "duped" by bad or insufficient intelligence.

In fact, Senate Resolution 85 could further weaken the Senate's role in foreign policy. The mere fact of the resolution seems to be a case of "special pleading" in itself. What it implies is that, for whatever reasons, the Senate has failed to respond to the pressing demands of the nuclear age; or, as the sponsors of the resolution would prefer, had their foreign policy role stolen from them. The very intent of the resolution demeans the role of the Senate in foreign policy by begging for such a role.

What's more, regardless of the intent of its sponsors, Senate Resolution 85 is already being interpreted from the outside as (a) an attack on the preceding administration for its policies in Vietnam, (b) a warning to this and future administrations in the same area, and (c) an apology for the unsuccessful efforts of the Senate in thwarting previous policy "mistakes."

Whether these allegations are true or false is irrelevant. Their real point is that, without achieving its intent of redressing the balance of power in foreign policy, Senate Resolution 85 introduces mischievous elements, inspires misinterpretations, and demeans both the high office of the President of the United States and the responsible role of the U.S. Senate in foreign policy.

The decision to bring Senate Resolution 85 to the floor at this time raises some questions concerning the proceedings of the committee. The Foreign Relations Committee only recently authorized an extensive subcommittee study of our national commitments (the ad-hoc committee chaired by Senator Symington for U.S. Security Agreements and Commitments Abroad.) It is as yet difficult to determine what the subcommittee will discover during its investigations. Would not the Foreign Relations Committee have been acting in better grace to have suspended a national commitments resolution until after the in-depth study was completed? Does not the leadership's present action amount to an unfounded presumption that the Symington Subcommittee findings will be entirely in accord with the intent of Senate Resolution 85?

TO STRENGTHEN ITS ROLE THE SENATE NEEDS DEEDS NOT WORDS

Is there, then, a meaningful role for the U.S. Senate in the shaping of foreign policy? The answer, of course, is yes. If the Senate is to succeed in achieving this new role, it, too, must update its sense of responsibility by focusing more and more on larger and larger questions. The Senate could afford to address itself well in advance of crises to the broad outlines and directions of American policy. This becomes far more constructive as well as influential than in responding principally to crisis situations after the fact.

The Senate's role in foreign policy of the future can best be achieved by deeds rather than by words—and least of all by the sense-of-the-Senate resolution.

The role of the Senate Foreign Relations Committee in the policy process is whatever it decides it to be. Thus, the committee can hide behind the shelter of a resolution, or it can stand on its deeds.

In fact, it would seem to be more important that the committee and the Senate involve itself with the decision elements implicit in an ABM system as the current International Organization and Disarmament Affairs Subcommittee has been undertaking (the Gore group); or the question of policy toward Mainland China; or to reexamine our foreign policy assumptions and commitments in many of the critical areas of the world, as the Subcommittee for U.S. Security Agreements and Commitments Abroad (Symington group) is now doing.

In the final analysis, then, the Senate through the Foreign Relations Committee should preserve its role in national policy-making by deeds and actions rather than by lamenting its role in a sense-of-the-Senate resolution.

[From the Christian Science Monitor, May 20, 1969]

A RESTRICTIVE RESOLUTION

By the time Secretary of State Rogers returns from his two-week Asian tour, the Senate may have begun debate on Senate Resolution 85. The Senate had better be

very certain that it knows what it's getting into.

This "National Commitments" resolution was developed by Sen. William Fulbright and his Foreign Relations Committee. It would declare it to be the "sense of the Senate" that the President shall make no commitment to any foreign nation unless that commitment be approved by Congress. A committee report further avers that the resolution's primary purpose is to assert congressional responsibility in any decision "to commit the armed forces of the United States to hostilities abroad, be those hostilities immediate, prospective or hypothetical. . . ."

Obviously the senators were thinking of Vietnam. Some committee members praise the resolution as reestablishing a necessary degree of congressional authority in foreign policy. The aim, they say, is to assure that a president won't again embark on some Vietnam-type of hostilities, with the Senate uncommitted and unconsulted. (Congress of course did give the president wide authority on Vietnam, in the Tonkin Bay resolution—and now wishes it hadn't.)

Critics say the proposed resolution would be almost as dangerous a limitation on presidential authority as was the proposed Bricker amendment—that it represents senatorial pique and carries a strong whiff of isolationism.

Despite good senatorial intentions, the resolution does seem to have dangerous possibilities. (Resolutions don't have to be heeded by the White House, but they are influential.) In a time when swift response is needed, this resolution would mean that the White House would have to await the pleasure of the Senate. An atomic-age crisis might depend on a Senate quorum. Would President Kennedy have been able to move quickly and quietly in the Cuba missile crisis, if such a resolution had been on the books? Would President Roosevelt have been able to consumate his destroyer-bases swap with Britain?

It is of course essential that the Senate increase its influence and responsibility in foreign affairs. There has been overmuch presidential free-wheeling, particularly in the Johnson years. But the Senate can best boost its influence by convening competent committee hearings eliciting able testimony, by holding influential debates on the floor, and by showing its own ability to respond to crises with clarity and dispatch. Congress will not improve matters by curtailing the freedom of the executive—by restricting the President's preeminence in foreign policy and his ability to act speedily in tune with fast-moving events.

[From the Washington Evening Star, June 5, 1969]

SENATE SEEKS PIECE OF THE ACTION

(By Charles Bartlett)

Still lacking a bite to match its barks of frustration at Congress' impotence in foreign affairs, the Senate has embarked on a complex nibbling operation.

The perennial mood to circumscribe executive power is being fanned by disappointment with President Nixon's stand against liberalizing East-West trade, by impatience with the Paris negotiations, and by the surge of popular sentiment against the military, focussed for the moment on the issue of the ABM.

One imminent reaction will be the Senate's consideration and probable passage of Senate Resolution 85, and assertion that a national commitment to a foreign power can only be executed through a treaty or convention that is approved by legislative action.

The resolution is designed to be a turning point in the erosion of Congressional power over foreign policy but it is conceded to be a small step, a splattering of balm which the State Department views with far less apprehension than it nursed toward the Bricker amendment in the 1950s.

The hard fact is that the disinclination of the executive branch to take Congress into partnership in foreign affairs is the growing legacy of a series of presidents whose earlier service as senators taught them that it is a mistake for any president to consult with Congress in a crisis until he knows exactly what he wants to do. As Harry Truman put it, "There can be only one voice . . ."

Congress is too hydrated an animal to be a comfortable partner in close deliberations on a taut situation. The President knows that he will bear the responsibility for the steps that are taken and he suspects that no member of Congress is as deeply immersed in the problem, from the standpoint of having read the cables and intelligence, as he and his staff. Presidents find it expedient to consult key legislators but difficult to take their advice.

Congress is spurred, on the other hand, by constitutional authorities who maintain it has been cowardly in deferring to executive wisdom. The quality of that wisdom is increasingly challenged by the disillusionment in Vietnam and by apprehensions of the entanglements that may arise from other commitments.

Senate Resolution 85 will not go far to balance the uneven tug-of-war. Congress has the constitutional power to declare war but the President holds the options in defending the national security. He is the Commander-in-Chief, empowered to meet the threats which he perceives.

More to the point is the suggestion by Sen. Gale McGee, D-Wyo., that the Senate concentrate on re-examining the assumptions and commitments which guide the President's conduct of foreign policy. The hypotheses on which treaties were ratified and bases were established in the 1950's should be restudied in the light of the new skepticism.

The SEATO Treaty, ratified 16 years ago with one dissenting vote, is a case in point. Few knowledgeable officials believe the end of the war in Vietnam will mark the end of guerrilla incursions against neighboring nations like Thailand and Cambodia. The threat of Communist takeover may be strong and the commitments are firm. How will the United States, fatigued and disillusioned with Southeast Asia react?

The key argument for the SEATO Treaty was derived from the NATO experience. "The pact is inspired," said Chairman Walter George of the Foreign Relations Committee, "by the conviction that a potential aggressor may be deterred from reckless conduct by a clearcut declaration of our intentions." While this premise had worked in Europe, it has proven inapplicable in Asia and the time is ripe for re-examination.

Senate dissent from the course of foreign policy is a valuable contribution when it bears on a situation in which options remain open. The weakness of much of the dissent on Vietnam has been its failure to provide alternatives. The senatorial pressure to reduce the troop commitment in Europe and the current scrutiny of the value of the base agreements in Spain, Greece and Turkey are far more useful.

The Senate obviously has a role to play in a transitional period of American foreign policy. But it will assume that role by dealing with the crucial questions instead of with peripheral issues like Senate Resolution 85.

[From the Washington Evening Star, June 10, 1969]

CONGRESS' FOREIGN POLICY SQUEEZE

(By David Lawrence)

Whether it's a partial withdrawal of troops from Vietnam or other policies of President Nixon in international affairs, the important thing for the American people to bear in mind is that in most countries of the world there's a different conception of how our government functions than prevails in this country.

Many of the peoples abroad are familiar only with the parliamentary system. Thus, when they read that the democratic party has a majority in both houses of the Congress of the United States, they assume that Nixon is subject to the control of his opposition party.

Hitherto, in international crises, Congress has overcome this difficulty by giving unified support to the president irrespective of party. Currently, however, the impression has been developed that President Nixon was compelled to arrange for a pullout of some troops from Vietnam and that this marks the beginning of a total withdrawal without regard to what the enemy does.

Perhaps the most significant thing that has been done in recent weeks to try to tell the world that the President of the United States is subject to the will of the majority party in the Senate and House was the adoption by the Senate Foreign Relations committee, by a vote of 11 to 1, of a resolution informing the President, in effect, how he should hereafter conduct foreign affairs. The declaration approved by the committee reads as follows:

"Whereas accurate definition of the term 'national commitment' in recent years has become obscured: Now, therefore, be it.

"Resolved, that it is the sense of the Senate that a national commitment by the United States to a foreign power necessarily and exclusively results from affirmative action taken by the executive and legislative branches of the United States government through means of a treaty, convention, or other legislative instrumentality specifically intended to give effect to such a commitment."

The Department of State is very much disturbed by this resolution and expressed its views in a letter urging that it not be adopted. The State Department in its dissent said:

"The Executive Branch tends to doubt the usefulness of attempting to fix by resolution precise rules codifying the relationship between the Executive and Legislative branches in the broad area of national commitments. . . .

"While it is, of course, for the Senate to decide on the disposition of Senate Resolution 85, the Executive Branch recommends against its adoption."

Within the last few days members of the Foreign Relations Committee, including the chairman, have spoken out in opposition to the President's policies in Vietnam and particularly his support of the present government in Saigon.

The lack of cooperation between the Executive and Legislative branches of the government here has led to the feeling in Europe and Asia that President Nixon does not have the confidence of Congress. The belief is widespread that he will be unable to continue American participation in the war in a manner that will induce the North Vietnamese to begin to withdraw their troops and permit the setting up of a new government in South Vietnam elected by the people.

It may turn out that President Nixon, in order to make headway in the Paris peace talks and bring the Vietnam war to a conclusion, will have to assert his Constitutional authority to press for a negotiated settlement under some form of international supervision.

The simplest solution of all, of course, would be to turn the matter over to the United Nations Security Council. If the Soviets really wish to cooperate, progress could be made there towards ending the Vietnam war and establishing a mechanism to keep the peace, as has been done on other occasions in various parts of the world.

Once the United Nations took over the responsibility, a situation, to be sure, could develop like the one in Korea. While this is

not altogether settled from the standpoint of reunification of the two parts of the country, South Korea is nevertheless at present being protected by a peacekeeping force under the command of the United Nations.

ADJOURNMENT TO MONDAY, JUNE 23, 1969

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 12 o'clock noon, Monday next.

The motion was agreed to; and (at 5 o'clock and 32 minutes p.m.) the Senate adjourned until Monday, June 23, 1969, at 12 o'clock noon.

NOMINATIONS

Executive nominations received by the Senate June 20, 1969:

DIPLOMATIC AND FOREIGN SERVICE

John A. Calhoun, of California, a Foreign Service officer of the class of Career Minister, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Tunisia.

CONFIRMATIONS

Executive nominations confirmed by the Senate June 20, 1969:

U.S. MARSHAL

Walter J. Link, of North Dakota, to be U.S. marshal for the district of North Dakota for the term of 4 years.

DEPARTMENT OF DEFENSE

Spencer J. Schedler, of New York, to be an Assistant Secretary of the Air Force.

J. Ronald Fox, of Massachusetts, to be an Assistant Secretary of the Army.

OFFICE OF EMERGENCY PREPAREDNESS

Haakon Lindjord, of Washington, to be an Assistant Director of the Office of Emergency Preparedness.

IN THE ARMY

The U.S. Army Reserve officers named herein for promotion as Reserve commissioned officers of the Army, under provisions of title 10, United States Code, sections 593(a) and 3384:

To be major general

Brig. Gen. William H. Booth, O302516.
Brig. Gen. Milton A. Pilcher, O363806.
Brig. Gen. Thomas J. Thorne, O384897.

To be brigadier general

Col. Leo V. Anderson, O1643783, Transportation Corps.
Col. Wilford L. Bjornstad, O1292117, Infantry.
Col. James R. Compton, O409922, Medical Corps.
Col. Constant C. Delwiche, O392240, Infantry.
Col. John J. Dorsey, O532303, Medical Corps.
Col. James O. Freese, O397056, Artillery.
Col. David W. Hanlon, O1301993, Infantry.
Col. Leslie W. Lane, O376606, Infantry.
Col. Ripon W. LaRoche, O1736763, Medical Corps.
Col. Charles S. LeCraw, Jr., O377683, Transportation Corps.
Col. Wilbur F. Munch, O1012308, Artillery.
Col. James J. O'Donnell, Jr., O392412, Artillery.
Col. Nicholas W. Riegler, Jr., O1775484, Medical Corps.
Col. Leo R. Weinshel, O360282, Medical Corps.

The Army National Guard of the United States officers named herein for promotion as Reserve commissioned officers of the Army, under the provisions of title 10, United States Code, section 593(a) and 3385:

To be major general

Brig. Gen. John C. Baker, O368365.
Brig. Gen. Glynn C. Ellison, O1171133
Brig. Gen. Nicholas P. Kafkalas, O1287540.

To be brigadier general

Col. Benjamin F. Compton, O1303590, Infantry.
Col. J. Frank Cook, O1168608, Artillery.
Col. O'Neil J. Daigle, Jr., O519675, Corps of Engineers.
Col. Richard L. Dunlap, Jr., O2017377, Armor.
Col. William S. Lundberg, Jr., O947030, Artillery.
Col. Curtis E. Meland, O41178, Infantry.
Col. Floyd W. Radike, O1288616, Artillery.
Col. Charles H. Starr, Jr., O390764, Artillery.
Col. John R. Stephenson, O1294215, Infantry.
Col. Edwin V. Taylor, O1167248, Artillery.

The Army National Guard of the United States officers named herein for appointment as Reserve commissioned officers of the Army, under the provisions of title 10, United States Code, sections 593(a) and 3392:

To be major general

Brig. Gen. Laurence B. Adams, Jr., O396901.
Brig. Gen. Floyd L. Edsall, O555952.
Brig. Gen. Charles H. Wilson, O485619.

To be brigadier general

Col. Laurence M. Blaisdell, O1042237, Artillery.
Col. Sylvester T. DelCorso, O358188, Adjutant General's Corps.
Col. Robert R. Goetzman, O388349, Artillery.
Col. Francis J. Higgins, O1054286, Judge Advocate General's Corps.
Col. James J. Lison, Jr., O445442, Infantry.
Col. Roy C. Martin, O386175, Artillery.
Col. LaClair A. Melhouse, O1174381, Corps of Engineers.
Col. Harold R. Patton, O1329739, Infantry.
Col. Felix L. Sparks, O386497, Artillery.
Col. Thomas K. Turnage, O440557, Armor.

The Army National Guard of the United States officers named herein for promotion as Reserve commissioned officers of the Army, under provisions of title 10, Untied States Code, sections 593(a) and 3392:

To be major general

Brig. Gen. John R. Carson, O1574211.

To be brigadier general

Col. Jack W. Blair, O376496, Staff Specialist Corps.
Col. Larry C. Dawson, O370754, Artillery.
Col. John N. Owens, O1558670, Armor.
Col. Alberto A. Pico, O386119, Infantry.

The following-named officer, under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. Patrick Francis Cassidy, O32809, Army of the United States (brigadier general, U.S. Army).

The following-named officer for appointment in the Regular Army of the United States, to the grade indicated, under the provisions of title 10, United States Code, sections 3210, 3284, and 3306:

To be brigadier general

Col. Manley Glenn Morrison, O37389, U.S. Army.

The following-named officer, under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. Henry Augustine Miley, Jr., O22993, Army of the United States (brigadier general, U.S. Army).

Brig. Gen. Hal Bruce Jennings, Jr., O26995, Army of the United States (colonel, Medical Corps, U.S. Army), for appointment as the Surgeon General, U.S. Army, and for appointment to the grade of lieutenant general, under the provisions of title 10, United States Code, section 3036.

The following-named officer, under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. Arthur William Oberbeck, O20569, U.S. Army.

IN THE NAVY

The following-named captains of the line of the Navy for temporary promotion to the grade of rear admiral, subject to qualification therefor as provided by law:

John D. Chase	Donald C. Davis
David M. Rubel	Donald V. Cox
Robert S. Salzer	Herbert A. Ainsworth
Narvin O. Wittmann	Earl P. Yates
Robert C. Gooding	Donald D. Engen
Paul E. Pugh	Oliver H. Perry, Jr.
John L. Butts, Jr.	Edwin K. Snyder
Charles N. Payne, Jr.	Spencer Matthews, Jr.
John L. Marocchi	Dean L. Axene
William M. Pugh II	Clarence R. Bryan
Ward S. Miller	Patrick J. Hannifin
Roger E. Spreen	James W. Nance
James Ferris	Rembrandt C. Robinson
John H. Dick	Worth H. Bagley
William H. Livingston	
Howard E. Greer	
Jon. L. Boyes	

IN THE MARINE CORPS

Lt. Gen. Richard G. Weede, U.S. Marine Corps, when retired, to be placed on the retired list in the grade of lieutenant general, in accordance with the provisions of title 10, United States Code, section 5233.

Maj. Gen. Frederick E. Leek, U.S. Marine Corps, having been designated in accordance with the provisions of title 10, United States Code, section 5232, for commands and other duties determined by the President to be within the contemplation of said section, for appointment to the grade of lieutenant general while so serving.

IN THE AIR FORCE

The nominations beginning Charles E. Abbey, to be lieutenant colonel, and ending David G. Wood, to be 1st lieutenant, which nominations were received by the Senate and appeared in the Congressional Record on May 19, 1969.

IN THE ARMY

The nominations beginning James J. Fragala, to be colonel, and ending Violet R. Pfeifler, to be major, which nominations were received by the Senate and appeared in the Congressional Record on June 4, 1969;

The nominations beginning Charles Feuerbacher, to be captain, and ending Daniel F. Wolfe, to be 2d lieutenant, which nominations were received by the Senate and appeared in the Congressional Record on June 4, 1969; and

The nominations beginning Amelia Garcia, to be captain, and ending William N. Yerkes, to be 2d lieutenant, which nominations were received by the Senate and appeared in the Congressional Record on June 9, 1969.

IN THE NAVY

The nominations beginning James A. Allphin, to be ensign, and ending Hilbert D. Dean, to be lieutenant (junior grade), which nominations were received by the Senate and appeared in the Congressional Record on June 11, 1969.

EXTENSIONS OF REMARKS

UNIVERSITY STUDENTS OF TEXAS AND FACULTY OPPOSE ABM

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, June 20, 1969

Mr. YARBOROUGH. Mr. President, I have recently received a letter from 13 members of the faculty and graduate students in the Physics Department of the University of Texas at Austin, Tex., another letter from 14 members of the Physics Department of Texas A. & M. University, and a letter from eight students and members of the academic community of the University of Texas at Austin, all opposing the ABM. The last-mentioned letter was attached to a petition containing the signatures of over 1,000 people at the University of Texas at Austin who are against the ABM proposal.

Mr. President, these names on the petition were collected over a period of several days when the petition was available for signature outside the Student Union Building at the University of Texas at Austin. The petition and these letters tell me that there is great public opposition to the ABM proposal in my home State of Texas. We cannot ram this multibillion-dollar program down the throats of an unwilling people. I hope that the Senate will keep this fact in mind when it votes on this proposal.

Mr. President, I ask unanimous consent that these letters, one from the Department of Physics, University of Texas, dated February 26, 1969; one from the Physics Department of Texas A. & M. University; and one from a group of University of Texas students dated April 19, 1969, along with the names of their signers; and the text of the petition from the University of Texas at Austin, together with the names of all of the signers, be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE UNIVERSITY OF TEXAS AT AUSTIN, DEPARTMENT OF PHYSICS,
Austin, Tex., February 26, 1969.

Hon. RALPH YARBOROUGH,
Senate Office Building,
Washington, D.C.

DEAR SENATOR YARBOROUGH: We the undersigned faculty and graduate students at The University of Texas at Austin urge you to vote against any additional appropriations for the Sentinel Antiballistic Missile System. We believe that the Sentinel system does not constitute a technically feasible defense against a nuclear attack with ballistic missiles and that any advantage obtained from such system can be easily offset by minor, inexpensive modifications of offensive weapons. We also feel that the construction of the Sentinel system at this time will increase international tensions and lead to an immediate escalation of the arms race. We therefore conclude that the costs as well as the dangers inherent in placing nuclear warheads in populated areas far outweigh any advantages of the Sentinel system and we urge you to oppose its construction.

Robert G. Yoes, Faculty Associate in Physics; Eugene Couch, Faculty Associate, Dept. of Physics; Alfred Schild, Professor of Physics; Laurence Shepley, Assistant Professor of Physics; Richard Matzner, Faculty Associate, Dept. of Physics; Albert R. Exton, Faculty Associate, Dept. of Physics; William Kinnersley, Faculty Associate, Dept. of Physics; Richard Tropp, Teaching Assistant, Dept. of Physics; William H. Marlow, Research Scientist; Ph. D. Candidate; Physics; John W. Middleton, Teaching Assistant, Physics; Yinger Ehlers, Professor of Physics; Robert S. Castroll, Teaching Associate, Mathematics Dept.; John A. Campbell, Assistant Professor, Physics and Computer Science.

Hon. RALPH YARBOROUGH,
U.S. Senate,
Washington, D.C.:

We the undersigned members of the physics department of Texas A. & M. University, wish to express our opposition to the proposed deployment of the Safeguard Anti-Ballistic Missile System. We respectfully urge that you vote against the authorization and appropriation of the funds necessary to deploy the Safeguard System.

This petition reflects the individual sentiments of the undersigned individuals and in no way represents an official position of the named institution.

J. Nuttall, associate professor; Ronald Bryan, visiting lecturer; F. Alan McDonald, asst. prof.; William A. Pearce, asst. prof.; Lee C. Northcliffe, assoc. prof.; R. K. Vaneyer, asst. prof.; G. W. Kattaman, assoc. prof.; E. Reyne, assoc. prof.; C. N. Adams, grad student; L. L. Rutledge, Jr., grad student; Mitty C. Plummer, grad student; Joe S. Ham, prof.; Donald F. Weekes, professor; Harold Cohen, post doctoral research associate.

APRIL 19, 1969.

Hon. RALPH YARBOROUGH,
Senate Office,
Washington, D.C.

DEAR SENATOR YARBOROUGH: We strongly believe that the ABM system advocated by the present administration is sheer madness. The Administration claims that this "defense" system is not provocative; this is simply not true. When the Soviet Union had set up a limited ABM system around Moscow we responded by developing the MIRV, the most deadly warhead ever created. This, in turn, forced the Russians to keep abreast militarily of the Americans. In now advocating the deployment of the ABM system, our military leaders fail to recognize how terribly they are escalating the arms race. Does our military assume the Soviet Union will react more sanely to our ABM than we did to theirs? There are purely technical reasons for opposing the ABM. In the February, 1968 issue of *Scientific American*, Hans Bethe maintains that after spending billions of dollars, the system could be quite easily foiled by new Russian technological advances. Another scientist, writing in the April, 1969 issue of the same journal, claims that the chances of nuclear war will be greatly increased if the ABM system is adopted. Presently, neither side can gain much of an advantage by initiating a nuclear attack. We, like the Russians, will suffer equally, whether we initiate or retaliate. If, however, ABM's are set up on both sides (if they indeed function; many scientists have their doubts), the country which attacks first will suffer least. Therefore, when a crisis situation arises, either side is more likely to push the panic button.

Militant nationalism is an absurd concept in this nuclear age. The United States can only protect her people by insuring world peace. This means that we must actively put an end to the action-reaction cycle which can only escalate the arms race, draining the financial resources so badly needed to cope with the world's domestic problems. The deployment of the ABM will serve only to bring us one step closer to a nuclear disaster, prompted by those who claim they are seeking but to defend the nation. Let us not force the Russians into the position of having to deploy a system even more terrible than the ABM, a device that will spell the doom of the up-coming arms negotiations, if not the world itself.

We are well aware of your solid opposition to the ABM. We hope this letter and the petition enclosed (signed by more than 1000 members of the Austin academic community) will bolster your position in Congress, and help influence your colleagues to follow your example. Please make our position known to as many members of Congress as possible.

We would appreciate a reply from you concerning the prospects for the fight against the ABM.

Sincerely,

James C. Kearney, Stacy Heinen, Ben Davis, Bill Holder, Claire Wilson, Steven Shankman, Marsha Maverick Wells, Nancy J. Moore.

We, the undersigned students of the University of Texas and members of the Austin academic community, deplore the Nixon Administration's advocacy of the ABM system, and we urge both Senators from the State of Texas to fight very strongly in Congress for the defeat of the ABM program.

RECOGNITION OF THE NEED FOR CONGRESSIONAL REFORM

HON. JAMES C. CLEVELAND

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1969

Mr. CLEVELAND. Mr. Speaker, on May 28, I had the pleasure of attending a testimonial dinner in the honor of Speaker Marshall Cobliegh of the New Hampshire General Court. The guest speaker for this event was the Honorable Albert J. Abrams, secretary of the senate for the State of New York. The context of Secretary Abrams' address, which will follow these remarks, was a discourse on the role of legislatures in representative government. Secretary Abrams discussed the need for legislative reform in order to assure that these bodies can continue to perform effectively as they were originally intended.

It is gratifying to note that there are individuals outside of this Congress who feel that the status of legislatures can be expanded from its present role as "watchdog" to a position of leadership.

Last February 6, on page H851 of this Journal, I included for the benefit of my colleagues, the context of the inaugural address delivered by the speaker of the New Hampshire House of Representatives, the Honorable Marshall Cobliegh. The speaker's remarks concerned the status of the New Hampshire Legislature and the need for its reform. Speaker Cobliegh, cited in his address one of my favorite quotations from the great Jefferson:

> Laws and institutions must go hand in hand with the progress of the human mind. As that becomes more developed, more enlightened, as new discoveries are made, new truths disclosed, and manners and opinions change with the change of circumstances, institutions must advance also and keep pace with the times.

I wish to express my thanks to Secretary Abrams and Speaker Cobliegh for their insight and ability to see the need for legislative reform to protect our representative democracy.

The address referred to follows:

THE MOST UNDER-UNDERSTOOD BRANCH OF GOVERNMENT

(By Albert J. Abrams, Secretary of the Senate, New York State)

INTRODUCTION

It is a measure of the liberality of New Hampshire that you have invited here to speak tonight in this testimonial to one of your own great leaders, Marshall Cobleigh, not only a "foreigner" from outside the state, but amazingly someone from the Upper House! Not only someone from the Upper House, but a staffer to boot!

I always view with some trepidation this microphone, because in the Senate of New

York I once read from the podium the title of a bill about to come up for debate. The bill would have regulated spawning beds. Only it resounded in the Senate Chamber over the microphone like this: "An act to amend the conservation law in relation to the regulation of sporting beds." Up sprung one of our older Senators and said, "Mr. President, are we regulating that too?"

The British poet, W. H. Auden, put the whole problem of legislative modernization succinctly when he said:

"We would rather be ruined than changed
We would rather die in our dread
Than climb the cross of the moment
and let our illusions die."

However, your Speaker is not one who has a fear of change. In a courageous leap to leadership he is in the forefront of those who seek to bring our legislatures dragging, squawking and protesting into the 20th century.

Tonight, I'm supposed to talk and you're supposed to listen. If you get through before I do, please let me know.

I appreciate your chairman's generous introduction. It is a great deal more sympathetic than one I received in New York City, when after listening to the master of ceremonies recite the dreary facts of my life I heard him conclude: "And now we shall hear the latest dope from Albany."

It is just great to come to New Hampshire, from whence many of our New York leaders gain new energies and new insights. Our New York Senate Minority Leader Joseph Zaretzki has lived in New Hampshire for years, but votes in Manhattan! And our Senate Majority Leader Earl Brydges extracts as many fish from your waters as your generous laws permit. Unpublicized, many of our New Yorkers come to New Hampshire to get a breath of unpolluted air, unpolluted water and unpolluted politics.

Your state flower, the purple lilac; your state tree, the white birch; reflect so well the clean tangy scent of your air and the dignity of your people.

And I bring you greetings from Gov. Rockefeller who was educated here. When he was a kid, before he went to Dartmouth, his father, so the story goes, gave him blocks to play with—50th Street, 51st Street, 52nd Street.

We have just gone through the 1969 session. In New York, we had nearly 6,000 bills introduced in the Senate alone, and about 7,500 in the House. We passed 1,500 bills and at this moment the Governor is signing about 1,155 of them. It was an exciting session, replete with historymaking events—the first school decentralization law in the history of the nation, an increase in the sales tax, an attempt to curb campus rioters and a move to re-write state-aid formulas that was fiscally crippling the state. Also, we had a wonderful under-estimate of revenues some people are snide enough to say is designed to keep us going through the election year of 1969. And our leaders reduced the number of interim committees because some cynics say we found there were committees that had solutions to which they couldn't find problems! I mean they had wonderful answers but couldn't find the questions to go with them!

THE LEGISLATIVE SITUATION IN THE WORLD

Today legislative bodies around the world are in dire trouble. The military have taken over in many parts of the world from weak legislatures, and civilian dictators make some parliaments meek rubber stamps. A Peruvian legislator visited me and said his Congress wouldn't dare oppose the military lest they be killed!

If we were to paint the globe white on those spots which have virile, creative, forceful legislative systems, the globe would appear mostly black.

In the trouble spots of the world, you will find on the whole they have weak legislative systems. Let us call the roll:

Egypt, with a dictator.

Nigeria, with a military government.

North and South Viet Nam, both with military leadership.

China, where a party bureaucracy dictates.

Russia, where legislative independence would be deemed an affront by the Omni-Bureaucrats.

Latin America, where legislatures generally are window dressing for hard-nosed autocracies with military governments.

South America, where legislatures are puppets generally for military rules.

Africa, parliaments on the whole are anemic and new governments are run by strong-men dictators.

The British parliamentary system is still strong. And in Australia, India, Canada, Israel, and in the Scandanavian countries, legislatures are not afraid to make and initiate policy, nor to hold executives to account. Our United States Congress at times appears to have lost its capacity for broad policy initiation, having recently implored the President to submit a legislative program to which it could react; but if it has lost power in the areas of foreign relations and war to a powerful Presidency, at least in the field of program auditing it is showing spark.

The truth is that most of the world's population does not know government by strong, independent legislature. And one of the most useful steps the nations of the world could take to strengthen freedom would be to bolster their legislatures. A people that does not have a free, strong legislature is not free.

Of course in Lebanon, they have solved the problem of parliaments. The rule there is that controversial subjects that cut into religious lines may not be brought before the legislature! They have solved their problem. They have deep dug-in religious sects which would be at each other's throats if issues of controversy were to come before their legislature, so they have worked out their own system: no controversial legislation!

THE STATE LEGISLATURES

New Hampshire has given the nation the motto: "Live free or die!" That is the cry our whole country has for the world. And that is the message of our legislatures to our people. Unfortunately, there is current in our nation a massive cynicism toward legislatures and an elitist cynicism that is destructive of representative democracy.

Each group in our society, the educators, the doctors, the engineers, the scientists feel they know better than the legislatures how to run our government. But it is the unique function of the legislature to apply the common sense of the generalist to the diverse viewpoints of the specialists.

Our state legislatures are under fire from the Atlantic Ocean to the Pacific Ocean. Some of the attacks by civic reformers has some basis.

Our legislatures have not organized for their main tasks, but have permitted themselves to be snowed under a paper blizzard of trivial legislation. Do we really need the 35,000 new laws adopted by our states each biennium?

They have permitted themselves to be outmaneuvered, out-staffed, out-budgeted by the Governors. They have permitted themselves to become ratifiers rather than initiators. They have permitted themselves to be punched senseless by editorialists who never had to mediate between conflicting forces in our society, and who rarely have access to time or research to sift fact from dazzling headlines. They have permitted the bureaucracy to mobilize a vertical ladder of decision-making extending from the localities to the states to the federal agencies, by-passing the legislatures.

And ruefully I must agree that legislatures have brought deserved attacks on themselves with their all-night sessions, and closing night hi-jinks. The glaring headlights of publicity shine on these theatrics. And the log-jam of the end of the session has brought outcries from the citizens, who little understand the natural rhythm of legislation in representative government, who little understand that conflicting forces defer compromises until certain the legislature is going to adjourn.

I could talk to you endlessly about the need for procedural changes, the need for more scheduling to space out sessions more evenly, the need for pre-filing, improved research staffing, annual sessions, better floor decorum, better office facilities for our committees, and a decent pay for decision-making.

Incidentally, it is not known in my own state that the salary of $15,000 base pay for our legislators who work 3–5 months in session and work the rest of the year part time at the very least in interim studies, in acting as ombudsmen for their constituency, in sounding out sentiment, get only $8 per decision they are called upon to make on the floor of the Senate; only $8 per vote they are called upon to make ranging from a $6.4 billion budget to delicate issues of church-state. And the public little understands that a legislator makes more decisions in a session than the average man makes in a lifetime.

THE REAL REFORMS

But let me warm to the task of suggesting where the real strengthening of our legislatures lie. It lies in knowing itself. The real task of legislatures is setting broad policies. The states are a $60 billion a year business! *Legislatures need to tool up, staff up and shape up.*

I will not stress the electronics and computers that many legislatures are using to help draft bills, codify statutes, and test alternate policy proposals. I will not stress anything tonight but main routes to get at the guts of bringing legislatures back to the glory that was theirs in the early 19th century.

These channels of strength are:

1. *The legislature must gain control over the planning function of state government.*

Today, the federal government is requiring comprehensive planning in higher education, welfare, health, highways—in virtually every segment of government—and the planning is being done by executive agencies usually without knowledge or consent of the legislature. Today state agencies are developing broad programs of economic development and these by-pass the legislatures. Today state agencies develop plans for the physical growth of the state, and these blueprints frequently escape legislative review. Planning is power, and legislatures are being locked into spending by plans over which they have little control.

2. *The legislature must gain control over the allocative function, over determining how much money will be distributed between private and public sectors and what the priorities are within the public sector.*

Today, our legislatures are using often primitive methods in budget. Few use an investment budget; few use an economic development budget. Few legislatures are given a broad economic review before the legislature convenes or after. Legislatures need more than fiscal notes on bills; they need to correlate area-spending with area-unemployment to make certain the money is going where the money is needed. The legislature needs a short-range and long-range budget. Money is power and legislatures weakened by the executive budget system need to be brought back into the partnership.

3. *Legislatures are being inundated with trivia, and need to gain control over the big decisions.*

Legislatures are being swamped with bills. And little effort has gone into keeping the trivia out of the legislative machinery. We need new mechanisms to keep the work-load down and the brainload up. We need explore concepts of negative legislation, retaining review over expanded administrative regu-

lations; consolidating bills; eliminating local bills, and concentrating on the bull's eye.

We need to bring in $1-a-year men to advise our legislatures, the nation's top scientific brains, foremost industrial management brains. We should not be shy about asking for help. Marshall Cobleigh has already moved in this direction.

There are so many other procedural improvements urgently, desperately needed by our legislatures. Internship programs, systems analysis, program development emphasis, systematic modernization of legislative rules, a standing committee system geared to do its job of evaluation, are but some of the obvious improvements needed.

We need better, closer relationship between our legislatures and the Congerss. Legislatures through control over congressional reapportionment have considerable leverage they have not used to gain a proper hearing at Washington.

The legislature's job is management of tensions and hostilities in society. If it continues to fail, if it continues to fumble and stumble, our whole system of representative government is in danger. And so I would urge a massive restructuring of our state legislature to do the job they need to do, a massive redirection of legislative activity to focus on planning and new kinds of fiscal controls, shedding the trivia and zeroing in the big problem areas.

The legislature is never going to be loved. Its job is that of umpire and who ever heard of a pitcher and batter sending love notes to the man in blue behind the plate. But that is your job: to call the balls and strikes as you see 'em, let the curves come as they may!

CONCLUSION

The Legislative leaders of our nation's 8,000 state legislators are helping to shape the resurgence of the states. They are being joined by Speaker Marshall Cobleigh, from the White Mountain State, a dynamic young man who seeks to strengthen the legislature and the legislative system, who shunned the easy path for hard work, who shuns the quiet life of ease, which as Elizabeth Barrett Browning said, "Is no life at all."

In an age of mankind that cries out for leadership, Marshall Cobleigh is rising to the challenge. And from New Hampshire there goes out to the nation an electric message: "We have here a man who can help mankind bind its wounds, who can gain common ground from diverse points of views, who is not afraid of change, who can see the far distances, who has hope and determination and the qualities so desperately needed today as our nation copes with congestion, mobility, revolt, corruption, pollution, immorality and the curse of inflation."

Let me end with the poem of Emily Dickinson who couldn't believe that men would die for law. The great Persian army under King Xerxes, moving to conquer Greece, found standing in the way at the pass at Thermopylae a small band of Greek soldiers hemmed between mountain and sea. These were the 300 Spartans under King Leonidas left to hold the narrow pass. And the King sent a stranger back to Sparta, saying, "Go stranger, and tell Sparta that here, obeying her commands, we fell."

And Emily Dickinson, as a woman, couldn't understand this sacrifice. She wrote:

"Go tell it—What a Message.
To whom—is specified—
Not murmur—not endearment
But simply—we obeyed—
Obeyed—a Lure—a Longing?
Oh Nature—none of these—
To Law—said sweet Thermopylae
I give my dying kiss."

Today we still have in our legislatures men like King Leonidas. Men like Marshall Cobleigh—willing to fight for principle—willing to fight for law.

THE NEED FOR LABOR LAW REFORM

HON. PAUL J. FANNIN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, June 20, 1969

Mr. FANNIN. Mr. President, for several years I have called the Senate's attention to the need for a restoration of balance in the administration of labor law in the United States today. Over and over cases have come to my attention in which the rights of individuals have been subordinated to the interests of big labor organizers and in some cases employers have been willing to go along with these inequities.

Now it comes to my attention, through an article in U.S. News & World Report, that a nationwide group is embarked on a program of labor law reforms. I note that the priorities expressed by this group are along the same lines I have been advocating over the years; namely, the protection of the rights of individual workers.

I commend this effort on the part of the Chamber of Commerce of the United States and a panel of 100 labor relations lawyers who are attempting to restore balance to those charged with the responsibility of administering our labor laws, to the attention of Senators for their study and information.

I ask unanimous consent that an article published in the U.S. News & World Report of June 16, 1969, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW BUSINESS HOPES TO CHANGE THE NATION'S LABOR LAWS

An employer drive to rewrite the basic labor law is getting under way, with a specific list of changes being sought.

For years, employer groups have asked for curbs on the National Labor Relations Board, on the ground that the NLRB's rulings have been giving unions the breaks.

But, in recent years, Democrats controlled the White House and Congress. Nothing came of the "reform" pleas.

Now, with Republicans in the White House and labor's support weakened somewhat in Congress, pressure for changes is being stepped up.

One of the leading groups in this campaign is the Chamber of Commerce of the United States. It announced on June 4 that it is setting up some 25 meetings of businessmen across the country—called "labor-law reform workshops."

Anthony J. Obadal, in charge of the campaign as the Chamber's labor-relations manager, said these workshops "will emphasize the need to remove from the NLRB jurisdiction over unfair-labor-practice cases and assign them either to the federal courts or to a special labor court."

Mr. Obadal made it clear that the strategy is to build pressure for the "reforms" in the 1970 congressional races, hoping to get legislative action from a new Congress in 1971.

TWENTY-ONE-POINT PROGRAM

From a longer list of complaints drawn up by a panel of 100 labor-relations lawyers, the Chamber is concentrating on 21 specific proposals.

A poll taken among local chambers of commerce and trade associations, Mr. Obadal said, gave top priority to the proposal to strip NLRB of power to rule when an employer or union has committed an unfair labor practice as defined in the labor law.

Some 28 per cent of the votes put that change in the No. 1 position.

Here, in order of preference as indicated by the poll, is what some of the other proposals would do:

Grant bargaining rights only after secret-ballot elections—not on showing of cards signed by workers. Twenty-three per cent gave this top priority.

Amend the preamble to the National Labor Relations Act to make it clear that federal policy allows workers to decide for themselves whether to join or not to join a union. In the poll, 19 per cent rated this No. 1.

Stop unions from picketing a store in order to punish a manufacturer of products on sale there.

Compel unions, before going on strike, to submit the strike question to a secret-ballot vote of workers, if requested by the employer or by 10 per cent of the employees involved.

Allow employers to sue a union for damages if the union violates a no-strike clause in the labor agreement.

Prevent NLRB from restricting an employer's right to discuss unionism with his workers prior to elections.

Give back to employers "management rights" which the Chamber says have been turned over to unions by NLRB. An example offered: forcing a company to bargain with a union on matters such as contracting part of the operation to an outside firm.

Prohibit unions from fining their members for such actions as working during a strike or exceeding work quotas fixed by the union.

Set new rules for determining the size of a bargaining unit to prevent what the Chamber calls NLRB's tendency to "gerrymander" the unit to fit the part of the shop that is organized.

CHAMBER SAYS: IT'S ONLY FAIR

The Chamber argues that those changes, with others on its list, are essential if employers are to be given a fair break with unions under the labor law.

The basic law—the National Labor Relations Act, or Wagner Act—was adopted in 1935. There was a major revision in 1947, aimed at putting some curbs on union powers. This was the Taft-Hartley Act, written by a Republican Congress upset about the postwar wave of strikes.

In 1959, after Senators had heard testimony of racketeering and corruption in some unions, Congress passed the Landrum-Griffin Act. It included a "bill of rights" for union members and restrictions on some forms of strike and secondary boycotts.

The Chamber of Commerce, in a leaflet outlining its campaign, declared that the Labor Board has failed to apply the proper balance to its rulings. The booklet stated:

"The NLRB . . . refused to abandon the philosophy of encouraging unions and it is this intransigence, more than anything else, which explains unfair decisions of the Board. The Board sees whatever will strengthen the unions as being in the best interest of the nation. . . ."

Therefore, the Chamber said, it "has taken on the ambitious job of bringing reform to the NLRB, to change that agency into a neutral decision maker, rather than a promoter of unions."

Chairman Frank W. McCulloch of the NLRB has denied that the Board favors unions or employers. He says the Board is applying the law as it was written.

OUTLOOK FOR NLRB

Members of the NLRB are named to five-year terms. Two of the five present members are Republicans.

President Nixon's first chance to nominate an NLRB member does not occur until Dec. 16, 1969, when the term of Sam Zagoria—a Republican—expires. The White House has indicated that a new Chairman will be designated at that time. Mr. McCulloch could remain as a member.

The next vacancy is due on Aug. 27, 1970, when the McCulloch term ends. There is to be another opening in August, 1971, with expiration of the term of Gerald A. Brown. Mr. Brown and Mr. McCulloch are Democrats.

Thus, it will be late 1971 before President Nixon could name three members—barring resignations. Employer spokesmen contend that all five present members usually favor the union side.

This delay in revamping the Board's membership is cited by some employers as a reason for the proposal that NLRB be eliminated, or at least confined to handling election cases.

OUTSIDE THE LAW

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1969

Mr. MIKVA. Mr. Speaker, as revelations about the nature and extent of illegal Government wiretapping continue, the citizens of this Nation grow daily more concerned and more fearful. Added to the revelations about tapping of the telephone of Dr. Martin Luther King, we now have the Justice Department baldly asserting that its authority to wiretap extends to organizations which, in the estimate of the tappers, may be seeking to "attack and subvert the Government by unlawful means."

The vital question—the question which really transcends the details of recent revelations—is who will decide when a case involves "national security." Who determines when a real threat to our Government exists? And once the decision has been made in a case or series of cases, what internal administrative controls exist to insure that the tapping does not go on even after the responsible policy makers have made their decision against it? These are questions which must be answered. Congress and the people of this Nation must be reassured that there are effective, functioning controls on would-be wiretappers which will give some concrete meaning to the judicial warrant procedures enacted into law last year.

This morning's Washington Post, Mr. Speaker, carried an editorial which eloquently expresses the sense of outrage and dismay with which millions of Americans greeted the King wiretapping disclosure and events which have followed it. I insert that editorial today for the contemplation of my colleagues, and for the purpose of helping us all reflect on what widespread, uncontrolled, illegal wiretapping by the Government will mean for the future of free communication in America.

The editorial referred to follows:

OUTSIDE THE LAW

The Department of Justice has come forward with an appalling paradox: entrusted with enforcement of the Federal laws, it holds itself to lie outside the ambit of those laws; committed to the championship of the United States Constitution, it holds itself to be free from the restraints of that fundamental charter. Expressly, the Department declared on Friday that is possesses legal power—despite a clause of the Constitution and an Act of Congress to the contrary, and without bothering to obtain judicial authorization in advance—to carry on electronic surveillance of any members of organizations who, in its opinion, may be seeking to "attack and subvert the Government by unlawful means."

No more pernicious notion has ever been propounded by an agency of the United States Government. What this comes down to is a bald assertion that the Department can take the law into its own hands whenever it thinks the national security is threatened—from within or from without. Last week, in a Federal District Court in Chicago, the Department disclosed that it had employed wiretapping or bugging devices to monitor conversations of the antiwar activists who were indicted for inciting riots at the Democratic National Convention last August. What is the Department's justification? "Any President who takes seriously his oath to 'preserve, protect and defend the Constitution,'" the Department asserts, "will no doubt determine that it is not 'unreasonable' to utilize electronic surveillance to gather intelligence information concerning those organizations which are committed to the use of illegal methods to bring about changes in our form of government and which may be seeking to foment violent disorders."

Of course, the Constitution which any President has taken an oath to "preserve" specifically forbids unwarranted searches. And the Supreme Court has plainly said that electronic surveillance constitutes a search permissible under the Fourth Amendment only when properly circumscribed and authorized in advance by a judge. Congress only last year, wishing to regularize and control electronic eavesdropping, stipulated precisely in the Crime Control Act the conditions under which bugging and wiretapping could be authorized.

Yet the Department of Justice appears to be saying that both the Constitution and the Crime Control Act can be ignored whenever the President thinks that certain groups are "committed to the use of illegal methods to bring about changes in our form of government." What could better illustrate the absurdity of this standard than its application in regard to the tatterdemalion crew of New Leftists who stirred up disorder in the streets of Chicago. If the President or the Department of Justice can see a threat to the Nation's security in that tawdry, loose-lipped cabal, it can see a threat in anything.

And if a supposed threat to national security can justify setting aside the Constitution and the law respecting electronic eavesdropping, why can it not be used to justify setting them aside for any other purpose the President and the Department of Justice may deem expedient or convenient in the protection of national security? Will they some day think it not "unreasonable" to set aside the prohibitions against arbitrary arrest or against random physical searches of citizens' homes or against imprisonment without trial or against suppression of speech deemed dangerous? What the Department of Justice has so blandly enunciated is the rationale of dictatorship. It is the justification of every despot from Caligula to Adolf Hitler.

It has been disclosed recently that the Federal Bureau of Investigation systematically, over a period of years, tapped telephones in flagrant violation of the law and in cases having nothing whatever to do with national security. It bugged and tapped the homes and hotel roomes of the Rev. Dr. Martin Luther King and of Elijah Muhammad, the Black Muslim leader, for example. It is beside the point if, as the FBI now asserts, the Attorney General, at that time Robert F. Kennedy, authorized the eavesdropping; no Attorney General had any authority to do so. The FBI also bugged and tapped numerous persons alleged to be part of that undefined group called the "Mafia." This eavesdropping was done in violation of the Constitution, in violation of the law, in violation of a presidential order and in violation of repeated assurances by the Director of the FBI that it was not being done. J. Edgar Hoover has forfeited the confidence of the American people. He ought to resign or be removed from office.

A Federal Bureau of Investigation which eavesdrops on citizens is a peril to privacy and a menace to freedom in any circumstances. But a Federal Bureau of Investigation which does this in direct defiance of Congress is intolerable. Congress, in its wisdom, decreed last year that bugging and tapping could be done under court order. For the Department of Justice to assert now that it may bug and tap at its own discretion is to undermine the whole concept of a government of laws.

DEMANDS OF CERTAIN BLACK MILITANT GROUPS

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, June 20, 1969

Mr. BYRD of Virginia. Mr. President, the demands of certain black militant groups were the subject of an interesting column by the able and perceptive writer, James J. Kilpatrick, which was published in the June 19 edition of the Washington Evening Star. I ask unanimous consent that Mr. Kilpatrick's column be printed in the Extension of Remarks.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

BLACK DEMANDS FOR MONEY GREETED DOCILELY

(By James J. Kilpatrick)

It is not so strange, when you come to think about it, that Roy Innis should be putting the bite on the bankers and James Forman should be making the churchmen kneel. After all, banks and churches have money. Innis and Forman would like a large chunk of it. If you're going to make hay, you look to the high grass.

What is strange is the calmness with which acts of sheer effrontery are now received. A curious paralysis seems to have hit our sense of right conduct. In the presence of irrational behavior, rational thought is suspended. Gross rudeness passes as acceptable civility, and the most preposterous demands are reported in the press as soberly as budget hearings on Capitol Hill.

Consider the scene the other day in Chicago. The American Bankers Association and the National Bankers Association had arranged a conference on urban problems. The 300 delegates had barely sat down when a disturbance was heard at the rear of the hall. In marched Innis, executive director of the Congress of Racial Equality, at the head of a squad of fifteen. He strode to the podium, completely uninvited, and announced that he intended to make the conference relevant to black people.

Did the bankers give him the bum's rush? No, indeed. They asked him to lunch. Whereupon Innis demanded six billion not as a loan, mind you, but as a gift. And not really

as a gift: This was to be an initial down payment "as recoupment of the birthrights of black people with compounded interest."

"We're not here to make threats," said Innis, "but we are here to give you a message: We have two kinds of operations. We operate either in the streets or on the drawing board. We would prefer to operate on the drawing board."

Innis let that sink in. Then he advised his hosts that while he was in no particular hurry, it would be nice to have the 6 billion in a couple of weeks. His Black Urban Coalition was waiting.

Were the bankers flabbergasted? Disturbed? Resentful? Apparently not. They listened to Innis as mildly as if he were asking them to support the Community Chest. The churchmen, reacting to the demands of Forman, have been equally docile.

Forman's thing is the National Black Economic Development Conference, organized last April in Detroit. The conference came up with a manifesto demanding that predominantly white churches pay $500 million—since raised to three billion—as reparations for oppressions imposed upon the black man. The money would be used for a land bank and a black university, among other things; mainly it would be used for building "a Socialist society in the United States."

By way of making their intentions clear, Forman and his followers have been occupying church property, invading pulpits, and threatening "guerrilla warfare" if the churches fail to pay up. In Detroit last week, they simply took over a vacant Presbyterian church building, declared it "liberated territory," and demanded $50,000 in ransom as the price for getting out.

Have the churchmen called the cops? Gone to court? Have they even denounced this churlish fellow as a new kind of highwayman, engaged in a new form of extortion? Not for a moment. The United Presbyterians invited Forman to address their conference in San Antonio; when he demanded $80 million, they applauded.

Maybe the psychiatrists can explain this curious reaction in terms of a national guilt complex. Or perhaps an explanation lies in the infinite impositions to which society becomes accustomed; in a world of unlimited rudeness, arrogance becomes acceptable social behavior. Even so, the patsy syndrome holds exceedingly small appeal. The bankers would be better advised to tell Innis generally where he can go, and leave it to the preachers to make the directions more precise.

TITLE IX—A NEW DIMENSION IN FOREIGN AID—V

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1969

Mr. FRASER. Mr. Speaker, Mr. Schott's paper, which I have been inserting in the RECORD in sections, contains excellent suggestions for carrying out the congressional mandate for political development as an integral part of our foreign aid efforts. The next portion follows:

HOW TO PUT TITLE IX IN EFFECT

Yet, given these obstacles, is it realistic to anticipate a serious and imaginative response to Title IX on the part of A.I.D. or its successor agencies? From this vantage point, there are three prerequisites to such a response:

(1) *Change in the foreign policy stance of the U.S. Government.*—With rapid changes taking place within the Soviet bloc, with significant developments taking place in military hardware and its deployment, and with an increasing influence in international politics being assumed by the Third World, the strategic calculations of the 'fifties and the concept of Soviet containment are becoming increasingly obsolete. This allows for and necessitates consequent changes in the approach of the United States towards third-world countries. In particular, it enables the U.S. to be less concerned with short-run, strategic considerations or the fluctuating cold-war posture of such countries; it should give A.I.D. the opportunity to consider the longer-term, broader-gauged development needs of these countries and to offer—or refuse—assistance in accordance with the degree to which Title IX goals appear realizable.[14]

The relevance of Title IX in this new foreign policy context critically hinges upon whether U.S. foreign policy is accommodated to this new international configuration and whether popular and Congressional pressure behind Title IX causes that provision itself to become a determinant of the manner of that accommodation.[15] Such an accommodation would entail: (a) a major analytical effort to understand and identify the responsible forces of social and political modernization in individual LDC's; and (b) a search for ways to support overtly—through public or private channels—those groups who represent these forces and to promote the institutional developments which will channel them in organizationally responsible and developmentally constructive directions. For this, three things are necessary. In the first place, resources must be made available to A.I.D., the State Department, and other internationally involved agencies to enable the requisite analytical work to be undertaken. Secondly, a resolution of the existing organizational and attitudinal conflict between the roles of State and A.I.D. toward the LDC's must be sought. And ultimately, a presidential decision must be taken that continued U.S. Government association (whether inadvertent or deliberate) with the *status-quo* forces in aid-recipient countries must gradually give way to a more farsighted and subtle *rapprochment* with the popular forces of change in these countries.

(2) *Broadening the Scope of the Country Planning Process.*—Individual "grass roots" projects can in cases contribute significantly to Title IX objectives. Yet Title IX does not encourage an *ad hoc,* project-oriented response. On the contrary, its successful implementation will require the integration of a variety of mutually reinforcing activities and the utilization, in concert, of a variety of public and private assistance instruments. Technical assistance efforts divorced from (or ineffectively dove-tailed with) related capital projects, or *vice versa,* can spell the relative failure of both. Sector loans which neglect to address systematically—and often concommitantly—a variety of social, cultural, political as well as economic problems in that sector can produce counterproductive disequilibria and popular frustrations harmful to the process of development already underway.

In recent years, A.I.D. has progressed far towards developing relatively sophisticated economic planning tools and procedures, although statistical imprecision still renders many of the findings suspect. Occasionally these tools are employed for more than public relations purposes. More often, however, country programs are determined by such other factors as host-government priorities, U.S. strategic considerations, the availability of funds, and the special interests and expertise of USAID field officials, each of whom has his private developmental axe to grind. Further refinement of the country programming approach is required to increase its influence on the allocation of resources by adherence to explicitly stated long-term development goals. Changes in the foreign policy context of aid programs and consequent changes in American foreign policy goals could now make this possible.

Beyond such refinement, however, is the need for the expansion of this programming approach so that a broader range of activities is considered and systematically intermeshed with host-country development goals. Simply because a given activity is a "good thing" is no excuse to fund it; similarly, because a given activity is likely to contribute to Title IX objectives does not imply that it should be programmed at this time, or under U.S. government sponsorship, or without supporting or ancillary activities being undertaken simultaneously. The interdisciplinary long-term planning which this approach assumes will require both personnel and organizational changes within the official foreign affairs establishment, and a much greater emphasis upon research and evaluation than has been traditional for A.I.D. and its predecessor agencies to undertake.

(3) *The Effective Coordination of U.S. Public and Private Assistance Instruments.*—Just as Title IX constitutes more than a simple package of discrete projects, so also does its implementation require resources beyond the capabilities of any one agency. For its successful implementation, Title IX should become a responsibility of the wide range of U.S. public and private agencies which are involved, in one way or another, in the foreign aid business. As the principal coordinator of U.S. foreign policy instruments, the State Department should assume a pre-

---

[14] This position is reflected in a conclusion of a conference on Title IX sponsored by A.I.D. during the summer of 1968. See *The Role of Popular Participation in Development.* Report of a Conference on the Implementation of Title IX . . . June 24 to August 2, 1968 (Max F. Millikan, Conference Chairman), Chapter Two.

[15] It might be argued that if bipolar, cold-war security considerations no longer need loom so large as a justification for foreign aid, the United States can turn its attention to urgent domestic priorities, leaving the Third World at least temporarily to fend for itself. Such a policy would be short-sighted in the extreme. Foreign aid must always be with us in one form or another if only because of the ever-increasing interdependence of the nations of the world and because the great mass of the world's population happens to live in countries where the standard of living is appreciably below ours. Just as conflicts based upon glaring inequalities within our own society are surfacing today, the gross inequalities within individual LDCs and between the rich nations and the poor are bound to lead eventually to international forms of conflict (in which the U.S. cannot help but become involved) unless concerted action is taken to reduce the social and political inequities which tend to give rise to conflict. Foreign aid is a small price to pay for some insurance against the forms of retaliation that activist groups in the benighted nations may eventually be in a position to take against us. This is the opposite side of the more humanitarian, "no man is an island" argument in favor of foreign aid, which is equally valid. To give cogency and pertinence to either argument, however, requires reference to individual LDC country situations and a variety of other variables important to a determination of relative national priorities, which is far beyond the scope of this paper. Here it need only be said that the arguments of this paper are based upon the assessment that foreign aid is a valid and effective device to overcome some of the sources of conflict in particular LDCs, and that it is in the U.S. national interest to extend foreign aid for this purpose.

eminent role in this, ideally orchestrating the instruments reposing in the U.S.I.A., the Department of Defense, the Peace Corps, and A.I.D. to make certain that each performs, in a complementary and mutually reinforcing way, a developmental (rather than purely strategic, or propagandistic, or otherwise self-serving) role in the LDCs. This requires within the Washington foreign affairs establishment a greater centralization of existing analytical and decision-making responsibility with respect to the LDCs than is presently the case; it also involves a degree of bureaucratic self-abnegation and policy reexamination on the part of each of the concerned agencies. The impulse behind Title IX should discourage unrelated programs serving incompatible objectives within individual countries. Experience has regrettably shown that the Country Team concept is in itself unable to harmonize diverse programs implemented by different and sometimes antagonistic agencies. The job, at least in part, must be done in Washington.

In addition to this, effective procedures must be established to coordinate government-sponsored activities with those of U.S. private organizations sponsoring or directly undertaking developmental activities in the Third World. This is a hope long dreamed of among foreign aid administrators. Yet the extraordinary diversity of these organizations and their understandable suspicion of government regulation and interference have thus far enabled them to fend off any government-sponsored "rationalization" of their overseas activities. Token attempts at this have been made, both in Washington and the field, but not with any particular success.

Yet if Title IX is to be taken seriously, such coordination of public and private development efforts becomes more desirable than ever before. Many of the activities to which this provision draws attention can best be done by private sector organizations: It is they who can most efficiently administer small-scale projects and can maintain a high degree of flexibility in the manner in which they undertake them. They also frequently prove to have greater access to certain countries and relevant private sector groups than a U.S. public agency required to act on a government-to-government basis. Coordination need not imply control nor the rigidification of NGO programming procedures—but it does involve consultation, the mutual exchange of information and a candid discussion of programming intentions. Owing to security requirements, these conditions are as difficult for a government agency to meet as they are repugnant to many non-governmental organizations, which attach great value to their freedom of action. But a mutual accommodation would appear necessitated by Title IX, at the risk of a futile intensification of "project *ad hocism*."

CAMPUS REVOLUTIONARIES LAMBASTED

HON. PAUL J. FANNIN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, June 20, 1969

Mr. FANNIN. Mr. President, it is encouraging to be reassured that not all members of the academic community are lacking in courage and determination in the face of the campus revolutionaries. Dr. Dwight L. Dumond, a distinguished professor emeritus of history of the University of Michigan, shows by his article that he is neither intimidated nor fooled by this motley collection of unwashed yeggs, hoodlums, and misfits now masquerading as students.

Dr. Dumond was a liberal pioneer in the fight for the freedom of the Negro in America and is particularly well qualified to comment on what is happening on American campuses and on the goals and action of Negro students on the campuses.

I ask unanimous consent that Dr. Dumond's article, published in the Arizona Republic of June 11, 1969, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCHOLAR LAMBASTS CAMPUS REVOLUTIONARIES

(By Dr. Dwight L. Dumond)

(NOTE.—Dr. Dwight L. Dumond is a distinguished professor emeritus of history of the University of Michigan, who specialized in the history of the American South and taught in this field for 35 years at Michigan. He is the author of several definitive works dealing with the abolitionist movement, the antislavery origins of the Civil War and similar subjects.

(As a student of Southern slavery and its aftermath, Dr. Dumond was a liberal pioneer in the fight for the freedom of the black man in America. He is particularly qualified to comment on the tragic effects of the disruption of American campuses and the goals and actions of Negro students on those campuses.

(Dr. Dumond is now the A. Lothrop O'Connor professor of American Institutions at Colgate University, Hamilton, N.Y.)

Rioting on college campuses in the United States has now become such a disgrace that we may well be caught in the tentacles of worldwide revolution.

We are dealing with a unique institution. It is the most precious establishment in a democratic society, so fragile as to be an alluring temptation to every would-be dictator and propagandist spawned in a free society.

It consists of two essential elements—professors and students. But if present disruptions continue, we may have to turn more and more to research institutes, unburdened and unencumbered by hordes of students.

There is a deep cleavage between administrators and professors. It worries the administrators, annoys the professors, confuses the students and destroys morale.

The arrogance and power of administrative officers depends largely upon their control of finances. There is enormous competition between deans for larger budgetary allowances for their colleges, between chairmen of departments in division of college funds, and between professors for ever higher salaries. Great inequities exist in all areas.

Herein lies the deadly virus that has done more to weaken and destroy independent teaching and research than all other things combined.

There never has been a revolt without the encouragement and assistance of a portion of the faculty. It is precisely in those areas which have been neglected and suffer the inequities that trouble starts.

The administrators have little to do with teaching and research.

Today, students, who know nothing at all about anything much, also are demanding and are getting membership on all policy-making boards and committees, and making important college and departmental decisions.

Disaster first struck when we were compelled to educate, or try to educate, a great unwieldy mass of young men and women who had no definite objective in a system, designed, organized and operated with reasonable success for an intellectually elite, or at least culturally oriented and carefully selected, minority.

Barriers dropped or requirements lessened perceptibly. Students came without language equipment, without an ability to write intelligent English, without adequate preparation in subject matter, and, worst of all, without manners.

Almost before anyone knew what was happening, a group generally considered riffraff showed up—disreputable characters who dressed like tramps, smoked incessantly, used drugs and seldom bathed. They had no apparent respect for themselves, for anything or for anybody.

They had no social consciousness.

They had nothing, in fact—did nothing useful—but wanted every experience in life in a day and night and took what they wanted. They thought no one before them ever had any problems or any experience, ever did very much, or ever did anything right.

What we soon had to deal with was an oligarchy of ignorance, conceit and plain immorality.

The second area of conflict embraced personal conduct. The age of drug addiction, sexual promiscuity, and nudity was upon us. The demand was for all restraints by faculty or administrative officials pertaining to student behavior to be abandoned.

If they wanted to have sexual relations in lounges or university buildings or in the rooms of men's dormitories; if they wanted to use drugs to release all inhibitions; if they wanted to hurl obscenities at professors; if they wanted to come to class half naked; or if they wanted to put on plays while nude or publicly show films formerly found only in bawdy houses or at stag parties—if these or other acts ordinarily considered immoral and degrading pleased them, then no one should interfere.

They said that God was dead and religious tenets were no longer respectable.

The third area of conflict was that of foreign and domestic policy as related to the Vietnam war. This was a legitimate, perhaps compelling subject for investigation and discussion in the halls of learning at the proper time and place.

We started out with proper seminar discussions, but degenerated to desecration of the flag, insults to and about men who had died in the service of their country, demands for the end of ROTC training, cancellation of all recruitment and research, obstruction of the shipment of war supplies, invasion of official conferences with government authorities and sit-downs in court rooms and legislative halls.

All of this, vulgar as it was, pales into insignificance beside the source and purpose of the initial agitation.

Not all, but a substantial part of the entire business bore a direct relation to civil rights. Two premises will haunt professors of history from now until eternity, if they do not recognize and deal with them:

(1) The bitter crusade of denunciation and vilification of President Lyndon B. Johnson and his Vietnam policy was begun by men who had never lifted their voice in support of civil rights, who were suspected of strong racist tendencies and who aimed at confusing and confounding the entire civil rights movement.

(2) They were aided and abetted by pseudo-liberals, who, frightened by progress of the crusade for equality of Negroes and whites, dared not openly oppose it and sought to retard it by attacking the President who had done more in six years for the Negro and the poor and the underprivileged than all the other presidents combined since the founding of the Republic.

We might have tried with as much success to brush back the tides with whisk brooms as to bring order out of the chaotic situation at that point, and the worst was

yet to come. We were entering the fourth area of conflict. The black militants were on the march.

Negro students began with a demand for full integration, passed to a demand for courses in Negro history and ended with a demand for autonomy and separation. Along the way they made many demands conforming to the various stages of the power struggle going on among the Negro population.

Black power is the battle cry—black colleges in the cultural complex of a university; black professors; courses designed for and by black students; and admission without requirements, as if blackness removed all handicaps to the understanding of higher mathematics, political theory or genetics.

They had no program but shifted from one demand to another day by day. They had no proposed curriculum of studies and wanted none.

They wanted to invade and participate in faculty meetings. They wanted college and university funds to spend running around from one campus to another, to import speakers, many of whom have deliberately violated the law and thumbed their noses at the courts, and to publish and distribute propaganda.

They wanted separation, but white money. They wanted autonomy, but the benefits of university degrees. They were supported in all of these demands by a small but violent minority of white students and intruders on the campus.

Who are these youngsters that demand the very segregation and alienation that generations of their forebears fought to overcome?

Most of them know little or nothing about the work of Walter White, or Roy Wilkins, or Thurgood Marshall. They know of Martin Luther King because in their impetuous ignorance they destroyed him and abandoned his philosophy of nonviolence.

They know nothing about how black and white men working together in mutual respect and understanding overcame lynchings, secured abandonment of segregation by law in education, in housing and in public accommodation, or about the painful struggle for support of Negro colleges in the South.

They have been misled and deceived. They demanded black colleges, black teachers, and black studies—other names for subordination, ghettos and apartheid.

Black power is not a thing of virtue.

The true basis of power is economic, political, intellectual and moral. The highways to achievement run along these lines. There are no other roads. Division of the country or any part of it, or any of its institutions, on the basis of color, is no more possible than division of freedom.

There is no such thing as black freedom, or white freedom. Everyone is going to have it or no one is. No person ever was accepted, or evaluated, or elevated to power for long because he belonged to a group—only on the basis of ability, knowledge, and individual achievement.

I am not an amateur in the writing or teaching of history, or on the lecture platform, and few men have done more in the area of human relations or for the cause of racial equality, but a leader of the militants at Howard University dared to say to me in the classroom, "I don't want to hear any more about your constitutional democracy."

After a public lecture at Colgate University, one white student called me a "damned radical" and a black student called me "another of those — — liberals."

This is what we have come to in our universities; a composite of intolerance and ignorance.

Rejecting integration, young Negroes talk of black history, art, economics, political action, leadership, nationalism and capitalism. They say they will go it alone. Nobody is going anywhere alone. Black racism and white racism are equally bad and both are beyond the pale of respectability.

The young Negroes in the universities are being misled by power-hungry men who exploit their gullibility for personal reasons of money and power.

The demands of black militants are supported by many white students through ignorance, a desire for segregation, an impulse to help a minority group regardless of merit, or their own gain. It may have elements of exaggerated self-pride, of inferiority complex, or narcissism, of budding masculinity.

They talk about doing their "thing," thus revealing an intellectual poverty and subservience to ignorant leadership.

They want power without knowledge. Those who come from wealthy homes, and many do, say over and over again that they never have to work if they don't want to, and intend to create such wide-spread fear by rioting and destruction that people will get down to the serious business of creating the kind of society they want. They are adventurers and revolutionaries, and happily so.

University administrators, totally unprepared and uninformed, were paralyzed into inactivity when the rioting began.

Students who seize university officials and buildings, disrupt faculty meetings and conferences, resort to arson and bombing, and make it impossible for law-abiding students to go about the business of getting an education for which they paid, are guilty of crimes sufficient to send them to prison for life.

Every one of them who attacked police, security officers, and national guardsmen with weapons could have been killed in the melee and it would have been due process of law.

I am not saying that severe repression is wise, or advocating resort to it, but facts are facts; and when law enforcement officials are called upon to perform their primary function of protecting persons and property someone is certain to get hurt.

In many respects the situation is more serious than crime in the streets. In every case, militant students have demanded complete immunity from law enforcement—no one should be arrested, offenders should be released from jail, excused from trials, and reinstated in school without being disciplined. This is anarchy, and when mobs attack public officials it approaches planned insurrection or treason.

Universities alone cannot handle this problem of law enforcement, but they can expel those students who are involved and dismiss participating faculty members. Law enforcement agencies have their responsibilities as do parents.

Students do not lose their rights as individuals when they enter a university, but neither do they shed their obligation to obey the law. In fact one of our most precious rights is to live under the rule of law.

To make martyrs out of men who violate the law is to invite anarchy. The legal principle must be sustained on the college campus as elsewhere. Why then has there been so much delay in correcting this serious and disgraceful business?

Agitators are not interested in discussion or reform, but in destruction and domination. They have no intention of making the educational process a continuing and ever-changing one.

The idea is to create havoc, confusion, destruction. Whether the basic motives can be classified as Communist, fascist or plain anarchy, the actual program is plainly identifiable as destruction of educational institutions rather than reform of educational processes.

The militants follow a practice of staying away from classes and public lectures; and of mutilating books, magazines, and manuscripts which do not conform to their momentary mood.

They check out thousands of books to disrupt the learning process, but never bring a precious tome to class. Instead, they bring coffee and doughnuts, hamburger sandwiches and soft drinks. Some of them come to classes in pajamas and with everything from garlic to cigarettes on their breath.

They cannot speak without obscenities. They cut great holes in desks, write erotic notes on desks at which decent people have to sit after them and burn holes in the carpets and cork floors. They have revolted against everything that is decent and respectable. Their study habits are irregular or nonexistent.

Faculty members have become so accustomed to these things and so intimidated by colleagues who go along with the students' behavior that they cease to be concerned if someone throws a brick through the window.

Professors have a long tradition of concern for the dignity, and security of the students and educational process. They know that some of the students' complaints are legitimate. In fact, they know more about that than anyone is willing to admit.

Too many administrators and faculty members, also, have been more interested in their own security and advancement than in the students.

Just as some of the problems of the cities lie in the poverty and illiteracy of the rural South whence the immigrants came, so do the problems of the universities lie in the homes, the public schools and the churches. Youngsters coming to college have never been disciplined. This is a permissive society. Our cultural level is in steady decline.

Children have never been failed in public schools, since there are no standards for promotion from year to year. They have never been taught respect for persons and property.

Universities cannot in a few months make up the deficiencies of parents, schools, churches, and public officials over a period of 16 to 18 years; and they have more sense than to try to do it by repression.

Governors, legislators, even congressmen and the President shun the problem and find justification for their inaction in the peculiar nature of educational institutions, or in the structure of the federal system which lodges police power in state and local government.

This is not a local matter. There is revolution involved, and the campus disorders are calculated, whether by design or not, to contaminate the vast reservoir of moral and intellectual power which is the great strength and security of a democracy.

The right to dissent does not mean the dissenters' views must prevail. Militant students say it does, that their demands are not negotiable. It does not include a right to destroy property, to prevent by obstruction, noise and physical violence, the vast majority of the students from going about their business of getting an education.

Militant students who call themselves Afro-Americans are devotees of black power.

To many it means unity in everything—to act as a black person though elected as a delegate to a political convention, appointed to a teaching position, given public office and so forth.

It means no longer to be a responsible person but a member of a group in politics, in business, in education, in religion. Their professed objective is a worthy one, of giving to black people a sense of dignity, of belonging, the need of which may well be overemphasized, but the value of which cannot be denied.

What then has been the result of these campus disorders? What has it all gained? What are the losses?

Those things which militants among the students want are not within the province of anyone to give. The structure of a university cannot be changed overnight, in all probability should not be changed at all.

Teaching methods, the content of admis-

sion requirements, the intellectual attainments which justify conferring degrees—all of these elements in the educational process are constantly under scrutiny and revision by college faculties. There is always intellectual ferment, though not always change because change does not always denote progress.

The militants are not progressives, not liberals. They are reactionaries of the most extreme sort. They seek to destroy, not to build, and they are achieving little except chaos and retardation. When the revolution has consumed its leaders, as always happens, and the wreckage is cleared away, we will be about where we were before the trouble started.

Those responsible have:

Destroyed academic freedom.

Betrayed the educational process by seeking objectives through ultimatums, threats of force, and destruction of property.

Infringed upon the rights of others to improve their talents and skills.

Greatly retarded understanding and peace between people of different colors by demanding separation instead of integration.

SEAL BEACH RESERVOIR INCORPORATES LATEST TECHNOLOGY

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1969

Mr. HOSMER. Mr. Speaker, on Sunday, June 22, the city of Seal Beach, Calif., will dedicate its new reservoir and the event is significant far beyond the city's boundaries. Completion and operation of its newest reservoir will mark several achievements.

The additional 3.6 million gallons of water storage will assist in providing the necessary water supply for the present population and for growth of the community for several years. A 900-foot well, which has been sunk at the site, supplies water to the reservoir. Other water for the city comes from additional wells and from the metropolitan water district.

The most distinctive feature of this reservoir is its nylon-vinyl air-supported cover, a radical departure from the standard use of concrete. The nylon-vinyl cover performs the necessary functions of preventing evaporation and contamination, but at much less cost—slightly over 3 cents per gallon of storage capacity, instead of 5 to 10 cents per gallon with concrete cover.

The cover weighs almost 2 tons. About 2½ pounds per square foot of air pressure prevents a collapse of the roof. The pressure is supplied by two 1½-horsepower motors. Both motors would have to be inoperative for a full day before the cover would settle to the waterline. The cover was designed by Industrial Covers of San Francisco to cover an acre of ground to a height of 36 feet. It is the largest inflated roof on any water reservoir in the United States.

Other improvements completed as part of the project include a 4,000-gallon-per-minute pumping station, approximately 3 miles of 18-inch and one-half mile of 12-inch water mains.

The project was financed by a grant of 50 percent of construction and other eligible costs from the Department of Housing and Urban Development and the city of Seal Beach.

The total water system improvements represent an expenditure of approximately $800,000. Construction crews have been working on the project since December 1968.

CONSERVATION OF OIL AND GAS DEPENDS ON RETAINING DEPLETION ALLOWANCE

HON. CHARLES H. GRIFFIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1969

Mr. GRIFFIN. Mr. Speaker, during our consideration of the revision of the Internal Revenue Code, it is appropriate that we discuss depletion allowances. I favor retaining the 27½-percent oil depletion allowance because, in my humble opinion, its reduction or elimination would drastically curtail the exploration of oil and gas. If we are to preserve for the use of future generations adequate supplies of petroleum, we must continuously locate and identify reserves. The essence of the question then, is conservation.

In this context, I call my colleagues' attention to the following comments of James Lambert, editor of the Natchez Democrat. It follows:

[From the Natchez (Miss.) Democrat, June 3, 1969]

NEED DEPLETION ALLOWANCE

When Congress proposed, and the State ratified, the income-tax amendment to the Constitution in 1918, the intent clearly was to tax net income from constant assets.

Replacement of ordinary capital investment, such as for machinery and equipment, was provided for by tax deductions for depreciation.

For mineral and certain other natural resources such as forests and fisheries, where the capital is a wasting asset, replacement of the capital investment is partly provided for by the 'depletion allowance' tax deduction. In the case of mineral resources, the specific asset is irreplaceable and a new 'asset' must be found by exploration.

Since most extractive industries are high-risk enterprises, incentive for risk capital to invest in mineral exploration could only be provided by greatly increased profits, if tax relief through depletion allowances did not exist. Since independent studies have repeatedly shown that current profits in the extractive industries are, on the average, about equal to or less than those of industry in general, and the tax load also about the same, this means that greatly increased product prices would be needed to offset exploration costs and risks.

The degree of exploration risk is theoretically balanced by the amount of the depletion allowance, based on the discovery value principle. Thus depletion allowances range from 5 to 27½ per cent of the gross value of the product produced, depending on exploration costs, but in no case may exceed 50 percent of the producer's net income from the property concerned.

Periodic studies over the past 40 to 50 years by committees of the Congress and by other investigative bodies have repeatedly reaffirmed the justice and economic soundness of the depletion-allowance principle. Criticisms, of this principle seem unjustified, particularly the one for oil and gas.

An adequate supply of minerals—fuels for power and transportation, metals for construction, and minerals for crop nutrients to maintain life—and absolute requisite for any modern industrial economy, now and in the future.

There are limited quantities of these needed minerals on or in the earth, and these quantities of these needed minerals are now being depleted at increasing rates as population growth, and demand increase.

Exploration costs rise rapidly as the most easily found deposits are exhausted. There is therefore a need to reexamine depletion allowances periodically and increase them as necessary to provide the incentive for investment of risk capital by balancing rising exploration costs.

The fact that, in the past few years, discovery of new reserves has not kept pace with production of oil and gas, and of some other minerals, indicates that this objective is not being attained in all cases.

OUR ECONOMIC CRISIS DEEPENS

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1969

Mr. OTTINGER. Mr. Speaker, I view last week's increase in the prime rate for bank loans as an extremely unfortunate development for our economy. But I view with even greater alarm a more recent talk by leading U.S. bankers that a further increase in the prime rate may be in the offing.

This latest report came from Copenhagen, where the American Bankers Association is conducting its annual international Monetary Conference. Reports indicate that many of our bankers feel a further prime rate boost to 9 percent would be likely unless business loan demand drops in the next few weeks.

I wonder how the average American wage earner feels about these pronouncements emanating from the castles, palaces, and luxurious restaurants in which our bankers are conducting their conferences?

Does anyone believe the typical family is content to be trapped in the ever-tightening vise of higher prices and higher taxes?

Whether this latest increase in the prime rate was due wholly or in part to a lack of adequate guidance from the administration is an academic question at this point, although it is significant that no spokesman for the administration has said anything definitive or indicated how it might view yet another increase. What should really concern us now is the urgent need for a more even-handled approach to our economic problems and a far better balance in the use of monetary policy and fiscal policy.

As the New York Times pointed out in a recent editorial, the effective prime rate actually is more than 10 percent. And the latest increase will make it difficult, if not impossible, for thousands of families to obtain credit to buy homes and for small businesses to finance their operations.

For many Americans, our economic boom has actually been something for a

recession. As the gross national product has soared, the standard of living for the average worker and his family has actually declined. Latest Labor Department figures show that the typical worker has a weekly pay of $112.13 but purchasing power of only $77.62. This is $2.24 below last September's figure and below the yearly averages for each of the last 4 years.

The buying power of the average worker's family has actually been declining for more than 10 years. Every increase in wages has been more than overcome by increases in taxes and by inflation. One prominent economist has predicted that purchasing power for the average family will continue to erode and that even while pay scales may increase, the standard of living will decline.

Higher local, State, and Federal taxes are part of the reason. But another important reason is the proclivity of business firms to merely pass on higher taxes and higher credit costs to the consumer. An official of City Stores Co. of New York was quoted as saying that the recent prime rate increase "is just one more reason to raise prices," and predicted a price increase of 4 to 5 percent over last year's levels.

A leading consumer finance company said it will increase charges on loans wherever possible. And a large savings bank said it will increase its charges on home mortgages guaranteed by the Federal Housing Administration.

If this vicious cycle continues, it is clear that the typical worker simply will not be able to win enough pay increases to offset the costs of inflation. At the same time, labor efforts to offset inflation by improving their pay contracts would probably serve to intensify the price spiral.

The ineffectiveness of the income tax surcharge in curbing inflation and its obvious unfairness in adding to an already inequitable tax structure make it obvious that substantial cuts in Federal spending and comprehensive tax reform are matters of highest priority. The modest budget cuts proposed by the administration are commendable, but leave considerable fat untouched, particularly in the areas of public works, farm subsidies, highway construction, space, the supersonic transport and a military budget that proposes to take more than 60 percent of our free funds. At least $10 billion in additional cuts can and should be made in the new fiscal year.

Combined with a tax reform program that will ease an unfair burden on the average family while opening up new sources of revenue, these spending cuts could achieve fiscal stability and reverse the dangerous cycle which has characterized our economy in the past few years.

At the same time, we must demand that monetary policy and those who make it be fully responsible to the national interest—not just to one segment of the business community. It is long past time that the American consumer and taxpayer stopped paying blackmail to domestic and international bankers.

HOUSE OF REPRESENTATIVES—*Monday, June 23, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Bear ye one another's burdens and so fulfill the law of Christ.—Galatians 6: 2.

Eternal God, who hast called us to pray and to work, sustain us with Thy power that we may be daily mindful of Thy presence and ready to help bear the burdens of others.

Guide us with Thy spirit that we may understand this troubled time in which we live and so lead us that we may use our talents to bring forth the fruit of faithful living.

Grant unto us the wisdom to order the life of our Nation upon the principles of justice, righteousness, and good will.

Give us the readiness to render real service to Thee, our country, and our fellow man, that out of our efforts may come peace to our world, peace to our Nation, and peace to our own hearts.

Again death has invaded this Chamber. In the prime of his life our colleague has entered the life immortal. We thank Thee for his presence in our midst and for the contribution he made to our country through this body. Bless his family with the strength of Thy spirit and the comfort of Thy love: through Jesus Christ, our Lord, in whose name we pray. Amen.

THE JOURNAL

The Journal of the proceedings of Thursday, June 19, 1969, was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment bills and a concurrent resolution of the House of the following titles:

H.R. 1437. An act for the relief of Cosmina Ruggiero;

H.R. 1939. An act for the relief of Mrs. Marjorie J. Hottenroth;

H.R. 1960. An act for the relief of Mario Santos Gomes;

H.R. 2005. An act for the relief of Lourdes M. Arrant;

H.R.4600. An act to amend the act entitled "An act to incorporate the National Education Association of the United States", approved June 30, 1906 (34 Stat. 804);

H.R. 5136. An act for the relief of George Tilson Weed;

H.R. 6607. An act to confer U.S. citizenship posthumously upon Sp4c. Klaus Josef Strauss; and

H. Con. Res. 114. Concurrent resolution commemorating the 200th anniversary of Dartmouth College.

The message also announced that the Senate had passed, with amendments in which the concurrence of the House is requested, bills of the House of the following titles:

H.R. 1632. An act for the relief of Romeo da la Torre Sanano and his sister, Julieta de la Torre Sanano;

H.R. 2336. An act for the relief of Adela Kaczmarski;

H.R. 8644. An act to make permanent the existing temporary suspension of duty on crude chicory roots; and

H.R. 11400. An act making supplemental appropriations for the fiscal year ending June 30, 1969, and for other purposes.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 8644) entitled "An act to make permanent the existing temporary suspension of duty on crude chicory roots," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. LONG, Mr. ANDERSON, Mr. GORE, Mr. HARRIS, Mr. WILLIAMS of Delaware, Mr. BENNETT, and Mr. CURTIS to be the conferees on the part of the Senate.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 11400) entitled "An act making supplemental appropriations for the fiscal year ending June 30, 1969, and for other purposes," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. BYRD of West Virginia, Mr. RUSSELL, Mr. PASTORE, Mr. HOLLAND, Mr. ELLENDER, Mr. MUNDT, Mr. YOUNG of North Dakota, and Mrs. SMITH to be the conferees on the part of the Senate.

The message also announced that the Senate had passed bills, joint and concurrent resolutions of the following titles, in which the concurrence of the House is requested:

S. 152. An act for the relief of Dr. Joaquin Juan Valentin Fernandez;

S. 632. An act for the relief of Raymond C. Melvin;

S. 690. An act for the relief of Chong Pil Lee;

S. 912. An act to provide for the establishment of the Florissant Fossil Beds National Monument in the State of Colorado;

S. 1087. An act for the relief of Vernon Louis Hoberg;

S. 1128. An act for the relief of Mrs. Chong Suk Stroisch;

S. 1173. An act to authorize the Secretary of Commerce to employ aliens in a scientific or technical capacity;

S. 1677. An act for the relief of Dr. Augusto G. Usategui;

S. 1704. An act for the relief of Lillian Biazzo;

S.J. Res. 88. Joint resolution to create a commission to study the bankruptcy laws of the United States;

S. Con. Res. 17. Concurrent resolution to recognize the 10th anniversary of the opening of the St. Lawrence Seaway; and

S. Con. Res. 33. Concurrent resolution favoring the suspension of deportation of certain aliens.

PERMISSION TO EXTEND REMARKS

Mr. ALBERT. Mr. Speaker, without creating a precedent, I ask unanimous consent that all Members may extend their remarks in that portion of the RECORD known as the Extensions of Remarks today, and to include such extraneous material as may be relevant.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

HOUR OF MEETING TOMORROW

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet at 11 o'clock a.m. tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

TRANSFER OF SPECIAL ORDER

Mr. GROSS. Mr. Speaker, I ask unanimous consent that the special order I have for this afternoon be transferred to tomorrow.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

SENATE BILLS, JOINT AND CONCURRENT RESOLUTIONS REFERRED

Bills, joint and concurrent resolutions of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 152. An act for the relief of Dr. Joaquin Juan Valentin Fernandez; to the Committee on the Judiciary.

S. 632. An act for the relief of Raymond C. Melvin; to the Committee on the Judiciary.

S. 690. An act for the relief of Chong Pil Lee; to the Committee on the Judiciary.

S. 912. An act to provide for the establishment of the Florissant Fossil Beds National Monument in the State of Colorado; to the Committee on Interior and Insular Affairs.

S. 1087. An act for the relief of Vernon Louis Hoberg; to the Committee on the Judiciary.

S. 1128. An act for the relief of Mrs. Chong Suk Stroisch; to the Committee on the Judiciary.

S. 1173. An act to authorize the Secretary of Commerce to employ aliens in a scientific or technical capacity; to the Committee on Interstate and Foreign Commerce.

S. 1677. An act for the relief of Dr. Augusto G. Usategui; to the Committee on the Judiciary.

S. 1704. An act for the relief of Lillian Biazzo; to the Committee on the Judiciary.

S.J. Res. 88. Joint resolution to create a commission to study the bankruptcy laws of the United States; to the Committee on the Judiciary.

S. Con. Res. 33. Concurrent resolution favoring the suspension of deportation of certain aliens; to the Committee on the Judiciary.

THE LATE HONORABLE WILLIAM H. BATES

The SPEAKER. The Chair recognizes the gentleman from Massachusetts (Mr. CONTE).

Mr. CONTE. Mr. Speaker, I rise today in sadness for it is my duty to officially notify this body of the passing of one of its finest Members—Representative WILLIAM H. BATES, of Massachusetts.

Mr. BATES, a Member of this body for 19 years and the senior minority member of the House Armed Services Committee, died of cancer yesterday at Bethesda Naval Hospital. He was 52 years old.

Death is always incomprehensible. But when it comes at an early age, and when it strikes down a man possessed of the rare qualities so needed by a troubled country, it is doubly tragic.

For here was a man, Mr. Speaker, whose life was proof of the compatibility of service to both God and the state. He did not scrimp in his service to either. He rendered to both the very best he had.

Much can be said of the many fruitful years of service WILLIAM BATES gave to his country, both as a dedicated naval officer for nearly 10 years and as a distinguished and effective Member of the Congress for the past 19.

These are things which must and will be said for Mr. BATES' career was a model of the just use of power and position. Our country today needs such models.

But, as a personal friend, I shall always remember BILL BATES as the epitome of the christian gentleman, the warm family man, the true and gentle friend. None of us is so blessed with such friends that we can easily afford the loss of one of them.

In this time of mourning, my heart goes out to his widow Jean, daughter Susan, and the rest of his family.

In the near future I will obtain a special order so that House Members may offer their individual eulogies.

Friends may call at the Gawlers Funeral Home today, 5130 Wisconsin Avenue, between 2 and 9 p.m.

A prayer service will be held at the funeral home today at 7:30 p.m.

On Tuesday and Wednesday the body of the deceased will lie in Salem.

On Thursday at 11 a.m. the funeral will be held in Salem.

Mr. BOLAND. Mr. Speaker, will the gentleman yield?

Mr. CONTE. I yield to the gentleman.

Mr. BOLAND. Mr. Speaker, the death of our colleague, BILL BATES, comes as a keen shock to all who knew him.

His death is a tragic example of the fierceness and voraciousness of cancer. Just a few short months ago, he was the picture of health—robust, cheerful, active. Yet, today, he is no longer with us in life.

Mr. Speaker, if there ever was a finer human being than BILL BATES, I did not know him. Intellectually, morally, physically, socially—in every way—he, indeed, was the perfect gentleman.

He came by all of these attributes naturally—nurtured by a splendid family and educational background. He was, indeed, a "chip off the old block." One need but look at his uniform success in public life to understand that he was imbued with the spirit and dedication of his great father, the Honorable George Bates, whose seat he took in this House.

He, more than a lot of us, understood the temper and tide of the times, but he was never panicked by them. He did his work in this body, for his country, his State, and his district, better than most of us. And always, he found time to mingle with the people he represented and to identify himself with them. He was never a partisan in matters that affected his area. I suspect that the best proof of this is that he was continuously returned to represent a district, that, if not Democratic in makeup, is assuredly marginal politically.

Our Nation has lost a strong leader at a time that it can ill afford it. Our State of Massachusetts will miss him and his own district will remember him for what he was and what he did. I have lost a good and solid friend.

To his devoted wife, Jean, and to his daughter, Susan—to his entire family I extend my sympathy in their hour of sorrow.

Mr. CONTE. I yield to my colleague from Massachusetts (Mr. KEITH).

Mr. KEITH. Mr. Speaker, the flag above the Capitol hangs at half mast today in tribute to our late friend and colleague, BILL BATES. The death of a Congressman is always marked by sadness as we recall past associations and achievements. But the death of BILL BATES is doubly tragic, for we mourn not only a distinguished past but an even more promising future lost.

BILL BATES was a politician in the finest sense of the word—a man whose purposes and accomplishments were utterly and completely in the public interest. In his 19 years in the House, BILL developed a reputation for fair-mindedness and knowledgeability that few exceeded. He was not known for locquacity—but just because he did not discuss and deliberate upon an issue at great length did not indicate that he was uninformed or disinterested. On the contrary, he was so well-informed and so interested in issues—especially those affecting Massachusetts or the Armed Services Committee—that he often gave accurate off-the-cuff answers to extremely complicated questions, constantly impressing his colleagues with the scope of his knowledge.

This respect was shared not only by his colleagues in the House, but by his constituents, by his staff, by the staffs of the committees on which he served, and by the executive agencies with which he came in contact. All will feel keenly the loss of this admired and beloved man.

When I first came to Congress 10 years ago, BILL, although younger than I, was even then a veteran legislator. His calm exterior and deliberate manner may at times have given impression of an unawareness of the complexities of a situation—but only to those who did not know him. Subsequent developments invariably showed that BILL BATES mastered and understood even the most complicated issues in his field. And the fact that his constituents again and again returned him to Congress shows clearly his extraordinary political insight and judgment. This special competence and expertise, especially in military matters, will be sorely missed, by the Armed Services Committee, by the House, and by the Nation as a whole.

There are strong elements of the tragic in BILL BATES' untimely passing. For it was nearly 20 years ago that BILL's father, Representative George Bates, died in an airline crash here in Washington. The year after, BILL won a special election to succeed him. It is indeed tragic that now the son should follow the father—both dying while in service to the district they loved.

There is tragedy, too, in the fact that

BILL has passed on in what many would consider the prime of life. He was relatively young, and exuded vigor and life. He always kept himself in fine physical condition, and was certainly among the most fit among our membership. It is especially saddening that this hale and hearty man should no longer be with us.

His death leaves a gap in our ranks that will be hard to fill. I know that I express the views of us all when I extend sincere condolences to his wife, Jeanne, his mother Nora, his daughter Susan, and to the many others who were privileged to call themselves his friends. If I may paraphrase what Benjamin Franklin's successor as Ambassador to Paris said centuries ago, "Someone may succeed BILL BATES in Congress—but no one can ever replace him."

Mr. CONTE. I yield to the majority leader, the gentleman from Oklahoma (Mr. ALBERT).

Mr. ALBERT. Mr. Speaker, I was shocked, as was every Member of the House, to learn of the death of a very good and personal friend and a very outstanding Member of this House, our late beloved colleague, BILL BATES.

When I first came to Congress I served with the father of BILL BATES. I remember his tragic and untimely death.

When BILL was elected to succeed his father, his wife and little daughter came to live in the same apartment building in which Mrs. Albert and I lived. They were good neighbors. We became very well acquainted with them early in BILL'S service here in Congress, and we became very fond of them.

BILL has gone on to become one of the truly outstanding men in this House in his day. Ranking member of the Committee on Armed Services, a strong defender of a strong America, and an outstanding member of the Joint Committee on Atomic Energy, he has made his contributions to the America of our time and to succeeding generations.

I shall miss him, my good friend.

Mrs. Albert joins me in extending our deepest personal sympathy to his wife Jeanne, his mother Nora, and his daughter Susan.

(Mr. ALBERT asked and was given permission to revise and extend his remarks.)

Mr. ARENDS. Mr. Speaker, will the gentleman yield?

Mr. CONTE. I yield to the distinguished minority whip.

Mr. ARENDS. Mr. Speaker, this is indeed a very sad day for me as well as for all colleagues who have been privileged to serve with BILL BATES in this great legislative body. At a later date when eulogies will be held I will want to in detail make additional remarks on the life of this wonderful man. He was my close friend—one whom I admired and respected in every way.

My wife, Betty, joins me in extending our most sincere sympathy to his wonderful wife Jean and daughter Susan.

Mr. BOGGS. Mr. Speaker, will the gentleman yield?

Mr. CONTE. I yield to the distinguished majority whip.

Mr. BOGGS. Mr. Speaker, I join with my colleagues in expressing shock and sadness at the passing of one of the great Members of this body. BILL BATES had a personal relationship with every Member of this body. He had a warmth of character that permeated him. He had a sense of humor which was with him at all times. He was indeed a Congressman in the finest sense of the term.

He was a great American. I was pleased with the gentleman's description of BILL BATES' ability to serve his country and to serve his God with equal fervor and dedication. What finer tribute can be paid to a man?

I recall it was just about 2 months ago—it was longer than that, but fairly early in the year when I was not feeling very well and I was resting on a couch in the Democratic cloakroom. BILL BATES came in and we kidded a little bit. He said, "What is wrong?" I said, "I am not feeling very well." He said, "I haven't been feeling well, either." I said, "There is nothing wrong with you, there couldn't be."

He looked so robust and healthy and strong that it is incomprehensible that in so short a time a man who was physically strong and a mental giant should be stricken and taken from us.

So I have the same sense of loss that all of us must feel today. I join with all who have spoken in saying to his lovely wife and family, "God bless him and keep him."

Mr. RIVERS. Mr. Speaker, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from South Carolina.

Mr. RIVERS. Mr. Speaker, how inadequate are words to express true sorrow.

How difficult it is to convey the feelings that lie deep in one's heart. Those of us who have lived by words find the words desert us in moments that touch us most deeply.

The death of Representative WILLIAM H. BATES brings over me a sense of loss that I cannot communicate. All of you know that BILL BATES was a Member of Congress for 19 years. He was the ranking minority member of the House Armed Services Committee. He was the most knowledgeable Member in the Congress concerning matters of national defense. He was a man of learning, of great judgment, of integrity, of compassion, of thoughtfulness, and of honor.

But somehow he was more than the sum of all of these things. To those of us who had the gift of his friendship and the privilege of sharing with him responsibilities, he was a tower of strength out of all proportion to the position that elections and seniority can normally bring to a man.

More than any man that I can name, he had the temperament of a great legislator. This House has been privileged to know many men who were brilliant of mind, broad in judgment, possessed of great energy, capable of great warmth and friendship. But BILL BATES had the perfect combination of these qualities. He was a man who always looked on his duty as a legislator concerned with national defense not as developing skills for war, but as finding the means for peace.

In the Armed Services Committee we know already how greatly we will miss him. We have missed him terribly this year, but we always felt that somehow, some way, he would come back to us. We never said "if BILL returns;" we always said "When BILL returns."

In the months and years to come this House will miss him greatly.

The Nation never has had a time when it more sorely needs leaders with the equanimity of spirit that characterized BILL BATES.

I will miss him also as a true and treasured friend. The staff of the Armed Services Committee has particularly asked that I include in my remarks today an expression of their profound sorrow.

He leaves a great emptiness:

He went down
As when a lordly cedar, green with boughs,
Goes down with a great shout upon the hills,
And leaves a lonesome place against the sky.

I was deeply touched to hear that at the moment when BILL BATES died, when his life on earth was fading away, the national emblem was being raised and the national anthem was being played at Bethesda Naval Medical Center. How appropriate for one who was so truly a patriot.

Mrs. Rivers and I send our deepest sympathy to his lovely wife and daughter and the other members of the Bates family.

Mr. CONTE. Mr. Speaker, I yield to the gentleman from Ohio (Mr. HAYS).

Mr. HAYS. Mr. Speaker, it was with a deep sense of shock that I heard on the car radio as I was driving back last night of the passing of BILL BATES.

BILL has been a member of the U.S. delegation to the North Atlantic Assembly, formerly known as the NATO Parliamentarians, for a long time. I have had the honor of being the chairman of the House delegation. He was a member who did us a lot of good in those meetings, because of his cheerful demeanor and his knowledge of the subject of military affairs. He was a member of the military committee.

I recall the trip we made to Brussels last November, at which he was his usual cheerful self. After the meeting in Brussels we paid a visit to Oslo, Norway, as guests of the Norwegian Parliament. I got a letter afterwards from the U.S. Ambassador to Norway saying the visit had done a lot of good in American-Norweigan relations. I suspect that BILL BATES had as much to do with the success of that visit as all the rest of us put together, because he had the right touch. He said the right things at the right time.

We are going to miss him on that delegation.

Like the chairman of the Committee on Armed Services, I also knew he was gravely ill, but somehow or other thought that he would be back, expected that he would be back—and of course, we all hoped that he woud be back.

My sympathy goes out to his wife, who accompanied us last fall on that journey. I am sure that she will have many happy memories of that trip, in which he showed no indication of his fatal illness

but was his usual, normal, ebullient, joyful, happy self.

Mr. CONTE. Mr. Speaker, I yield to the gentleman from Texas (Mr. PICKLE).

Mr. PICKLE. Mr. Speaker, we have all lost a dear friend and a valued colleague. In my own case, I believe I have lost more, because I have lost a shipmate.

For 18 months BILL BATES and I steamed throughout the South Pacific aboard the U.S.S. *Miami*. When he came to our ship he was a bouncing young officer, fresh from Brown University. Naturally, we got to know each other well and intimately. He had that brightness, that bounce, and that happiness about him which immediately brought respect and appreciation and popularity both from the officers and the men. We got to know each other well as shipmates do, when confined aboard a vessel for months at a time.

I respected him highly then, and that respect has increased over the years.

Naturally, it was with a great deal of pleasure I looked forward to joining him here in the Congress when I first came.

BILL BATES came by my office and greeted me, and from that point on many, many times befriended and helped me and did things that were thoughtful and kind. He was that kind of a colleague to all of us. The same kind of respect that he immediately brought aboard that ship I noticed permeated this Hall as shown by the respect that the various Members have extended to him. I rather imagine that the interest BILL developed in national defense came about because of his experiences in the early days of World War II. As the chairman of the Committee on Armed Services has said, BILL was perhaps the outstanding authority on military affairs in this House. He was a tremendous individual—happy, alert, and helpful. We will all miss him very much.

Mr. Speaker, I extend to his family my very deepest sympathy.

Mr. HOLIFIELD. Mr. Speaker, will the gentleman yield to me?

Mr. CONTE. I yield to the gentleman from California, but before I do so I wish to reiterate that we will have a special order at a later date so that all Members will have an opportunity to eulogize our colleague, BILL BATES.

Mr. HOLIFIELD. In that case, Mr. Speaker, I will reserve my remarks for that time. I was under the understanding, with the Speaker, that the eulogies would be held for our departed colleague later.

Mr. CONTE. That is absolutely right.

Mr. HOLIFIELD. Therefore I think it might be well to give us that time to prepare our remarks in some detail.

Mr. CONTE. I expect to discuss this matter with his widow this evening, and we will set a time so that all Members will have an opportunity to eulogize BILL BATES.

Mr. O'KONSKI Mr. Speaker, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Wisconsin.

Mr. O'KONSKI. Mr. Speaker, I had the pleasure of serving with WILLIAM BATES' father, as I did with his son BILL BATES. I sat next to BILL BATES on the Committee on Armed Services for the past 17 years now, ever since 1952.

A great poet wrote many years ago—

I have never talked to God and I have never been in heaven, but had I talked to God and had I been in heaven, this is a man.

I am sure that when this great poet wrote those words she had men like BILL BATES in mind. Among his legion of qualities was the fact that BILL BATES was a deeply religious man. I do not know how many of the Members of the House knew it, but I doubt that there was a more devoutly religious Member of this House than BILL BATES.

The Lord working in strange and devious ways, I am sure the situation was thus: God needed BILL BATES, God wanted BILL BATES, God took BILL BATES, and he will be as helpful to God as he was to the world, to the Nation, and to his family.

Mr. O'NEILL of Massachusetts. Mr. Speaker, will the gentleman yield?

Mr. CONTE. I yield to my colleague from Massachusetts.

Mr. O'NEILL of Massachusetts. Mr. Speaker, I too want to join the other Members of the Congress in expressing our deepest regret at the loss of our good friend, BILL BATES. I can truthfully say he was one of my closest friends. I knew his dad before I knew him, and I knew BILL since he was a young fellow. He was one of the finest men I have ever met. A real, outstanding Christian gentleman who lived up to the principles of his faith, and lived up to the principles of all good family men. A finer man never lived.

He had a great sense of wit, and a great sense of humility about him. He loved his fellow man.

Mr. Speaker, it is an old wives' tale that when someone good dies, a chill wind passes over the earth.

I feel that way now, not because of an old wives' tale, but because one of the warmest, kindest, most joyful men I have ever known has passed away.

BILL BATES was truly the most cheerful man on Capitol Hill. He was full of good will, of love and respect for his fellow man.

On the day I entered Congress he had already been here for almost 3 years. He was eager to share his experience and knowledge with the freshmen members of the Massachusetts delegation.

We worked closely together for more than 16 years. We shared a devotion to the Commonwealth and to the Nation.

He served his district well for 19 years, never for a moment overlooking the needs of the people.

BILL was one of the most knowledgeable men in the Nation on military matters, and was probably the best informed Member of Congress on the Navy. He was planning to make the Navy his career, when his father's abrupt and tragic death changed his plans. As a Member of Congress, elected to fill his father's seat, he continued to work for a modern, improved Navy.

BILL BATES worked closely with our beloved Speaker and me to help save the Boston Naval Shipyard, realizing its importance and knowing its role is the economic and military strength of the Nation.

We will all miss the gentleman from Massachusetts. We will miss having the benefit of his knowledge. The members of our delegation will miss his presence, his ideas, his devotion.

But more than all of this, more than his myriad contributions to the welfare of his district, the Commonwealth, and the Nation, we will miss BILL BATES, the man, our friend.

I do not know if I can convey what a wonderful man he was. He was like a warm light that dispelled darkness. We always knew when BILL was around. First we would hear his whistling, his jubilant walk, and there he would be—his simile making everyone else smile and be happy.

I will never forget March 12 of this year. I was having an early St. Patrick's Day party in my office. BILL, of course, was invited. He was going into the hospital so he could not stay.

But he came by to say hello to everyone, to talk a little. It was a happy party, but when he came in, it became absolutely joyful. There was something so good about the man that his presence enriched everyone—made them happier to be alive.

Only his close friends knew the pain he was in, and no one who saw him that night could believe anything was wrong with him.

That was the last time he was on Capitol Hill.

I saw him after that at Bethesda Naval Hospital. He did not talk about the great pain he was in, although it was apparent. He tried to cheer up others, and only God knows how, but he succeeded.

We talked about the things that concerned us—the problems of the Nation, the issues of the day. When we talked of personal things, it was not of what was happening to him; he was only concerned about his family and his staff—what was happening to them, he did not want them to suffer with him.

BILL'S lovely wife Jean was there. No man has a greater helpmate. Knowing her, I know part of the reason BILL was so strong and so kind.

At one point, when things were going well, he talked about the future, about the good days outnumbering the bad. That was not the way things worked out, but it was his philosophy and his strength. The good days had outnumbered the bad—the good people were more numerous than the bad.

In the balance of life, all things good heavily outweigh all things bad. I believe the good was heavily weighted because BILL BATES lived, because he contributed so much to his time and his place.

In our age and especially in this place, the seat of power, there are men who have helped the Nation, men who have helped individuals. But rarely has one man done so much for the Nation as a whole, and also for everyone he met.

BILL BATES brightened the lives of us all. He was a tireless worker, a knowledgeable man, a dedicated humanist, whatever he did, wherever he went, lives were improved, cheered, made more human.

One of the characteristics of humanity is "other-love"—caring for others. BILL did care, and made others care—not through the powers of persuasion,

but because he was so good and because we were all better in knowing him.

My wife Millie and I extend our deepest sympathy to Jean and Susan, to the rest of his family and friends. There is nothing I can say to assuage their grief. But I hope they will always remember that because of them there were so many more good days than bad.

Mr. BURKE of Massachusetts. Mr. Speaker, will the gentleman yield?

Mr. CONTE. I yield to my colleague from Massachusetts.

Mr. BURKE of Massachusetts. Mr. Speaker, it is with a saddened spirit that I rise today to pay tribute to an old and dear friend and colleague, WILLIAM H. BATES. I was deeply grieved to learn of his untimely death.

Having attended St. James Parochial School in Salem, Worcester Academy, Brown University, and Harvard Business School, BILL entered the Navy. BILL served in the Navy until the tragic death of his father left vacant the congressional seat for the Sixth District of Massachusetts. In 1950 he was elected to that seat and remained in Congress since that time.

During these 11 terms in Congress he rose to be the ranking Republican member of the House Armed Services Committee and second ranking minority member of the Joint Commission on Atomic Energy. For the past 4 years, he served as a member of the U.S. delegation to the NATO Parliamentarians Conference and was a member of the Conference's military committee.

A deeply religious man, BILL carried into his daily life the principles of Christianity, especially the commandment to "Love one another." For BILL BATES did love his fellow man. His entire life was a model of service and untiring efforts to improve the lives of those he served. Until the very end he fought for those less fortunate. His example will remain a source of inspiration.

His loyalty, sincerity of purpose, high ideals and personal warmth made him a devoted friend and called forth friendship in return. I know few men who commanded as much respect, admiration, and love from all he met. This fine man was rare, indeed. I shall always cherish the memory of his friendship.

My sympathy and my prayers are with Mrs. Bates and the family during this difficult time.

Mr. LATTA. Mr. Speaker, I was grief-stricken to hear of the untimely death of our friend and colleague, who was affectionately known to us as BILL BATES. BILL BATES was loved and admired by Members on both sides of the aisle, and in my 14 years in the Congress, I never heard a Member speak ill of him. On the other hand, Mr. Speaker, I never heard BILL BATES speak ill of another Member. He was always his jovial self, ready at all times to give of himself for any cause of his country or of this House.

During his years of service in this House he became a real specialist on the Armed Services Committee, and it was a real delight for me, Mr. Speaker, when BILL BATES and the chairman of the Armed Services Committee, MENDEL RIVERS, appeared before our Committee on Rules seeking a rule on one of the bills from their Armed Services Committee. They always were in accord and spoke as a single voice for the defense of their country. They were never partisan and they were always prepared on the legislation at hand.

Mr. Speaker, we have lost one of our most respected Members, the country has lost a champion for a strong national defense, and the family of BILL BATES has lost a wonderful husband and father.

Mrs. Latta joins me in extending our deepest sympathy to Mrs. Bates and the members of the family.

Mr. SCHNEEBELI. Mr. Speaker, BILL BATES was certainly one of the most friendly and pleasant Members of our House of Representatives whom I have met here from the beginning of my career. BILL was always most helpful and available with a ready smile to assist in whatever area his ability and knowledge could be utilized. He had a sunny disposition and his cooperative attitude was outstanding among his many fine qualities. The House of Representatives is going to miss his engaging personality and congenial disposition.

BILL was also a leader among his colleagues and was highly respected for his intelligent and common sense approach to our many national problems. He was the leader to whom we looked for advice relative to our military and defense matters and this fine knowledge will be sorely missed by his many friends here in the House.

Mrs. Schneebeli joins me in extending heartfelt sympathy to his fine family.

Mr. MORGAN. Mr. Speaker, it was with a deep sense of shock and sadness that I learned this morning of the untimely passing of our dear friend and colleague, the Honorable WILLIAM HENRY BATES.

Although he had served nearly 20 years in the House of Representatives, BILL BATES was still a young man. His brilliant record is a measure of the loss to us and to our country that his passing means. BILL was a skilled and vigorous legislator. As the ranking minority member of the powerful Armed Services Committee, he filled one of the most important key posts in the House of Representatives. He inspired and won the confidence and friendship of his colleagues on both sides of the House. As a Democrat, I can say that I am among those who liked and admired BILL BATES and believed the Congress was the better for his service as a Member.

It is a tragedy that his brilliant career has been cut short, especially as he had so early in life earned the rank of senior statesman. We shall miss him as a jovial and kindly friend, as an indefatigable fellow worker, and as a patriotic American dedicated to the welfare of our country. I join in extending my deepest sympathy and heartfelt condolences to his widow and the other members of his family.

Mr. SPRINGER. Mr. Speaker, it is with sadness that I join my colleagues in mourning the untimely death of BILL BATES.

BILL and I both came to Congress about the same time. His election was the result of a tragedy in his family when his father who was the Congressman representing the same district in Massachusetts died in the airplane collision over National Airport. The people of that district elected BILL, who was on active duty with the Navy, to replace his father.

Since that time, he has served in the Congress with distinction. He rose to be the senior Republican member on the Armed Services Committee and one of the senior Republicans on the Atomic Energy Committee. The security and welfare of his country could not have been in better hands. He handled his demanding responsibilities of his committee assignments with the same intelligence, insight, and love of country that he fulfilled his obligations to his constituents who continued to return him to Congress with overwhelming majorities.

Who knows what is in store for us in the master plan. In His wisdom, the good Lord saw fit to call BILL BATES, who was in his prime of life and still had much to give. He lived a fruitful and constructive life and his family and friends will remember with pride and honor his contribution to his country. Mrs. Springer joins me in expressing our deepest sympathy to Mrs. Bates and the family. Words are never adequate at a time like this, but perhaps the knowledge that the good thoughts and prayers of BILL'S friends are with them will bring them some measure of comfort.

Mr. CLEVELAND. Mr. Speaker, BILL BATES was a good friend of mine and a valued colleague. With his numerous other friends I leaned with a sinking heart that he was under treatment for cancer. Until the end, we all hoped that his courage, coupled with modern medicine, would enable him to surmount this dread disease.

It is hard to imagine this House without BILL. By all normal expectations, he should have lived to serve his country for many more terms. As ranking minority member on the Armed Service Committee, he had achieved a position of great importance to the national security at an unusually early age. A career of ever-rising influence beckoned and this would have been greatly to the national good.

I shall always be grateful to BILL for his kindness and consideration to me when I first entered Congress in 1963. BILL always had time for a friendly word of advice. One characteristic of his struck me forcibly and made an impression on me which I have endeavored to copy during my own public service. It was the fact that no matter how solidly entrenched in office he was or how powerful he was in the councils of the Nation, he never for an instant forgot those who sent him down here to Washington. He knew they were the roots of democracy. No matter what his responsibilities demanded of him in Washington, his people at home had his first priority. I know this from constituents of mine who moved to New Hampshire from BILL BATES' district. They always praised BILL for this devotion to his people and, by so doing, set a high standard for me to follow in my own district.

BILL BATES exemplified the ideal leg-

islator. Ever devoted to his electorate, he was courteous to his colleagues of both parties, hard working, a leader in the field of national defense, a man who loved his fellow man and thoroughly enjoyed his service to others. One never sat in BILL BATES' company that one did not gain something new and valuable from him. I shall miss him deeply and I know that this country will suffer the loss of his expertise and wisdom in national defense matters as we seek to steer a course through dangerous and troubled times.

I extend to his wife and family my deepest sympathy. We all share their loss.

Mr. ADAIR. Mr. Speaker, I share with others the shock and grief at the death of BILL BATES. He was certainly one of the most outstanding and capable Members of this House and of the entire U.S. Congress.

Coupled with his ability were other traits as well—a deep dedication to the performance of his duties a broad knowledge on many subjects, both domestic and foreign, and the zeal to perform as a dedicated Member of this body.

In addition to the comprehensive knowledge he had upon a great variety of subjects, he had a detailed and accurate understanding of the problems of his particular legislative activity—the armed services. Anyone who knew him knew of the devotion he brought to his service on the Committee on Armed Services and the vast contributions that he made in that respect.

Any remarks concerning BILL BATES should not be concluded without reference to his warm, friendly, and genial personality. Truly, he was outstanding in this respect and endeared himself to all those with whom he came in contact.

We shall miss him as a colleague, as a great public servant, and as a devoted American. Mrs. Adair joins me in expressing our deep sympathy to all members of his family.

Mr. RHODES. Mr. Speaker, the untimely passing of the Honorable WILLIAM H. BATES is deeply mourned by all the Members of this body who knew his outstanding capabilities as a legislator and who loved him as a true and loyal friend. WILLIAM BATES dedicated almost 20 years of his life to the enactment of legislation which would improve the lives of his fellow citizens and safeguard the country that he served so well. The Nation will long be grateful for the great heritage he leaves by his accomplishments.

Mrs. Rhodes joins me in deepest sympathy to Mrs. Bates and the family in their bereavement, and hope they will take some measure of comfort in knowing their loss is shared by so many.

Mr. ZABLOCKI. Mr. Speaker, it is with a heavy heart and a sense of deep loss that I join my colleagues in paying tribute to the late Honorable WILLIAM H. BATES of Massachusetts.

It was my privilege to serve in the House in the first session of the 81st Congress with his beloved father. The tragic air collision in 1949 deprived this body of the able senior Congressman Bates, but it was fortunate for us to have his son succeed him and serve so well.

He represented his district, his State, and his country for many years with dedication and devotion. Congressman BATES was to us who served with him, above all, a gentleman, with all the virtues that term implies. As he kept the quiet tenor of his ways, he was unfailing in his courtesy and a model of gentility.

During his tenure in the House he was determined that our country's security be preserved. His outstanding work on the House Armed Services Committee is well known. BILL BATES championed the cause of an adequate military force. He was, however, always insistent that civilian supremacy be maintained in the military operations of our Nation. His presence on the Armed Services Committee and in this legislative body will be sorely missed.

My wife joins me in expressing deep sympathy to his beloved wife Pearl, his daughter Susan, his mother, and his family. May they derive some small consolation from the knowledge that their loss is shared by his many friends and in the thought that the good Lord has chosen him to be among His very own.

Mr. MADDEN. Mr. Speaker, I was shocked and grieved when I heard the newscast yesterday announcing the passing of our colleague, WILLIAM BATES. He was beyond question one of the most admired and liked Members of the House of Representatives. He had outstanding ability as a legislator and was industrious, diligent, and competent in his work as a member of the House Armed Services Committee, and active in other legislation pertaining to the welfare of his district, State, and Nation.

I was long acquainted with his father, Congressman George Bates, whom he succeeded after his father's unfortunate death in an airplane accident about 20 years ago. I serve on the Naval Affairs Committee in the 79th Congress when his father was a member of that committee. I also served on two naval subcommittees with his father during the World War II period.

BILL was a worthy successor to his illustrious father. He was a great advocate of our defense system and he especially made a major contribution, by reason of his long experience and knowledge, to our Naval Establishment.

BILL displayed the same efficient and outstanding legislative ability as his illustrious father.

Every Member of Congress and all his friends mourn his passing at such an early age during a productive and fruitful life. I extend to his wife, daughter, and members of his family my deepest sympathy in their bereavement.

Mr. EVINS of Tennessee. Mr. Speaker, I want to take this means of joining my colleagues from Massachusetts and others in paying a brief but sincere tribute to our beloved friend and colleague, WILLIAM H. BATES.

I was indeed saddened to learn of the passing of BILL BATES, one of the most personable and genial Members serving in the House.

He was a hardworking member of the Committee on Armed Services and contributed much to the strengthening of the national defense and the security of our country during his service in the Congress.

I knew his father whom he succeeded in the Congress—devotion and dedication to public service were in the tradition of the Bates family.

Suddenly, this young colleague has given his life at an early age and my deepest sympathy is extended to Mrs. Bates and other members of the family in their loss and bereavement.

Mr. PHILBIN. Mr. Speaker, I am very deeply touched and grieved by the untimely passing of my esteemed and dearly beloved friend, BILL BATES. He was one of the great men of the Congress—able, distinguished, informed, and profoundly concerned about giving every measure of his fine mind and big heart to the service of our country and its people.

He was a tower of strength on our Armed Services Committee and the Atomic Energy Committee, and his leadership contributed greatly to our deliberations and work in the committee and the House.

Congressman BATES was an indefatigable worker and always gave of himself unstintingly in seeking solutions to the great problems before us. He was a man of sound judgment, and served his district, State, and Nation unselfishly, conscientiously, and with great ability and dedication.

He was truly one of our great national leaders as well as an invaluable representative of his own district, our State, and Nation. He was respected, admired, and loved by all of us.

Strong of body and character, firm in his convictions, noble of purpose, dedicated beyond measure, the warmth and sincerity of his personality, his loyalty and fine human qualities won for him the high regard, appreciation, and affection of the people.

A statesman and patriot of the first magnitude, he will long be gratefully remembered by his constituents, State, and Nation, and will never be forgotten by those of us who had the honor and privilege to serve our country with him, to know him well and call him our friend.

His great knowledge of military and scientific matters enabled him to make invaluable contributions time and time again.

BILL BATES has performed great and enduring service to our country. He has served far beyond the call of duty. Now, in truth, after his hard labors, he has fallen at his post like a soldier in battle.

We shall miss his warm friendship, his invariable cooperation, his unselfish, dedicated approach to his work. I extend my prayers and most heartfelt sympathy to his devoted wife, Jean, his lovely daughter Susan, his wonderful mother and all his dear ones. I join them in mourning the loss of this great American and dear friend, and pray that the good Lord will bring them reconciliation and peace in the tragic, sad bereavement they have sustained.

Mr. BURLESON of Texas. Mr. Speaker, I join with my colleagues in paying tribute to the memory of our departed friend and colleague, BILL BATES.

I know of no man who had a wider friendship in this House of Representatives than did BILL BATES. I know of no Member who held greater respect among

his associates. He was recognized as a leader and as a dedicated public servant.

We will all miss his pleasant association, his wonderful personality, and his understanding and considerateness in the long association we have had with him here in the House of Representatives.

I join those who have expressed their sympathy and condolence to his very fine family.

Mr. TEAGUE of Texas. Mr. Speaker, I want to join my colleagues in paying tribute to the Honorable WILLIAM H. BATES, the late Representative of the Sixth District of Massachusetts. He will be sorely missed here in the House where he served with distinction since 1950.

I had the distinct pleasure of serving with BILL on the House Select Committee on Survivor's Benefits back in the early 1950's and I still recall his great concern for the welfare of the serviceman's survivors. Because of his some 10 years of service in the Navy, he was a most influential member of this committee and contributed greatly to its success.

I also had the privilege of serving with BILL'S father, the late George Bates, on the House District Committee when I first came to Congress, and BILL was much like his father in his desire to serve his people in the best way possible. He will be sorely missed in this body, but his record will stand for a long time and his family can be proud of his achievements.

Mr. DONOHUE. Mr. Speaker, together with every Member of this House on both sides of the aisle and many, many thousands of people throughout our country and Commonwealth, I am, indeed, deeply saddened at the passing of my dear friend and colleague, the Honorable WILLIAM H. BATES, of Massachusetts.

Over a period of 19 of the most challenging legislative years in our history, he served this Nation, his State, his district, and this House with dedicated integrity, wisdom, diligence, and effectiveness. His unsurpassed zeal and industry in the fulfillment of his committee assignments, legislative responsibilities, and personal concern for the solution of constituents' problems is a byword in this House and our Commonwealth.

Affectionately known as BILL to almost everyone, he was a man entirely without pretension. Above and beyond all other things, he was beloved by all of us because of his humble attitude, his compassionate understanding, his patient tolerance, his optimistic disposition, his quiet humor, his genuine friendship, and his ever-kindly heart.

The legend of his great generous spirit will forever brighten the annals and the atmosphere of this Chamber. His personal example provides for all of us here and those who will come after a permanent inspiration of wholesomeness and honor in patriotic service, for which this Congress and this Nation will remain forever grateful.

BILL BATES will be sorely missed by everyone ever privileged to know him.

In this time of great loss and sorrow, we extend our heartfelt sympathy to his gracious wife, Jean, his wonderful daughter, Susan, his mother, and his brothers and sisters, while we join in our prayers that the great soul of our beloved, departed friend will rest in heavenly peace.

Mr. HÉBERT. Mr. Speaker, my heart is heavy—I have lost a friend.

I mourn my loss, but also that of all of you.

I will miss BILL BATES, just as I did his father before him.

I had served with BILL'S father on the District Committee and the old Naval Affairs Committee. He was a great and honorable man. It was therefore a pleasure to welcome young BILL BATES to Congress when he succeeded his father.

We in this Chamber who have known and worked with BILL BATES for many years are the poorer for his passing. We have all benefitted from his ability, his wisdom, his dedication, his sincerity, and most importantly, his honesty.

As Hawthorne said:

Death is so genuine a fact that it excludes falsehood or betray its emptyness;
It is a touchstone that proves the gold, and dishonors the baser metal.

Now that BILL BATES has left us, the fact of his death enables us to assess with greater clarity the wisdom and depth of his character as a man and his contributions to America as a lawmaker.

BILL BATES' personal and public life were exemplary. The moral principles which he uttered as a public figure were those which he also observed as a devoted husband and father. It can, in truth, be said—he lived and died as a Christian. His quiet and resolute dedication to his Christian principles was ever present in the discharge of his constitutional responsibilities in representing the Sixth Congressional District of Massachusetts. The voters of his district knew this and provided him with constantly greater majorities in each succeeding Congress.

Those of us who worked daily with BILL BATES on the Committee on Armed Services are keenly aware of his indispensable contribution to our national security. His presence on the committee was the mortar which bound the members on both sides of the aisle to an objective nonpartisan approach to our national security problems. His objective insight into the most complex issues contributed immeasurably towards the resolution of the most controversial issues confronting our committee and the Congress. His premature death therefore creates a vacuum in our committee and in the Congress which defies resolution.

It has been said that "heaven gives its favorites early death." I know that BILL BATES must be one of heaven's favorites since he labored so diligently and faithfully for his God, his country, and his fellow man.

Mr. GRIFFIN. Mr. Speaker it is with deep regret that I learned of the death of our colleague, BILL BATES. Our departed friend and fellow Member was a very useful and effective Member of the House; one who was both respected and respectful.

The loss of the services of BILL BATES to his district, State, and Nation is great, indeed, inasmuch as he was in the prime of life—only 52 years of age.

It was my privilege to have known BILL BATES for nearly two decades. He was always friendly and cheerful. He had an unusual zest for life. He was always kind and courteous.

The absence of BILL BATES from the House will be felt by every Member. I extend my sympathy to his family.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. CONTE. I yield to our distinguished Speaker.

Mr. McCORMACK. As the gentleman from Massachusetts (Mr. CONTE) in his opening remarks stated, a time will be set aside in the near future for Members to eulogize our late friend BILL BATES and his memory. It is not my purpose at this time to enter into an extended eulogy. However, I do want to convey to Mrs. Bates and her daughter and other loved ones, as Speaker of the House of Representatives, for myself personally and for all of the Members of the House, our deep sympathy in their great loss and sorrow. They can derive great consolation from their knowledge that our late friend was one of the outstanding Members of Congress. He served his country with great dedication and with extraordinary courage. He was one of the most beloved Members of the House of Representatives without regard for political party or affiliation.

I shall make more extended remarks when a time is set aside for the eulogies.

As the Speaker of the House, for myself and for my colleagues, I wish to convey to Mrs. Bates, her daughter, and other loved ones the profound feelings of sympathy in their bereavement.

Mr. CONTE. Mr. Speaker, I offer a resolution.

The Clerk read the resolution, as follows:

H. RES. 450

Resolved, That the House has heard with profound sorrow of the death of the Honorable William H. Bates, a Representative from the State of Massachusetts.

Resolved, That a committee of fifty-seven of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

The resolutions were agreed to.

The SPEAKER. The Chair appoints as members of the funeral committee the following Members on the part of the House: Mr. McCORMACK, Mr. GERALD R. FORD, Mr. PHILBIN, Mr. DONOHUE, Mr. BOLAND, Mr. O'NEILL of Massachusetts, Mr. MACDONALD of Massachusetts, Mr. BURKE of Massachusetts, Mr. CONTE, Mr. KEITH, Mr. MORSE, and Mrs. HECKLER of Massachusetts.

Also Mr. RIVERS, Mr. ARENDS, Mr. HÉBERT, Mr. FISHER, Mr. HOLIFIELD, Mr. O'KONSKI, Mr. CORBETT, Mr. PRICE of Illinois, Mr. McCULLOCH, Mr. ASPINALL, Mr. BENNETT, Mr. BRAY.

Also, Mr. BYRNE of Pennsylvania, Mr.

EDMONDSON, Mr. GUBSER, Mr. HOSMER, Mr. BOB WILSON of California, Mr. LENNON, Mr. YOUNG, Mr. PIRNIE, Mr. STRATTON, Mr. RANDALL, Mr. ANDERSON of Illinois, Mr. CLANCY.

Also, Mr. HAGAN, Mr. HALL, Mr. ICHORD, Mr. KING, Mr. PIKE, Mr. STAFFORD, Mr. NEDZI, Mr. LEGGETT, Mr. CHARLES H. WILSON of California, Mr. DICKINSON, Mr. HICKS, Mr. LONG of Louisiana, Mr. WHITE, Mr. BRINKLEY, Mr. HUNT, Mr. NICHOLS, Mr. WHALEN, Mr. MOLLOHAN, Mr. FOREMAN, Mr. DANIEL of Virginia, and Mr. WHITEHURST.

The Clerk will report the remaining resolution.

The Clerk read as follows:

Resolved, That as a further mark of respect the House do now adjourn.

The resolution was agreed to.

ADJOURNMENT

Accordingly (at 12 o'clock and 36 minutes p.m.), under its previous order, the House adjourned until tomorrow, Tuesday, June 24, 1969, at 11 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

872. A letter from the Comptroller General of the United States, transmitting a report on the effectiveness and administrative efficiency of the Neighborhood Youth Corps program in Grand Rapids, Mich., under title I–B of the Economic Opportunity Act of 1964, Department of Labor; to the Committee on Education and Labor.

873. A letter from the Comptroller General of the United States, transmitting a report on the effectiveness and administration of the community action program, Kansas City, Mo., under title II of the Economic Opportunity Act of 1964, as amended; to the Committee on Education and Labor.

874. A letter from the Comptroller General of the United States, transmitting a report on problems arising from the manner and extent to which Federal funds are granted for State highway safety programs, Federal Highway Administration, Department of Transportation; to the Committee on Government Operations.

875. A letter from the Deputy Assistant Secretary of the Interior, transmitting a copy of a proposed concession contract for accommodations, facilities, and services for the public in Grand Teton National Park, Wyo., during a 20-year period from October 1, 1969, through September 30, 1988, pursuant to the provisions of 67 Stat. 271, as amended by 70 Stat. 543; to the Committee on Interior and Insular Affairs.

876. A letter from the Chairman, Indian Claims Commission, transmitting a report that proceedings have been finally concluded with respect to docket No. 114, *The Sioux Tribe of Indians of the Cheyenne River Reservation, South Dakota, Plaintiffs,* v. *The United States of America, Defendant,* pursuant to the provisions of section 21 of the Indian Claims Commission Act, as amended; to the Committee on Interior and Insular Affairs.

877. A letter from the Chairman, Indian Claims Commission, transmitting a report that proceedings have been finally concluded with respect to docket Nos. 350–A, 350–E, and 350–H, *The Three Affiliated Tribes of the Fort Berthold Reservation, Plaintiff,* v. *The United States of America, Defendant,* pursuant to the provisions of section 21 of the Indian Claims Commission Act, as amended; to the Committee on Interior and Insular Affairs.

878. A letter from the Secretary of the Interior, transmitting a report of findings and conclusions based on an examination of the effects of imports of groundfish upon the domestic groundfish market, made in accordance with section 9(b) of the Fish and Wildlife Act of 1956, pursuant to the provisions of that act; to the Committee on Merchant Marine and Fisheries.

879. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to permit the Secretary of Transportation to commence progress payments to a bridge owner upon ordering alteration of the bridge; to the Committee on Public Works.

880. A letter from the Deputy Assistant Secretary for Administration, Department of Transportation, transmitting a report that there were no grants made by the Department of Transportation under section 1891 of title 42, United States Code, during the preceding year, pursuant to the provisions of 42 U.S.C. 1893; to the Committee on Science and Astronautics.

881. A letter from the General Manager, U.S. Atomic Energy Commission, transmitting a list of the nonprofit educational institutions and other nonprofit organizations in which title to equipment was vested by the Commission during calendar year 1968, pursuant to the provisions of section 3 of Public Law 85–934; to the Committee on Science and Astronautics.

882. A letter from the Secretary of Commerce, transmitting the annual report of the Foreign-Trade Zones Board for fiscal year 1968, pursuant to the provisions of section 16 of the Foreign-Trade Zones Act, as amended; to the Committee on Ways and Means.

883. A letter from the Acting Secretary of Health, Education, and Welfare, transmitting the first annual report on the medicare program by the Health Insurance Benefits Advisory Council, pursuant to the provisions of section 1867(b) of the Social Security Act; to the Committee on Ways and Means.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, pursuant to the order of the House of June 19, 1969, the following bill was reported on June 20, 1969:

Mr. MILLS: Committee on Ways and Means. H.R. 12290. A bill to continue the income tax surcharge and the excise taxes on automobiles and communication services for temporary periods, to terminate the investment credit, to provide a low-income allowance for individuals, and for other purposes (Rept. No. 91–321). Referred to the Committee of the Whole House on the State of the Union.

[*Submitted June 23, 1969*]

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. FALLON: Committee on Public Works. H.R. 6508. A bill to provide assistance to the State of California for the reconstruction of areas damaged by recent storms, floods, landslides, and high waters; with amendment (Rept. No. 91–322). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BARRETT:

H.R. 12308. A bill to amend the Internal Revenue Code of 1954 to provide that the first $5,000 of the income of an individual who is over 65 years of age shall be exempt from income tax; to the Committee on Ways and Means.

H.R. 12309. A bill to amend title II of the Social Security Act to provide a 15-percent across-the-board increase in monthly benefits, with subsequent cost-of-living increases in such benefits and a minimum primary benefit of $100; to the Committee on Ways and Means.

By Mr. BRASCO:

H.R. 12310. A bill to expedite delivery of special delivery mail, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. BROYHILL of Virginia:

H.R. 12311. A bill to establish fee programs for entrance to, and use of, areas administered for outdoor recreation and related purposes by the Secretary of the Interior and the Secretary of Agriculture, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. BURTON of California:

H.R. 12312. A bill to improve the health and safety conditions of persons working in the coal mining industry of the United States; to the Committee on Education and Labor.

By Mr. CULVER:

H.R. 12313. A bill to amend the Consolidated Farmers Home Administration Act of 1961, as amended, to provide an alternate method of making loans for acquisition and improvements of the farm, needed by farm families, including young farmers, and to provide the borrower family with adequate standards of living and the consumer with reasonable prices for dairy and other agricultural products, as well as to maintain and improve national health, and for other purposes; to the Committee on Agriculture.

By Mr. DERWINSKI (for himself, Mr. ADAIR, Mr. BERRY, Mr. BUCHANAN, Mr. FINDLEY, Mr. FULTON of Pennsylvania, Mr. MORSE, Mr. TAFT, and Mr. THOMSON of Wisconsin):

H.R. 12314. A bill to limit the period of time during which appropriations are authorized to carry out the purposes of the U.S. Information and Educational Exchange Act of 1948; to the Committee on Foreign Affairs.

By Mr. FISHER:

H.R. 12315. A bill to amend the Federal Food, Drug, and Cosmetic Act to include a definition of food supplements, and for other purposes; to the Committee on Interstate and Foreign Commerce.

H.R. 12316. A bill to amend section 4005 of title 39, United States Code, to restore to such section the provisions requiring proof of intent to deceive in connection with the use of the mails to obtain money or property by false pretenses, representations, or promises; to the Committee on Post Office and Civil Service.

By Mr. FRASER:

H.R. 12317. A bill to promote safe driving and eliminate the reckless and irresponsible driver from the streets and highways of the District of Columbia by providing that any person operating a motor vehicle within the District while apparently under the influence of intoxicating liquor shall be deemed to have given his consent to a chemical test of certain of his body substances to determine the alcoholic content of his blood, and for other purposes; to the Committee on the District of Columbia.

By Mr. FRIEDEL:

H.R. 12318. A bill to provide Federal financial assistance to opportunities industrialization centers; to the Committee on Education and Labor.

H.R. 12319. A bill to amend section 8336(c) of title 5, United States Code, to include the position of customs inspector in the category of hazardous occupations; to the Committee on Post Office and Civil Service.

By Mr. MAILLIARD (for himself, Mr. DON H. CLAUSEN, and Mr. BURTON of California):

H.R. 12320. A bill to authorize the acquisition of additional lands at Muir Woods National Monument in the State of California, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. PERKINS (for himself, Mr AYRES, Mr. THOMPSON of New Jersey, Mr. GERALD R. FORD, Mr. DENT, Mr. BELL of California, Mr. PUCINSKI, Mr. ERLENBORN, Mr. DANIELS of New Jersey, Mr. DELLENBACK, Mr. BRADEMAS, Mr. ESCH, Mr. O'HARA, Mr. STEIGER of Wisconsin, Mr. CAREY, Mr. WILLIAM D. FORD, Mr. HATHAWAY, Mrs. MINK, Mr. SCHEUER, Mr. MEEDS, Mr. BURTON of California, Mr. GAYDOS, Mr. POWELL, Mr. HANSEN of Idaho, and Mr. RUTH):

H.R. 12321. A bill to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, and for other purposes; to the Committee on Education and Labor.

By Mr. PODELL:

H.R. 12322. A bill to amend the Fair Packaging and Labeling Act to require the disclosure by retail distributors of unit retail prices of packaged consumer commodities, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. POLLOCK:

H.R. 12323. A bill to amend the U.S. Fishing Fleet Improvement Act to provide increased construction subsidies, to permit the trade-in of, and allowance for, old fishing vessels, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. QUILLEN:

H.R. 12324. A bill to amend the Railroad Retirement Act of 1937 and the Railroad Retirement Tax Act to provide for the continued payment of supplemental annuities in accordance with present law; to the Committee on Interstate and Foreign Commerce.

H.R. 12325. A bill to amend section 610 of title 38 of the United States Code to extend hospital and domiciliary care for nonservice-connected disability to veterans of service performed before January 31, 1955; to the Committee on Veterans' Affairs.

H.R. 12326. A bill to provide that disabled individuals entitled to disability insurance benefits under section 223 of the Social Security Act or to child's, widow's, or widower's insurance benefits on the basis of disability under section 202 of such act, and individuals in the corresponding categories under the Railroad Retirement Act of 1937, shall be eligible for health insurance benefits under title XVIII of the Social Security Act without regard to their age; to the Committee on Ways and Means.

By Mr. RARICK:

H.R. 12327. A bill to further define the jurisdiction of Federal courts in certain cases; to the Committee on the Judiciary.

H.R. 12328. A bill to further define the jurisdiction of U.S. courts in certain cases; to the Committee on the Judiciary.

By Mr. RHODES:

H.R. 12329. A bill relating to the interest rates on loans made by the Treasury to the Department of Agriculture to carry out the programs authorized by the Rural Electrification Act of 1936; to the Committee on Agriculture.

H.R. 12330. A bill to establish the calendar year as the fiscal year of the Government, and for other purposes; to the Committee on Government Operations.

H.R. 12331. A bill to provide that the President shall include in the budget submitted to the Congress under section 201 of the Budget and Accounting Act, 1921, an item for not less than $2 billion to be applied toward reduction of the national debt; to the Committee on Government Operations.

H.R. 12332. A bill to establish penalties for the operation of a motor vehicle between States by a person while his motor vehicle operator's license is suspended or revoked; to the Committee on the Judiciary.

By Mr. RIVERS:

H.R. 12333. A bill to amend the act of September 20, 1968 (Public Law 90-502), to provide relief to certain former officers of the Supply Corps and Civil Engineer Corps of the Navy; to the Committee on Armed Services.

By Mr. ROBISON:

H.R. 12334. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. TEAGUE of Texas:

H.R. 12335. A bill to amend section 1684 of title 38, United States Code, in order to provide for the measurement of an academic high school course; to the Committee on Veterans' Affairs.

By Mr. WATSON:

H.R. 12336. A bill to amend the Internal Revenue Code of 1954 to encourage higher education, and particularly the private funding thereof, by authorizing a deduction from gross income of reasonable amounts contributed to a qualified higher education fund established by a taxpayer for the purpose of funding the higher education of his dependents; to the Committee on Ways and Means.

By Mr. COLLIER:

H.J. Res. 787. Joint resolution to authorize the President to proclaim the second Sunday in September of each year as "Bataan Day"; to the Committee on the Judiciary.

By Mr. FULTON of Pennsylvania:

H.J. Res. 788. Joint resolution to authorize the President to award appropriate medals honoring those astronauts whose particular efforts and contributions to the welfare of the Nation and of mankind have been exceptionally meritorious; to the Committee on Science and Astronautics.

By Mr. RARICK:

H.J. Res. 789. Joint resolution proposing an amendment to the Constitution of the United States relating to powers not delegated to the United States; to the Committee on the Judiciary.

By Mr. RHODES:

H. Res. 451. Resolution to amend rule XXI of the Rules of the House of Representatives; to the Committee on Rules.

MEMORIALS

Under clause 4 of rule XXII,

228. The SPEAKER presented a memorial of the Legislature of the State of Illinois, relative to the sharing of Federal tax revenues with the States, which was referred to the Committee on Ways and Means.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

154. By the SPEAKER: Petition of Thomas Adams, Joliet, Ill., relative to impeachment proceedings; to the Committee on the Judiciary.

155. Also, petition of the Board of Supervisors, Cayuga County, N.Y., relative to taxation of State and local government securities; to the Committee on Ways and Means.

SENATE—*Monday, June 23, 1969*

The Senate met at 12 o'clock noon and was called to order by the Vice President.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Eternal Father, whose mercies are new every morning, deliver us now from the clash and clamor of the busy world without, from the pressure of daily duties within, and from the confusion of many voices that in the quiet solitude of our inmost hearts we may hear again Thy still small voice. Cross the inner threshold of our being, sensitize our consciences, grace our wills, steady our hesitant spirits, reinforce us in our labors, renew our faith in eternal things, and strengthen our resolution to serve Thee this day in spirit and in truth. Through Jesus Christ our Lord. Amen.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILL AND JOINT RESOLUTION

Messages in writing from the President of the United States were communicated to the Senate by Mr. Leonard, one of his secretaries, and he announced that on June 17, 1969, the President had approved and signed the following act and joint resolution:

S. 1995. An act to provide for the striking of medals in commemoration of the 150th anniversary of the founding of the State of Alabama; and

S.J. Res. 35. Joint resolution to provide for the appointment of Thomas J. Watson, Jr., as Citizen Regent of the Board of Regents of the Smithsonian Institution.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

THE JOURNAL

Mr. KENNEDY. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Friday, June 20, 1969, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

WAIVER OF THE CALL OF THE CALENDAR UNDER RULE VIII

Mr. KENNEDY. Mr. President, I ask unanimous consent that the call of the calendar of unobjected to bills under rule VIII be waived.

The VICE PRESIDENT. Without objection, it is so ordered.

TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. KENNEDY. Mr. President, I ask unanimous consent that statements during the transaction of routine morning business be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. KENNEDY. Mr. President, I move that the Senate go into executive session to consider the nominations on the Executive Calendar, beginning with "New Reports."

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

The VICE PRESIDENT. The nominations on the Executive Calendar will be stated, beginning with "New Reports."

MISSISSIPPI RIVER COMMISSION

The assistant legislative clerk read the nomination of Maj. Gen. Andrew Peach Rollins, Jr., to be a member and President of the Mississippi River Commission.

The VICE PRESIDENT. Without objection, the nomination is considered and confirmed.

CALIFORNIA DEBRIS COMMISSION

The assistant legislative clerk read the nomination of Col. Charles R. Roberts, Corps of Engineers, to be a member of the California Debris Commission.

The VICE PRESIDENT. Without objection, the nomination is considered and confirmed.

Mr. KENNEDY. Mr. President, I ask that the President be notified of the confirmation of the nominations.

The VICE PRESIDENT. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. KENNEDY. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; the Senate resumed the consideration of legislative business.

AUTHORIZATION FOR APPOINTMENT OF ADDITIONAL DISTRICT JUDGES

Mr. KENNEDY. Mr. President, I move the Senate proceed to the consideration of Calendar No. 252, S. 952.

The VICE PRESIDENT. The bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 952) to provide for the appointment of additional district judges, and for other purposes.

The VICE PRESIDENT. The question is on agreeing to the motion of the Senator from Massachusetts.

The motion was agreed to; and the Senate proceeded to consideration of the bill (S. 952) which had been reported from the Committee on the Judiciary with amendments on page 2, line 1, after the name "Colorado," strike out "six additional district judges for the District of Columbia," and insert "two additional district judges for the middle district of Florida,"; in line 14, after the name "Louisiana", strike out "one" and insert "two"; in the same line, after the word "district", where it appears the second time, strike out "judge" and insert "judges"; in line 17, after the name "Missouri", insert "one additional district judge for the western district of Missouri, one additional district judge for the district of Nebraska,"; in line 24, after the name "York", strike out "one additional district judge for the eastern district of North Carolina,"; on page 3, line 2, after the name "Ohio," strike out "five" and insert "six"; in line 7, after the name "Carolina", insert "one additional district judge for the western district of Tennessee,"; at the beginning of line 13, strike out "and"; in line 14, after the name "Virginia," insert "and one additional district judge for the southern district of West Virginia."; in line 24, after the name "Kansas," strike out "and"; on page 4, line 1, after the name "Pennsylvania", insert "and the existing district judgeship for the eastern district of Wisconsin"; in line 2, after the word "by", strike out "subsections (a) and (b) of"; in line 11, after the word "and" strike out "subsections (a) and (b) of"; in the table following line 19, under the heading "District Judges" strike out:

Alaska	2

On page 5, in the same table, strike out:

District of Columbia	21

In the same table under "Florida" insert:

Middle	7

In the same table, after the amendment just stated change the figure following the name "Southern" from "2" to "8"; and in the same table under "Georgia, Southern," change the figure from "8" to "2"; in the same table, following the name "Marylnad" change the figure from "6" to "7"; in the same table, following the name "Missouri, Eastern," insert:

Western	4

In the same table, after the amendment just stated, insert:

Nebraska	3

In the same table after the name "New York, Eastern," strike out:

North Carolina: Eastern	3

On page 6, in the same table, after the name "South Carolina" insert:

Tennessee, Western	3

In the same table, after the name "Virginia, Eastern," insert:

West Virginia: Southern	2

In the same table after the amendment just stated, insert:

Wisconsin: Eastern	3

On page 6, line 1, after "SEC. 2"' insert "(a)"; at the beginning of line 6, insert:

(b) The President shall appoint, by and with the advice and consent of the Senate, one additional district judge for the middle district of Pennsylvania. The first vacancy occurring in the office of district judge in said district shall not be filled.

At the top of page 7, insert:

(c) The President shall appoint, by and with the advice and consent of the Senate, one additional district judge for the eastern district of North Carolina. The first vacancy occurring in the office of district judge in said district shall not be filled.

On page 8, after line 9, insert:

(d) The third sentence of section 24 of the Revised Organic Act of the Virgin Islands, as amended by this Act, is amended to read as follows:

"Whenever it is made to appear that such an assignment is necessary for the proper dispatch of the business of the district court the chief judge of the Third Judicial Circuit of the United States may assign a judge of the municipal court of the Virgin Islands or a circuit or district judge of the Third Circuit, or the Chief Justice of the United States may assign any other United States circuit or district judge with the consent of the judge so assigned and of the chief judge of his circuit to serve temporarily as a judge of the District Court of the Virgin Islands."

On page 10, after line 2, insert a new section, as follows:

SEC. 6. Section 118(a) of title 28, United States Code, is hereby amended to read as follows:

"EASTERN DISTRICT

"The Eastern District comprises the counties of Berks, Bucks, Chester, Delaware, Lancaster, Lehigh, Montgomery, Northampton, Philadelphia, and Schuylkill.

"Court for the Eastern District shall be held at Easton, Reading, and Philadelphia."

After line 10, insert a new section, as follows:

SEC. 7. Section 41 of the Act of March 2, 1917 (ch. 415, 39 Stat. 965), as amended (48 U.S.C. 863), be and hereby is repealed.

After line 10, insert a new section, as follows:

SEC. 8. Section 753 of title 28, United States Code is hereby amended as follows:

(a) Subsection (b) is amended to read:

"(b)(1) Except as provided in subsection (b)(2) of this section, one of the reporters appointed for each such court shall attend at each session of the court and at every other proceeding designated by rule or order of the court or by one of the judges, and shall record verbatim by shorthand or by mechanical means which may be augmented by electronic sound recording subject to regulations promulgated by the Judicial Conference: (1) all proceedings in criminal cases had in open court; and (2) all proceedings in other cases had in open court unless the parties with the approval of a judge shall agree specifically to the contrary; and (3) such other proceedings as the judge of the court may direct or as may be required by rule or order of court or as may be requested by any party to the proceeding.

"(2) Upon a determination that such action is necessary to insure the expeditious production of transcripts or to otherwise expedite and improve the administration of justice, the Judicial Council of any circuit, subject to regulations promulgated by the Judicial Conference, may direct that an electronic sound recording be made of any proceedings or part thereof in any district court in the circuit and that the attendance of a reporter not be required at such proceedings or part thereof.

"(3) The Judicial Conference shall prescribe the types of electronic sound recordings which may be used by the reporters in accordance with the provisions of subsection (b)(1) of this section and which may be used

in absence of a reporter in accordance with the provisions of subsection (b)(2) of this section. Any such sound recording when properly certified shall be admissible evidence to establish the record of that part of the proceedings which has been recorded.

"(4) Any reporter who has made a record of any proceeding in accordance with the provisions of subsection (b)(1) of this section and any person who has made a sound recording of any proceeding in accordance with the provisions of subsection (b)(2) of this section shall attach his official certificate to the original shorthand notes, sound recording or other original records so taken and file them with the clerk who shall preserve them in the public records of the court for not less than ten years.

"(5) The reporter shall transcribe and certify all arraignments, pleas and proceedings in connection with the imposition of sentence in criminal cases unless they have been recorded by electronic sound recording as provided in this subsection and the original records so taken have been certified and filed with the clerk as hereinabove provided in this subsection. He shall also transcribe and certify such other parts of the records of proceedings as may be required by rule or order of court. Upon the request of any party to any proceeding which has been so recorded who has agreed to pay the fee therefore, or of a judge of the court, the reporter shall promptly transcribe the original records of the requested parts of the proceedings and attach to the transcript his official certificate, and deliver the same to the party or judge making the request.

"The reporter shall promptly deliver to the clerk for the records of the court a certified copy of any transcript so made.

"(6) The transcript in any case certified by the reporter shall be deemed prima facie, a correct statement of the testimony taken and the proceedings had. No transcript of the proceedings of the court shall be considered as official except those made from the records taken by the reporter or from an electronic sound recording made in accordance with the provisions of subsection (b)(2) of this section.

"(7) The original notes, electronic recording or other original records and the copy of the transcript in the office of the clerk shall be open during office hours to inspection by any person without charge."

(b) The first sentence of subsection (e) is amended by striking and eliminating the words "at not less than $3,000 nor more than $7,630 per annum."

(c) A new subsection (g) is added to read as follows:

"(g) If, upon the advice of the chief judge of any district court within the circuit, the judicial council of any circuit determines that the number of court reporters provided such district court pursuant to subsection (a) of this section is insufficient to meet temporary demands and needs and that the services of additional court reporters for such district court should be provided the judges of such district court (including the senior judges thereof when such senior judges are performing substantial judicial services for such court) on a contract basis, rather than by appointment of court reporters as otherwise provided in this section, and such judicial council notifies the Director of the Administrative Office, in writing, of such determination, the Director of the Administrative Office is authorized to and shall contract with any suitable person, firm, association or corporation for the providing of court reporters to serve such district court under such terms and conditions as the Director of the Administrative Office finds, after consultation with the chief judge of the district court, will best serve the needs of such district court.

On page 14, after line 10, insert a new section, as follows:

SEC. 9. Section 332 of title 28, United States Code, is amended (a) by designating each of the existing paragraphs thereof as subsections (a), (b), (c), and (d) respectively; and (b) by inserting new subsections (e) and (f) to read:

"(e) From a list of not less than three names submitted to the council by the Director of the Administrative Office of the United States Courts, each judicial council shall appoint a court executive of the circuit who shall exercise such administrative powers and perform such administrative duties as may be delegated to him by the council.

"All duties delegated to the court executive shall be subject to the general supervision of the chief judge of the circuit.

"The qualifications for the position of court executive shall be established by the Judicial Conference and shall emphasize management expertise. The court executive shall not be required to have a law degree.

"The court executive of the circuit shall serve at the pleasure of the judicial council and shall be paid at a rate established by the Judicial Conference of the United States. The salary of the court executive shall not exceed the amount authorized by law for a referee in bankruptcy.

"(f) In performing its duties prescribed by sections 332 and 372(b) of title 28, United States Code the judicial council may, under rules adopted by the Supreme Court, issue such orders as are necessary to compel the appearance of witnesses and the production of documents. As prescribed within the order, such orders may issue to any part of the circuit and may require the appearance of witnesses and the production of documents at any place designated for holding court within the circuit."

On page 15, after line 16, insert a new section, as follows:

SEC. 10. Chapter 49 of title 28, United States Code, is hereby amended by adding after Section 756 thereof the following new section:

"§ 757. District Court Executive

"(a) Each district court authorized by law six or more permanent judges may, upon approval of the judicial council of the circuit and the Judicial Conference of the United States, appoint a district court executive. The appointment shall be made from a list of not less than three names submitted to the court by the Director of the Administrative Office of the United States Courts.

"(b) The qualifications for the position of court executive shall be set by the Judicial Conference and shall emphasize management expertise. The district court executive shall not be required to have a law degree.

"(c) The district court executive shall serve at the pleasure of the chief judge of the district court. The salary of the district court executive shall be established by the Judicial Conference of the United States but shall not exceed 75 per centum of the rate now or hereafter prescribed by law for a district judge.

"(d) The district court executive shall exercise such administrative powers and perform such administrative duties as may be delegated to him by the court. All duties delegated to the court executive shall be subject to the general supervision of chief judge of the district.

"(b) The analysis of chapter 49 of title 28, United States Code, is amended by adding at the end thereof the following new item:

"757. District Court Executive."

So as to make the bill read:

S. 952

A bill to provide for the appointment of additional district judges, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the President shall appoint, by and with the advice and consent of the Senate, one additional district judge for the northern district of Alabama, one additional district judge for the middle district of Alabama, one additional district judge for the district of Arizona, two additional district judges for the northern district of California, three additional district judges for the central district of California, three additional district judges for the southern district of California, one additional district judge for the district of Colorado, two additional district judges for the middle district of Florida, three additional district judges for the southern district of Florida, three additional district judges for the northern district of Georgia, one additional district judge for the southern district of Georgia, two additional district judges for the nothern district of Illinois, one additional district judge for the northern district of Indiana, one additional district judge for the southern district of Indiana, one additional district judge for the eastern district of Kentucky, one additional district judge for the western district of Kentucky, two additional district judges for the eastern district of Louisiana, one additional district judge for the western district of Louisiana, two additional district judges for the district of Maryland, two additional district judges for the eastern district of Michigan, one additional district judge for the eastern district of Missouri, one additional district judge for the western district of Missouri, one additional district judge for the district of Nebraska, one additional district judge for the district of New Jersey, one additional district judge for the district of New Mexico, one additional district judge for the eastern district of New York, five additional district judges for the southern district of New York, one additional district judge for the northern district of Ohio, one additional district judge for the southern district of Ohio, six additional district judges for the eastern district of Pennsylvania, two additional district judges for the western district of Pennsylvania, one additional district judge for the district of Puerto Rico, one additional district judge for the district of South Carolina, one additional district judge for the western district of Tennessee, two additional district judges for the northern district of Texas, two additional district judges for the eastern district of Texas, one additional district judge for the southern district of Texas, one additional district judge for the western district of Texas, one additional district judge for the eastern district of Virginia, and one additional district judge for the southern district of West Virginia.

(b) The existing district judgeship for the middle and southern districts of Alabama, heretofore provided for by section 133 of title 28 of the United States Code, shall hereafter be a district judgeship for the southern district of Alabama only, and the present incumbent of such judgeship shall henceforth hold his office under section 133, as amended by this Act.

(c) The existing district judgeship for the district of Kansas, the existing district judgeships for the eastern district of Pennsylvania and the existing district judgeship for the eastern district of Wisconsin created by section 5 of the Act entitled "An Act to provide for the appointment of additional circuit and district judges, and for other purposes," approved March 18, 1966 (80 Stat. 78) and amended by the Act of September 23, 1967 (81 Stat. 228), shall be permanent judgeships and the present incumbents of such judgeships shall henceforth hold their offices under section 133 of title 28, United States Code, as amended by this Act. The Act of September 23, 1967 (81 Stat. 228) and section 5 of the Act of March 18, 1966 (80 Stat. 78) are hereby repealed.

(d) In order that the table contained in

section 133 of title 28 of the United States Code will reflect the changes made by this Act in the number of permanent district judgeships for said districts and combinations of districts, such table is amended to read as follows with respect to these districts:

District	Judges

SEC. 2. (a) The President shall appoint, by and with the advice and consent of the Senate, one additional district judge for the district of New Jersey. The first vacancy occurring in the office of district judge in said district shall not be filled.

(b) The President shall appoint, by and with the advice and consent of the Senate, one additional district judge for the middle district of Pennsylvania. The first vacancy occurring in the office of district judge in said district shall not be filled.

(c) The President shall appoint, by and with the advice and consent of the Senate, one additional district judge for the eastern district of North Carolina. The first vacancy occurring in the office of district judge in said district shall not be filled.

SEC. 3. (a) The President shall appoint, by and with the advice and consent of the Senate, one additional judge for the District Court of the Virgin Islands, who shall hold office for the term of eight years and until his successor is chosen and qualified, unless sooner removed by the President for cause.

(b) In order to reflect the change made by this section, the first, second, and fourth sentences of section 24 of the revised Organic Act of the Virgin Islands are amended to read as follows: "The President shall, by and with the advice and consent of the Senate, appoint two judges for the District Court of the Virgin Islands, who shall hold office for terms of eight years and until their successors are chosen and qualified, unless sooner removed by the President for cause. The salary of a judge of the district court shall be at the rate prescribed for judges of the United States district courts. * * * The compensation of the judges of the district court and the administrative expenses of the court shall be paid from appropriations made for the judiciary of the United States."

(c) Section 24 of the revised Organic Act of the Virgin Islands, as amended by this Act, is further amended by inserting before the first word of the language thereof the subsection designation "(a)", and by adding after the final word of that language, the following subsection:

"(b) The eligibility of the chief judge shall be determined as provided in section 136 of title 28, United States Code, and the division of the business among the judges shall be made as prescribed in section 137 of that title."

(d) The third sentence of section 24 of the Revised Organic Act of the Virgin Islands, as amended by this Act, is amended to read as follows:

"Whenever it is made to appear that such an assignment is necessary for the proper dispatch of the business of the district court, the chief judge of the Third Judicial Circuit of the United States may assign a judge of the municipal court of the Virgin Islands or a circuit or district judge of the Third Circuit, or the Chief Justice of the United States may assign any other United States circuit or district judge with the consent of the judge so assigned and of the chief judge of his circuit to serve temporarily as a judge of the District Court of the Virgin Islands."

SEC. 4. (a) Section 128(a) of title 28, United States is hereby amended to read as follows:

"EASTERN DISTRICT

"(a) The Eastern District comprises the counties of Adams, Asotin, Benton, Chelan, Columbia, Douglas, Ferry, Franklin, Garfield, Grant, Kittitas, Klickitat, Lincoln, Okanogan, Pend Oreille, Spokane, Stevens, Walla Walla, Whitman, and Yakima.

"Court for the Eastern District shall be held at Spokane, Yakima, Walla Walla, and Richland."

(b) Section 128(b) of title 28, United States Code, is hereby amended to read as follows:

"WESTERN DISTRICT

"(b) The Western District comprises the counties of Clallam, Clark, Cowlitz, Grays Harbor, Island, Jefferson, King, Kitsap, Lewis, Mason, Pacific, Pierce, San Juan, Skagit, Skamania, Snohomish, Thurston, Wahkiakum, and Whatcom.

"Court for the Western District shall be held at Bellingham, Seattle, and Tacoma."

SEC. 5. Section 92 of title 28, United States Code, is hereby amended to read as follows:

"§ 92. Idaho

"Idaho, exclusive of Yellowstone National Park, constitutes one judicial district.

"Court shall be held at Boise, Coeur d'Alene, Moscow, and Pocatello."

SEC. 6. Section 118(a) of title 28, United States Code, is hereby amended to read as follows:

"EASTERN DISTRICT

"The Eastern District comprises the counties of Berks, Bucks, Chester, Delaware, Lancaster, Lehigh, Montgomery, Northampton, Philadelphia, and Schuylkill.

"Court for the Eastern District shall be held at Easton, Reading, and Philadelphia."

SEC. 7. Section 41 of the Act of March 2, 1917 (ch. 415, 39 Stat. 965), as amended (48 U.S.C. 863), be and hereby is repealed.

SEC. 8. Section 753 of title 28, United States Code, is hereby amended as follows:

(a) Subsection (b) is amended to read:

"(b)(1) Except as provided in subsection (b)(2) of this section, one of the reporters appointed for each such court shall attend at each session of the court and at every other proceeding designated by rule or order of the court or by one of the judges, and shall record verbatim by shorthand or by mechanical means which may be augmented by electronic sound recording subject to regulations promulgated by the Judicial Conference: (1) all proceedings in criminal cases had in open court; and (2) all proceedings in other cases had in open court unless the parties with the approval of a judge shall agree specifically to the contrary; and (3) such other proceedings as the judge of the court may direct or as may be required by rule or order of court or as may be requested by any party to the proceedings.

"(2) Upon a determination that such action is necessary to insure the expeditious production of transcripts or to otherwise expedite and improve the administration of justice, the Judicial Council of any circuit, subject to regulations promulgated by the Judicial Conference, may direct that an electronic sound recording be made of any proceedings or part thereof in any district court in the circuit and that the attendance of a reporter not be required at such proceedings or part thereof.

"(3) The Judicial Conference shall prescribe the types of electronic sound recordings which may be used by the reporters in accordance with the provisions of subsection (b)(1) of this section and which may be used in the absence of a reporter in accordance with the provisions of subsection (b)(2) of this section. Any such sound recording when properly certified shall be admissible evidence to establish the record of that part of the proceedings which has been recorded.

"(4) Any reporter who has made a record of any proceeding in accordance with the provisions of subsection (b)(1) of this section and any person who has made a sound recording of any proceeding in accordance with the provisions of subsection (b)(2) of this section shall attach his official certificate to the original shorthand notes, sound

recording or other original records so taken and file them with the clerk who shall preserve them in the public records of the court for not less than ten years.

"(5) The reporter shall transcribe and certify all arraignments, pleas and proceedings in connection with the imposition of sentence in criminal cases unless they have been recorded by electronic sound recording as provided in this subsection and the original records so taken have been certified and filed with the clerk as herein above provided in this subsection. He shall also transcribe and certify such other parts of the records of proceedings as may be required by rule or order of court. Upon the request of any party to any proceeding which has been so recorded who has agreed to pay the fee therefor, or of a judge of the court, the reporter shall promptly transcribe the original records of the requested parts of the proceedings and attach to the transcript his official certificate, and deliver the same to the party or judge making the request.

"The reporter shall promptly deliver to the clerk for the records of the court a certified copy of any transcript so made.

"(6) The transcript in any case certified by the reporter shall be deemed prima facie, a correct statement of the testimony taken and the proceedings had. No transcript of the proceedings of the court shall be considered as official except those made from the records taken by the reporter or from an electronic sound recording made in accordance with the provisions of subsection (b)(2) of this section.

"(7) The original notes, electronic recording or other original records and the copy of the transcript in the office of the clerk shall be open during office hours to inspection by any person without charge."

(b) The first sentence of subsection (e) is amended by striking and eliminating the words "at not less than $3,000 nor more than $7,630 per annum."

(c) A new subsection (g) is added to read as follows:

"(g) If, upon the advice of the chief judge of any district court within the circuit, the judicial council of any circuit determines that the number of court reporters provided such district court pursuant to subsection (a) of this section is insufficient to meet temporary demands and needs and that the services of additional court reporters for such district court should be provided the judges of such district court (including the senior judges thereof when such senior judges are performing substantial judicial services for such court) on a contract basis, rather than by appointment of court reporters as otherwise provided in this section, and such judicial council notifies the Director of the Administrative Office, in writing, of such determination, the Director of the Administrative Office is authorized to and shall contract with any suitable person, firm association or corporation for the providing of court reporters to serve such district court under such terms and conditions as the Director of Administrative Office finds, after consulation with the chief judge of the district court, will best serve the needs of such district court.

SEC. 9. Section 332 of title 28, United States Code, is amended (a) by designating each of the existing paragraphs thereof as subsections (a), (b), (c), and (d), respectively; and (b) by inserting new subsections (e) and (f) to read:

"(e) From a list of not less than three names submitted to the council by the Director of the Administrative Office of the United States Courts, each judicial council shall appoint a court executive of the circuit who shall exercise such administrative powers and perform such administrative duties as may be delegated to him by the council.

"All duties delegated to the court executive shall be subject to the general supervision of the chief judge of the circuit.

"The qualifications for the position of court executive shall be established by the Judicial Conference and shall emphasize management expertise. The court executive shall not be required to have a law degree.

"The court executive of the circuit shall serve at the pleasure of the judicial council and shall be paid at a rate established by the Judicial Conference of the United States. The salary of the court executive shall not exceed the amount authorized by law for a referee in bankruptcy.

"(f) In performing its duties prescribed by sections 332 and 372(b) of title 28, United States Code the judicial council may, under rules adopted by the Supreme Court, issue such orders as are necessary to compel the appearance of witnesses and the production of documents. As prescribed within the order, such orders may issue to any part of the circuit and may require the appearance of witnesses and the production of documents at any place designated for holding court within the circuit."

SEC. 10. Chapter 49 of title 28, United States Code, is hereby amended by adding after section 756 thereof the following new section:

"§ 757. District Court Executive

"(a) Each district court authorized by law, six or more permanent judges may, upon approval of the judicial council of the circuit and the Judicial Conference of the United States, appoint a district court executive. The appointment shall be made from a list of not less than three names submitted to the court by the Director of the Administrative Office of the United States Courts.

"(b) The qualifications for the position of court executive shall be set by the Judicial Conference and shall emphasize management expertise. The district court executive shall not be required to have a law degree.

"(c) The district court executive shall serve at the pleasure of the chief judge of the district court. The salary of the district court executive shall be established by the Judicial Conference of the United States but shall not exceed 75 per centum of the rate now or hereafter prescribed by law for a district judge.

"(d) The district court executive shall exercise such administrative powers and perform such administrative duties as may be delegated to him by the court. All duties delegated to the court executive shall be subject to the general supervision of chief judge of the district.

"(b) The analysis of chapter 49 of title 28, United States Code, is amended by adding at the end thereof the following new item:

"757. District Court Executive."

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (Rept. No. 91-262) explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the proposed legislation as amended, is to provide for the creation of additional district judgeships throughout the United States and to make amendments to the Judicial Code which will enable the federal courts to efficiently and expeditiously handle the business brought before them, and for other purposes.

STATEMENT

The Judicial Conference of the United States, at its session in September 1968, recommended the creation of 67 additional judgeships in the U.S. district courts, including one temporary judgeship position; and recommended further that four existing temporary judgeship positions be made permanently and that the roving judgeship for the Middle and Southern Districts of Alabama be made a judgeship only for the Southern District of Alabama. Subsequently, at its session in March 1969, the Conference recommended the creation of one more district judgeship, that for the Western District of Tennessee.

S. 952, as introduced, contained the September 1968 recommendations of the Judicial Conference of the United States and would have created a total of 68 additional judgeships as follows: Sixty-seven permanent district judgeships and one temporary district judgeship.

The bill, as amended, would create 70 new judgeships as follows: Sixty-seven permanent district judgeships and three temporary district judgeships.

The basis for the recommendations of the Conference was a systematic and comprehensive statistical study and review of the judicial business of the circuit and district courts undertaken by two Conference committees with the assistance of the Administrative Office of the U.S. Courts. The study was made in the light of the policy adopted by the Conference in 1964 of making a quadrennial survey of the need for additional district and circuit judgeships. Under this policy, the committees of the Conference survey the needs of the district and circuit courts separately, and present requests for new district and circuit judgeships separately. In 1965, the Conference submitted to Congress an omnibus district judgeship request which led to the enactment of the Act of March 18, 1966. In 1967, the Conference presented an omnibus circuit judgeship request which led to the enactment of Public Law 90-347, signed into law on June 15, 1968.

The report of the Committee on Judicial Statistics to the Judicial Conference contains the following statement with reference to its most recent survey and the factors taken into consideration by the Committee in its survey of district court needs:

"Four years have elapsed since the Committee's last general survey of district judgeship needs in 1964. In the interim the Committee has considered numerous requests for recommending additional judgeships on an emergency basis, but found none of the situations so critical as to require such emergency action. All requests were therefore deferred for consideration at the quadrennial review of judgeship needs undertaken this year in accordance with the 4-year policy previously receiving Conference approval.

"The factors focused upon by the Committee in the statistics were the nature and extent of the accumulation of cases and the rate of attrition in the buildup of the backlog; the rate of dispositions as a matter of overall judicial performance as an aspect of the ability of the court to cope with its caseload; the trends in case filings; and the comparative weighted caseload per judgeship, with the awareness that the weighted caseload requires the revision reported above. In recognition of the policy of reviewing judgeship needs once every 4 years the Committee also included as a deliverative element a factor of projection. These factors considered in the light of the recommendations of the judicial councils of the circuits and the individual district courts, fused themselves into what the Committee considers to be the demonstrably justifiable needs for judgeships in the district courts at the present time and in the next 4 years, except as extraordinary developments may occur in some individual situations."

The Subcommittee on Improvements in Judicial Machinery held hearings on S. 952 on April 15 and 16 and May 6 and 7, 1969. At the first set of hearings, the subcommittee heard testimony from witnesses representing the Judicial Conference of the United States, the Department of Justice, and other interested parties. Testimony taken at these hearings disclosed not only a need for additional district judgeships, but also suggested the need for amendments to the Judicial Code to improve the administrative efficiency of the Federal judicial system. In order to develop further testimony on the need for the judgeships and the suggested amendments, the subcommittee heard testimony on May 6 and 7 from, among others, the chief judges of six of the 11 Federal judicial circuits and received for the record written communications from the chief judges of 3 other Federal judicial circuits. On the basis of the statistical data provided by the Administrative Office and the testimony taken at the subcommittee hearings, the pending legislation was refined in the manner presented by this report.

In reviewing the pending legislation, your committee was reminded of the efficacy of a portion of its report on the bill to establish a Federal Judicial Center. That report[1] stated:

"In the past Congress has responded to accelerating judicial business by establishing new judgeships. It is more and more apparent, however, that increased manpower alone is not the entire solution to the problem. The number of Federal judges has almost doubled since 1941. In particular, the record of the 5-year period from 1959 to 1964 belies the suggestion that the mere creation of additional judgeships is an adequate bulwark against burgeoning judicial backlogs. During that period, a 25-percent increase in the number of Federal district court judges resulted in but a 3-percent increase in the total number of civil cases terminated."

That statement, now a year and a half old, remains valid. Since 1959 there has been a 40-percent increase in the number of Federal district judges, but only a 9-percent increase in the number of civil and criminal dispositions.

The creation of additional judgeships alone has not solved the problems of backlog and delay nor have the benefits anticipated from their creation been fully realized. As cases in the Federal courts become more complex and more numerous, the need becomes more pressing for modern administrative techniques to assist the court to perform their judicial functions expeditiously and fairly.

To bring managerial skills to the operating levels of the Federal court system, amendments were made to S. 952 to create a court executive for each circuit and to allow the appointment of a district court executive in those districts having six or more authorized permanent judgeships.

The circuit executive can develop the information and make the suggestions necessary to vitalize the statutory powers held by the judicial councils. Further assistance to the councils is provided by granting to them the power to compel the attendance of witnesses and the production of documents. Testimony before the Subcommittee on Improvements in Judicial Machinery clearly revealed that the judicial councils have not fulfilled the responsibility for which they were conceived—that of effectively superintending the judicial business within their circuits. Part of this failure is due to an absence of staff assistance and the subpena power, both of which would now be provided to the councils.

The hearings before the Subcommittee on Improvements in Judicial Machinery and the statistics contained in the annual report of the Director of the Administrative Office clearly demonstrated that there was a growing and serious problem of delay in the Federal appellate process. A large part of this delay involves the timelag in the transcription of court reporters' notes for appeal. Amendments were added to S. 952 to give the courts necessary flexibility in the hiring and utilization of court reporters.

In the opinion of the committee it is necessary to dispense with the requirements of subsection (4) of rule XXIX of the Standing Rules of the Senate in order to expedite the business of the Senate.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the amendments be considered en bloc.

The VICE PRESIDENT. Without objection, the amendments are considered and agreed to en bloc.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. DIRKSEN. Mr. President, the Senate has just passed the bill to provide additional district judges. I think at least a word ought to be said about the bill.

These recommendations came from the Judicial Conference and from the Administration Office of U.S. Courts, which keep rather current about what is happening in district courts all over the country so as to ascertain whether there is an increase in the workload and in the termination of cases, both civil and criminal. There is now, of course, a rather substantial increase in the workload, and that means that additional judges are required to expedite the work of the courts. That is why the bill is here.

The bill provides for 70 additional judges. I wish to compliment the Senator from Maryland (Mr. TYDINGS) and the Senator from Nebraska (Mr. HRUSKA), who have done a tremendous amount of work on the bill. Additions, changes, and modifications have been made. Likewise, amendments dealing with the court system as such have been made, all of them designed to improve the efficiency and the expedition of the work of the courts, to enable them to render better service.

I believe that these additional judges are absolutely indispensible, particularly so when one stops to consider the congestion of criminal cases in the courts from one end of the country to the other. So this bill, which is an important bill, should reflect the general sentiment of the Senate as it goes on its way to the House of Representatives. I hope they will take expeditious action and that in due course these additional judges can be named so that they can get to work at once and deal with this rather phenomenal caseload.

Mr. TYDINGS. Mr. President, S. 952, as amended, provides for the creation of additional district court judgeships and makes certain changes in the Judicial Code to enhance the ability of the U.S. courts to administer justice.

The bill, as amended, provides for 70 new judgeships—67 permanent and three temporary—for 45 of the 93 Federal district courts. The new judgeships are in large part those recommended by the Judicial Conference of the United States at its September 1968 meeting. The Conference's recommendations were developed after a systematic and comprehensive statistical study and review of the judicial business of the district courts by the Conference's Committees on Judicial Statistics and Court Administration. The recommendations of the Judicial Conference were embodied in S. 952 introduced by the chairman of the Judiciary Committee, Senator EASTLAND, on February 7, 1969. Hearings on S. 952 were held by the Subcommittee on Improvements in Judiciary Machinery of which I am chairman on April 15 and 16 and May 6 and 7, 1969. At these hearings, the subcommittee heard testimony and received, for the record, statements and communications from approximately 70 interested parties, including Senators, Representatives, judges, bar associations, and private attorneys.

The testimony and statements received at these hearings suggested not only the need for additional judge-power at the trial level in the Federal judicial system but also, and perhaps even more importantly, called attention to the need for improved techniques and managerial assistance to help the courts handle effectively the increasingly more numerous and complex cases brought by our exploding population. Sections 8, 9, and 10 of S. 952 embody amendments offered in response to this need. In my mind, those amendments are as important, if not more important, than the creation of the additional judgeships.

The amendments embodied in sections 8, 9, and 10 of S. 952 are designed to alleviate existing problems relating to court reporters, to create administrative officers for the judicial councils of the respective circuits and for districts having six or more authorized judgeships and to provide subpena power to the councils.

To fully appreciate the need for these new provisions of law, it is necessary to review the present administrative hierarchy of the Federal judicial system. At the pinnacle of that hierarchy is the Judicial Conference of the United States which serves as the policymaking organ for the so-called inferior Federal courts. Its various committees report to the semiannual meetings of the Conference on a wide range of subjects. The Conference, however, is not vested with the day-to-day administrative responsibility and control of the Federal judicial system. Under section 332 of title 28, United States Code, the judicial council of each circuit, composed of all of the active circuit judges in the circuit, is charged with reviewing the business of all the courts in the circuit, and is empowered to "make all necessary orders for the effective and expeditious administration of the business of the courts within its circuit." The district courts are required, by that statute, to follow the council's orders.

At the district court level, each chief judge is responsible for administering the business and dividing the cases among the judges according to rules formulated by the district court, and the council.

From this review of the administrative

[1] S. Rept. 181, 90th Cong., first sess. 8 (1967).

framework of the Federal judicial system, it is clear that the principal responsibility for court administration rests with the judicial councils. Since their creation in 1939, however, the councils have not adequately fulfilled this role. The deficiencies of the councils was the cause of a study in 1961 by Judicial Conference of the powers and responsibilities of the councils. A special committee of the Conference reviewed the background, history and experience under section 32 of the code, and their report to the Congress was published as House Document No. 201, 87th Congress, first session. That report did not call for new legislation to implement the directives of section 332 but recognized that greater effort by the judiciary was necessary to assure that the councils were fulfilling their statutory responsibility.

That report of the Conference concluded that the councils had responsibility to superintend the business of each of the courts within the circuit and the personnel of those courts, to work as an instrument to prevent problems of judicial administration from arising and to find solutions for those problems which did arise. To perform these functions, the conference recognized that the councils "must undertake to keep themselves informed," and that to properly inform themselves the councils would have to look beyond the statistics and investigate individual problems with the help of the Administrative Office of the U.S. Courts.

Since 1961, the performance of the councils has not markedly improved. The circuit judges composing those bodies have been inundated with an ever-increasing workload—appeals have climbed from 4,204 filed in fiscal year 1961 to 9,116 in fiscal year 1968. The number of appeals per circuit judgeship has jumped from 62 in fiscal year 1961 to 94 in fiscal year 1968. This rise in business has put heavy pressure on each circuit and judges, properly chosen for their legal acumen not their managerial skill, have had even less time than before to reflect and consider the administrative needs of the courts within the circuits.

During hearings before the Subcommittee on Improvements in Judicial Machinery on S. 952, I invited the chief judges of the circuits to comment on the individual judgeship requests, on the workings of the councils and on what was needed to make these administrative mechanisms work. Testimony revealed that the councils had been relatively important in meeting their responsibilities under section 332 because they were unable to develop the necessary facts on which orders for improved administration of the courts could be fashioned. Consequently, the subcommittee resolved to amend S. 952 to provide the councils with the tools the chief judges attest are necessary to an adequate fulfillment of responsibility under section 332.

Section 9 of S. 952 amends section 332 of title 28 to create the position of court executive for each circuit and to arm the circuit councils with the power to issue subpenas to compel the appearance of witnesses and the production of documents if such subpenas are required by the council to fulfill its duties under sections 332 or 372(b), the latter relating to the involuntary retirement of disabled judges.

I believe that a court administrator or executive for the circuit can greatly improve the administrative efficiency of all courts of the circuit, including the court of appeals itself. Such nonjudicial officers can bring managerial expertise and experience to the councils and can serve to gather information beyond what can be gleaned from statistics. By doing so, he can give vitality to the administrative prerogatives now granted to, but not now effectively exercised by, the respective judicial councils. He can relieve the chief judge of the circuit of numerous administrative chores and burdens, leaving the chief judge to supervise the court executive and conserving his time for the exercise of the paramount judicial function, that is, judging and deciding cases.

The concept of a court executive for each circuit was endorsed in principle by the Judicial Conference of the United States at its March 1969 meeting. It has also been endorsed by the American Bar Foundation report on "Accommodating the Workload of the United States Courts of Appeals" which, in pertinent part, reads:

> The administrative facilities of the Court of Appeals should be greatly strengthened.
>
> 1. Each court should have an administrative officer responsible to the Circuit Council having authority and responsibility for the adminstraton of the court's business. He should assume, as far as possible, all nonjudicial duties of the circuit judges.

In addition to the need for a person with managerial skill at the circuit level, the hearings conducted by the Subcommittee on Improvements in Judicial Machinery disclosed a need for power within the councils to compel attendance of witnesses and production of documents. This power would be useful to the council in determining the facts necessary for action under section 332 or 372(b) of title 28, United States Code. Section 9 of S. 952, consequently, adds a new subsection (b) to section 332 to provide the subpena power. The mere existence of such power may make its use rare, and open information to council scrutiny which has heretofore been unobtainable.

But making the councils more effective administrative bodies is not the sole answer to better judicial administration. Even the most effective case flow mechanism will be negated if sufficient judges are not available to try cases or dispose of them by pretrial consideration. Moreover, our large district courts are facing so many managerial problems that they need administrative assistance at their level. Therefore, section 10 was added to S. 952 to give district courts with six or more authorized judgeships, the services of a court executive who can bring to bear on immediate and daily problems of those courts the same knowledge and techniques which the circuit court executive would apply to the circuit as a whole. Only districts with proven need for managerial assistance will acquire an executive officer after approval of the respective circuit council and the Judicial Conference.

A judge's time should be spent in judging. He should not be, as too many judges are now forced to be, a personnel manager or docket controller. The court executive, both at the council and district level, will relieve judges of these time-consuming managerial tasks.

I have already alluded to the caseload problems of the Federal courts of appeals. In many ways these courts are the most heavily burdened in our entire federal system. There has been a distressing and growing time lag in the appellate process. The median time for disposition of a civil appeal is now 9.6 months; 10.6 months for a criminal appeal. The hearings conducted by the Subcommittee on Improvements in Judicial Machinery revealed that a number of circuits have undertaken experiments to reduce the delay from the filing of the last brief to final disposition. While these experiments are to be welcomed, greater delay now occurs in the compilation of the record of appeal and in briefing time than in the subsequent stages of the appellate process. The courts of appeals can themselves tighten up the briefing period by requiring adherence to time schedules and granting extensions only in real emergency situations. The courts, however, need help in reducing the delay in compilation of the record.

The median time in fiscal year 1968 for the filing of the complete appellate record was 1.8 months in civil cases and 2.8 months in criminal cases. The most time-consuming aspect of this part of the process is the transcription of the court reporters notes. There needs to be more flexible and effective utilization of reporters, and section 8 of S. 952 is designed to promote the more efficient use of reporters and thereby to expedite the judicial process.

Under the present provisions of law, a court reporter must be present in the courtroom at every session. Although the reporters are authorized to augment their own verbatim transcript with electronic sound recordings, such recordings may be substituted for a transcript taken by a court reporter only for proceedings on arraignment, plea, and sentence in criminal cases.

Clearly, transcripts could be produced more rapidly if court reporters spent less of their time in court. Their increasingly heavy caseload makes it nearly impossible for them to be in the courtroom and to still keep up production. The proposed amendments to subsection (b) of section 753 of title 28, United States Code, supported in principle by many witnesses during the hearings on S. 952, would enable the judicial council of any circuit, subject to regulations promulgated by the Judicial Conference, to authorize the use of electronic sound recordings and the consequential release of reporters from court attendance upon a determination that such action is necessary to insure the expeditious production of transcripts or to otherwise expedite and improve the administration of justice. Any such sound recording when properly certified will be admissible evidence to establish the record of the part

of the proceedings which has been recorded.

These amendments to subsection (b) of section 753 will enable the Federal judiciary to begin experimentation with and utilization of sophisticated electronic sound recording techniques and equipment and to thereby provide court reporters with the out-of-court time necessary for the more expeditious production of transcripts.

Under the existing provisions of subsection (e) of section 753 the Judicial Conference has the authority to set the salaries of court reporters subject to a statutory maximum and minimum. Representatives of the Judicial Conference, with the support of the court reporters association of the Federal judiciary, recommended the elimination of the statutory maximum and minimum. This recommendation would be implemented under the provisions of subsection (b) of section 8 of S. 952. Because of the statutory maximum, the Federal courts in some circuits are unable to compete effectively with the State courts for the services of court reporters. Elimination of the statutory maximum will enable the Judicial Conference to establish competitive salaries, which may well vary from circuit to circuit. Elimination of the statutory minimum will provide the Administrative Office of the U.S. Courts with more flexibility in the hiring of part-time and short-term court reporters.

The Judicial Conference also recommended amending section 753 by adding the proposed new subsection (g) contained in subsection (c) of section 8 of S. 952. Under existing provisions of section 753 it is not clear whether or not the Administrative Office can meet temporary demands and needs in a particular district court by contracting with a court reporting agency to provide services on an intermittent basis. At present, an attempt is made to meet such needs by hiring additional individual court reporters. Experience has shown that there is great difficulty in obtaining the services of individual court reporters for short-term, intermittent service. The proposed subsection (g) will make it clear that the Administrative Office has the power to hire reporting agencies which will be able to provide court reporters whenever they are needed to meet an emergency situation.

The amendments to S. 952 contained in sections 8, 9, and 10 are vital to improvement in the Federal judicial system. They will give the courts the modern tools they need to meet their responsibilities. They are no less essential than the increases in judge-power provided by S. 952.

The creation of 70 new district judgeships is a dramatic increase in our Federal judiciary. The request, however, is meant not only to meet pressing caseload demands that now exist but also to anticipate needs of the future. No modern business would think of ignoring future needs in devising its personnel requirements. Too often in the past the judiciary has been guilty of ignoring the future and fashioning its requests only to meet past needs.

In making its request for judgeships to the Congress last September, the Judicial Conference projected its needs through 1972. Nine months have elapsed since their request was made. Final enactment of this legislation still lies in the future. There will also be some time expended in the filling of these judgeships. Indeed, the Justice Department witnesses at hearings on S. 952 estimated the passage of a year after final enactment before all the new positions would be manned. Such a delay in filling judicial vacancies should not be countenanced, and, as I told the Department's witness at the hearings, a much shorter period of time should be expected by our citizenry. Yet, I must note that there has been a serious problem in expeditiously filling vacancies in some of our districts and circuits. Indeed, our hearings disclosed that more than 140 judge-years have been lost through vacancies existing for 6 months or more.

The timelag in authorization of judgeships and the filling of vacancies are sound reasons, in and of themselves, for the desire of the Judicial Conference to project future needs for judges. Equally important, however, is the very real fact of our Nation's exploding population. The record shows that litigation has been increasing even faster than the population. If we ignore population trends, we will have a judiciary barely able to meet the demands of the 1960's, when they are forced to cope with the caseloads of the 1970's.

It is relevant to note that, once a serious backlog of cases develops in a court, herculean efforts may be insufficient to restore the lost ideal of swift justice. The flow of new cases is just too rapid to allow meaningful reduction in backlog without the addition of more judges. Each of our major metropolitan areas district courts is now confronting a serious backlog or its docket is showing the signs of a steadily approaching crises. Federal cases, particularly criminal cases, have grown more complex and are consuming ever-greater amounts of court time. Recent court decisions have reduced the number of guilty pleas and generated a voluminous number of pretrial motions. This result calls for the addition of judges so that our criminal calendars will not break down to the dertiment of our entire society.

The judgeships authorized by S. 952 have been scrutinized carefully by the Judicial Conference, the Subcommittee on Improvement in Judiciary Machinery, and the full Judiciary Committee. Each must stand on its own particular facts which are set out in the committee's report.

The committee report contains one error. The statistics for the northern district of Illinois have been printed both after the text on that district and after the text on the northern district of Indiana. The statistics for the northern district of Indiana have not been printed in the report. I therefore ask unanimous consent that these statistics be printed in the RECORD.

There being no objection, the statistics were ordered to be printed in the RECORD, as follows:

TABLE 1.—U.S. DISTRICT COURT FOR THE NORTHERN DISTRICT OF INDIANA

Authorized judgeships, 3

Resident judges:	Places of holding court:
Robert A. Grant, chief judge	South Bend
George N. Beamer	Hammond

1968	704	435	195	63	11	1.6

[1] For both tables 5 and 6 excludes land condemnation cases. For table 5 also excludes habeas corpus cases, deportation reviews, and motions to vacate sentence.

TABLE 7.—WEIGHTED [1] CASELOAD FOR JUDGESHIP FOR ALL U.S. DISTRICT COURTS AND FOR THE NORTHERN DISTRICT OF INDIANA

Fiscal year	Number of district courts in the United States	Number of judgeships		Weighted [2] caseload per judgeship						
				Civil		Criminal		Total		
		United States	Northern Indiana	United States	Northern Indiana	United States	Northern Indiana	United States	Northern Indiana	
									Number	Rank [2]
1962	87	289	3	185	138	57	31	242	169	68
1963	88	289	3	195	156	56	32	251	188	66
1964	88	289	3	207	201	57	30	264	231	55
1965	88	288	3	214	234	60	41	274	275	34
1966	87	318	3	200	258	55	44	255	302	18
1967	89	322	3	198	230	54	29	252	259	37
1968	89	323	3	207	239	58	42	265	281	31

[1] Based on civil and original criminal cases filed. The weighted caseload reflects the amount of court time used for types of civil or criminal cases divided by the proportions of total terminations. A description of the method used appears on pp. 156–161 in the Annual Report of the Director of the Administrative Office of the U.S. Courts, 1964. The weighted caseload per judgeship refers only to the overall average per judgeship for each district as provided by 28 U.S.C. 133. Therefore, the number of judgeships does not include the services of senior judges or services of visiting judges. In computing the weighted caseload for the United States the District of Columbia and territories are excluded.

[2] Refers to the rank of the district court compared to all of the district courts for the year indicated. The lower the ranking the higher the average weighted caseload.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. KENNEDY. Mr. President, I ask unanimous consent that all committees, be authorized to meet during the session of the Senate today.

The VICE PRESIDENT. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT UNTIL NOON TOMORROW

Mr. KENNEDY. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until noon tomorrow.

The VICE PRESIDENT. Without objection, it is so ordered.

(Later in the day, the Senate modified its order, to provide for an adjournment until 11 a.m., tomorrow.)

DEATH OF REPRESENTATIVE WILLIAM HENRY BATES, OF MASSACHUSETTS

Mr. PASTORE. Mr. President, it is with a very heavy heart that I express my deep sorrow on the passing of a dear colleague and close friend, Representative WILLIAM H. BATES, of Massachusetts.

He and I were associated on the Joint Committee on Atomic Energy for quite a number of years. We came to know each other well during this association. I dare to say that in all my life I have never met a man who was finer and more decent than BILLY BATES. He was an exemplary father and husband, a devoted public servant, and a great American. I know that Congress will miss him, and miss him sorely.

I extend my deepest sympathy to his very lovely family.

Mr. KENNEDY. Mr. President, BILL BATES was in the great tradition of Congressmen who are servants not only of their districts but of the Nation as well. All who worked with him respected him for his dedication to his constituents and to his country.

Over the years, the Massachusetts congressional delegation met periodically on Massachusetts' problems as the need arose and communication between members of the delegation was sometimes very frequent. I came to know BILL BATES in this way. I can say, Mr. President, that whether the problem was a labor-management conflict in Lynn or shoe imports in Haverhill or Salem, BILL's knowledge of the problem was thorough, his compassion real and his dedication not only obvious but effective.

The people of his district were proud of their representative in Congress and the people of Massachusetts take great satisfaction in his service to the Nation.

As a public servant, he was outstanding and as a friend he was sensitive and steadfast. His death is a loss to us all.

THE TAX REFORM BILL

Mr. METCALF. Mr. President, on April 22 the House Committee on Ways and Means completed 28 days of public hearings on the question of tax reform. Those hearings began last February with the benefit of 2 years of staff studies, together with proposals regarding tax reform which the then Secretary of the Treasury Joseph W. Barr submitted to the present Secretary David M. Kennedy on January 17 of this year. Twelve days later those studies were made available to the House Committee on Ways and Means.

An examination of those studies, together with a reading of the testimony gathered in the public hearings, simply confirmed the fact that although the Federal income tax is designed to be progressive, many persons with substantially high incomes actually pay either no tax or the same effective rate of tax as do persons with incomes only a fraction as large. What this all adds up to is that the wealthy pay far less than their fair share of taxes, while others suffer special hardships to meet their tax liabilities.

I do not intend to vote for an extension of a surtax on top of an established inequitable tax structure unless I have a comprehensive package of tax reform to consider right along with the surtax. The need for overhauling our tax laws is nothing new or startling. What these latest hearings have revealed is simply that with the passage of time, the situation only continues to get worse.

Mr. President, I want to go on record now in opposition to any extension of the surtax without tax reform because the only choice open to the other body this week will be to vote it up or down. Fortunately, in the Senate we will be able to debate this subject at some length, and I, for one, intend to take advantage of that opportunity.

"JUST HOW BAD ARE THINGS"—COMMENCEMENT ADDRESS BY HEDLEY DONOVAN AT CARNEGIE-MELLON UNIVERSITY

Mr. DIRKSEN. Mr. President, the distinguished editor in chief of Time magazine gave a commencement address at Carnegie-Mellon University, better known as Carnegie Tech.

I allude to only one matter which rather intrigues me because he said to the graduates:

> You are graduating just in time to get in on the ground floor of a golden age.

That statement is quite at variance with all the pessimistic philosophy and observations we hear expounded on all fronts today. Therefore, this is a refreshing note.

I think it is great on the part of Mr. Donovan to say that graduates are just getting out of school in time for the golden age. Why should there not be a golden age now, and later golden ages for future graduating classes. I wish every one of them well.

I think anyone who strikes that kind of felicitous note should have his remarks given wide coverage. Mr. President, I ask unanimous consent that the commencement address by Mr. Hedley Donovan to the graduating class at Carnegie-Mellon University be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

JUST HOW BAD ARE THINGS?

(By Hedley Donovan, editor in chief, Time, Inc., Publications)

I was out on Michigan Avenue one night last summer, when Senator McCarthy's disciples, and Mayor Daley's police, and the Hippies and Yippies and National Guardsmen were milling around in the so-called Battle of Chicago. I even inhaled a little tear gas, and I was beginning to feel like a real front-line reporter. Then as the police started to form up for another of their sweeps, a couple of the flower children moved right up behind me, and I heard the young man say to the girl, "Just stay behind this businessman and we'll be all right."

Somehow I wasn't too flattered. Not that I have anything against businessmen; they certainly have their uses. But the journalist thinks of himself as a rather dashing, rebellious sort of fellow—and as a matter of fact some journalists did get their heads cracked in Chicago.

This morning, of course, I must leave it to you whether I sound like a reporter or some painfully square, dues-paying member of the Establishment. My proposition this morning is in fact an unconventional one. Some of you may find it outrageously so. My thesis is that we Americans, in this June of 1969, are not in a total mess.

It is a strange hour in our history. In the

past four years—your college years—this country has suffered certain forms of failure, disillusionment and fear that no Americans before us have known. We have also, in these same four years, accomplished a prodigious amount of work; we have come safely past some kinds of danger; and I would argue that as a country we have been maturing in some interesting ways.

The American conditions is almost anything you want to prove. Without exaggerating any particular item of evidence—just by careful selecting of the items—it is possible to demonstrate that this Class of 1969 is graduating out into a nation in the last stages of social, political and moral decay. Also without exaggerating, just by selecting—and this takes *very* careful selecting—it is possible to show that you are graduating just in time to get in on the ground floor of a Golden Age. Which kind of evidence one hunts hardest for is perhaps a matter of individual temperament or chemistry. I myself have a weakness for optimism. This in spite of spending many years in a profession which goes to a tremendous amount of trouble to make sure that all of you know all the bad news as promptly as possible.

Even a chronic optimist must recognize, I think, that this country has entered a great internal crisis, the third in our history. The first came to its climax in the Civil War. The second, which scarred this city and so many others, and marked the lives of all your parents, was the Great Depression of the 1930's. The third crisis has developed late in these 1960's, and it still lacks a name.

That first internal crisis of more than a century ago turned upon a simple moral wrong, slavery, and a not so simple constitutional issue, secession. The second internal crisis, a generation ago, was economic. Today's crisis is essentially social. The structure, the priorities and the purposes of American society have come under severe challenge. Here is America, fantastically prosperous, brilliant at politics—when else in history has there been so powerful a government that was both stable and democratic?—and yet the social fabric of the United States seems at times stretched to the ripping point.

The specific components of the crisis are painfully familiar to all of you. First, of course, is the continuing injustice that America does the Negro, the rising militance and anger of the Negro mood, and all the churning emotions aroused among whites, including terror. Second is the campus, where because of the race problem, and also because of Viet Nam and the draft, but surely also because of affluence, and liberation from the old bread and butter anxieties, a very capable and zealous minority have been able to mount a rebellion that has indeed shaken the pillars of the Establishment. Third is a general unease and indignation, affecting those over the notorious Age 30 line more than those under, that nothing is working right, especially nothing urban: why must I every day walk past so much uncollected filth in the streets of New York, the richest city in human history? Fourth and last, not unique to America but intensifying our specially American problems, is the whole moral unmooring of mid-Twentieth Century Western man: the decline of formal religious belief, the decline of the conventional sex codes, the decline of traditional patriotism. I won't stop this morning to argue whether any of these particular declines are bad or good things, but we do have to note that when so much belief is taken away, men either must find new belief, or else they will be more and more caught up in the ordinary mechanics of living, and then if even the mechanics seem to be coming apart . . . a society without idealistic commitment is deep in trouble.

As to the chronology of the present American crisis I would date it from Watts, August 1965, the very late hour when so many Americans first glimpsed the extent of our failure in the race question. The crisis built up in 1966–67 with the mounting doubt as to whether we could or should succeed in Viet Nam. It has continued with a whole rollcall of ghetto and college names: from Newark and Detroit to Harvard and Cornell.

A few weeks ago the London *Economist* published a special report on the United States under the title "The Neurotic Trillionaire." The *Economist*, which does not get excited easily, said the fact that America has virtually mastered man's economic problem "is almost certainly the most momentous news-story so far in the history of the world." They also observed that "this society which represents man's greatest secular achievement sometimes seems to be on the edge of a national nervous breakdown."

Let me turn to some of my reasons for thinking we might just barely avoid that national nervous breakdown, and might work our way through our crisis. First, we really *are* going to be a trillionaire. It will happen, with something to spare, by the end of 1971. The gross national product will run to about $925 billion in 1969. I hope it's not too vulgar of me to mention these sums of money. A trillion dollars can buy a lot, even at 1971 prices. And I would rather be wondering how best to use our immense economic assets than wondering, as were so many of the commencement speakers in my graduation year, whether the U.S. economy could be made to work at all. There are many ways to slice the foreseeable growth in national production over the next thirty months. For just one example, we could allow private spending to raise by $70 billion, which is equal to the total national product of Canada, and at the same time double the present level of federal spending for housing, health and education.

Do we have the brains to make the best uses of our prosperity? We have in fact been training brain power at a rate that all th rest of the modern world marvels at. There are economists and scientists in western Europe who, despite the unprecedented prosperity of their own countries, and despite large expansion in their own educational systems, see the American brain margin steadily widening for decades ahead—precisely because of scenes like the one here this morning. In this academic year 1968–69 the U.S. has had seven million students in some 2,400 colleges and universities. We probably must admit that some of the 2,400 don't really deserve to be called colleges, and perhaps a few of the seven million don't deserve to be called students. Even so, it is still an extraordinary effort and achievement in higher education. This same American campus which keeps frightening and fascinating so many of us, this place of long hair and locked-in deans and four letter words, is also a place of immense promise for our national future. I must say that the student rebels, however bad their manners and however monumental their self-righteousness, have indeed attacked some geninue weaknesses in the structure of universities and precipitated some overdue reform. Beyond that, I find the things the student rebels say are almost as interesting as the way the old, square world of parents, administrators, alumni and trustees *listen*—a truly impressive example of democratic tolerance and of willingness to learn, even at advanced ages. And a sign, as I see it, that there may be considerable health in our society after all. May all of you of the Class of 1969 be as open-minded 20, 30, 40 years from now, when your children will be saying . . . who of us knows what they *will* be saying?

And there is another attitude, quite widespread in our society, that I find encouraging. Next month, very probably, Americans will land on the moon. In all the proud commentary on that event, and in all the praise for the people who have made it possible, including such scientists as President Stever (Carnegie-Mellon University President, H. Guyford Stever), there is also going to be a wonderfully American theme struck over and over again. We have already heard it in all the sermons and editorials after last month's triumphant flight of Apollo 10. If we can go to the moon, so the sermon runs, why can't we master the problems of the ghetto? I think there is an inspiring foolishness about that question. A foolish question because the answer is so obvious—i.e., the ghetto is a tougher problem than the moon, and that's how we came to solve the moon first. An inspiring question because it reasserts the old American faith that anything is possible, including the improvement of people.

We shall need all that faith as we continue to toil with the question of race, for here we are trying to do nothing less than change people, inside the ghetto but especially outside. My colleague Charles Silberman of *Fortune*, in his perceptive book *Crisis in Black and White*, predicted five years ago that as the race situation grew better it would get worse. As various objective measurements of Negro progress—income per capita, educational opportunity, and so on, improved, as indeed they have, the disparity between these levels and white privilege would grow steadily more offensive. "It is a commonplace of history," Silberman wrote, "that revolutions stem from hope not despair, from progress, not stalemate." So we shall seek more progress and risk more revolution, heartened perhaps by a little extra light from Apollo.

I am not going to detain you this morning, you will be relieved to hear, with a total inventory of national strengths and weaknesses. If I were, I would want to talk, for instance, about pollution—air, water, noise, billboards, automobile graveyards, etc.; I would want to praise the pioneering work of Pittsburgh and lament the steady deterioration of New York. And then I would want to talk for a while about the situation in Washington; I would want to give a rather mixed report card, for this first semester, to the new Nixon Administration.

Before I conclude, however, I do want to touch upon some changes in our position in the world, changes which may give us a freer hand in dealing with the shortcomings of our own society.

I think the danger of World War III, perhaps never very great, has declined further during your college years.

I have spent a litte time this year in Russia, the Middle East and Viet Nam. You see that journalistic affinity for bad news I spoke of earlier—except the news really wasn't so bad.

For students of bad news, that was a nice comment the other day by the State Department officer who gives Secretary Rogers his morning briefing. The Secretary complained that there never seemed to be any good news. The young man replied: "Mr. Secretary, there is never any good news, but there is sometimes bad news for which we are not to blame. There is a report that the Aswan Dam is leaking."

The Dam did not appear to be leaking when I saw it last month. And the Middle East, all in all, did not seem to be on the brink of exploding.

In Viet Nam we are slowly de-escalating, and I am one of those who think the history books will eventually say we did accomplish some good, at high cost, by being there.

I think it is very possible that within a year or two the world around us will look less menacing to the United States than at any time since the rise of Hitler. I like a lot of the suggestions that are being made in universities, in Congress, in the press, for new accents in American foreign policy, not isolationist but less dependent on military commitments, more reliant on trade and other private American endeavor in the world. I welcome the major debate that has been developing over the Safeguard ABM system—perhaps a democracy actually *can* hold a responsible public discussion on a major mat-

ter of military technology and diplomatic strategy. I think myself that the "military-industrial complex" is a myth, and a distracting one, but I am glad to see military budgets and military efficiency coming under much more rigorous review. All these things, without implying retreat from our fundamental interests or obligations abroad, could mean more resources for meeting the American social crisis.

Thornton Wilder observed in 1950: "Americans are still engaged in inventing what it is to be an American." It is still true today.

This Carnegie-Mellon Class of 1969 is surely going to have a hand in the invention. I congratulate each of you on what you have already accomplished, and I wish you well in all that you are about to do.

Mr. KENNEDY. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

CENTER FOR VIETNAMESE STUDIES AND PROGRAMS

Mr. DIRKSEN. Mr. President, it has been brought to my attention that one of the leading universities of our great State has recently established a new center which I believe should be of interest to all of you and gives promise of being a great addition to the American academic community. Southern Illinois University has had approval from its own board of trustees and from the board of higher education of the State of Illinois for a Center for Vietnamese Studies and Programs, which will be located on its Carbondale campus.

Attention is being given to the fact that it is essential we begin now to consider the needs for the reconstruction of Vietnam and how best to accomplish this task that we hope will be upon us soon. President Nixon and other national leaders have referred to this need in recent public statements. Unfortunately, as I see it, we have no major university in our country carrying forward a specialized program dealing specifically with Vietnam even though we have spent over $100 billion and lost over 35,000 lives in that country.

The broad mission of the Center for Vietnamese Studies and Programs is indicated by the following major reasons for its establishment:

First. The involvement of the American people in Vietnam is unique in our history. Despite the trials of war, American universities have played a significant role in this involvement by providing assistance to Vietnam with respect to that nation's educational and social goals. The American involvement undoubtedly will extend to the postwar reconstruction period in Vietnam. And, American universities—among which SIU is uniquely qualified by reason of its involvement in Vietnam since 1961—undoubtedly will be asked to participate in the American response to the challenge of postwar reconstruction for Vietnam. SIU is desirous of such participation, as a service to the Nation and to the world.

Second. SIU educational experience—and indeed, also, that of other American universities—in Vietnam since 1961 needs to be thoroughly researched in terms of seeking ways to infuse that experience generally into the academic lifestream of higher education in the interest of academic relevance with respect to one of the major world issues of our times.

Third. Research is required, and revised or new programs must be devised, to make education more relevant especially for veterans of the war in Vietnam—some 26,000 Illinois veterans have served in Vietnam to date. And such veterans constitute a unique manpower pool of individuals who could serve in the postwar reconstruction of Vietnam—provided appropriate educational and training programs are devised for and made available to them.

Fourth. The proposed center, with its focus on Vietnam, can develop means and ways for more effective university assistance to the reconstruction of other present and future war-torn areas of the world—that is, a multiplier effect may accrue from the operations of this particular center.

It is planned that the center will have educational, research, and service functions. As an educational organization, it will offer assistance to academic units of the university for the development and staffing of selected Vietnamese studies as part of the curriculum of the institution. A major project in this connection will be the development of a special educational and training program for selected veterans of the Vietnamese war for service in the postwar reconstruction of Vietnam. As a research organization, the center will: assess SIU experience in Vietnam to date; serve as a depository for Vietnamese materials and materials about Vietnam; and, conduct research needed for the development of new proposals for assistance to Vietnam. And, as a service organization, the center will: assist with the backstopping of current SIU/AID contracts in Vietnam and of any new SIU activities in that country once aproved and implemented; and provide special consultant and training services to—for example—governmental agencies and foundations.

Many of the veterans upon returning from Vietnam have expressed a desire to return to that country and assist with the job of rebuilding. President Nixon has appointed a task force to be headed by Mr. Johnson, his nominee to be Administrator of the Veterans' Administration, to look into the reasons that Vietnam veterans are not participating more actively in the veterans programs for training after leaving service. Southern Illinois University's Vietnamese center may hold a partial solution to this problem. One of the more forward looking programs to be established is one called VET—Vietnam education and training program.

The operation of the program will have two major phases, as follows: Phase 1: Beginning the fall quarter of 1969, and enrolling selected American veterans at the freshman level for the associate degree, at the junior level for the bachelor's degree, and at the graduate level—to produce, respectively, technical, professional and administrative personnel by 1971. Phase 2: Beginning as soon as external sponsorship and financial support can be obtained, and enrolling selected Vietnamese veterans. Phase 2 will require a counterpart VET facility in Vietnam to help select participants, to provide orientation prior to their departure for SLU to enroll in the campus VET program, and to receive and orient VET graduates prior to specific assignment in Vietnam. As phase 2 develops, it will enable VET to produce teams of American and Vietnamese veterans for service in postwar Vietnam.

The overall VET program will: First, involve appropriate existing programs at the associate, bachelor and graduate degree levels, using to the maximum extent possible faculty members who have served in Vietnam—for teaching and advisement functions; and, second, have a special Vietnam-focused training program to include, for example, instruction in Vietnamese history and culture, language—Vietnamese and French, life and living in Vietnam, community development theory and practice, and human relations—using to the maximum extent possible both American faculty and advisers who have served in Vietnam and Vietnamese faculty and advisers, for teaching and advisement functions. Headquarters for the Vietnam program will be at the university's Little Grassy Lake facilities, in a "Vietnamese village." The VET facility in Vietnam also will be used for training purposes.

It is my understanding that AID and the Office of Education have been looking to the possibility of assisting with the funding of this center. This is to be commended and other agencies of the Federal Government should do likewise. This is an important program.

Mr. President, I think this is, indeed, a very timely and extraordinary proposal which Southern Illinois University makes. It is high time that we have a major educational institution in the country that is willing to undertake this, because it is a job that inescapably confronts us and it must be done.

ORDER OF BUSINESS

Mr. KENNEDY. Mr. President, I suggest the absense of a quorum.

The PRESIDING OFFICER (Mr. ALLEN in the chair). The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

FUTURE STATUS OF OKINAWA

Mr. BYRD of Virginia. Mr. President, on May 29, just prior to the visit of the Japanese Foreign Minister to the United States, I addressed the Senate on the future status of Okinawa.

Under the 1952 Treaty of Peace with Japan, the United States was granted the unrestricted use of the island of Okinawa in the far Pacific. On this island,

we have our greatest Pacific military base complex.

The Japanese Government is seeking administrative control of Okinawa, which is to say that it wants a veto over any U.S. action affecting Okinawa. It specifically wants the right to deny the United States the authority to store nuclear weapons on Okinawa, and would require prior consultation before our military forces based there could be used.

In speaking to the Senate, I expressed the view that it is debatable whether the United States should continue to guarantee the security of much of Asia.

But I expressed the view, too, that if we are to continue to guarantee the security of the Asian nations—and our Government has not advocated reducing these commitments—then it seems only logical, sound, and responsible that the United States continue to have the unrestricted use of its greatest base in the west Pacific; namely, Okinawa.

It would be foolhardy, in my judgment, to commit the United States to defend most of the Far East and then to give away this country's unrestricted right to use its military bases on Okinawa.

For 4 years we have fought the war in Vietnam with one hand tied behind our back. Let us not be so foolish now as to get into a similar position by giving someone else control over our principal military complex.

My Senate speech on Okinawa was published throughout Asia. Such newspapers as Asahi in Tokyo published the full text.

The Japanese newspapers, of course, do not agree with my view. It was given full coverage, however, by such papers as the Japanese Times and Yomiuri, which ran it in both its Japanese and English editions.

The future status of Okinawa is the most burning political issue in Japan.

The purpose of my speech was to focus public attention on what I consider to be a matter of great importance—assuming our Nation plans to continue to play a major role in the far Pacific.

Even the New York Times said in discussing the Japanese Foreign Minister's visit to Washington that—

> The Japanese must recognize that they cannot continue to enjoy the luxury of American protection without making some sacrifices on their own on behalf of mutual security.

While my speech received a cool reception in Japan, it appears to have helped focus attention on an important problem. It received support from the Shreveport, La., Journal; the Birmingham, Ala., News; the Lynchburg, Va., News; the Northern Virginia Daily, Strasburg, Va.; the Hartford, Conn., Courant; the Phoenix, Ariz., Republic; and the Nashville, Tenn., Banner, as well as from Chicago Tribune columnist, Walter Trohan.

I received the following telegram from the Chamber of Commerce of the United States in Okinawa:

> Applaud your speech in the Senate 29 May stop Please air mail copy complete text.

I also received the following telegram from the Patton Crosswhite Post 6975, Veterans of Foreign Wars, Bristol, Va.-Tenn.:

Members oppose the return of Okinawa to the Japanese Government.

I ask unanimous consent that the text of various editorials mentioned above be published in the RECORD at this point—and following these editorials, that one written for the Hearst Newspapers captioned "Okinawa Surrender" be published in the RECORD, to be followed by an article from the Christian Science Monitor datelined Tokyo and written by the Monitor staff correspondent, David K. Willis, captioned "Nuclear Question Underlies Okinawa Parley," and followed by an editorial from the New York Times, captioned "A Visitor From Japan."

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the Shreveport (La.) Journal, May 30, 1969]

OKINAWA VITAL TO U.S. SECURITY

So long as the United States maintains its role as the defender of the Far East, the continued unrestricted use of this nation's military bases on Okinawa is vital and fundamental to the security of America and the rest of the free world.

This is the warning sounded by U.S. Sen. Harry F. Byrd Jr. of Virginia on the eve of a visit to Washington by the Foreign Minister of Japan, who will be in the United States to discuss the future status of the Island of Okinawa.

Senator Byrd, in a speech to his colleagues Thursday, said the U.S. Senate, under the Constitution, has a responsibility for foreign policy, but that too often during the past 25 years the Senate has abdicated this responsibility and relied instead on the Department of State.

Today the United States has become the policeman of the world, having entered into mutual defense agreements with 44 nations.

Senator Byrd asks, "Can we logically continue in this role? Should we, even if we could?

"Twenty-four years after the defeat of Germany we have 225,000 troops in Europe, mostly in West Germany.

"Twenty-four years after the defeat of Japan, we have nearly 1,000,000 military personnel in the Far Pacific, on land and sea."

Behind Japan's efforts to regain administrative control of Okinawa are many factors, one of which is the political fate of Prime Minister Sato. Leftist elements including the Socialist and Communist parties and radical student groups, have demanded that the United States withdraw completely from Okinawa.

The United States has had unrestricted use of Okinawa since World War II. The status of the island was determined by the 1952 Treaty of Peace with Japan. There is no legal obligation on the part of the United States to discus reversion of the island to Japan at this time or any other time.

As analyzed by Senator Byrd, "The Japanese Government wants the United States to continue to guarantee the safety of Japan; to continue to guarantee the safety of Okinawa; to continue to spend hundreds of millions of dollars on Okinawa ($260,000,000 last year). But, it seeks to put restrictions on what the United States can do.

"Japan wants a veto over any U.S. action affecting Okinawa. It specifically wants the right to deny the United States the authority to store nuclear weapons on Okinawa and would require prior consultation before our military forces based there could be used."

In defense matters, the Virginia senator pointed out, the Japanese have been given a free ride. As a direct result, Japan's present gross national product is more than one hundred and twenty billion dollars a year and ranks third in the world, behind only those of the United States and the Soviet Union. Japan's expenses for its own national defense are less than one per cent of the value of its gross national product.

For four years the United States has fought the Vietnamese war with one hand tied behind its back. To relinquish control of Okinawa to the Japanese at this time—regardless of our friendship with the country—would be to further cripple ourselves for the benefit of others.

Senator Byrd deserves the gratitude of all Americans for his alertness and for his forthright stand against an action which could destroy the military security achieved for this nation by the men who gave their lives to take Okinawa in World War II.

[From the Birmingham (Ala.) News, May 30, 1969]

OKINAWA: NOT NOW

Printed on the opposite page today are excerpts from a speech made in the U.S. Senate yesterday by Sen. Harry F. Byrd, Jr., of Virginia.

The subject of the speech is Okinawa, and it is timely because the Japanese minister arrives in Washington tomorrow for talks on the status of that island.

American forces captured Okinawa in the last major land battle against Japan in World War II. Since then the U.S. has administered the affairs of the island. Important military bases are maintained there under the terms of the peace treaty.

Under a separate agreement—the U.S.-Japan Mutual Security Treaty—the U.S. maintains troops in Japan itself. But, as Sen. Byrd pointed out yesterday, there are restrictions imposed on the use of U.S. forces based in Japan.

Increasingly in recent years there has been agitation in Japan against *both* the Mutual Security Treaty, which will be up for renegotiation next year, and U.S. control of Okinawa. But it is important to keep the two issues separate.

There may be modifications next year in the Mutual Security Treaty binding the two one-time enemies. This is a legitimate subject of negotiation and agreement—or, if the two nations so conclude, of disagreement.

The News believes that extension of the security treaty is in the national interest of both countries. Scrapping it would force the U.S. to re-think much of its Pacific strategy; it also would impose dramatic new responsibilities on the Japanese government which, under the protection of the U.S. defense umbrella, has achieved a near miraculous economic reconstruction without the nasty necessity of worrying much about its national defense.

But this newspaper does not believe that the U.S., in exchange for renewal of the security agreement—which as we say, is of at least as much importance to Japan as to America—need succumb to pressure on the at-this-point extraneous issue of Okinawa.

To repeat: The two things are distinct and separate, despite the efforts of militant Japanese leftists to lump them into one big anti-American "cause."

With Sen. Byrd we assume that someday administrative control of Okinawa will revert to Japan. But it would be foolhardy under the present circumstances, when we are deeply involved in a war in Southeast Asia and committed to a border defense role in alliance with non-Communist nations in the region, to hand over or agree to hand-tying restrictions on the use of one of the key American military outposts in the Western Pacific.

We hope that the talks with the Japanese foreign minister will be cordial and constructive. But the Tokyo government should be given to understand that the question of Okinawa's reversion to Japanese control must wait more propitious times and meanwhile should not be allowed—by Tokyo or by us—to damage the good and mutually beneficial relations which have existed between the two

countries since World War II or to poison the atmosphere in which the important forthcoming negotiations on the Mutual Security Treaty will be conducted.

As usual, Harry Byrd talked sense in the Senate yesterday. This is a refreshing change from what we too often hear from some other members of the august body, whose attacks on the U.S. defense establishment and quaint views on national security resemble nothing much as an apparent national death-wish

---

[From the Lynchburg (Va.) News, June 4, 1969]

OKINAWA

Senator Harry Byrd Jr. made some valuable comments in the Senate last week on Japan's efforts to regain control of the island of Okinawa, which is our major military base in the Far East.

Emphasis was placed by Senator Byrd upon our military involvements and the fact that the Senate has perhaps left too much to the State Department and the Senate too often abdicated its responsibility in foreign affairs. He seeks to arouse that body to the exercise of these responsibilities, and does so as the Japanese Foreign Minister arrives to discuss Okinawa.

The essense of his position is in the sentence: "As a practical matter, we have become the policeman of the World."

The Japanese Foreign Minister's visit is, as he said in the Senate, due to: "The status of the island has become the most inflammatory political issue in Japan; a clamor is rising among Japanese and Okinawans for the reversion of the Ryukyu Islands to Japanese administration."

The effort of the Left in Japan, Senator Byrd said, ". . . reminds one of the effort of elements in Panama to blackmail the United States into giving up the Panama Canal. The administration of President Johnson drew a treaty to meet the demands of the Panamanians, but strong opposition in the Senate kept the President from bringing the issue to a vote."

One dominantly clarifying item was in Senator Byrd's message in relation to Okinawa: "The status of Okinawa was determined by the 1952 Treaty of Peace with Japan. There is no legal obligation to discuss reversion of the island to Japan at this time or any other time." And this peace treaty is entirely separate from "the 1960 Mutual Defense Treaty with Japan."

In listing the matters at issue between the two countries over Okinawa, Mr. Byrd brings out the pertinent facts and they constitute a strong, wholly adequate and necessitous case for the United States to hold and administrate Okinawa for as long as is necessary it being "vital if the United States is to continue to have obligations in the Far East." And it is perfectly clear that the United States has and will continue for a long time to have these obligations.

So concisely pertinent is Senator Byrd's address to the importance of our holding Okinawa, and to our overall relations and predicaments in the Far East, that it is worth filing as a ready and relatively brief reference to the situation as it exists and is likely to continue for a long while.

We occupy a tragic situation in the Far East; this is a situation in which we could have avoided heavy commitment, but the commitment was made, is too complicated for extrication, and must be seen through with power and the bases of power we hold.

[From the Northern Virginia Daily, May 31, 1969]

A REALISTIC VIEW

Unless there is a last minute revision in schedules, the Foreign Minister of Japan will arrive in Washington today for a working session with the U.S. State Department. The Japanese objective is the future status of the Island of Okinawa and the hope that the U.S. will return administrative power in the island to the government of Japanese Prime Minister Sato.

Since World War II, Okinawa has been the principal U.S. military base in the Pacific area. It has been under the complete administrative and military control of the U.S.

Pressure is mounting among the Japanese and the Okinawans, fomented by a growing clamor from Japanese leftist groups and other radical elements, for a return of administrative control to Japan.

The demand is complicated by the fact that, among the many commitments for military defense which the U.S. now has throughout Southeast Asia, under the U.S.-Japanese Mutual Security Treaty the U.S. also guarantees the freedom and safety of Japan.

Apparently, the Japanese have no wish to abrogate the security treaty. While they find administrative control in the hands of the U.S. irksome, they obviously are quite satisfied to have this country continue to protect them and guarantee their freedom from attack.

Virginia's Senator Harry F. Byrd, Jr., in a speech on the Senate floor Thursday, took strong issue with this development. Attacking the Japanese suggestion that the U.S. should give up administration of the Ryukyu Islands, the largest of which is Okinawa, Sen. Byrd stated:

"We are the dominant party in the North Atlantic Treaty Organization, the purpose of which is to guarantee the freedom of Europe; we are the dominant party of ANZUS—the treaty among Australia, New Zealand and the United States; we are the military head of CENTO—Central Treaty Organization—Turkey, Iran and Pakistan; we are the dominant partner in the Southeast Asia Treaty Organization, one of the prime reasons, according to former Secretary of State Dean Rusk, that the United States became involved in the war in Vietnam; we have guaranteed the security of Free China, and we have guaranteed the security of Japan.

"As a practical matter, we have become the policeman of the World.

"Whether the United States should continue to guarantee the freedom of Japan, and Free China; whether we should continue the mutual defense arrangements covering the eight countries signing the Southeast Asia Treaty; plus the Philippines; plus Australia and New Zealand; plus Thailand, Laos and Vietnam, is debatable.

"But what is clear-cut common sense, in my judgment, is that if we are to continue to guarantee the security of the Asian nations—and our government has not advocated scrapping these commitments—then I say that it is only logical, sound and responsible that the United States continue to have the unrestricted use of its greatest base in the West Pacific, namely, Okinawa."

We consider Sen. Byrd's evaluation a valid and sensible view. As he pointed out, whether we should continue our far-flung commitments in the Far East is debatable, but as long as we are committed, surrender of control of our most strategic military base in the Asian area "would only make more difficult our role in the Pacific."

In other words, if we are to continue to be the policeman in Asia, as well as Europe, we must be in a position to blow the whistle.

[From the Hartford (Conn.) Courant, May 30, 1969]

SENATOR BYRD'S REALISTIC STAND ON OKINAWA

The remarks about Okinawa made by Senator Harry F. Byrd Jr., of Virginia, on the floor of the Senate yesterday proved as perceptive as they are urgent.

As long as the United States maintains its significant role in the Far East, Senator Byrd said in sum, the continued unrestricted use of American military bases on the large Ryukyu island is vital and fundamental.

The Senator spoke in anticipation of the visit by the Japanese Foreign Minister who comes to Washington this weekend to discuss the future status of Okinawa. That the present Japanese government appreciates—and well should—the part played by the United States in the defense of Japan as well as of Asia to the southeast in general, can probably be taken for granted. Nevertheless, Premier Sato's Liberal-Democratic Party is under utmost pressure by the Leftist opposition to secure the return of Okinawa to Japanese control, and the party is plainly seeking to shore up its position by advocating this reversion.

Senator Byrd points out that the mutual security treaty between the United States and Japan comes up for review next year. He stresses however that the issue of Okinawa is quite a separate one. The status of Okinawa was determined by the 1952 peace treaty with Japan and, as the Senator rightly observes, there is absolutely no legal obligation to review it this time in some fancied context with the defense treaty.

While Japan probably would not seek to remove American bases from Okinawa, it does specifically want the right to deny storage of United States nuclear weapons there, and to prior consultation before American forces based there could be used.

The fallacy of such restriction is made plain enough by Senator Byrd. It is interesting to note that the Senator calls "debatable" the question of whether the United States should continue to play so large a part in the defense of the Far East. Yet this adds all the more weight and credence to his conclusion that if we are going to guarantee the security of Asian nations, "it is clearcut common-sense—logical, sound and responsible—that we also continue to have unrestricted use of our greatest base in the West Pacific, namely Okinawa."

The Senator feels the eventual revision of Okinawa to Japan may take place. But certainly the time is not now, as he points out. "For four long years we have fought the war in Vietnam with one hand tied behind our back . . . Let's not be so foolish now as to get into a similar position by giving someone else control over our principal military complex."

That is Senator Byrd's advice to his colleagues and to the country in general, and it is as important as it is unassailable. Surrender of control over Okinawa would only make more difficult our already difficult enough role in the Pacific. Since it was the Senate that ratified the peace treaty which gave the United States unrestricted use of Okinawa, the present issue must be decided by the Senate. Under the Constitution, the Senate has a responsibility for foreign affairs. In discharging it in the matter of Okinawa, the Senate could not do better than heed Senator Byrd's statements.

[From the Arizona Republic, June 4, 1969]

POLITICS AND OKINAWA

The 1952 American-Japanese peace treaty gave the United States unrestricted right to the use of Okinawa, the long, narrow, strategically located island off the coast of Asia.

In the past 17 years, the Okinawans have been given increasing autonomy. They elect their own mayors and local councils. But foreign policy decisions are made by the U.S., and American military commanders have final administrative control over Okinawa.

Today the Japanese are making a concerted drive to regain Okinawa. Foreign Minister Kiichi Aichi brought the matter up when he visited President Nixon Monday. The future of Okinawa undoubtedly is a major item in the current negotiations be-

tween Mr. Aichi and Secretary of State William P. Rogers. The Japanese are particularly anxious to get American agreement on this issue before Prime Minister Eisaku Sato visits Washington in November.

It would, of course, be politically advantageous for Prime Minister Sato to return to Tokyo with Okinawa in his diplomatic briefcase. But it wouldn't redound to the advantage of Japan, the United States, or the free world to weaken the military strength of Okinawa.

That strength certainly would be weakened if Okinawa were placed under the administrative arm of the Japanese Foreign Office, or if the United States should give Japan a veto over the use of the men and arms (including atomic weapons) on Okinawa.

Sen. William F. Byrd (D-Va) put the Okinawa problem in perspective in a speech delivered to the Senate last week. He cited American mutual defense agreements with 44 nations, and recalled that the U.S. has been involved in three major foreign wars since 1941.

"We are the dominant country in the North Atlantic Treaty Organization, the purpose of which is to guarantee the freedom of Europe; we are the dominant party of ANZUS—the treaty among Australia, New Zealand and the United States; we are the military head of Cento—Central Treaty Organization—Turkey, Iran and Pakistan; we are the dominant power in the Southeast Asia Treaty Organization, one of the prime reasons, according to former Secretary of State Dean Rusk, that the United States became involved in the war in Vietnam; we have guaranteed the security of Free China, and we have guaranteed the security of Japan."

"As a practical matter," said Senator Byrd, "we have become the policeman of the world." Nowhere is this more evident than in Asia. Continued the senator:

"Whether the United States should continue to guarantee the freedom of Japan, and Free China; whether we should continue the mutual defense arrangements covering the eight countries signing the Southeast Asia Treaty; plus the Philippines; plus Australia and New Zealand; plus Thailand, Laos and Vietnam, is debatable.

"But what is clear-cut common sense, in my judgment, is that if we are to continue to guarantee the security of the Asian nations—and our government has not advocated scrapping these commitments—then I say that it is only logical, sound and responsible that the United States continue to have the unrestricted use of its greatest base in the west Pacific, namely, Okinawa."

What the Japanese seem to want is a continued guarantee of Japanese security; the continued American expenditures in Okinawa ($260 million last year); the continued protection of Okinawa against aggression. But with all these things the Japanese also want to restrict American uses of Okinawa; and of course they want reversion of Okinawa to Japanese hegemony.

Senator Byrd's conclusion is definite, precise and should appeal to every American. "It would be foolhardy, in my judgment, to commit the United States to defend most of the Far East and then to give away this country's unrestricted right to use its military bases on Okinawa."

Okinawa is the touchstone. Any reduction on its strength must be counterbalanced by other strength. Perhaps that strength can come from Japan. The gross national product of Japan is now the third largest in the world, exceeded only by those of the United States and Russia. It should contribute more to its own security.

The Japanese have an important role, perhaps the most important role, to play in stemming the Communist tide in the Far East. But until they are ready to make a substantial contribution in that direction.

[From the Nashville (Tenn.) Banner, June 6, 1969]

FOR SECURITY PURPOSES: AUTHORITY OVER OKINAWA BELONGS IN U.S. HANDS

Sen. Harry F. Byrd, Jr., of Virginia, is one of those who believe—with cause—that the United States must not cede to Japan veto power over military use of the Island of Okinawa. He is right. Exponents of that surrender, ignoring dictates of national and Free World security, have made no reasoned case.

Under provisions of Article 3 of the 1952 Treaty of Peace, the United States has complete administrative authority over the Ryukyu Islands, the largest of which is Okinawa. This nation is not trespassing there, on a mission strictly of peace-keeping. The reminder hardly is necessary that, as Senator Byrd puts it, beginning with President Eisenhower, each administration since 1951 has firmly maintained that the unrestricted use of the U.S. bases on Okinawa is vital if the United States is to continue to have obligations in the Far East.

The mere fact that leftist elements in Japan are clamoring for abrogation of this arrangement, as of the U.S.-Japanese Security Treaty is not sufficient cause either to scuttle the base or give Tokyo veto power over any military decisions relating to it.

The Virginia Senator puts it bluntly: "To put it another way, the Japanese government wants the United States to guarantee the safety of Japan; to continue to guarantee the safety of Okinawa; to continue to spend hundreds of millions of dollars on Okinawa ($260 million last year). But it seeks to put restrictions on what the United States can do."

This nation does not aspire to be the world's policeman—by self-assignment, or by circumstances of assignment by others. But it must not be pushed from essential security outposts legally held, by the pressure of left wing political whims afar, for a surrender that could play directly into the hands of the Free World's Communist enemies. It must not confine itself in a policy straitjacket, nor abdicate administrative authority over a base which shortly, under Communist assault, it might have to recover with arms.

Senator Byrd agrees that eventually the Ryukyu Islands will be returned to Japan. But that time is not yet. It isn't in the immediate offing. Note it:

"What is clear-cut common sense is that if we are to continue to guarantee the security of the Asian nations—and our government has not advocated scrapping those commitments—then I say that it is only logical, sound and responsible that the United States continue to have the unrestricted use of its greatest base in the West Pacific, namely Okinawa."

He is right.

[From the Chicago (Ill.) Tribune, June 4, 1969]

NIXON ON HORNS OF DILEMMA OVER OKINAWA

(By Walter Trohan)

WASHINGTON, June 3.—Japanese Foreign Minister Kiichi Aichi has stated Japan's case to President Nixon for the return of Okinawa. Sen. Harry Flood Byrd Jr. [D., Va.] has stated the case no less forcibly for retention of the island, with its key air base, as long as this country remains involved in the far east.

In pondering the fate of the island, President Nixon is riding the horns of a dilemma. On the one hand, this country has not waged war for territory, at least since 1848, so it would seem that we should hasten to return territory which is not ours and which we have no long-range desire to keep.

On the other hand, the return of Okinawa would make the American role of policemen in the far east, if not in the world, most difficult. The roll may not be a happy one and certainly it is not a profitable one, unless it leads to peace in the area and in the world.

Okinawa is the principal island of the Ryukyu group. More than two-thirds of the 60-island chain's population lives on Okinawa, which houses a key American military base. The islands were won during the war at a cost of 35,000 American lives as part of Douglas MacArthur's island hopping strategy against Japan.

Japan took over the islands in 1879. There has been some local agitation for return of the islands to Japan, but in the Japanese rather than the native community.

BASE VITAL IF UNITED STATES STAYS IN FAR EAST

It is, of course, questionable whether the United States should continue its far flung commitments in the far east, but if it elects to do so, the base at Okinawa is vital. During the quarter of a century since the war ended, the United States has entered into mutual defense agreements with 44 nations, including those in the Southeast Asia Treaty organization.

Two major wars—Korea and Viet Nam—have come since the end of World War II. Probably no other nation in the world would have been able to fight three major wars in so short a period, but it is obvious that the mutual defense agreements haven't headed off two wars or lightened our burden.

We have 225,000 troops in Europe, mostly in West Germany, and one million military in the far east, on land and on sea. This is part of the price the United States is paying as world policeman.

The status of Okinawa has become a burning issue in Japan. Leftists and Socialists, Byrd told the Senate, are trying to force dissolution of the United States-Japanese security treaty in 1970 and as a part of their campaign are demanding the return of Okinawa at once.

OKINAWA STATUS DETERMINED BY 1952 TREATY

The mutual security treaty and the status of the island are not linked. The security treaty was concluded in 1960, each party reserving the right to reopen it after 10 years. The status of Okinawa was determined by the 1952 peace treaty with Japan putting the Ryukyus under United States military administration.

President Kennedy in 1962 said he looked forward to return of the islands to Japan. President Johnson reaffirmed the statement permanently, but the wisdom of return is seriously questioned by many.

"Surrender of control over Okinawa would only make more difficult our role in the Pacific," Byrd told the Senate on the eve of the Japanese foreign minister's visit. "The issue must be decided by the Senate; it was the Senate which ratified the treaty of peace in 1952, which gave the United States unrestricted use of Okinawa.

"In my opinion, so long as the United States maintains its significant role in the far east, the continued unrestricted use of our bases on Okinawa is vital and fundamental."

[From the Christian Science Monitor]

NUCLEAR QUESTION UNDERLIES OKINAWA PARLEY

(By David K. Willis)

TOKYO.—Phase 2 of the crucial security talks between the United States and Japan is opening with one major question that has to be answered.

The question: What right will Washington have to use its massive base on Okinawa without restrictions on nuclear or conventional methods should an emergency threaten after Okinawa reverts to Japanese control?

Phase 1 of the talks, which took place when Foreign Minister Kiichi Aichi paid a quick visit to Washington recently, stripped away much diplomatic underbrush and left the question clearly spotlighted front and center.

Tokyo wants nuclear weapons on Okinawa

to be removed upon reversion. It also says Washington must consult in advance with Japan before reintroducing them or staging renewed combat missions to war zones such as Korea or Vietnam.

But Washington is afraid that these "prior consultations" will take too much time, and will end up with Tokyo saying "No."

RESTRICTIONS OPPOSED

If North Korean should attack the south again, or if Communist China should send troops into Southeast Asia, Washington wants to be sure it can use Okinawa as it sees fit—which is the way it uses the island now. Seoul and Taipei also want Okinawa to stay unrestricted.

Tokyo says "'Prior consultations' could mean 'Yes' rather than 'No.'" Washington replies: "How do we know? Can we be certan?" Tokyo says, "We'll be flexible—after all, we are sensible people. If the emergency is real, we'll say 'Yes.'"

Judging from detailed reports of Mr. Aichi's movements in Washington that were cabled back here by Japanese reporters, the Foreign Minister thinks President Nixon is anxious for a settlement favorable to Japan.

But he also knows now that Secretary of State William P. Rogers, and Defense Secretary Melvin R. Laird, are worried about future Communist threats after reversion.

Japanese sources say Prime Minister Eisaku Sato, who visits Mr. Nixon in Washington in late November, must return to Tokyo with a date and acceptable conditions if he is to stay in office.

HEATED DEBATE SHUNNED

Japanese public opinion seems set against retention of nuclear weapons on the island after reversion. Mr. Sato cannot publicly admit that Washington is free to use the base freely in emergencies. The opposition and others would say that, even if nuclear weapons were removed, Japan still ran the risk of being involved in a war without its own full consent.

Mr. Sato basically wants the U.S.-Japan security treaty applied to Okinawa in full. The restrictions he is asking are already in force for American bases on the Japanese mainland.

If the treaty is changed in any way, he will have to seek ratification from the Diet, or parliament, and heated National debate will ensue. He wants to avoid this.

It has been made clear, privately, to Mr. Nixon that Japan will allow virtual "free use" in a serious emergency.

It is a "stick and carrot" approach: The "stick" is that if Mr. Sato's government falls, Washington will lose a valuable friend. The "carrot" is that emergency "free use" would also apply to bases on mainland Japan as well.

One difficulty for Japan is that, although Mr. Aichi presented a detailed Japanese view—and backed it up with promises of more foreign aid to Asia and improved Self-Defense Forces—Washington itself has still not settled on a final position.

Mr. Nixon and his aides are preoccupied with Vietnam and related issues.

OUTWARDLY OPTIMISTIC

Mr. Aichi sees Mr. Rogers next at the end of July, when American Cabinet members come to Japan for an annual meeting with the Japanese Cabinet on economic issues.

The two men meet again at the opening of the United Nations General Assembly in New York in September.

Japan now must weigh the extent to which Washington will insist on an "unrestricted use" formula, and exactly how it can reply while still placating popular opinion here at home.

Mr. Aichi returns to Tokyo outwardly optimistic. But basically his visit went almost exactly as Tokyo expected it to go, except that Mr. Nixon was thought to be unusually warm, and a potentially sticky meeting with Commerce Secretary Maurice H. Stans also went smoothly.

Publicly, the Japanese dismiss a New York Times report that Mr. Nixon already has decided in principle to return Okinawa without nuclear weapons. Even if the report were true, Tokyo still wants to know the terms Mr. Nixon has in mind.

[From the New York Times]

A VISITOR FROM JAPAN

The visit of Japanese Foreign Minister Kiichi Aichi to Washington this week heralds a new era in Japanese-American relations in which both nations must adjust to new realities to preserve and strengthen a partnership essential to Asian security.

Mr. Aichi is here as advance man for Premier Sato, due next November, to press claims for reversion of Okinawa and other islands of the Ryukyu chain to Japanese rule. The Japanese are also insisting that the American military complex on Okinawa, largest in the Pacific, be subject to the same restrictions as those that already apply to American bases on the Japanese main islands: namely, no nuclear weapons and prior consultations with Tokyo on any combat operations conducted outside Japan.

Loss of absolute American control over Okinawa and unrestricted use of the bases there would certainly impose limitation on the ability of the United States to act unilaterally in the Far East. But the United States can no longer ignore the demands of a resurgent Japan for the return of sovereignty over islands that both the Japanese and the Ryukuans regard as an integal part of Japan. Nor can this country deny Japan a wider role in determining Pacific policies that vitally affect Japanese security.

To rebuff Japanese demands for a more equal partnership would be to court political disorders on Okinawa and invite political repercussions on the main islands that could topple the friendly Sato Government and destroy the United States-Japanese Mutual Security Treaty, an indispensable element in the stability of the Western Pacific. Fortunately, there are indications that the Nixon Administration is preparing to meet the Japanese demands realistically.

For their part, the Japanese must recognize that they cannot continue to enjoy the luxury of American protection without making some sacrifices of their own on behalf of mutual security. If Japan goes too far in forcing reduction of the American military presence, the Japanese will either have to begin making costly investments in a national defense force or stand exposed to the rising nuclear power of China and the belligerency of a heavily-armed North Korea, not to mention pressures from the Soviet Union.

The total elimination of American military ties, including the United States nuclear umbrella, which some Japanese seek would not lead to a disarmed and neutral Japan as they profess to believe. More likely it would provoke the resurgence of Japanese militarism, with Japanese nuclear arms. This is a nightmare most Americans and most Japanese fervently wish to avoid.

OKINAWA SURRENDER?

Twenty-four years ago, 12,500 United States fighting men died to capture Japan's 72-island Ryukyu Chain and its strategic big prize, the 60-mile-long island of Okinawa in the East China Sea. Since then, under continuing American control, Okinawa has been developed as our single most important military base complex in the Far East—A vital, multi-billion-dollar staging area for operations from Korea to Viet Nam.

Japan now is pressing for return of Okinawa and the other Ryukyu Islands. Intense campaigns both by its nationalistic far right and its anti-American left have made such return an explosive political issue. And the Nixon administration, anxious to maintain good relations with Japan's pro-American Government, has indicated it will yield to the pressures and return the territories—probably effective in 1972.

This conciliatory attitude is the latest demonstration of Uncle Sam's amazingly benevolent attitude toward defeated former enemies. Surrender of our control over Okinawa will not mean dismantling of our 91 military installations there. But it would mean we could no longer use the island for storing nuclear weapons, or as an operating base for our B–52 bombers. Furthermore we would have to get Japan's permission for launching any military operations, as we do now at the 148 bases we maintain in Japan itself.

There is absolutely no legal reason why we should do this. The status of Okinawa and the other Ryukyus was fixed by the Treaty of Peace signed by Japan in 1952. Nor does their status have anything to do with the U.S.-Japanese Mutual Security Treaty of 1960, under which the U.S. guarantees the freedom and safety of Japan. Yet a threat not to renew that 10-year treaty in 1970, ironically, is one of the pressures being exerted on Washington for the return of Okinawa.

Under that treaty Japan, in effect, has given a free ride in defense matters. Because we are its protectors, only one per cent of its budget goes for defense. As a result it has been able to develop an annual gross national product of over $120 billion—third in the whole world and topped only by the U.S. and Russia.

What the Okinawa situation boils down to, in other words, is a demand that we give Japan a veto over future U.S. military operations on the island. At the same time, the Japanese would continue to enjoy the benefit of the hundreds of millions of dollars we spend there every year, plus the immense saving afforded by our continuing protection.

It is an absurd proposition from any viewpoint but Japan's. Naturally we want to maintain friendly relations, but a clear choice must be made. Either we keep a strong base under our own unhindered control on Okinawa, or Japan must take over the cost and responsibility of its own defense.

Anything else would be a foolish, dangerous, inexcusable betrayal of the ultimate sacrifice made by 12,500 American men in the bloody battles of 1945.

The PRESIDING OFFICER. Is there further morning business?

Mr. KENNEDY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. GRAVEL in the chair). Without objection, it is so ordered.

VIETNAM ANALYSIS BY SENATOR AIKEN

Mr. MANSFIELD. Mr. President, I call attention to an editorial entitled "Vietnam: Getting Back to the High Ground," published in the Washington Post of Friday, June 20, 1969. The editorial comments most highly on remarks of the distinguished senior Senator from Vermont (Mr. AIKEN).

Senator AIKEN has waited a long time for the judgment of this editorial. It was in October 1966 that he "advised" the administration that the United States should declare that it has "won" the war in Vietnam, and then proceed with the

"gradual redeployment of U.S. military forces." He added:

This unilateral declaration of military victory would herald the resumption of political warfare as the dominant theme in Vietnam.

The administration ignored Senator AIKEN in 1966. Editorially he was torn apart. Professors and students of political science thought his proposal was absurd.

Mr. President, one of the sad things about our society is that we seem unable to recognize the wise men among us. We suffer fools; we reject the wise.

We see that the Senator from Vermont, 20,000 and more lives late, made sense 3 years ahead of the rest of us.

I ask unanimous consent that the editorial be printed at this point in the RECORD and that it be followed by the entire speech which the Senator from Vermont made to this body on October 19, 1966.

There is food for thought in the speech.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From The Washington (D.C.) Post, June 20, 1969]

VIETNAM: GETTING BACK TO THE HIGH GROUND

"In the final analysis, it is their war. They are the ones who have to win it or lose it. We can help them, we can give them equipment, we can send our men out there as advisers, but they have to win it, the people of Vietnam against the Communists."—John F. Kennedy, September 2, 1963.

This country has had no stronger supporter of its Vietnam effort over the years than Lee Kwan Yew, the tough-minded Prime Minister of Singapore, and yet when Lee was here in town a while ago he was not asking as much of us, in his private conversations with old friends, as we have been asking of ourselves. He had read American public opinion rightly, and, while he was puzzled and dismayed, he was realistic. If the public would not see it through, it was time to begin a gradual withdrawal of our forces—to "Vietnamize" the war. And if the South Vietnamese proved incapable of handling the increased burden and succumbed in time to Communist control, what would the repercussions be elsewhere in Asia? They would not be serious; the American position would not collapse, *provided* the South Vietnamese were seen to have been given a reasonable opportunity to save themselves, *provided* we were honest about it and did not pull out precipitously; *provided* it was plain that we had done as much as any outside power reasonably could be expected to do to foreclose a Communist conquest by force.

This was the nub of it, giving the South Vietnamese an honest, reasonable shot at their own salvation, and, while these are not easy measures to make, this is the test which must somehow be applied to the proposals for disengagement put forth by Clark Clifford, the former Secretary of Defense, in *Foreign Affairs*. They are not, strictly speaking, new proposals; a variation was offered by McGeorge Bundy last October, and both plans draw on the simple prescription put forth by Senator George Aiken several years ago—*declare victory*.

Mr. Clifford did not put it that way, of course, but his plan, like Mr. Bundy's, comes down to the same thing as Senator Aiken's. By proposing that we ease off our military pressure on the enemy, remove 100,000 troops by the end of this year, and withdraw the balance of our ground forces by the end of 1970, Mr. Clifford is making the arbitrary judgment either that the South Vietnamese will be ready 18 months from now to go it alone, perhaps with American air and logistical support; or that if they aren't it won't be our fault; but that in any case we have accomplished as much of our Vietnam mission as can be accomplished in the way we are going about it and that it is time to "set a chronological limit on our Vietnamese involvement."

The logic of almost everything Mr. Clifford has to say about his proposal is inescapable; we are not getting anywhere, nearly fast enough, as things are going now; the South Vietnamese probably won't face up to their obligations to defend themselves until we do less of it for them, the war is diverting "our minds and our means" for pressing domestic problems that won't wait; so the time to begin the process of disengagement is now.

With this much, the Nixon Administration probably would not quarrel—at least privately, in any case, at his press conference last night, the President cited his initial withdrawal of 25,000 troops as evidence that "we have started towards the withdrawal that (Clifford) has advocated" and expressed the hope that "we could beat Mr. Clifford's timetable." He promised another withdrawal in August. But he said the numbers would depend on the rate of training of the South Vietnamese Army, progress in the Paris talks, and other developments. What he isn't saying, in short, is how fast he will go; he has not spread out a timetable or put a flat and final limit on the use of American ground troops. He has not, in short, told the North Vietnamese, who have been waging this war for twenty years, that if they will just be patient for another year and a half, all our ground forces will be gone.

And he has not done so, one suspects, because he does not share Mr. Clifford's quiet confidence that this sort of announcement would create a "painful dilemma" for Hanoi or act as an incentive to "true bargaining" in the Paris talks. This is the sole flaw, to our mind, in the Clifford approach; it might infuse the South Vietnamese with new strength and self-confidence; it might bring them greater self-sufficiency. But because of its fixed and arbitrary timetable, unrelated to any response the enemy might make, it might also shatter the Saigon government, demoralize the South Vietnamese armed forces, and raise very serious questions about whether, in whatever ensued, the South Vietnamese had been given a decent, reasonable chance. So we would forgo the precise, prearranged timetable, while applauding the rest of the Clifford approach. We would favor beginning an irreversible accelerating process of disengagement, but one whose exact pace and termination date are at least somewhat related to honest judgments about the performance of the South Vietnamese and the response of the enemy.

President Kennedy was right—six years ago. In the last analysis, it *was* their war. But we took a very large part of it away from them when we plunged headlong into this quagmire. And this, as well as the effort and the sacrifices that have already been made, imposes upon us a very special obligation to take care about the way we hand it back to them as we try to make our own way back to the high ground.

[From the CONGRESSIONAL RECORD, Oct. 19, 1966]

VIETNAM ANALYSIS—PRESENT AND FUTURE

Mr. AIKEN. Mr. President, now that the President is well on his way to Manila for a meeting with our allies in arms, it seems appropriate to review briefly events leading up to our present position in Vietnam, the status of that present position, and what possible courses are available for the future.

The President has stated repeatedly that the Manila conference is being held in the quest for peace.

I have never doubted the desire of President Johnson for peace in southeast Asia—a peace which would permit the withdrawal of U.S. troops from that area and greater concentration of our aid in the political, economic, and social fields.

I know I speak for the great majority of Americans in wishing him progress toward this objective at Manila.

Passing over the early years of our Vietnam involvement, the record of which is already abundantly clear, I would like to present the situation as it existed in February 1965, when the total of American combat troops in South Vietnam was less than 20,000.

In spite of confident reports by our highest military authorities at that time, there actually existed a clear and present danger of military defeat for the American forces.

In the face of this imminent danger, a detachment of marines was dispatched to Da Nang, and a program of building up military forces in Vietnam was launched.

The administration chose not to identify the danger of military defeat as the reason for escalation, but rather the aggression of the North Vietnamese military forces against South Vietnam.

Aggression is a word with two meanings—one is a quasi-legal meaning which has in the past—in the case of North Korean aggression across the 38th parallel and Hitler's many aggressions in Europe—served as a formal rallying point for collective action. It also has a looser meaning—simply the determination of one country of a hostile act by another.

The United States has been unable to sustain "aggression" as a basis for collective action.

Even the countries most affected by our commitment in Vietnam did not increase their own commitment until the escalation of U.S. military power had proceeded beyond any point where outright military defeat was a credible alternative.

In short, our allies, like Korea, felt it was in their interest to follow our lead if only in respect for U.S. power.

Therefore, whatever the merits of the U.S. charge of aggression, the word cannot be employed in its quasi-technical sense.

However, there is no reason to doubt that wide support exists in the world to the proposition that the military power of the United States should not be questioned or compromised.

This is the honor our gallant allies in Korea, Thailand, the Philippines, Australia, and New Zealand pay us by placing their soldiers alongside ours in Vietnam and in Thailand.

Insofar as our commitment to Vietnam represented an effort to sustain the credibility and integrity of the U.S. Armed Forces, the act of escalation cannot brook any serious dissent.

In February of 1965 and for some months thereafter, such a situation persisted.

However, at the present time it is not possible to sustain a clear and present danger of military defeat facing U.S. Armed Forces.

The enemy has apparently dismissed any idea of engaging in major formal combat with superior U.S. forces, and has resorted to a war of harassment and surprise guerrilla tactics.

Faced with the harassment of the Vietcong and the North Vietnamese military forces, casualties to American forces in Vietnam are inevitable.

The more American troops in active combat, the more casualties from such harassment there will be.

But these casualties in no way sustain the prospect of a military defeat.

Today, the American commitment in Vietnam no longer involves the fundamental objective of preserving the credibility and integrity of U.S. Armed Forces—provided that the war is not extended in time or in geography to the point where a wholly new threat to U.S. military power exists.

The new threat might take either the form of Chinese intervention, or, more pertinent, the form of a prolonged erosion of the credi-

bility of U.S. power through harassment in a political context—namely, through the disintegration of the South Vietnamese society.

The U.S. Government has asserted frequently and emphatically that there is no military "solution" or objective in this war.

We do not seek to destroy North Vietnam nor its government.

This assertion is shared by virtually every type of observer—allied, official, and hostile.

The greater the U.S. military commitment in South Vietnam, however, the less possibility that any South Vietnamese Government will be capable of asserting its own authority on its home ground or abroad.

The size of the U.S. commitment already clearly is suffocating any serious possibility of self-determination in South Vietnam, for the simple reason that the whole defense of that country is now totally dependent on the U.S. armed presence.

This was also true in Korea in 1954, but then the United States was operating under the umbrella of collective U.N. action, and along a well-defined battlefront which permitted organization of the rear areas.

None of this is true in South Vietnam.

Considering the fact that as every day goes by, the integrity and invincibility of the U.S. Armed Forces is further placed in question because there is no military objective, the United States faces only two choices: Either we can attempt to escape our predicament by escalating the war into a new dimension, where a new so-called aggressor is brought into play or we can deescalate the war on the ground that the clear and present danger of a military defeat no longer exists and therefore deescalation is necessary in order to avoid any danger of placing U.S. Armed Forces in a position of compromise.

Faced with these alternatives, the United States, could well declare unilaterally that this stage of the Vietnam war is over—that we have "won" in the sense that our Armed Forces are in control of most of the field and no potential enemy is in a position to establish its authority over South Vietnam.

Such a declaration should be accompanied, not by announcement of a phased withdrawal, but by the gradual redeployment of U.S. military forces around strategic centers and the substitution of intensive reconnaissance for bombing.

This unilateral declaration of military victory would herald the resumption of political warfare as the dominant theme in Vietnam.

Until such a declaration is made, there is no real prospect for political negotiations.

The credibility of such a unilateral declaration of military victory can only be successfully challenged by the Vietcong and the North Vietnamese themselves—assuming that the Chinese remain aloof.

There is nobody in the United States or in Europe or in Russia that is at all likely to challenge a statement by the President of the United States that our military forces have discharged their duty in their usual competent manner and occupy the field as victors.

Any charge against such an assertion directly challenges the ability of U.S. military power and makes the prospect of a wider war clear and present.

Right now in the eyes of most of the world, only the United States suggests that possibility.

Once the burden of suggesting a wider war is shifted from us to others—others who question the integrity of U.S. military power—the United States is again in the position of leading from collective strength politically.

This suggested strategy is not designed to solve the political problem of Vietnam.

It is simply designed to remove the credibility of U.S. military power—or more loosely the question of "face"—as the factor which precludes a political solution.

Again, it is important to stress that no politician in the United States, in Europe, or even in Russia is likely to challenge a unilateral declaration of military victory on our part.

Even if such a challenge were made, the United States would be in a stronger position than it is today, for it would have established "aggression" again as a means of collective, rather than essentially unilateral action.

I have not discussed this possible course of action with President Johnson, but I firmly believe that it presents a feasible course of action which ought not to be lightly dismissed.

Its adoption would not mean the quick withdrawal of our forces in southeast Asia.

In all probability, our military strength would have to be deployed in that area for many years to come.

We are a Pacific power, and no nation in southern Asia—possibly not even North Vietnam itself—would feel at ease were we to announce a withdrawal from that responsibility.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. AIKEN. I yield.

Mr. MANSFIELD. Mr. President, as always, the distinguished senior Senator from Vermonth [Mr. AIKEN] has given us a great deal to consider and some additional food for thought. His speech indicates that he has devoted a good deal of his time and energy to the suggestions which he has advanced.

I commend the Senator for his emphasis on the political aspects of the war because there is no doubt that, militarily speaking, the hump was crossed over a long time ago and we are now in a position where we cannot and will not be dislodged. Therefore, we reach the political phases of the situation, which are by far the most important because, in my opinion, the struggle in Vietnam will not be won on a military basis.

As the Senator from Vermont (Mr. AIKEN) has pointed out, it is not a case of conventional warfare. It is of harassing tactics and a case of guerrilla activities that can go on for a long time, even though we continue to hold the upper hand.

I was also pleased to note the emphasis placed by the distinguished Senator from Vermont (Mr. AIKEN) on his assertion that the United States is a Pacific power. There is a great deal of difference between being a Pacific power and an Asian power. Therefore, the emphasis has been well brought out at this time.

It happens that last evening the distinguished U.S. Ambassador to the United Nations, Mr. Arthur Goldberg, in response to challenges in the closing minutes of the General Assembly's marathon policy debate, which centered on the war in Vietnam, had some comments to make. In response to Communist and nonalined member states who have been calling for a halt in the bombing as an essential preliminary of any peace negotiations, and also to the Communits demands for withdrawal of U.S. troops, Ambassador Goldberg said:

"We have considered this advice and having considered it, we would like to know from Hanoi privately or publicly what would happen if we followed it."

Replying to the challenges relative to U.S. troop withdrawal, Ambassador Goldberg said:

"We have said repeatedly that we do not seek a permanent military presence in Vietnam and have offered to agree to a time schedule for supervised, phased withdrawal of all external forces, those of North Vietnam as well as those of the United States."

It would appear to me that the proposals which have been suggested by the distinguished senior Senator from Vermont (Mr. AIKEN) are worthy of consideration by the administration and by all of those engaged in the present conflict.

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that I may proceed for 2 additional minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from this morning's ticker which deals with the statements of Ambassador Goldberg in the United Nations last night.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

"UNITED NATIONS.—The United States called on North Vietnam last night to spell out what it would do if U.S. air attacks on the communist state are called off.

"Ambassador Goldberg posed the challenge in the closing minutes of the General Assembly's marathon policy debate which has centered on the war in Vietnam.

"Replying to Communist and nonaligned member states who had been calling for a halt in the bombing as an essential preliminary to any peace negotiations, Goldberg said:

" 'We have considered this advice and having considered it, we would like to know from Hanoi privately or publicly what would happen if we followed it.'

"Replying to Communist demands for a withdrawal of U.S. troops in Vietnam, he said:

" 'We have said repeatedly that we do not seek a permanent military presence in Vietname and have offered to agree to a time schedule for supervised, phased withdrawal of all external forces—those of North Vietnam as well as those of the United States.' "

Mr. AIKEN. I thank the Senator from Montana [Mr. MANSFIELD], whose opinion, as everybody knows, I wholeheartedly respect.

I did not know that Ambassador Goldberg was going to make a speech yesterday. In fact, I have had no consultation with anyone on this matter. But I do think that the hand of the United Nations would be immensely strengthened if we could announce that we have won the military victory, and it is the political situation that now exists. Then, if the enemy persists in military operations, they, in the eyes of the world, would be the aggressors, and subject to collective actions which the United Nations would be interested in and concerned with, as was the case in connection with Korea.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. AIKEN. I would be happy to yield, but I have no time remaining.

The ACTING PRESIDENT pro tempore. The Senator from Arkansas may be recognized in his own right.

Mr. AIKEN. Mr. President, I ask unanimous consent that I may proceed for another 5 minutes.

The ACTING PRESIDENT pro tempore. Without objection, the Senator may proceed for an additional 5 minutes.

Mr. FULBRIGHT. First, I wish to join the majority leader and say that I think the speech is most interesting, and I think it is very timely as this conference gets underway in Manila in the next few days that some alternatives to the escalation of the war be given. I wish to congratulate the Senator from Vermont [Mr. AIKEN] on raising this matter.

I wish to ask the Senator one or two questions. I notice that on page 6 the Senator says there are two approaches: one is to escalate the war into a new dimension, by which I assume he would mean probably an invasion of North Vietnam or the dropping of atomic bombs. Is that correct?

Mr. AIKEN. There is a great temptation on the part of some people to escalate the war rather than to admit that the United States is at a military disadvantage which, of course, it is not. If we once announce that the military conflict has been won, then we can go onto a political basis and if anyone else seeks to promote the question of credibility or the

ability of U.S. Armed Forces, or attempts to escalate or continue the war, they themselves would be taking the position of being aggressors in the eyes of much of the world, which views the United States at the present time as being the aggressor. I think we have got to get rid of that label.

Mr. FULBRIGHT. I join the Senator in wishing to find a way to get rid of that label, but I want to clarify my thoughts. Is it the Senator's view that the deescalation, which he mentions in the first paragraph on page 6, should take place concurrently with the announcement of a military victory?

Mr. AIKEN. The deescalation would be gradual.

Mr. FULBRIGHT. Gradual.

Mr. AIKEN. Of course.

We could not withdraw our troops from South Vietnam precipitately. They could be redeployed. I do not know what would happen. Perhaps the enemy would refuse to concede or to stop the fighting. It seems to me that they should be ready to stop it by now because they have been unmercifully punished by U.S. forces.

As for withdrawing our troops from South Vietnam, I think they would have to cover it for a long time, because we might as well admit that the South Vietnamese Government has now been completely overshadowed by our forces there. They are having trouble again, and we would have to stay there for some time; but as of now we have gone so far as to guarantee that no outside forces will take over South Vietnam.

Mr. FULBRIGHT. I think that is correct. I ask the Senator, would this entail a suspension of the bombing of North Vietnam?

Mr. AIKEN. I think it should. That is one way we would get our answer as to whether the enemy is disposed at all to meet us on political grounds.

Mr. FULBRIGHT. If, as I think the Senator has in the past suggested, as a token of our good faith, with regard to negotiations we suspended the bombing of North Vietnam, does the Senator think that would be a useful thing for us to do? Would that be a good way to test out their attitude?

Lastly, because this is a new idea—I am not quite clear on it, but I am certainly sympathetic with anything that the Senator from Vermont ever brings forward designed to minimize the tragic destruction and loss of life now taking place in Vietnam—does the Senator visualize that at the Manila conference an announcement should be made that we have won a military victory? Is that what he is suggesting?

Mr. AIKEN. That is a hope—possibly a faint hope, but it seems to me that there might be action taken in Manila and an understanding reached there which would lead to such an announcement of a military victory on our part, because no one in the world—Russia, or any other country—can dispute the fact that we are winning a military victory so far as Vietnam is concerned.

Mr. FULBRIGHT. I would go further and say that they do not dispute that we could make of Vietnam a desert, as they say, by completely destroying everything there—man, woman, tree, anything else if we wished.

Mr. AIKEN. But we have repeatedly announced to the world that we have no intention of destroying North Vietnam or the Hanoi government, that they have a right to their own choice of government. But, we could destroy them. They must understand that. It seems to me that at this point they would welcome some indication that we might meet them on political grounds, in which case they might be willing to negotiate.

Mr. FULBRIGHT. To negotiate.

Mr. AIKEN. I do not believe, so long as we base this conflict on military grounds, that the Hanoi government will ever sit down with the present leadership of the United States. I think they would accept extermination first.

Mr. FULBRIGHT I think I agree with the Senator on that. I am very glad he has made his speech. I shall study it with a great deal of interest. I also hope that the administration will.

I congratulate the Senator on his fine address.

Mr. LAUSCHE. Mr. President, will the Senator from Vermont yield?

The ACTING PRESIDENT pro tempore. The time of the Senator from Vermont has expired.

Mr. AIKEN. Mr. President, I ask unanimous consent to proceed for 2 additional minutes in order to yield to the Senator from Ohio [Mr. LAUSCHE].

The ACTING PRESIDENT pro tempore. Without objection, it is ordered.

Mr. LAUSCHE. Do I understand correctly from the Senator's remarks that he would begin by declaring a military victory?

Mr. AIKEN. Absolutely. My statement speaks for itself.

Mr. LAUSCHE. The Hanoi government might challenge that.

Mr. AIKEN. Yes; North Vietnam might challenge that, but if they do, I think they will lose much of the sympathy of the rest of the world.

Mr. LAUSCHE. If we declare a military victory, what do we do then, pull out, establish enclaves, or deescalate? What is the next step?

Mr. AIKEN. I think we would have to remain in order to maintain our bases there and conduct full-scale reconnaissance to keep track of what they were doing. But we would before long find out whether they wanted to continue to fight and, if they did, then they themselves would be the aggressors, rather than us, in the eyes of the world.

Mr. LAUSCHE. In substance, that is the Gavin plan, that we establish islands and hold onto them and stay there.

Mr. AIKEN. That has been the practice we have been following over there now. We certainly have strongholds now from which we can deploy our troops.

Mr. LAUSCHE. But the Senator does not recommend that we pull out?

Mr. AIKEN. No. We will have to remain until a great degree of stability has been established. Our leaving South Vietnam will have to be gradual.

Mr. LAUSCHE. Or that we establish bases there and watch whether North Vietnam will respond favorably to our gestures to bring them to the negotiating table.

Mr. AIKEN. If we said we were going to pull out at once, then the Government of South Vietnam would go. It would not stand up very long.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. TYDINGS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

THE WETLANDS OF MARYLAND

Mr. TYDINGS. Mr. President, one of the greatest natural resources the State of Maryland possesses is the estuary known as Chesapeake Bay. It is one of the world's finest natural spawning spots for fin fish and shellfish.

Some years ago a group of Japanese biologists visiting Chesapeake Bay stated that if Japanese techniques for farming—and when I say "farming" I mean the development of shellfish and fin fish—were utilized in Chesapeake Bay, the resulting income from the annual harvest would be sufficient to support the entire Japanese budget with no other source of income.

Chesapeake Bay, is indeed, a priceless jewel in the crown of Maryland's natural resources. However, the price for keeping any crown untarnished and preserved is vigilance. We in Maryland have not exerted the vigilance that we should in the protection of our great natural resources, particularly Chesapeake Bay.

Last week an article entitled "The Wetlands: The High Hidden Price of Surrender," written by Hunter James, was published in the Baltimore Evening Sun. Mr. James stated just what could happen if Maryland's 320,000 acres of wetlands were permitted to be replaced by "a dreary procession of marinas, boat slips, jerry-built housing developments, gas stations, boardwalks, honky tonks, dancehalls, refuse dumps, and long rows of beach cottages all but obliterated by the hot sun."

The point is that any one of these developments may not be objectionable; indeed, some of them may be desirable. The point is that we must exert more diligence in planning and protecting our wetlands in this great estuary than we have in the past. Mr. James' article makes that clear.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WETLANDS: THE HIGH, HIDDEN PRICE OF SURRENDER

(By Hunter James)

Someday, if private developers have their way, the last of Maryland's 320,000 acres of wetlands will be replaced by a dreary procession of marinas, boat slips, jerry-built housing developments, gas stations, boardwalks, honky tonks, dance halls, refuse dumps and long rows of beach cottages all but obliterated by the hot sun; man-made waste flung down upon nature's waste, made profitable for a few, hospitable to some and disquieting to the rest of us.

In hard truth, if nothing were endangered by the builders and dredgers but nature in its primeval state, there would be reason only for lament, not one for official compaint. But scientists know that in the eternal order a wetland is as important to some forms of bird life and fish life and even some forms of animal life as the sea and land and air itself.

The easiest way to think of a wetland is as the margin of the sea, the part covered by the incoming tide and left exposed when the tide goes out. It is the ebb and flow of the tides that helps explain why the wetlands are so important. Down with the outgoing tide go assorted forms of decayed plant life that serve as food for croakers, menhaden, skillet fish, silver perch and other species.

The menhaden is itself a basic food for the white marlin, striped bass, sea trout and other large food and game fish. Once the menhaden goes so will most of the others. The menhaden will vanish just as soon as young menhaden can no longer swim up the Chesapeake to feed in the fresh water estuaries—that is, as soon as the builders and dredgers have done their work. Marsh plants, high in nitrogen and phosphorous compounds, also furnish food for deep sea plants and for shellfish which mature in the shallow waters along the edge of the bay and its tributaries.

The destruction of the coastal marshes would ultimately deprive Maryland of most if not all of its blue crabs, clams and oysters—all of which depend either directly or indirectly on the wetlands for food. Hunters would no longer shoot the canvasback

duck or the Canadian wild goose in these parts, and the diamondback terrapin would become a rarity indeed. The muskrat, native of the swamps and valuable for his fur, would vanish and with him would go the whistling swan, great blue heron, snowy egret, osprey and hundreds of species of songbirds.

Dr. Eugene Cronin, director of the state's Natural Resources Institute, describes the bay and its surrounding regions as "a very rich ecosystem, made up of plants and animals which are beautifully fitted to the special characteristics of this rather violent body of water.

"The organisms are in balance with their environment and with each other. The system is tough and many species have been able to withstand considerable environmental change and modification. At the same time, it is essentially delicate or fragile, and destruction of any one link in the rather short food chain might have far-reaching and long-lasting destructive effects on the entire system."

The state has lost an estimated 7 per cent of its wetlands since 1952 and could lose up to 93,000 additional acres in the next decade. Luckily, Maryland is not yet so poor in wetlands as California now is. That state has lost almost 70 per cent of its wetlands and San Francisco bay, the hardest hit area, is no longer of much consequence as a commercial fishery.

Maryland has been helped by the relative isolation of the Eastern Shore. But the impending construction of a second Bay bridge may bring renewed clamor for more commercial development which in turn will bring a demand for a third and fourth Bay bridge which will create other types of pressure for other types of development.

The state recently took a monetary beating in the transfer of valuable wetland properties on Assawoman Bay and Isle of Wight Bay to James B. Caine, a private developer, and to Maryland Marine Properties, Inc. It also gave up some of the most valuable food-producing regions. Experts believe the proposed development alone could destroy up to half the blue crabs and clams that inhabit the surrounding waters.

Fortunately the Board of Public Works has called off further transfers of state-owned wetlands until the General Assembly has had a chance to enact sensible legislation for their control. In the last session of the General Assembly, steel and railroad interests joined with the Maryland Port Authority, and the state Department of Economic Development to kill two relatively mild regulatory measures. The only difference next time, if any, will be the sense of urgency brought on by the realization that so far the problem hasn't been treated with any urgency at all.

"We are not yet in the late crisis stage," says Dr. Cronin. "We are still in the early visible and grave threat stage, and there is still time to write fair laws and bring the problem under reasonable control."

Mr. TYDINGS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECENT AIR TRAFFIC CONTROL SLOWDOWN

Mr. STENNIS. Mr. President, last year, as chairman of the Appropriations Subcommittee on Transportation, I made a special visit to many of the air traffic control centers operated by the Federal Aviation Agency. I went into the facilities, inspected the equipment and observed controllers in Los Angeles, San Francisco, Seattle, Oklahoma City, New York, and many other cities. I saw first hand the situation that faced the controllers and was particularly impressed with the very heavy responsibility placed upon them in moving air traffic throughout the Nation and to and from foreign countries.

Mr. President, I was not only impressed with the enormous amount of work they do but also with their fine dedication, high sense of responsibility, and splendid attitude toward their obligations, and their work as a whole. I witnessed that in every place I visited.

I was quite serious about this matter. I realized that I had to know more about the subject matter in order properly to handle the bill on the floor of the Senate.

I then took the lead—with some very fine help, of course—in increasing the Federal Aviation Agency appropriations to include the addition of 1,000 controllers over and above that recommended in the budget. We already had a recommendation for 1,000 new prospective controllers but the committee had that amendment for an additional 1,000 because of the congested conditions. In addition, again with splendid assistance, I took the lead in removing the controllers from the manpower limitation of 1968 so that the number of controllers could be increased as rapidly as possible.

That amendment was considered on the floor of the Senate. There was some very fine debate on it. The Senate voted overwhelmingly to except the agency from the limitations of the Revenue Act of 1968. That was the only exception, as I recall, that I voted for.

As chairman of the Appropriations Subcommittee on Transportation, I feel that I have a direct responsibility in the air controller problem and after the extensive study I feel I know something of its extent, and of what is being done to remedy it. I, therefore, feel that I have an obligation to speak out on the recent slowdown of air controllers that disrupted air traffic throughout the Nation and had a very serious effect even in foreign countries served by airlines to and from the United States.

On last June 18, 19, and 20, the Nation was faced with a severe disruption of air traffic, because of a slowdown of air traffic controllers in key places throughout the Nation.

On those days, many controllers did not report to work, giving as their reason the taking of sick leave. I believe this is a very serious matter, which can have an adverse effect upon the Nation as can few other operations for which the Government is responsible.

I am in sympathy with the air controllers generally. Last year, the Appropriations Subcommittee on Transportation added money for the hiring and training of more controllers. We continue to work toward acquiring and training a sufficient controller force, safely and adequately to handle the air transportation of the Nation.

I emphasize, however, in a most serious way, that the action taken by the controllers during this 3-day slowdown is neither in the best interest of the Nation, nor in the best interest of the controllers. Such action, if repeated in this, or any similar form, is virtually certain to bring down upon the controllers a wave of criticism that will make it difficult, if not impossible, to obtain public and congressional support for their cause.

It is readily conceded by those in positions of responsibility that the air controller system needs attention. However, no good purpose is served by inconveniencing hundreds of thousands of travelers and causing the unnecessary expenditure of millions of dollars in an effort to "dramatize" a situation already well known by those, who have responsibility in the matter and who are doing what they can to correct the inequities and inadequacies.

Moreover, the damage is greatly increased inasmuch as the "dramatization" and the slowdown were made under what appears to be false pretenses—that is, the taking of sick leave to avoid the necessity of reporting to work and at the same time escaping penalty for not being at their assigned post of duty.

I have received a summary of the status of the air traffic control system of the United States on June 18, 19, and 20—the days of the so-called slowdown.

I am far from convinced, in fact I have grave doubt, that in Denver, Colo., of the 50 controllers scheduled to report for duty, 25 were sick. Or in Honolulu, seven of the 13 scheduled to report for duty were sick. Or in Houston, seven of 15 scheduled to report for duty were sick. Or in New York, 79 of 112 scheduled for duty were sick.

I think that this practice, in addition to being a disservice to the traveling public, puts in jeopardy the sick leave system of the entire Government.

I urge the air controllers to carry out their duties in good faith, to express their grievances in an orderly and dignified manner through proper channels while at the same time performing their duties in accordance with the high standards and the splendid reputation they have earned over the years.

I sincerely hope they will not be misguided or misled into believing that such tactics as a slowdown of this type will have the effect of bringing pressure on Congress.

Mr. President, I have a continuing interest in this problem. I feel a sense of responsibility to the Senate, to Congress, and to the people of this Nation as chairman of the Appropriations Subcommittee on Transportation, that it is my obligation—direct, official, and personal—to continue this interest and to continue working on this matter—an obligation which also extends to the controllers, to the public, and to the Congress.

I am interested in their welfare. I am interested in their equipment. We put in extra money last year for that. My acute interest was also evident in this subject before I became chairman of the subcommittee when, a few years ago, two of my closest friends lost their lives not because of something the controllers failed to do, but because, as I believed, of a lack of equipment at that particu-

lar airport which caused a very serious crash of an airplane which not only caused the loss of life to my two friends, but everyone else on the airplane.

All those reasons combined have caused me to come here today not to look for any trouble—I already have enough to do—but to come here to raise the flag of warning to these fine men and also to raise the flag of warning to the public as a whole, and to Congress, to show the possible grave and tremendous trouble that can arise unless this matter is brought to a different plane and settled on a different basis.

I believe in these fine men. I know a few of them personally, but when one observes them working under the stress and strain, and care and responsibility, he has a better idea of the character of the controllers than if he met them at a social function, a ball game, or any other place.

My impression of them, when left alone to carry out their responsibilities, is that they are a fine, high-type group of men.

Mr. President, I ask unanimous consent to have printed in the RECORD a situation report on the status of the air traffic control system on June 18, 19, and 20, 1969.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

SITUATION REPORT ON THE STATUS OF THE AIR TRAFFIC CONTROL SYSTEM ON JUNE 18, 19, AND 20, 1969

In the period 18–19 June 1969 absenteeism in the ATC system became a major problem. Detailed reports providing a breakdown on the situation on a facility by facility basis are currently being prepared. The purpose of this summary is to provide an overview of the situation from a system standpoint. On 18 June 1969, the absenteeism was centered in the Kansas City Center ARTCC and Denver ARTCC areas. These are key facilities in terms of transcontinental traffic movement. Approximately 50% of the controllers scheduled for duty called in sick in these two facilities. In addition, the Kansas City Municipal Airport terminal ATC facility experienced 25% absenteeism. This resulted in a void at the crucial mid-continental area and resulted in reroutings to transcontinental traffic north and south of this area. Specifically, the Kansas City Center, faced with the shortage of qualified control personnel, was obliged to issue restrictions on transcontinental traffic which resulted in large scale disruption to the normal flow between the East and West Coasts of the United States.

On the following day, 19 June 1969, the absenteeism became more widespread. Denver Center again was hard hit while Kansas City returned to a normal complement. A new element, however, was introduced. The New York ARTCC experienced absenteeism which appears to be on a selective basis. In all of our Centers we have varying degrees of specialization in terms of controllers function or span of control. Based on the data available, it appears that the absenteeism experienced on 19 June 1969 was concentrated in specific and strategic areas. In the New York Center on both the 8 to 4 and 4 to Midnight tours of duty, the absenteeism was concentrated in the functions which provide services to the main flow of traffic proceeding to points west of New York; this includes New York/Chicago and New York/West Coast traffic. This pattern combined with the absenteeism experienced in the Oakland Center, which was mainly concentrated in the functional areas which provide services to Eastbound departures and traffic originating in New York, Chicago and Atlanta terminals, indicated, at least on a prima facie basis, that there was a specific, well-coordinated plan designed to cripple, or at least slow down, the main East Coast to West Coast traffic. Based on preliminary analysis of the data available, it appears that the absenteeism was concentrated in those areas where its effect would result in the most disastrous disruption.

Aside from this overall pattern in the en route environment, the system experienced spotty absenteeism in terminal air traffic control facilities, which appear to have some relationship to the en route system problem. On 18 June 1969 the Kansas City Municipal Airport, as noted above, had about 25% absenteeism on both the day and evening watches. This situation, combined with the absenteeism in the Kansas City Center, caused major operational difficulties. On 19 June 1969 while the New York Center was operating at about 50% of normal staffing, the New York terminal facility experienced about 25% absenteeism.

Aside from these major areas outlined above, there were pockets of significant absenteeism throughout the system. We had to shut down two towers; at Stockton and San Jose, California, due to insufficient personnel on duty to provide air traffic control services. The Houston area experienced 50% absenteeism in the terminal facility. Austin, Texas, and Baton Rouge, La., had similar problems. Honolulu Tower and Center also experienced about 30–35% absenteeism on 19 June 1969.

As the pattern of absenteeism became evident, the FAA took action to implement emergency plans which were originally designed to cope with catastrophic system failures. These actions combined with the initiative and dedication of the personnel who reported for duty resulted in maintaining a safe environment although system delays were prevalent.

The impact on the air traffic control system appears to have been concentrated mainly in the New York Area on 19 June 1969. The void in the Kansas City/Denver area on 18 June 1969 resulted in many reroutings but based on the data available to date had negligible overall effect on the system. On 19 June 1969, however, the effects were more far reaching in terms of ground delays and cancellations of flights throughout the system.

In summary, it appears that the absenteeism shows a pattern designed to have maximum effect on the air traffic control system by creating a void in functional areas which would hurt the most.

As of today, 20 June 1969, things appear to have returned to normal. It is significant to note, however, that most of the personnel who reported sick to the New York Center on the midnight to 8 shift (20 June 1969) subsequently called in and said they felt better and would return to work. This was after the announcement on the communications media which stated that the "dispute" had been settled between the employee organizations and the FAA.

JUNE 18, 1969

Denver ARTCC (sick leave)

8 a.m. to 4 p.m., 25 controllers out of 50 scheduled.

4 p.m. to 12 midnight, 30 controllers out of 46 scheduled.

Midnight to 8 a.m., 3 controllers out of 15 scheduled.

Kansas City ARTCC (sick leave)

8 a.m. to 4 p.m., 24 controllers out of 61 scheduled.

4 p.m. to 12 midnight, 33 controllers out of 61 scheduled.

Kansas City tower (sick leave)

8 a.m. to 4 p.m., 4 controllers out of 13 scheduled.

4 p.m. to 12 midnight, 3 controllers out of 13 scheduled.

JUNE 19, 1969

Denver ARTCC (sick leave)

8 a.m. to 4 p.m., 24 controllers out of 50 scheduled.

4 p.m. to 12 midnight, 8 controllers out of 46 scheduled.

Midnight to 8 a.m., 6 controllers out of 13 scheduled.

New York ARTCC (sick leave)

8 a.m. to 4 p.m., 61 controllers out of 123 scheduled.

10 Assistants out of 18 scheduled.

New York ARTCC (sick leave)

4 p.m. to 12 midnight, increased to 79 controllers out 112 scheduled.

9 Assistants out of 28 scheduled.

Midnight to 8 a.m., 42 controllers out of 53 scheduled.

Approximately 1 a.m. controllers started to return so that New York assumed control of their area at approximately 3 a.m.

New York terminal common IFR room (sick leave)

8 a.m. to 4 p.m., normal.

4 p.m. to 12 midnight, 13 controllers out of 38 scheduled.

Oakland ARTCC (sick leave)

8 a.m. to 4 p.m., 12 controllers out of 54 scheduled (2 left after reporting).

4 p.m. to 12 midnight, 13 controllers in Area D.

Area D handles eastbound traffic from bay area. The Common IFR Room expanded eastward to control area traffic and traffic was rerouted to bypass area.

Cigar in drain of water fountain—Water flooding from cafeteria which is above TELCO room. No damage but TELCO standing by in case.

Stockton tower (sick leave)

Shutdown 11 p.m. to 7 a.m.—3 of 4 control personnel absent.

Adjustments made so that day shift staffed for normal operations.

San Jose tower (sick leave)

Approximately 6:30 p.m. Pacific Coast all air carrier traffic were requested to divert to San Francisco.

4 controllers out of 5 scheduled were absent.

Approximately 7 p.m. Notice to Airmen was issued advising San Jose Tower would be inoperative from 12 p.m. to 6 a.m.

Houston tower (sick leave)

Common IFR Room, 7 controllers out of 15 scheduled.

Hobby Tower, 3 controllers out of 5 scheduled.

Austin tower (sick leave)

3 controllers out of 5 scheduled.

Baton Rouge (sick leave)

3 controllers out of 4 scheduled. 3 controllers sent from Beaumont, Texas, to handle 8 a.m. to 4 p.m. (2).

Honolulu tower (sick leave)

4 p.m. to 12 midnight, 7 controllers out of 13 scheduled.

12 midnight to 8 a.m., 3 controllers out of 5 scheduled.

Honolulu ARTCC (sick leave)

4 p.m. to 12 midnight, 7 controllers out of 21 scheduled.

Emergency Plan was implemented by New York at approximately 10:30 p.m. to 2:56 a.m.

Washington, Cleveland, Boston Centers assumed control with direct handoff to New York Terminal at 18,000 feet and above.

The towers in the New York Center area assumed control of traffic at 17,000 feet and below. By 1 a.m. 11 additional controllers reported for work and by 5 a.m. New York had assumed control of their area.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDING OFFICER laid before the Senate the following letters, which were referred as indicated:

REPORT ON MEDICARE

A letter from the Acting Secretary of Health, Education, and Welfare, transmitting, pursuant to law, the first annual report on the medicare program by the Health Insurance Benefits Advisory Council, covering the period July 1, 1966, to December 31, 1967 (with an accompanying report); to the Committee on Finance.

REPORTS OF FOREIGN-TRADE ZONES BOARD

A letter from the Secretary of Commerce, transmitting, pursuant to law, the annual report of the Foreign-Trade Zones Board for the fiscal year ended June 30, 1968, together with reports covering the activities during the same period of Foreign-Trade Zones Nos. 1, 2, 3, 5, 7, 8, and 9 (with accompanying reports); to the Committee on Finance.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. METCALF (for himself and Mr. MANSFIELD):

S. 2464. A bill to repeal section 372–1 of title 25, United States Code, relating to the appointment of hearing examiners for Indian probate work, to provide tenure and status for hearing examiners performing such work, and for other purposes; and

S. 2465. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide a more equitable allocation of grants among the States; to the Committee on the Judiciary.

By Mr. TYDINGS:

S. 2466. A bill for the relief of Dr. Aleyde A. Melocoton; to the Committee on the Judiciary.

By Mr. BROOKE:

S. 2467. A bill for the relief of Konstantine Anagnostopoulos; to the Committee on the Judiciary.

SENATE RESOLUTION 214—RESOLUTION RELATING TO DEATH OF REPRESENTATIVE WILLIAM H. BATES OF MASSACHUSETTS

Mr. BROOKE (for himself and Mr. KENNEDY) submitted a resolution (S. Res. 214) relative to the death of Representative William H. Bates of Massachusetts, which was considered and agreed to.

(See the above resolution printed in full when submitted by Mr. BROOKE, which appears under a separate heading.)

NOTICE OF HEARINGS ON SMALL BUSINESS LEGISLATION

Mr. McINTYRE. Mr. President, I should like to announce that the Subcommittee on Small Business of the Committee on Banking and Currency will begin hearings on 1969 small business legislation on Tuesday, July 8, 1969, at 10 a.m., in room 5302, New Senate Office Building.

The bill to be considered by the subcommittee, plus any other bills which may be introduced and referred to the Small Business Subcommittee prior to July 8, are—

S. 915, to authorize the Small Business Administration to provide financial assistance to certain small business concerns suffering substantial economic injury as a result of the current work stoppages at east and gulf coast ports;

S. 1212, to amend the Small Business Investment Act of 1958;

S. 1213, to create a Small Business Capital Bank, and for other purposes;

S. 1750, to amend the Small Business Act to authorize assistance to small business concerns in financing structural, operational, or other changes to meet standards required by Federal law or State law enacted in conforming therewith;

S. 1763, to increase certain loan limitations applicable to the regular business and the development loan program of the Small Business Administration;

S. 1782, to amend section 7(b) of the Small Business Act to provide for new interest rates on the Administration's share of disaster loans;

S. 2385, to amend the Small Business Act to apply an acceptable credit risk standard for loans to small business concerns in certain high-risk areas;

S. 2408, to amend the Small Business Act; and

Senate Resolution 176, providing for the Small Business Administration to conduct a pilot study of the financial needs of small business concerns which must modify plant, equipment, or procedures in order to comply with recently enacted Federal health and safety standards.

All persons wishing to testify should contact Mr. Reginald W. Barnes, assistant counsel, Senate Committee on Banking and Currency, 5300 New Senate Office Building, Washington, D.C. 20510; telephone 225–7391.

REMARKS BY SENATOR CURTIS AT SENATE PRAYER BREAKFAST

Mr. STENNIS. Mr. President, recently, the Senator from Nebraska, Mr. CARL T. CURTIS, made some remarks before the Senate prayer breakfast group in the Vandenberg room of the Capitol. His profound remarks were most impressive indeed to those who heard them; they were filled with wisdom and common sense and were timely as well as constructive comments on some of the problems of our times. I think Senator CURTIS' thoughts and comments should be available to the public at large and therefore ask unanimous consent that they be printed in the body of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR CARL T. CURTIS BEFORE THE SENATE PRAYER BREAKFAST, WEDNESDAY, APRIL 23, 1969

The first half of what I am about to say is not new. I am going to speak a little bit on the influence of the Bible and Christianity in the beginning of our nation and now.

There was a new book published in late 1968, entitled, "Unto the Generations". Its author is Daniel L. Marsh, President of Boston University. I will be quoting from him liberally and I want to give due credit. All of us have talked and listened to remarks about the Mayflower Compact. Mr. Marsh gives some additional facts that I think are most interesting. He points out that the Separatists in England, who were the people who were to become the Pilgrims, had to meet in secret. One tiny congregation of these devout people worshiped secretly in Scrooby Manor House and the Keeper of the Manor House who permitted them to meet there was William Brewster, who was the father of the famous William Brewster, Jr., who was to become the Elder Brewster of the Pilgrim Colony. Within walking distance of this little hamlet of Scrooby in Middle England lived William Bradford who was to become Governor of the Colony of Massachusetts.

The famous clergyman Cotton Mather made a study of the life of Governor William Bradford. He wrote: "He was a person for study as well as action: and hence, notwithstanding the difficulties through which he passed in his youth, he attained unto a notable skill in languages. The Dutch tongue was become almost a vernacular to him as the English. The French tongue he could also manage. The Latin and Greek he had mastered. But the Hebrew he most of all studied. Because, he said, he would see with his own eyes the ancient Oracles of God in their native beauty. He was also well skilled in History, in Antiquity, and in Philosophy. But the crown of all was, his holy, prayerful, watchful, and fruitful walk with God, wherein he was very exemplary."

It is little wonder that with leadership like this that this colony in spite of hardship and deaths that took one-half their number should so succeed.

Mr. Marsh in his book, "Unto the Generations", relates the journey of these people from England to Holland. The history books that most of us studied in grade school told us that the Pilgrims left Holland because they did not want their children to grow up and be Dutchmen. This wasn't the complete answer. Mr. Marsh points out that Amsterdam was a liberal and progressive city and because of the general worldliness and presence of many heresies it proved a disappointing refuge for the Pilgrims.

As you know, they first moved to another city in Holland, Leyden, and then set out for the New World. They had prospered in Holland. They were well blessed with goods and possessions. As the Separatists were about to leave Leyden for the New World they held a fast, there was a sermon and Holy Communion. Bradford wrote: "So they left that goodly and pleasant city which had been their resting place near twelve years; but they knew they were Pilgrims, and looked not much on those things, but lifted up their eyes to the heavens, their dearest country, and quieted their spirits."

As all of you so well know, these Pilgrims missed the Virginia Colony by some distance. They felt that they were on their own and that they had no government. It was for that reason that they drafted the Mayflower Compact. Orators in the past have called attention to the fact that it began "in the Name of God" and stated that their enterprise was "for the Glory of God." Even though the Compact was short we sometimes lose sight of the fact that the Compact bound the Pilgrims together and pledged them to enact just and equal laws and to grant to those laws all due submission and obedience.

"They stayed in the New World and were loyal to the Compact by which they had determined to govern themselves. Under it they held elections; enacted laws; punished those who violated them; made treaties with the Indians; abolished the commune-scheme with which they had started out; settled their own property question by purchasing the common stock from the Adventures and distributing the land among themselves, the citizens, giving to them titles of private ownership; made Captain Miles Standish head of their military organization, and planted the first permanent independent settlement in the New World. They made of their commonwealth a place where initiative

lay within themselves, and not with landlords, nobility or kings."

Volumes could be written about the influence of Christianity and the Bible from that time to this hour. Some careful students point to World War I as the beginning of certain trends that have resulted in problems for us today. It is interesting to note what our World War I President Woodrow Wilson said in the last statement that he ever composed before his death.

"The sum of the whole matter is this, that our civilization cannot survive materially unless it be redeemed spiritually. It can be saved only by becoming permeated with the spirit of Christ and being made free and happy by the practices which spring out of that spirit. Only thus can discontent be driven out and all the shadows lifted from the road ahead."

It was at the end of World War II that General Douglas MacArthur made one of the greatest speeches of all time when he spoke at the Formal Surrender of the Japanese on the Battleship Missouri. In that marvelous speech he pointed out the horrors of war and man's failure to cope with it by military alliances, League of Nations and treaties. Then General MacArthur said: "The problem basically is theological and involves a spiritual recrudescence and improvement of human character that will synchronize with our almost matchless advance in science, art, literature, and all material and cultural developments of the past two thousand years. It must be of the spirit if we are to save the flesh."

Today, the world seems in turmoil. It is discouraging to read the headlines or the news columns. The time has come for us to quit lamenting about the sad state of affairs, the low moral tone and the loss of faith in some places. We need to look about us and find that the same God who was with this nation in its founding and has blessed it through the years is actually accomplishing miracles within our midst in 1969.

Last Sunday night at the church I attend here in Washington, it was my privilege to hear Reverend Harold Voelkel, D.D., a longtime missionary in Korea. The story he told was fascinating. He was a missionary in Korea at the time that the war was going on. Tens of thousands of North Koreans were taken prisoner. As a missionary, he was called upon by the American forces to minister to these prisoners of war. These POW's were North Koreans, many of them Communists and many of them hard-shelled Communists.

This modern missionary, Dr. Voelkel, could speak the Korean language. He started out conducting evangelistic meetings in a POW camp. The job became so big that he asked and obtained permission of the American forces to use as his assistants native Korean pastors. The converts numbered into the thousands. I watched on the screen a picture of one instance where he was administering Christian baptism to 55 Communist prisoners.

Reverend Voelkel started Sunday Schools. He started schools for the illiterates. He made a correspondence course in the Bible available to them. These POW's responded. He let none of them advance without a written examination which showed the Scriptural basis for their statements. This one effort alone not only transformed the lives of tens of thousands of people and brought them all the hope and power of Christianity but it constituted the only bulwark against Communism.

President Truman was so impressed by the reports that he heard of what was going on in this POW camp that he sent the Chief of Chaplains to visit it and report back. Among these hard-shelled Communists several dozens have gone to theological seminary and have entered the ministry. One of these young men, after preaching in Korea, has now become a Christian missionary to Africa. Once he was a Communist and now he is a Christian missionary.

Another convert to Christianity from the ranks of the Communists in the POW camp fluently speaks Japanese which was the language of Korea before World War II. We are told that the Japanese have migrated to Brazil in great numbers and that they are taking over important segments of the economic life of Brazil. This Christian minister, who was formerly a Communist in a POW camp, is now a missionary in Brazil preaching the gospel in the Japanese language to a group that will determine much of the future course of Brazil.

Some may be surprised that in our time and generation individuals are being tortured and murdered because of their profession of the Christian faith. Reverend Voelkel and his assistants did reach thousands of Communists and many hard-core Communists. There were, of course, numerous hard-core Communists that they couldn't reach. He showed pictures of individual Christians who had been severely beaten and tortured in the POW camp because of their profession of Christian faith. The persecution of Christians went far beyond beatings and torture. He showed us a picture of the POW cemetery and pointed out a rather long row of fresh graves that contained the bodies of those who were murdered in one night by the hard-core Communists who were outraged and determined to stop the spread of Christianity. Ancient times hasn't a monopoly on accounts of Christians laying down their lives for their faith.

All I am trying to say is that for modern liberals and skeptics to say that God is dead does not make it so. And, secondly, that we do not need to go back to the pages of history to prove the involvement of God in the affairs of men.

Our God is sovereign and His Will will be done. It is exciting to see the many ways He works. I became familiar with the Wycliffe Bible Translators when they called upon me to emcee their annual Bible Translation Day in 1967. I was so thrilled at it that I welcomed the chance to perform the same duties on Bible Translation Day in 1968. We might assume that everybody has access to the Bible. That is not true for several reasons. In the first place, the growth of the world's population so exceeds the growth of the Christian Church that there are hundreds of millions of people without the Scriptures, but there is something more startling. I found that there are over two thousand tribes on this earth who have never had a translation of Scriptures. The Wycliffe Bible Translators have set out to complete the job of translating the Holy Scriptures into every tongue on this globe in this century. Fortunately, we live in a day when computers, automatic type-setting machines, airplanes, radio, and other scientific aids can be mobilized into this translation task.

The fact remains, however, that a dedicated Christian must go to one of these tribes, live there, gain their confidence and respect, and create for them a written language and then translate the Scriptures.

Never in the history of mankind has a selfless group motivated by love of mankind attempted to translate any other book and make it available for every tribe on the globe. This is what is happening in our generation with reference to the translation of the Holy Bible. The fact that it couldn't happen with any other book, regardless of its excellence, is ample proof to me that the Bible is of Divine origin and that it is the authoritative revelation of God Himself.

One of the speakers on Bible Translation Day was Mr. Larry Jordan. Mr. Jordan retired at age 26. He decided to seek out a tribe, live with them and translate the Scriptures. He told how great an experience it was to have a part in lifting a whole people from the stone age into the twentieth century. In addition, he brings them the story of Salvation.

In the Christian Business Men's Committee International magazine for May 1968 there is a story about Mr. Jordan. I will refer to it briefly.

"I have felt the Lord wanted me to be a foreign missionary since I was seven years old, and since my high school days another factor entered my thinking. I wanted to be a businessman and make enough money either before I went to the field or after I was on the field so that I would be a self-supporting missionary like Paul. * * * "Time came to go to the mission field—which for the Jordans was the town of Apoala, 240 miles southeast of Mexico City—27 miles off the Pan American highway. * * *

"While working on their translation projects, the Jordans have also aided in establishing an improved irrigation system, better agricultural methods, a town credit union, a cement basketball court, so the children can play outside even in rainy season, and an electric grain grinder that enables grinding of the corn for tortillas in three minutes instead of three hours.

"The town hopes for a factory here for the people to weave beautiful wool sweaters, and thus raise their income—as well as a 50-kilowatt hydro-electric plant for the town."

I have a personal letter from Mr. Jordan dated November 24, 1968, in which he tells me of their great program. The sweater weaving project is underway and they have already received part of the equipment for the electric generator and that the rest is on its way. As to his main job, I want to read the last paragraph of his letter.

"Translation is going at a very satisfactory rate, and we now have first drafts done of Mark, Acts, Romans, I Corinthians, Galatians, New Testament Bible stories, and Old Testament Bible stories in final form—ready for publication. We can hardly wait until the people can start reading God's Word in their own language and participate in the internal revolution that we really came to have a part in."

The thought I would like to leave with you this morning is, first, that all around us at this very time God is working and, secondly, that He is doing a better job than man can do. I dare say that the project of Mr. Larry Jordan will do more lasting good than the entire Alliance for Progress and that the evangelistic effects in the prisoner of war camp in Korea will bring about more good through the generations than the sum total of all of man's programs of economic aid and educational indoctrination to overcome Communism.

The Christian missionary program in the POW camp in Korea and the great work of the Wycliffe Bible Translators do not stand alone. There are many other fascinating and dramatic illustrations happening in 1969 that show what God is doing in our time. We could include in such a list of activities the Billy Graham Crusades, Teen Challenge, Youth for Christ, Campus Crusade, Youth Unlimited, and the Christian Service Corps.

In closing, I will quote Reverend Harold Voelkel, D.D. He said: "God doesn't have problems. He has plans."

GREASING THE WHEELS OF GOVERNMENT

Mr. MATHIAS. Mr. President, the slowness and complexity of governmental machinery is so often criticized that it is really heartening to learn of cases in which applications are processed with some efficiency.

The following Associated Press report of June 14 is self-explanatory, and I ask unanimous consent to include it in the RECORD and commend it to all Federal officials for consideration.

There being no objection, the article

was ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Post, June 15, 1969]

GOVERNMENT SPEED AMAZES OFFICIAL

HAGERSTOWN, MD., June 14.—Francis J. Connolly, director of Washington County social services, said he had never known the wheels of government to turn so quickly.

Connolly said he sent an application for a food-stamp program to the State Department of Social Services on Monday.

The State agency forwarded it to the U.S. Department of Agriculture Tuesday and Federal approval was telegraphed back Wednesday.

"Unprecedented!" exclaimed Connolly.

ECONOMIC DEVELOPMENT AT THE FORT PECK INDIAN RESERVATION

Mr. METCALF. Mr. President, I am proud of the Sioux and Assiniboine Indians on the Fort Peck Indian Reservation in Montana. These tribes are working hard to modernize their reservation and to bring living standards up to the level of neighboring non-Indians—while at the same time they preserve the values of traditional Indian culture.

The tribes have gotten underway with a military rifle renovation plant in Poplar, brought to the reservation by Fort Peck Tribal Industries. The plant employs 120 Indians and makes a major dent in the severe unemployment that has afflicted the reservation.

It has perhaps become trite to speak of the values of the traditional Indian culture. Yet these values are very real. They include a sense of community and a spirit of generosity, values which I think we are sometimes in danger of losing in our larger American society. It is true that American Indians need to learn from us so that they can better adapt themselves to our society and economy; but there is also much that we can learn from them.

An article by John Kuglin in the Great Falls, Mont., Tribune, expresses the optimism felt by the Fort Peck Indians toward the prospect of economic development. At the same time, the article indicates that the Indians are very aware of the need to preserve their ancient values. The article is based on an interview with Anson A. Baker, reservation superintendent, who is a Mandan Indian from neighboring North Dakota, and who has been doing outstanding work on the reservation. I ask unanimous consent that the article be reprinted in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TO HELP INDIANS TO HELP THEMSELVES—BIA IS ONLY A TOOL

POPLAR.—"It's a joke to say you can get a job in January on the Port Peck Indian Reservation."

That's an assessment of wintertime unemployment in northeastern Montana by Anson A. Baker, superintendent of the two-million-acre home of the Assiniboine and Sioux.

At a national level, an unemployment rate of 5 to 6 per cent is considered to be a "disaster," Baker said, yet the jobless tally on the Fort Peck Reservation ranges from a "low" of 43 per cent in summer to a winter high of about 55 per cent.

Baker's figures are reinforced by the State Department of Indian Affairs, Helena, which in its annual report said, "Income on the (Fort Peck) reservation is low, living conditions generally are poor and unemployment is a chronic problem." The reasons? They included an educational level lower than non-Indians in the area and a large unskilled labor force.

Another report, prepared by Dynalectron, the company hired by the Indians to manage their rifle renovation plant in Poplar, says about 60 per cent of the women on the reservation are unemployed all year. And 54 per cent of the Indian families of the reservation have an income below the $3,000 level, the federal government's official poverty line.

"Our biggest need is for new job opportunities," said Baker, who pointed out that some of the Indians are so poor they don't have the money to drive to the local employment office. So, they stay on the reservation "and just try to eke out a subsistence living."

The Fort Peck Reservation needs industry—not arts and crafts—said Baker, 41, a Mandan Indian born on the Fort Berthold Reservation in North Dakota.

The brightest hope now for the Indians is Fort Peck Tribal Industries, formed by the tribes in October, 1968, which landed an Air Force contract to renovate 44,000 carbines. This gives employment to 120 Indians in the plant in Poplar (population 2,500), agency headquarters.

Purpose of the plant, initially, was to perform government contracts. The long-range plan is to develop a commercial product or service to reduce the concentrated unemployment problem.

"We tried to make the Indians cattlemen and farmers when statistics showed only 10 per cent of the people in this nation are farmers. After many years we've finally learned that what's not good for the White Man may not be good for the Indian," Baker said.

As Indian industry flexes its muscle, Baker believes Indians' skills and confidence will grow. The tribes have set aside 40 acres on the reservation for an industrial park. Already a Billings construction company has moved in. It will employ about 25 local persons to build low-rent housing units.

Among the more interesting employment proposals under consideration, Baker said, is salvage of submarine netting used in World War II to discourage German submarines from entering American harbors. It could be used for fancy den decorations, he said.

The tribes plan to construct a 30,000-square-foot manufacturing plant, in addition to the 10,000-square-foot Poplar Armory, site of the present rifle plant. The Indians want a vocational training center and expect to find some jobs as Avco Corporation expands its activities at the deactivated Glasgow Air Force Base.

"Our hope," Baker said, "is to create 200 more jobs in the next two years."

The Fort Peck Agency is the first superintendency for Baker, who wears many headdresses. He is the executive during the day, dressed in a sombre business suit. But at one of the Fort Peck Tribes' famous dances, which go far into the night, Baker may be observed in his flower design costume, popular among the Mandans, which took three years to fashion.

Baker makes it clear he isn't against the Fort Peck Arts and Crafts Club that operates the Poplar museum where tourists can buy the tribes' fine beadwork and other items. He points out, however, that arts and crafts on the reservation are conducted on a "piecemeal basis."

The Indian, Baker said, is reluctant "to be put on a sidewalk as a wooden image—a wooden Indian. He has a hidden pride that he cherishes. He feels the White Man's concept of commercialism is an invasion of his privacy. We have a fine museum and there's a place for it. But the geographical location of the reservation doesn't lend itself to tourists like Glacier Park does."

Baker, a father of seven, has been with the Bureau of Indian Affairs (BIA) since 1951. He went to mission and public schools and attended North Dakota State College and Minot (N.D.) Business College. He worked for the BIA at the Blackfeet and Fort Belknap agencies in Montana prior to his Fort Peck assignment.

As a career BIA employee, Baker has some observations on the federal agency. The BIA has been hit with controversy in recent months. First there was the scandal on operation of an Indian boarding school in Oklahoma. That, authoritative sources say, was one reason BIA Commissioner Robert Bennett canceled his appearance last April when the Poplar rifle plant was dedicated. Bennett then resigned, under pressure from the Nixon administration, which apparently was dissatisfied with his performance.

"The BIA," Baker believes, "is only a tool to help the Indians to help themselves. It shouldn't take the leading role." The BIA's role, Baker predicts, will continue to diminish, especially from operating a reservation as a custodial institution. Baker, however, foresees no overnight "termination" of vital health services and other BIA programs.

Replacing the BIA, he believes, will be an increasing participation by Indians in reservation, community and civil affairs. This, he admits, may have some political ramifications in Montana.

Enrollment in the Fort Peck tribes is about 6,200, and about 3,500 of those Indians live on or near the reservation. Congress established a 2.1 million-acre reservation in 1888. Now this real estate, in Roosevelt, Valley, Daniels and Sheridan counties, is checkerboarded with non-Indian land.

In the early 20th century the federal policy was to eliminate the tribes as a political entity and convert the Indians to farmers. Families were given individual land allotments. The rest was sold and the proceeds credited to the Indians. After 1911 homesteaders were allowed to move in. Much of the better land had passed from Indian ownership by 1930.

As a result tribal lands were reduced to the present fewer than 200,000 acres, and an additional 600,000 acres remain in the hands of individual Indians.

Baker believes the impact of industrialization on the reservation, instead of destroying the "old ways," will make the tribal members want to say "I'm proud to be an Indian."

The tribes have a proud history. The Fort Peck Sioux are descendants of the warriors who put up such fierce resistance to the White Man's invasion of their territories. Their ancestors took part in the bloody Minnesota uprising of 1862. Others took a few scalps at Custer's Last Stand during the Battle of the Little Big Horn in 1876. The Assiniboine are closely related to the Sioux and the two tribes have intermarried on the Fort Peck Reservation. Lewis and Clark encountered the Assiniboine in 1805-06 along the Missouri River in what is now North Dakota and Montana.

The Fort Peck Reservation's economy, like that of northeast Montana, is based on beef cattle, wheat and oil. The first oil was discovered on the reservation in 1951 and more than 50 million barrels have been pumped in the area. Poplar Oil Days Celebration attracts about 5,000 and is getting bigger each summer.

Baker believes life on the reservation is gradually improving. New community centers are slated at Fort Kipp, Brockton, Wolf Point, Oswego and Frazer. There is an alcoholism problem, but there is a concentrated effort by many agencies to combat it. More Indians are being admitted to the State Hospital in Warm Springs for treatment.

Baker, quite a dancer himself, believes in the "old ways" of tribal ritual. "A lot of people are accustomed to them," he said, "and they are something that you don't forget." There are, he pointed out, a score of

dancing societies on the reservation, such as the Redbottom Society at Frazer.

"The Fort Peck Indians are keeping alive the intangible elements," Baker said, "that are sometimes overlooked in our society. There is a sense of unity among our people."

DOES EUROPE HOLD THE ANSWERS TO OUR RAPID TRANSIT PROBLEMS?

Mr. ALLOTT. Mr. President, I have addressed myself on many occasions to the need for adequate rapid transit development in this country. I have pointed out that European cities have made great urban transit progress since the end of World War II, while ours has been a slowly dying transit industry.

Fortunately, since the passage of the Urban Mass Transportation Act in 1964, the trend has been partially reversed. Yet in many respects we are worse off today, transitwise, than we were even 5 years ago.

New systems and rapid transit lines are being built, but the planning has been unreasonably slow, and the construction even slower. When new lines have gone into operation, or new cars into service, transit systems have been plagued with a myriad of technical problems.

On the other hand, European cities of all sizes are continually building new rapid transit lines and systems, and they have little of the difficulty we have been experiencing.

I have said for some time now that the United States should not have so much pride that it cannot look toward Europe for direction in sensible, workable transit operations. Granted that America may be superior in almost every other field, but as far as transit is concerned, almost without exception, we are behind the times.

It is for that reason, Mr. President, that I was particularly interested in a report written by Gunther M. Gottfeld, an official of the Massachusetts Bay Transportation Authority in Boston, reciting his observations on the state of rapid transit in Western Europe.

Mr. Gottfeld, who has written extensively on transportation, formerly held a position in the planning division of the Stockholm subway system, and has traveled widely throughout Europe reporting on the various transit projects there.

His views are widely respected in knowledgeable transportation circles, and his report "Rapid Transit Progress in Europe" very closely parallels my own thinking on this important subject. I believe his views should be considered by all who have responsibilities in transportation in the United States.

Mr. President, I ask unanimous consent that Mr. Gottfeld's report be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

RAPID TRANSIT PROGRESS IN EUROPE

(By Gunther M. Gottfeld)

The writer had the privilege of inspecting public transportation systems in a number of European cities in May, 1969, as part of a trip to attend the Congress of the International Union of Public Transport in London.

Much has been written in recent months comparing transit progress in Europe with that in the United States. There is no question that European cities are progressing more rapidly in achieving a balanced transportation system. It will be distressing for many people to learn this fact, because of this country's abilities and financial resources. Certainly, no country in the world can equal the U.S. in the quality of its airplanes, automobiles, electronics, universities, highways, and many other facilities. But regrettably, it is becoming more evident each day that while we may be the first country in the world to send a man to the moon, we are rapidly becoming the last in solving our pressing urban transportation problems.

The reasons for this phenomena will now be examined in some detail.

1. CONTINUOUS PUBLIC RECOGNITION OF THE NECESSITY OF URBAN MASS TRANSPORTATION

Before World War II, both U.S. and European cities depended heavily on mass transit facilities. Following the end of that war, the U.S. adopted a policy of discouraging the use of transit by devoting almost all of its transportation resources to the building of new highways and other auto-oriented facilities. This has led to the development of low density suburbs, and decentralization and decay of central business areas of the central city. Beginning in the early 1960's, it became evident that this policy was having a disastrous effect on our cities, because more and more land became devoted to the use of the automobile and congestion was increasing, despite a large network of superhighways which were built through the cities. Los Angeles became the extreme example of what can happen to a large metropolitan area when it depends entirely on the automobile.

The intolerable conditions in Los Angeles were instrumental in the passage of the San Francisco Bay Area Rapid Transit District bond issue in late 1962 to spend $1 billion to build the 75-mile network now under construction. This development, plus the passage of the federal Urban Mass Transportation Act of 1964, were probably the two most important factors which generated new interest in urban mass transit.

By contrast, European cities, many of which were destroyed or badly damaged by the effects of the war, were rebuilt with both public transit and automobiles taken into consideration. At the end of the war, automobile traffic in Europe was a minor consideration, but in recent years the increase in auto ownership has been so rapid that in a number of cities the ratio of persons per car almost approaches that in U.S. cities. All during the late 1940's, 1950's and 1960's, while American transit systems have been allowed to decay, European systems have been expanding and improving and preparing for the inevitable competition with private automobiles.

Some forms of public subsidies have always been available to European systems because of the recognition that the fare box cannot cover all costs. In the U.S. subsidies are a relatively new idea, except in a few cities. This policy has permitted European systems to operate at lower fares. The very sizable boost in fares in this country, as high as 40 cents in some cities, has accelerated the trend away from public transit. Chicago is an excellent case in point, where riding has decreased 18 per cent during the last two years.

2. PROMOTING OF BALANCE TRANSPORTATION THROUGH CONSTRUCTION OF NEW FACILITIES

Much has been said during the past ten years about the need for having a proper balance between transit and highways in American cities, but unfortunately these ideas repeated thousands of times, have resulted in little concrete action. While American cities have been talking about balanced transportation, European cities have been achieving it by means of building new rapid transit lines and a network of modern highways. The planning of both means of transportation are completely coordinated with community development. There is no competition between highways and transit. They are both planned to complement each other.

Since the end of the Second World War, new rapid transit systems have been opened in Stockholm, Oslo, Frankfurt, Cologne, Milan, Rotterdam, Lisbon and Rome. New systems currently under construction or to be shortly underway include: Helsinki, Amsterdam, Brussels, Munich, Essen, Dortmund, Stuttgart, Hanover, Nuremburg, Dusseldorf and Bremen. The last seven cities are all in Germany, and the reasons for this large development is explained later. All of the cities having had rapid transit before the war have expanded their systems as rapidly as funds permitted.

During the same period, expansion evolved rather slowly in the United States. Only one new system—in Cleveland—was completed in 1955, and most of the construction for this single line was actually done twenty years earlier. Insufficient funds and the war delayed the completion. There have been some extensions to the existing systems in Boston, Chicago, New York and Philadelphia, but to a much lesser extent than their European counterparts. The one bright spot, of course, is the construction of the BART system in San Francisco. This venture is probably unequalled to anything else in the world, but unfortunately it is only one out of more than twenty metropolitan areas in this country having a population in excess of one million.

Highway construction has advanced rather rapidly because of increased automobile ownership. The Autobahns in Germany are built to approximately the same standards as our interstate highways. Automobile ownership has increased from one car for every 50 persons twenty years ago to one for five. In some cities, the ratio is larger, i.e., in Frankfurt it is one car to every 3.5 persons. Thus it is unrealistic to assume that present high standards of transit are due to a large degree to low automobile ownership.

3. BALANCED FUNDING OF TRANSPORTATION IMPROVEMENTS

Until the passage of the Urban Mass Transportation Act in 1964, no public funds for major mass transit improvements were available for most cities in this country. Even the passage of this Act did not achieve anywhere near a balance. In the current federal fiscal year, only $175 million is being spent for urban mass transit, compared to about $5 billion for highways. This large disparity is caused by the existence of a long-term trust fund financed by motor vehicle fuel and tire taxes which provides adequate revenues to permit massive highway improvements. By contrast, urban mass transit is funded on a year to year basis, and is subject to annual review by the Congress.

The urban mass transit program has never had the strong political support as other programs, particularly the highway program, because proponents of transit have done such a poor job in selling its product to the Congress.

In Europe, motor vehicle fuel taxes are much higher than in the U.S., but these monies go into the general fund rather than be specifically earmarked for highways. National governments in Sweden and Germany are now paying increasing sums for transit improvements. Part of this money comes from motor vehicle fuel taxes. In Sweden, the government now pays 95 per cent of the basic construction of rapid transit lines in the Greater Stockholm Area, which contains almost 20 per cent of that country's population. This assistance will permit Stockholm's subway network to double from 40

miles at present to 80 miles in 1980. It is anticipated that 2,000,000,000 Swedish kronor or $400,000,000 will be spent on rapid transit construction by 1980.

In Germany, gasoline and diesel fuel taxes were increased about 4 cents per gallon to pay for improved transportation. This additional tax brings in between 650,000,000 DM and 750,000,000 DM ($163 million to $188 million) each year. Sixty per cent of this is earmarked for highways and 40 per cent for transit. Except for Berlin, which is heavily subsidized by the German Federal Republic, the transit assistance program pays for 50 percent of capital improvement costs. The remaining 50 percent is paid by the municipalities. This program has permitted many cities to undertake transit improvements, and in addition to Berlin and Hamburg, which had subways for many years, subways are now operating or under construction in Frankfurt, Cologne, Munich, Essen, Dortmund, Stuttgart, Hanover and Nuremburg. Several other cities, including Dusseldorf and Bremen, are expected to get underway shortly.

Without these national grants, it would not be possible for Swedish or German cities to undertake such extensive improvements so quickly. Other European countries also contribute financially for transit improvements, although to a lesser extent.

4. ACCEPTANCE OF IMPROVED EXISTING TECHNOLOGY

Although the availability of public funds is an important reason for the success of European transit, it is by no means the only one. European countries have accepted the conventional modern tworail rapid transit concept as the most logical, efficient and economic means of rapid transit. Except for the basic technology, there is little resemblance between the new subway trains in Berlin with the old elevateds in New York. Every major rapid transit system and extension has and will continue to rely on improved existing technology.

In this country, millions of dollars and many years have been spent on searching for something different. These studies have never proven the advantages of other technology, nor have they disproven the advantages of modern two-rail rapid transit. Unfortunately, these studies have delayed implementation of realistic solutions, and rising construction costs now make many of these improvements financially impossible. The Bay Area Rapid Transit District in San Francisco spent millions of dollars for research and development, and concluded that the modern two-rail system was the only feasible technology for its space-age system. Yet other cities still undertake studies to "re-invent the wheel" despite the extensive finds by BART.

European cities are interested in building facilities with greater capacity. Subways are being constructed to replace surface streetcars and buses. Streetcars in other cities are modern and articulated, operated by one man, and are being placed in subways and reservations to offer a rapid transit type service in cities not having sufficient population to justify heavy rapid transit trains. In the U.S., there appears to be some interest in new types of systems which actually have lower capacity than existing technology. Such proposals as dial-a-bus, bus rapid transit, minibuses, and skybus all utilize low capacity vehicles and in most cases have excessively high labor costs.

The acceptance by European systems of modern two-rail rapid transit does not imply that they are technologically advanced to United States rapid transit systems. As a matter of fact, there is probably no rapid transit system operating in the world today which is as technologically sophisticated as the new Lindenwold line of the Delaware River Port Authority, and a great deal of credit must be given to its engineers who built the line for their foresight in constructing such a superior facility. The major difference between Europe and this country in this area is not one of technology, but rather the determination to implement well-conceived plans rather than to undertake endless studies which produce little or no results.

5. ABILITY TO ATTRACT AND KEEP QUALIFIED PERSONNEL

Transit systems in the United States have been unable to attract educated young people into the field, because for many years transit was considered a dead industry. Now, with a growing recognition of the importance of transit, many jobs are opening and they are often filled by unqualified or lesser qualified persons. The inability to attract good people into the transit field for so many years is in many ways perhaps its most serious problem. There are few outstanding administrators and spokesmen who can sell the message to governmental bodies effectively. This has been a major factor for transit to be short-changed during Congressional appropriation sessions.

European transit systems have always been able to attract qualified talent because of a sense of dedication for public service, and salaries competitive with other fields of work. The recent Congress of the International Union of Public Transport was a far cry from similar conferences in the U.S. The discussions were of a substantive, technical and professional level, in contrast to the dreary sessions held here which are devoted largely to social functions and superficial discussions about balanced transportation and interfaces.

It has been the purpose of this report to bring out the major differences between transit in the U.S. and Europe. In concluding, it would appear that a detailed in-depth study of European transportation systems should be made, with particular emphasis on planning, financing, personnel, operations, administration, and program implementation. Such a study would be extremely valuable as a guide to finally update our ailing urban transportation systems.

HE STILL LIKES THIS COUNTRY

Mr. DODD. Mr. President, it is not unusual to read in today's newspapers that someone has again attacked the United States. Indeed, it has become something of a national pastime to denounce America in the most strident terms.

Therefore, Mr. President, it was refreshing to read the remarks of Eric Hoffer in his column that appeared in the Norwich, Conn., Bulletin yesterday.

I ask unanimous consent to have printed in the RECORD at this point the article by Mr. Hoffer.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HE STILL LIKES THIS COUNTRY

(By Eric Hoffer)

I live in a society full of blemishes and deformities. But it is a society that gives every man elbow room to do the things near to his heart. In no other country is it so possible for a man of determination to go ahead, with whatever it is he sets his heart on, without compromising his integrity.

Of course, those who want acclaim and fortune must cater to other people's demands. But for those who want to be left alone to realize their capacities and talents this is an ideal country. It is incredible how easy it is in this country to cut oneself off from what one disapproves—from all vulgarity, conformity, speciousness, and other corrupting influences and infections.

The processional detractors of America are telling us day in and day out that we have been debased and dehumanized by our system of government and our way of life.

We are told the majority of people in this country have no will and no judgment of their own; that we are robots manipulated by politicians, manufacturers and the mass media.

Novelists, playrights, philosophers and critics often depict this country as a land of the living dead. It is a country where sensitive souls are starved and flayed; where nothing nourishes and everything hurts. Nowhere, they say, is there such a boring monotony; monotony of talk, monotony of ideas, monotony of aim, and monotony of outlook on the world.

One American writer, who has spent much of his life in France, says that "America is no place for an artist. A corn-fed hog enjoys a better life than a creative writer."

It is hard to believe that these savage denunciations are based on direct experience with persons and places. I spent half of my life as a migratory worker in California, living with people from every state, and the other half as a longshoreman in San Francisco.

If now, at 66, I consult all that I have seen and experienced over the years I find that the people I have lived and worked with all my life had three outstanding qualities:

(1) They were skilled people. Working with them you knew beyond doubt that they were intelligent and competent; that they would tackle any problem and often solve it in a subtle, original way. They had both technical and social skills so that if dumped anywhere on this planet they could build another America.

(2) They needed very little supervision and leadership.

(3) They were on the whole wonderfully kind. It happened again and again: I would jump off a freight train in some small town and in almost no time it seemed to me that where no one knew me everyone was my brother. I always knew that if ever I wrote the story of my life it would be titled, "A Book of Kindness."

All my life I have seen America from below, and what I saw seemed good to me.

THE RUGGED ROAD TO INDEPENDENCE

Mr. WILLIAMS of Delaware. Mr. President, in the July 1969 issue of the Reader's Digest there appears an excellent article by Thomas Fleming entitled "The Rugged Road to Independence." The writer reviews the days of doubt, debate, and dissension at the time of our Nation's first and greatest decision, the Declaration of Independence.

This article should be read by every American as we approach the 193d anniversary of the signing of this historic document.

I ask unanimous consent that the article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE RUGGED ROAD TO INDEPENDENCE

(By Thomas Fleming)

Thomas Jefferson awoke as usual with the first faint streaks of dawn. From his second-floor rented rooms, above Seventh and Market Streets, the tall, redheaded Virginian looked out over the city of Philadelphia with foreboding. Today, July 1, 1776, he would find out if for the last three weeks he had wasted his time in the writing and rewriting of a document he had titled: "A Declaration by the Representatives of the United States of America, in General Congress assembled."

Doubting the future of the Declaration of Independence seems almost laughable now.

With comfortable hindsight we ask: Could there really have been any question? The fact is that history as men experience it is totally different from the way those who follow them relive it.

Again and again, America has found itself racked by agonizing decision-making. It is so racked today. Thus it may help to realize that there was the same kind of agonizing over the decision that created our nation. Standing at his window that July 1, the 33-year-old Jefferson could not be sure that his Declaration was even going to be read, much less ultimately immortalized. The Continental Congress had first to decide whether the very idea of independence was acceptable; only then could the members worry about how to phrase it.

THREAT OF DESTRUCTION

Down at the City Tavern, 26-year-old Edward Rutledge, of South Carolina, was also awakening. His thoughts and feelings were dominated by an inflexible detestation of a declaration of independence. On June 7, when one of Jefferson's fellow Virginians, Richard Henry Lee, had introduced a resolution declaring that "these united colonies are, and of right ought to be, free and independent states," Rutledge had leaped to his feet to heap scorn on the idea. It was, he shrilled, "a blind, precipitous measure." It would accomplish only two things, both bad. It would reveal America's intentions to the enemy, and it would make the unborn nation look "ridiculous in the eyes of foreign powers."

In a manor house five miles outside Philadelphia, an even more powerful foe of independence was arising—43-year-old John Dickinson, political leader of Pennsylvania. A year before, almost single-handed, Dickinson had beaten back a surge toward independence, persuading the Congress to present instead a petition to George III, begging His Majesty to redress America's grievances. Although the king had callously rejected the petition, Dickinson believed that to make a declaration now would be like "destroying a house before we have got another, in winter, with a small family."

Thus Dickinson had joined Rutledge in vehemently opposing the June 7 resolution. After three days of wrangling, the Congress had compromised. It ordered Jefferson to begin drafting a declaration—but there would be no vote on indepedence until July 1. By then, perhaps, opinions might be closer to unanimity.

Both sides were acutely aware that near-unanimity was called for. John Dickinson had already threatened John Adams, of Massachusetts, one of the most outspoken independence men, with a weapon that could make a mockery of the whole idea of independence. "Concur with us," Dickinson had snapped, "or we'll break off from New England." If powerful Pennsylvania made such a decision, New York, New Jersey, Maryland and Delaware might follow suit. Thus, instead of uniting the colonies, independence might well destroy them.

TEMPERATURE: HIGH

These and other gloomy thoughts were in the minds of Thomas Jefferson and his fellow delegates as they made their way down dusty Chestnut Street to the handsome red-brick Pennsylvania State House, where Congress was sitting. There, as the tower clock struck nine, tall, elegant John Hancock strode to the President's chair and gaveled the Congress into session. (Jefferson, with his scientist's curiosity, noted that the temperature stood at 81.5 degrees.)

First came reports from American armies in the field. None of them was likely to inspire a waverer to vote for independence. In the North, the once-proud army that had invaded Canada was in headlong retreat, ridden by disease and dissension. In New York, Commander in Chief George Washington's army of 19,000 was desperately short of ammunition—and a huge British fleet had been sighted off Sandy Hook. In the South, a British army supported by a naval squadron was battering at Charleston. British forces attacking from three directions—and some men of Congress wanted a vote for independence!

By noon the tension in the room was almost unbearable, and the Congressmen gratefully escaped into the State House yard for an hour's recess. On their return, they resolved into "a committee of the whole," under the chairmanship of Virginia's Benjamin Harrison, so that everything said or voted would be unofficial. The purpose was to encourage every man to speak his mind.

ALL-OUT WAR

Instantly, John Dickinson was on his feet. What was there to gain from declaring independence, he asked. Would it add a single man to the cause? Would it impress the nations of Europe? Or would it make them think that the Americans were blustering windbags, proclaiming as a fact something they had yet to prove against the British armies?

Outside, nature added to the drama of Dickinson's powerful speech. Huge clouds had formed above the city. Now thunder crashed, and lightning streaked the sky. Candles were lighted against the room's sudden gloom.

Dickinson spoke on. A declaration of independence was a declaration of all-out war. Did the members know what that meant? "The burning of our towns. The setting loose of the Indians." War against the richest, most powerful empire in the world. Could America depend on her own people to stand firm in a war "rendered more cruel" by this declaration? "In bitterness of soul, would they not complain against it as madness, rashness?"

In the momentary stillness that followed these ringing words, rain could be heard lashing against the windows. John Dickinson sat down. All eyes in the silent room turned to the stumpy, 41-year-old delegate from Massachusetts, John Adams. Only he could answer Dickinson.

Wearily, Adams rose to his feet. For months he had been living on four hours' sleep a night, serving on more committes than anyone else in Congress, writing endless letters and reports, battling each day on the floor for independence. For a moment he wondered if he could go through with another repetition of "what had been repeated and hackneyed a hundred times, for six months past." But the moment he began, the immense importance of the subject gripped him again, and weariness vanished from his voice. In the pounding, vehement style that had made him one of the dominant voices in Congress, he gave the greatest speech of his career. Of that speech, Thomas Jefferson would later say that it had "a power of thought and expression that moved us from our seats."

How many times, Adams asked, did Americans have to see their humble petitions scorned, before they realized that George III was an enemy? With armies invading from three directions, who could still be deluded by rumors of reconciliation? The hour had come, said Adams, for the people of America to decide whether to submit as slaves or to fight as free men. At Lexington and Bunker Hill, George III had destroyed the loyalty of most Americans forever. A declaration would tell this to the world, win friends, perhaps allies. More important, it would rally thousands of men and women who were temporizing. As for himself, Adams cried, "All that I have, all that I am, and all that I hope for in this life, I am now ready to stake on this resolution. Live or die, survive or perish, I am for the Declaration."

NIGHT OF NEGOTIATION

Benjamin Harrison called for a vote. Around the room the ayes and nays went. The results were grim: only nine colonies were in favor of a declaration. Pennsylvania and South Carolina had followed their leaders into opposition. Delaware had split, one to one, thereby canceling its vote. New York had abstained. Four delegations, almost a third of the 13, not voting for independence! Quickly, Edward Rutledge moved that an official vote be postponed until the following day.

A night of frantic negotiation and desperate action began. Thomas McKean, of Delaware, hired an express rider with the fastest horse in Philadelphia to cover the 80 miles to Dover. There he was to find Caesar Rodney, a pro-independence delegate who had gone home on business. If he could be got back to Philadelphia in time, he would swing Delaware's vote.

At the City Tavern, Edward Rutledge debated far into the night with his fellow Carolinians. He was still against a declaration of independence. But he was statesman enough to see that a split of even one colony could be a first step toward disunion and disaster.

New Yorkers, conferring with pro-independence men, admitted that they were in favor of a declaration. But they were under specific instructions from home *not* to vote for independence. They would continue to abstain.

This left Pennsylvania. For sleepless hours, John Dickinson struggled with his conscience. One of his chief Pennsylvania supporters, Robert Morris, had urged him to submit to the will of the majority. But Dickinson, Quaker-bred could not vote war's suffering on his people, whatever the majority willed. He sent word to Robert Morris that he was staying home from Congress on July 2, and that perhaps Morris should do the same thing. This meant that Pennsylvania's delegation would be reduced to five. Two were for independence, two opposed; one, John Morton, was undecided.

THROUGH GLOOM TO GLORY

July 2 dawned rainy and cooler. Through the muddy streets the delegates clumped to the familiar chamber. The absence of Dickinson and Morris was instantly noticed. But the independence men grimly noted another absence: Caesar Rodney's. Had the messenger failed in his mission? All morning and into the afternoon, President John Hancock delayed the vote with other business. Finally further delay was impossible.

Name by name, Secretary Charles Thomson called the roll of the delegates. The nine yeas of the previous day caused no suspense. New York politely declared its abstention. Pennsylvania's vote split two-two until John Morris rose, weak from the disease that was to kill him a few months later.

Morton shared John Dickinson's dread of the impending war. Only a month earlier, he had said: "The contest is horrid. Parents against children, children against parents." But now he voted, in a voice tight with anguish, for independence. John Adams had convinced him.

And Delaware? Outside, Thomas McKean had spent most of the day straining eyes and ears for sight or sound of a horseman. As the vote rolled away inside, McKean at last saw what he was praying for. Covered with mud after an all-night ride, Caesar Rodney slid off his horse. Minutes later, he rose in the meeting room to declare, "The voice of my people at home is for independence. I concur."

Now it was South Carolina's turn, and the independence men sighed approval when Edward Rutledge announced that his state was joining their ranks.

In a voice that trembled with suppressed excitement, President John Hancock read the result: for independence—12; against—none. The great decision had been made.

Everyone present in Congress that day, July 2, assumed that thenceforth it would

be known as Independence Day, "I believe that it will be celebrated by succeeding generations as the great anniversary festival," John Adams wrote to his wife, Abigail. But he and the others did not reckon with the power of the written word. Little of John Adams' magnificent speech was recorded. Congress, after debating various deletions and additions to Jefferson's Declaration of Independence, voted approval of the edited document on the evening of July 4. And thus Jefferson's brilliant prose has been indissolubly linked in American minds with independence.

Yet some of sturdy John Adams' praise of independence deserves to be remembered by Americans forever. "I am well aware of the toil and blood and treasure that it will cost us to maintain this declaration," he wrote to his wife. "Yet through all the gloom I can see the rays of ravishing light and glory. I can see that the end is more than worth all the means; and that posterity will triumph in that day's transactions, even though we should rue it, which I trust in God we shall not."

IDEALS AND BEHAVIOR INCONSISTENT ON FORCED LABOR CONVENTION

Mr. PROXMIRE. Mr. President, today, I refer to the Forced Labor Convention, one of the human rights treaties still before us, despite its introduction over 5 years ago.

In the Universal Declaration of Human Rights put forth by the General Assembly of the United Nations in 1948, article I states:

All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.

Article II goes on to stress:

Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, color, sex, language, religion, political or other opinion, national or social origin, property, birth or other status.

One of these basic rights is enumerated in section 1 of article 23:

"Everyone has the right to work, to free choice of employment, to just and favorable conditions of work and to protection against unemployment.

Using this clause on the rights of labor as a common base, the Social Council of the United Nations and the International Labor Organization—ILO—decided to work together to strengthen and define the rights of labor all over the world. As a result of this cooperation, the ILO adopted in 1948 the Freedom of Association and Protection of the Right To Organize Convention, and in 1949 the Right to Organize and Collective Bargaining Convention. The International Labor Organization and the United Nations also established a Committee on Forced Labor in 1951.

This committee based its inquiry on allegations that forced labor existed in certain countries or territories. These complaints came from both governmental groups and private citizens in over 20 countries. The final report of the committee, issued in 1953, concluded that two systems of forced labor existed in the world; the first being employed as a means of political coercion or punishment for holding or expressing political views; the second, for important economic purposes. The committee, moreover, felt that its inquiry had revealed facts shocking and serious enough to threaten fundamental human rights and to jeopardize the freedom and status of workers as outlined in the provisions of the United Nations Charter. Hence, it formally urged that all such systems of forced labor be abolished.

In 1954, both the Economic and Social Council and the General Assembly condemned these systems of forced labor and appealed to all governments to reexamine their laws and administrative practices. They also requested the Secretary General of the U.N. and the Director General of the ILO to prepare a new report. This new publication again condemned all systems of forced labor employed as a means of political coercion or punishment for holding or expressing political views, and the Economic and Social Council urged that action be taken to eliminate forced labor.

But the ILO was determined that much more could be done in this field. Thus, after meeting in Geneva in 1957, the organization adopted a Convention on the Abolition of Forced Labor. Under this convention, the parties signing it are obligated to suppress, and not to use, forced or compulsory labor:

First, as a means of political coercion or education or as a punishment for holding or expressing political views or views ideologically opposed to the established political, social or economic systems;

Second, as a method of mobilizing and using labor for purposes of economic development;

Third, as a means of labor discipline;

Fourth, as a punishment for having participated in strikes; and

Fifth, as a means of racial, social, national or religious discrimination.

As of May 1, 1969, 85 countries had ratified the convention which entered into force on January 17, 1959.

Mr. President, the United States is not one of those 85 nations. This, despite the fact that the late President Kennedy submitted this convention to the Senate for ratification on July 22, 1963, almost a full 6 years ago. In asking for the Senate's constitutional consent, President Kennedy said:

The United States cannot afford to renounce responsibility for support of the very fundamentals which distinguish our concept of government from all forms of tyranny.

Mr. President, I urge that we act now to rectify this seeming paradox between our stated ideals and our inconsistent behavior. We, as Members of the Senate, have full power in this area. Let us make the ratification of this Abolition of Forced Labor Convention one of our primary pieces of business.

CHICKEN IN HOTDOGS

Mr. MATHIAS. Mr. President, one vital issue currently being debated is the future of that great American institution, the hotdog. At issue is whether, and under what conditions, chicken should be included as an ingredient in hotdogs.

Recently my fellow Marylander, the Honorable ROGERS C. B. MORTON, summarized his thoughts on this question in a succinct statement. In calling attention to his remarks, I would like to note that, for those who would like to sample a "chickendog," Representative MORTON has invited us all to a "chicken-in" on Tuesday afternoon, June 24, from 5 to 7 p.m. in the caucus room of the Cannon House Office Building. This is a chance for some basic research on this challenging question.

I ask unanimous consent to include Representative MORTON'S statement at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF ROGERS C. B. MORTON, MEMBER OF CONGRESS, FIRST DISTRICT OF MARYLAND

Technological developments in recent years have made it possible—and economical—to offer chicken meat in addition to red meat for inclusion in hot dogs and other sausage products. Unfortunately, regulations handed down by the Department of Agriculture have hindered the growth of this new market for chicken products.

The purpose of the labeling and content regulations established by the Department of Agriculture should be to assure the consumer he is purchasing a healthful and nutritious product, not to dictate to the manufacturer which meats, and in what proportions, may be included in this product.

I can see no logical reason to require the name of a sausage product to be changed merely because it contains chicken meat. Under the dictionary defintion and the consumer definition, chicken is meat just as beef and pork are meats. While poultry could not be included in an "all beef" product, there is no reason it cannot be included in "all meat" products.

Further, taste tests have shown no significant change in flavor, texture or appearance results from the use of chicken meat in sausages. Thus, I would urge no limitations be set by the Department on the amount of chicken which may be included.

The poultry growers in my District have no objection to an indication on the label of the inclusion of chicken, provided the indication is similar in form to that of the red meat products. It would seem to me that the description "comminuted" is unnecessary, since all meat products included in sausage products are, in fact, comminuted.

The proposed restrictions on the amount of bone and skin which may be included could be very harmful to competition. I urge that the regulations permit the inclusion of skin in proportion to the amount normally associated with the chicken-part used; and that the present 1.5% limit on bone inclusion be retained, since USDA studies have shown no harmful effects derive from such amount.

In summary, let me emphasize that the poultry industry seeks no special consideration in processing or offering its product for use in sausages. On the other hand, we want to be certain that unnecessary or unfounded regulations do not restrict the ability of the industry to compete in the marketplace with other meat products.

THE FEDERAL CITY COLLEGE IN THE DISTRICT OF COLUMBIA

Mr. TYDINGS. Mr. President, it was with great concern that I learned of the questionable status of the land-grant funds for the Federal City College. This college, in its first year of operation here in the District of Columbia, is already making great strides in determining the

role of a land-grant institution in an urban community. And this role is truly great.

A land-grant college is a college committed to reaching off campus to help people to help themselves. There is no question that this can be applied to an urban scene. Already the Federal City College has instituted 4-H programs reaching over 1,500 youths in its first 6 months. Its nutrition education aide program has reached over 4,000 people in 800 families. A full freshman curriculum is being instituted at the Lorton Correctional Center in order to enable the inmates to be paroled to the college. Extensive community and adult education courses have been established, all of which are truly carrying out the tradition of the land-grant college—that is, the people's college.

Now we find that the $7.2 million endowment making these programs possible is in jeopardy. The House of Representatives has already approved this endowment in addition to a $375,000 cooperative extension budget for the Federal City College. As these appropriations are pending before the Senate, I would like to insert in the RECORD an article appearing in the Spectator, the bulletin of the National University Extension Association, entitled "Urban Extension Programs," which further explains the tremendous role the Federal City College is and must play as an urban land-grant college, and I encourage my fine colleagues to take favorable action on these pending measures.

I now ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

URBAN EXTENSION PROGRAMS: FEDERAL CITY COLLEGE AND SYRACUSE UNIVERSITY

(By Eugene Wiegman, dean, Community Education)

"What does a land grant college do in an urban area?" a question asked of President Farner and me on numerous occasions by U.S. Congressmen. This question came up repeatedly when working legislation through Congress naming the Federal City College, the land grant college for the District of Columbia. We answered the question by saying, "We will do the same as other land grant colleges—that is reach off campus to help people help themselves."

In June, 1968 Federal City College became the 69th land grant college, the first new land grant institution in 50 years. The Federal City College differs from other land grant universities in that the entire population of the District of Columbia is urban. How is the Federal City College organized to bring the spirit of land grant to the people of Washington, D.C.?

The Federal City College's land grant functions of Cooperative Extension Service, general extension, continuing and adult education, community assistance, and special programs (Headstart, Model Cities, etc.) are in the Office of Community Education. The chief officer is the dean of Community Education, assisted by two associate deans and an assistant dean. At the present time the dean is also director of Cooperative Extension Service; U.S. Department of Agriculture, for the District of Columbia. He is also the liaison officer with Washington Technical Institute in cooperative programs under land grant status.

Community Education functions are separated into three areas:

(1) Cooperative Extension Education Programs are under the leadership of Associate Dean Selma Lippeatt. Programs that are presently under way deal with nutrition education, home living, family counseling, child care, 4-H youth development, family stability and human development. Presently, there are five professional staff members, called community educators, and 31 paraprofessionals and aides carrying out the programs. The goal in cooperative extension service is to reach 4,000 persons in 800 families and 1,500 youth by June 30, 1969.

Aides and paraprofessionals trained and supervised by community educators visit homes teaching and demonstrating skills in home management, consumer education, buymenship practices, and child care. The nutrition education program emphasizes assisting low income families to purchase and prepare nutritious meals. In many cases it means using food purchased through food stamps.

4-H youth clubs are being established in the District emphasizing projects in photography, electronics, sewing and cooking, citizenship, beautification and general recreation. John Thompson, former basketball player is heading-up the 4-H youth development.

Regional Training Officer, Miss Cleo Shakespeare, is responsible for the in-service training of Headstart personnel in the District of Columbia and Northern Virginia (Metropolitan Washington, D.C.). The program serviced 2,000 personnel this past year in workshops, short courses, etc. She also visited 52 individual classrooms observing Headstart programs.

(2) General Extension Adult and Continuing Education: This phase of Community Education is geared to respond to the educational needs of citizens, the government and public and private organizations. Community educators working closely with citizens structure educational programs for specific purposes. Before any program is begun, a community educator meets with citizens and designs extension courses or programs of study. Twenty community educators, two paraprofessionals, and six students carry out programs in general extension.

Presently, Community Education has programs in conversational English as a second language, black history and consumer education. Also in Adams-Morgan, where a community educator has been concentrating his efforts, the area's community council has for the first time in its history elected Spanish-speaking adults and teenagers to its board. Federal City College's community educator helped the council draw up a proposal for a youth development program. He also helped distribute Christmas gifts to needy families.

Another current program brought together Federal City College, Georgetown University, and Afro-American Resources, Inc., to develop a 56-session training institute for the Shaw area's Model Inner City Community Organization. Designed to further total community participation in vital decision-making, the institute deals with the history and functioning of urban renewal in the U.S.A. and in Washington, the Washington power structure, and MICCO's relationship to it and to the Shaw community it serves. MICCO board members, staff paraprofessionals and volunteer workers are participating in the training program.

One program recently completed was a six-week course on the use of arbitration and mediation techniques in resolving community disputes between parties such as landlords and tenants, welfare agencies and clients, and consumers and merchants. The course got underway in mid-November for members of 20 neighborhood organizations.

The College's manpower program has met its goal of encouraging student concern for social and employment problems facing the community. Working with existing community groups in southeast and southwest, under directorship of community educators, ten Federal City College students spent much of the fall quarter talking to a cross-section of the populace, gathering information and rendering service. As a result of their activities, the students wrote a proposal to set-up their own program. On April 1, 1969 the proposal was funded under Title I of the Higher Education Act and will continue until August 31, 1969.

Since November, Community Education has been involved in Project Work Incentive. Eight Federal City College staff members, including two students, are helping to teach and coordinate the project.

(3) Extension courses: Seeing the need to reach adults who are not enrolled as students of Federal City College, the Office of Community Education has begun a series of extension courses with heavy emphasis on the community, human development and black awareness. These courses are under the direction of Assistant Dean Andress Taylor, and include: "Unions and Government", "American Racism", "History and Culture of Black America", "English as a Second Language", "Community Development", "Principles of Business Administration", "Human Development".

The Office of Community Education has extension programs at the D.C. Lorton Reformatory for inmates with high school diplomas. Two sections of "Introduction to Urban Social Institutions", a freshman course, began in March. An entire freshman college year will be offered at the Reformatory with the hope that when the inmates are paroled they will attend the College to complete requirements for an AA or BA degree.

Community Education also sponsors a number of conferences and workshops primarily for professional groups. The Federal City College will, for example, co-host the Adult Education Galaxy Conference in December, 1969.

In April, Community Education will televise over Station WTOP, daily half hour programs, numbering 65, on the subject of "The Black Experience in America". In the future such courses will be televised for college credit.

Community Education is offering two sections of community organization and one section of proposal evaluation for the Model Cities ward councilmen and commissioners. In addition, the College is working closely with Model Cities staff on educational matters.

Community Education is offering a course through the Federal City College Skills Center, called "Introduction to the Teaching of Reading" for 15 teachers at Calvin Coolidge High School. The teachers in this course will organize a reading project at Coolidge High School using the techniques which they learn in this course.

THE FUTURE

Community Education at Federal City College has reached over 10,000 citizens since September, 1968. Its goal is to touch the lives of at least 30,000 citizens and youths in one way or another during the coming academic school year. Since Federal City College is the only comprehensive institution of higher learning in Washington, D.C., the College feels it has a unique function to reach out to people in such a way as no other agency or institution can in the City. We feel we are carrying-out and enhancing the glorious tradition of the "people's college"—the Land Grant College.

A CABAL AT THE FEDERAL TRADE COMMISSION

Mr. CURTIS. Mr. President, the Federal Trade Commission is the unquestioned leader of all of the independent regulatory agencies in terms of the vol-

ume of criticism received in recent months. From every conceivable quarter, we continue to hear insistent demands for reform. As the crescendo increases, it is important to comprehend the precise nature of these demands, since the Federal Trade Commission is or should be one of the most important arms of Congress.

In January of this year, a group of young investigators organized by Ralph Nader published a 185-page report calling for the resignation of the present Chairman of the Commission and a sweeping overhaul of the agency's policies, practices, and staff. This group spent 3 months last summer checking FTC files and interviewing officials at FTC's Washington headquarters, where their enthusiasm and persistence earned them the name of "Nader's Raiders." Of the present Chairman, Paul Rand Dixon, that report urged that his "chief and perhaps only contribution to the Commissions' improvement would be to resign from that agency that he has so degraded and ossified."

Mr. President. I ask unanimous consent to have printed at this point significant parts of that report.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

1. PARTISAN POLITICAL ACTIVITY

The official image of the Federal Trade Commission is, as it should be, that of a nonpolitical agency regulating interstate commerce against anti-competitive and unfair practices in the public interest. In order to insulate the agency from party politics, the original law provided that no more than three Commissioners could be from the same political party. For the same reason the Commissioners' tenures run for seven years at staggered intervals. On the staff level the Hatch Act, 18 U.S.C. Sec. 602 (1964), prohibits the soliciting of political funds by government employees. In addition the Civil Service Commission forbids party discrimination in hiring policy.

Yet in the case of the present regime at the FTC, the Hatch Act and the Civil Service Law are regarded as more rhetoric to which lip service is paid publicly, but which are in reality either ignored or circumvented. Most attorneys at the FTC are labelled as either Democrat or Republican and their party affiliation has a definite impact on the positions they are offered. All staff attorneys at the FTC from Bureau Chief[1] to Executive Director hold their positions on appointment from Chairman Dixon who, in effect, may replace them whenever he desires and reduce them from a supergrade to a GS–15. Ideally then, the Chairman rotates the FTC staff in order to place the best men at the top of each operating bureau. When Mr. Dixon became Chairman in 1960, it seems that the "best men" were all Democrats and so any Republican in a high position was offered the choice of either becoming a trial lawyer at the bottom of the organization chart or, of course, resigning from the Commission.

As a result of this extremely partisan policy, fourteen highly experienced career FTC men left the commission almost immediately. In November of 1961, *Advertising Age* claimed partisan politics as the major consideration in a reorganization of the FTC and that, as a result the quality of key personnel "ha(d) deteriorated." *Advertising Age*, Nov. 20, 1961 p. 13. In time, most of the other Republicans found it hard to swallow their pride and left. A few able Republicans such as the former Assistant Executive Director, Basil Mezines, and attorney John Walker have stuck it out. For eight years, however, their position as being "out" men, has grown increasingly uncomfortable.

Of the nearly five hundred lawyers working for the Commission only about forty are now Republicans with approximately twenty of these being located in the central office. At the present time only one Republican holds a position of any prominence in the operating bureaus of the FTC: Mr. Charles Moore, who has recently succeeded Sam Williams as Chief of the Bureau of Field Operations. Mr. Moore, is a Republican, but in his case there is the extenuating factor of his coming from Johnson City, Tennessee. See p. 110, below. The extreme partisanship of the higher staff combined with the control they wield over the selection and promotion process has made these results inevitable. See p. 120, below.

In addition to permitting his staff to violate both the spirit and the letter of the Civil Service Law, in promotion and hiring practices, Chairman Dixon, himself, has violated the Hatch Act. Highly reliable sources at the FTC revealed to this project that until recently Mr. Dixon was notorious for dunning the agency's personnel down to the GS–14 level for political contributions. This group includes approximately one quarter of the more than 450 lawyers working in the central office in Washington. The chief collector of dues used to be Fletcher Cohn who holds the title of Assistant General Counsel for Legislation with a salary of $24,477 per year. Mr. Dixon's reputation with the democratic fund raisers is reported to be excellent. It is also known in the high echelons of the Commission that Chairman Dixon is openly proud of his fund raising, and well he might be. His methods would make any chairman of an alumni fund raising committee jealous. Members of the staff have testified to receiving solicitation cards from the Democratic National Committee with a code number in the corner which everyone involved knew would indicate to Chairman Dixon who gave and who did not. This outrageous method of solicitation was not well received by those who were being coerced to give against their will. Eventually, the threat of action by the Justice department under the Hatch act forced Chairman Dixon to give up this political exploitation of his employees. He now uses more discreet methods to do his political fund raising inside the FTC. Now, for example, he personally asks his subordinates to buy $100-a-plate tickets to Democratic fund raising dinners. Thus Chairman Dixon persists in playing partisan politics, while neglecting his responsibilities as a public servant.

Mr. CURTIS. Mr. President, the group's other recommendations, of a more substantive nature, were summarized in the New York Times on January 6, 1969.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD this Times article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FTC INCOMPETENT, SAYS INQUIRY SET UP BY NADER

(By John Morris)

WASHINGTON, January 5.—A team of investigating law students charged today that consumer interests were inadequately protected by a complacent Federal Trade Commission with an incompetent staff under the domination of a politically minded chairman.

In a 185-page report, the seven investigators from Yale and Harvard called for the resignation of Paul Rand Dixon, commission chairman, and a thorough overhaul of the agency's policies, practices and staff.

The team was organized by Ralph Nader, the crusading writer and lecturer on consumer causes, and directed by John Schultz, a 1968 graduate of the Yale Law School who is an assistant law professor at the University of Southern California.

The young investigators spent three months last summer checking files and interviewing officials at the commission's headquarters, where their enthusiasm and persistence earned them the name of "Nader's Raiders."

Mr. Nader said that he had given the team "some guidance and some leads" but that he had taken no part in writing the report. Except for a $500 grant to Mr. Schultz by the Yale Law School, the students said they had paid their own expenses in making the study. Mr. Schultz said he had agreed to write an article for The Yale Law Journal.

Mr. Dixon, who was blamed by the students for most of the commission's shortcomings, said he did not care to comment on the report. Commissioner Philip Elman commented by recalling a speech in 1961 in which he quoted findings in 1949 of a study commission headed by former President Herbert Hoover.

The Hoover Commission called the F.T.C.'s record "disappointing" and said the agency had become "immersed in a multitude of petty problems," had not "probed into new areas of anticompetitive practices" and was "increasingly bogged down with cumbersome procedures and inordinate delays in the disposition of cases."

"Despite some progress made in recent years," Mr. Elman said, "this appraisal of the Federal Trade Commission has much validity today."

Many of the charges made by the Hoover Commision and other investigators since then were also made by the Schultz team. But no other report was comparable in the use of colorful language and superlatives. For the first time, high staff members of the commission were publicly accused of alcoholism as well as incompetence, indolence and political * * *.

ALCOHOLISM CHARGED

Without naming names, the Schultz report said that "alcoholism, spectacular lassitude and office absenteeism, incompetence by the most modest standards and lack of commitment to their regulatory missions are rampant at these [high staff] levels."

Noting that the chairman has sole jurisdiction over hiring and directing the staff, the investigators said that "most of the commission's weaknesses and misdirection can be laid at the doorstep" of Mr. Dixon.

"Mr. Dixon's chief and perhaps only contribution to the commission's improvement would be to resign from the agency that he has so degraded and ossified," they said.

"His resignation will indicate to the American consumer, who has been deceived, defrauded and ignored for profit by corporations both large and small, that the F.T.C. is prepared to protect his interest as demanded by law."

They said a new chairman should undertake "the formidable task of uprooting the political and regional cronyism which has for years prevented the F.T.C. from achieving its mandate to defend the hapless consumer."

Here are a few of the report's other charges, most of which were accompanied by official statistics and other documentary evidence.

In detecting unfair or deceptive trade practices, the commission relies too heavily on

[1] Division chiefs were removed under the cover of a general reorganization of the Commission. A similar reorganization took place in 1952 when the Republicans came in, but was initiated and planned from outside the agency. Chairman Dixon, however, was the chief architect of the 1961 reorganization.

complaints by aggrieved consumers while it should extensively monitor television commercials and conduct aggressive investigations of trouble spots, "particularly in ghetto areas."

The commission handles too many trivial cases and should establish priorities in accordance with the importance of the problem. It "has not given appropriate attention to the largest companies."

A general decline in enforcement activity "is matched by a shift in emphasis to greater reliance on 'voluntary' enforcement tools. Industry-wide guides and trade rules "themselves are sanctionless, making their effectiveness seriously questionable."

The commission's powerful enforcement tools, such as seeking preliminary injunctions and criminal penalties, are "under-used and ill-applied," its program of insuring compliance with cease-and-desist orders is "grossly inadequate, and enforcement delays are excessive."

The commission masks its failures by misrepresentation, secrecy and "collusion with business interests."

Partisan politics are played, contrary to civil service laws, in hiring the staff. Of nearly 500 lawyers on the payroll, only about 40 are Republicans. Key personnel are hired largely on the basis of their political connections, and Southern Democrats are favored. It was noted that Mr. Dixon came from Tennessee.

In recruiting young lawyers, Ivy League schools are largely ignored and graduates of Southern colleges are favored. The commission hires Negroes, but only "in their place," giving most of them jobs in the four lowest Civil Service categories.

Members of the investigative team, beside Mr. Schultz, were Judy Areen and Edward Cox of the Yale Law School; William Howard Taft 4th, Robert Fellmeth and Andrew Egendorf of the Harvard Law School, and Peter Bradford, a 1968 Yale Law School graduate who is now special assistant to Gov. Kenneth M. Curtis of Maine.

Mr. CURTIS. Mr. President, more recently, the President-elect's task force on productivity and competition has focused upon the Federal Trade Commission. In its report made public last week, the task force stated that the Federal Trade Commission is in urgent need of reform and renovation.

Too many critics of the Commission have fallen into the familiar trap of confusing personalities and people with the institution itself. In disagreeing with the views of present personnel of the Commission, some would have us abolish the agency or transfer its functions to another agency. Such drastic remedies are not warranted, at least until this new administration has appointed a new Chairman and he has had a full opportunity to reexamine in depth the agency's basic mission and programs.

It must be kept in mind that the present furore surrounding the FTC is not new. I was in the Congress in the late 1940's when similar criticisms were heard, and the Hoover Commission conducted an extensive examination of the Commission. Based upon that Commission's detailed recommendations, President Truman submitted Reorganization Plan No. 8 to the Congress on May 24, 1950.

Mr. President, I ask unanimous consent that this reorganization plan be printed at this point.

There being no objection, the text of the report was ordered to be printed in the RECORD, as follows:

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES TRANSMITTING REORGANIZATION PLAN NO. 8 OF 1950 PROVIDING FOR REORGANIZATIONS IN THE FEDERAL TRADE COMMISSION

To the Congress of the United States:

I transmit herewith Reorganization Plan No. 8 of 1950, prepared in accordance with the Reorganization Act of 1949 and providing for reorganizations in the Federal Trade Commission. My reasons for transmitting this plan are stated in an accompanying general message.

After investigation I have found and hereby declare that each reorganization included in Reorganization Plan No. 8 of 1950 is necessary to accomplish one or more of the purposes set forth in section 2(a) of the Reorganization Act of 1949.

The taking effect of the reorganizations included in this plan may not in itself result in substantial immediate savings. However, many benefits in improved operations are probable during the next years which will result in a reduction in expenditures as compared with those that would be otherwise necessary. An itemization of these reductions in advance of actual experience under this plan is not practicable.

HARRY S. TRUMAN.

THE WHITE HOUSE, *March 13, 1950.*

REORGANIZATION PLAN NO. 8 OF 1950

(Prepared by the President and transmitted to the Senate and the House of Representatives in Congress assembled, March 13, 1950, pursuant to the provisions of the Reorganization Act of 1949, approved June 20, 1949)

FEDERAL TRADE COMMISSION

SECTION 1. *Transfer of functions to the Chairman.*—(a) Subject to the provisions of subsection (b) of this section, there are hereby transferred from the Federal Trade Commission, hereinafter referred to as the Commission, to the Chairman of the Commission, hereinafter referred to as the Chairman, the executive and administrative functions of the Commission, including functions of the Commission with respect to (1) the appointment and supervision of personnel employed under the Commission, (2) the distribution of business among such personnel and among administrative units of the Commission, and (3) the use and expenditure of funds.

(b) (1) In carrying out any of his functions under the provisions of this section the Chairman shall be governed by general policies of the Commission and by such regulatory decisions, findings, and determinations as the Commission may by law be authorized to make.

(2) The appointment by the Chairman of the heads of major administrative units under the Commission shall be subject to the approval of the Commission.

(3) Personnel employed regularly and full time in the immediate offices of members of the Commission other than the Chairman shall not be affected by the provisions of this reorganization plan.

(4) There are hereby reserved to the Commission its functions with respect to revising budget estimates and with respect to determining upon the distribution of appropriated funds according to major programs and purposes.

SEC. 2. *Performance of transferred functions.*—The Chairman may from time to time make such provisions as he shall deem appropriate authorizing the performance by any officer, employee, or administrative unit under his jurisdiction of any function transferred to the Chairman by the provisions of this reorganization plan.

SEC. 3. *Designation of Chairman.*—The functions of the Commission with respect to choosing a Chairman from among the membership of the Commission are hereby transferred to the President.

Mr. CURTIS. Mr. President, as a result, the power to appoint the Chairman was vested in the President, and there were transferred to the Chairman the principal executive and administrative functions formerly exercised by the Commission as a whole, including the appointment and supervision of personnel, the distribution of the agency's business among personnel and among administrative units, and the use and expenditure of funds. The principal purpose of this streamlining move was to achieve greater efficiency, since the Hoover Commission had found that the Commission, acting as a five-headed executive, had become "immersed in a multitude of petty problems" and was "increasingly bogged down with cumbersome procedures." In approving the Hoover Commission's reorganization plans and transfer of functions to the Chairman, the President said it was expected to result in "more businesslike and effective administration" of the FTC regulatory program.

There is no question that the Hoover Commission's approach to the FTC problem was sound and constructive. If it had been implemented as intended by an experienced and qualified Chairman, much of today's criticism would have vanished overnight. Unfortunately, a cabal of present FTC Commissioners have now made known their intent to disregard the intent of Congress and Reorganization Plan No. 8. I am advised that certain Commissioners, all appointed by our last President, claim that they—not the Chairman or new Chairman—have the right to hire and fire personnel and to organize the Commission as they see fit. If this scheme of the present Commissioners and the present Chairman is effectuated, the new Chairman of the Commission, whom President Nixon will appoint, will become a mere figurehead stripped of the powers transferred and entrusted to him under Reorganization Plan No. 8.

Specifically, I point out to the Senate that very recently FTC Chairman Dixon, who will be replaced in the near future, appointed his assistant to the position of General Counsel. Immediately thereafter Chairman Dixon published an opinion which would have the effect of freezing in office almost all nonclerical staff members on the Commission. This opinion by Chairman Dixon would have the effect of requiring full Commission approval of all Commission staff appointments. In other words, although the administration has changed, and the chairmanship of the Commission will change in short order, the same political staff that has infested the FTC in the past, will remain in office for the foreseeable future. This Dixon opinion is now before the Civil Service Commission for approval. If this cabal by the present Commissioner succeeds, the Nixon administration will be prevented from setting a new course for the Commission and rectifying the mistakes of the past.

The time has come to reiterate the goals of the Hoover Commission plan and enforce the clear intent of Congress.

Shortly, the President will have an opportunity to appoint a new Chairman. I have every confidence that, if the appointee is an aggressive person experienced in the affairs of the Commission, and if the Dixon plan to perpetuate present staff in office is successfully aborted, this bipartisan agency will again resume its important and constructive role in our Nation's economy.

"THE CORRUPT JUDGE"— A CALL FOR JUDICIAL REFORM

Mr. TYDINGS. Mr. President, 7 years ago, when Joseph Borkin published "The Corrupt Judge," his voice was a voice in the wilderness. Long before the public clamor for reform, Mr. Borkin, in "The Corrupt Judge," traced the history of misconduct in the Federal judiciary and documented the inadequacy of existing procedures to deal with such misconduct. Finally, in a display of great insight, Mr. Borkin called upon the judiciary to impose upon itself the requirement of financial disclosure, a requirement recently adopted for the lower Federal courts by the Judicial Conference of the United States.

Mr. Borkin is an unusually effective writer. Senator MAGNUSON recently called his latest book, "Robert R. Young—The Populist of Wall Street," "one of the more important contributions to American business history." I consider it to be a remarkably readable and potent book. So too is "The Corrupt Judge."

"The Corrupt Judge" helped inspire Senator Kefauver to introduce, in 1962, a bill which would have made Mr. Borkin's financial disclosure proposal a matter of law. It also helped inspire the Subcommittee on Improvements in Judicial Machinery to undertake the study of judicial fitness that it began in 1965 and that culminated in the introduction of the Judicial Reform Act in 1968 and again this year. Indeed, as a witness and as an author Mr. Borkin has contributed much to our continuing study of the problems caused by unfit Federal judges.

"The Corrupt Judge" was recently syndicated in abridged form by the North American Newspaper Alliance. In my opinion, it should be required reading for all those who are interested in preserving the strength of the Federal judiciary.

I ask that the abridged version of "The Corrupt Judge" be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CORRUPT JUDGE

DISHONEST JURISTS SUFFER FROM AJAX COMPLEX

The attainment of justice is the purpose to which the entire intricate structure of jurisprudence is dedicated. Within this edifice sits a focal figure in whom is crystalized the essence of law and equity—the judge.

Society has elevated the judge to a carefully-protected eminence and has provided him with flowing black robes and ceremonial architecture, thus underscoring his exalted station. The epitome of honor among men, he is assigned a sacrosanct trust.

This helps explain why the United States, together with England, has the smallest incidence of judicial corruption in the world.

What rational motive, then, can be given for those few judges who have sold their honor and their decision?

Inexplicable as the reason may be, the corrupt judge moves like the figure in a Greek tragedy, inexorably along the way to self-destruction. Like the mythical Ajax, he seems compelled to tempt the gods to destroy him, and each suceeding corruption is greater than the one before.

There is no discernible type of corrupt judge. A study of at least 32 federal judges against whom there has been a considerable body of adverse evidence indicates that they were recruited from the most diverse of environments, varying from theological seminaries to Tammany clubhouses, and included among them honor graduates, professors and trustees of universities as well as alcoholics and mental deviates, corrupt politicians and associates of gangsters.

Not only did some of these judges permit themselves to be demeaned by the most eminent members of the bar and respected corporate executives, but they entered into the basest of arrangements with known criminals and notorious fixers.

Relatives, such as sons, daughters and in-laws, were frequently part of the apparatus of the venal judge. Tribute was collected from court-appointed fiduciaries. Unsecured loans were exacted from litigants.

Some judges engaged in joint enterprises with lawyers who appeared before them and even shared fees with their former law partners. Decisions were sold for cash, for forbidden favors, and for business opportunities.

Shakedowns of the corruptors by some of the crooked judges were part of the performance, as was the blackmailing of the judge himself by the corruptors. Payments were made in back alleys and the inner sanctum of the judicial chamber.

Neither the law nor honor were restraints, except that often the bribes and kickbacks were computed with adequate reserves for tax purposes—providing a rare tribute from experts to the quality of income tax enforcement.

One clearcut conclusion emerges from the study of judicial corruption: There is a direct relationship between unsettled business conditions, particularly severe downturns in the market place and the incidence of judicial misbehavior. A judge whose side entrance into the business world may have begun with a reasonable investment in real estate and the stock market propelled by greed, to be caught in the "maelstrom of business disaster."

The demands by creditors and failing enterprises make the judge a easy mark.

A judge cannot be corrupt alone. As a rule, the corruptors fared better than the corrupted judge. This is true in material reward, in the public's attitude or lack of it, and in the failure of public authorities to punish and professional societies to discipline.

Once a judge's corruption is revealed, he is rarely permitted to continue his honored role. For the corruptors there seems to be a laxer standard, enabling a number to retain their professional, economic, or political status.

There is one absolute standard, one implacable test which society applies to a judge—unswerving honesty. For a judge to deviate from the most rigid honesty and impartiality is to betray the integrity of all law.

No legal relativity can condone such betrayal. From the standpoint of justice, the size of the bribe or scope of corruption cannot be the scale for measuring a judge's dishonor. A single dishonest judge not only dishonors himself and disgraces his office, but jeopardizes the integrity of the entire judicial process.

From the beginning of Anglo-Saxon law, the conduct of judges has followed well-understood rules. In the United States, these standards were formalized in the Canons of Judicial Ethics in 1924, by a committee of the American Bar Association.

* * * * *

These canons, a judge may not accept from a lawyer an inadequately secured loan. He may not appear on a commercially-sponsored radio program on which legal advice is given, nor may he conduct a newspaper column. He may not accept presents or favors from a lawyer, litigant, or a friend of a lawyer or litigant. He may not be the director of a bank. He may not sit on a case involving a near relative.

In essence, the canons thus impose upon the judge himself the responsibility of avoiding any conflict between self-interest and the rendering of judgment.

The extent to which the American Bar feels this is expressed in Canon R, the "Caesar's Wife" doctrine:

"A judge's official conduct should be free from impropriety and the appearance of impropriety; he should avoid infractions of law; and his personal behavior, not only upon the Bench and in the performance of judicial duties but also in his everyday life, should be beyond reproach.

As part of the ancient precedents introducing the Canons of Judicial Ethics are the immortal words of Sir Francis Bacon, the Lord Chancellor, carved in marble over the Department of Justice Building, as well as court houses all over the world.

"The place of justice is a hallowed place, and therefore not only the bench, but the foot pace and precincts and purprise thereof, ought to be preserved without scandal and corruption."

How many know, even today, that the author of these lines was a corrupt judge whose public career was terminated by "disbarment," imprisonment and a monumental fine? In Bacon's case, it would seem that, unlike Caesar, "the good that men do lives after them, but evil is oft interred with their bones."

In the U.S., only three federal judges have ever been criminally charged with corruption in a formal indictment:

(1) Martin T. Manton, judge of the Second Circuit Court of Appeals, in 1939.

(2) J. Warren Davis, judge of the Third Circuit Court of Appeals, in 1941.

(3) Albert W. Johnson, judge of the district court, Middle District of Pennsylvania, in 1945.

Their judicial history, part of which follows in succeeding articles, runs the catalogue of venality and corruption.

II. CRIMES OF "MODEL JURIST" SHOCKED NATION IN THIRTIES

Judge Martin T. Manton, senior judge of the U.S. Second Circuit Court of Appeals, by 1939 had reached a position of such eminence and respectability that he was regarded as the 10th-ranking justice of the United States, just below the nine justices of the Supreme Court.

In fact, he was a likely choice to succeed his fellow Catholic Justice Pierce Butler when the latter died or retired—although there were rumors that some of Manton's colleagues on the Circuit Court bench had complained about his questionable character to President Franklin Roosevelt in order to forestall such an appointment. But to the nation at large, he was a distinct judicial personage.

One can imagine, then, the shock registered by the Congress and the public when, in an open letter to the Judiciary Committee of the House of Representatives, a young district attorney, Thomas E. Dewey, charged Judge Manton with judicial corruption on an unprecedented scale. He stated that Manton had employed fixers, approached litigants for loans, engaged in corrupt bankruptcy practices and performed a host of im-

proper activities tantamount to the sale of his judicial office.

The day after the story appeared, Judge Manton announced that he would issue a statement that would "satisfy the public that there is nothing wrong or immoral" about his judicial conduct.

Asked by reporters whether, in his opinion, there was anything wrong or immoral about a judge having business interests outside his judicial duties, Judge Manton replied, "I never thought it was wrong or immoral. I know that other judges have such interests."

However, instead of issuing a statement "that would satisfy the public," Judge Manton tendered his resignation to President Roosevelt, who promptly accepted it.

The resignation, Manton declared, was dictated solely by his desire to avoid becoming the central figure in a controversy that would weaken public confidence in the general administration of justice. He defended his business activities, denying that any of them "bore the slightest relation to my conduct as a judge or to any litigation in my court."

The acceptance of Manton's resignation under fire was to be expected. Traditionally, this had been the practice in the case of a corrupt judge who was exposed. Congress did not relish the task of impeachment and even considered it unnecessary when a judge conveniently resigned.

District Attorney Dewey, however, would not let the matter end on such a note.

He made it clear that if the federal government would not act under federal criminal statutes, he would proceed under state law.

With the implacable Dewey in the background, a criminal investigation of Manton was begun by the U.S. attorney, and an indictment was returned. The legend of the inviolability of the modern federal judiciary was about to receive a severe jolt.

The trial of Judge Manton, charged with obstructing justice and intent to defraud the United States, began on May 22, 1939, to huge crowds and flaming headlines. Few trials in the history of New York have evoked such interest.

An eminent array of character witnesses appeared at the trial on Manton's behalf, including two former candidates for President of the United States, John W. Davis and Alfred E. Smith.

Perhaps even more effective was the appearance as defense witnesses of all four of Manton's colleagues on the Circuit Court bench: Judges Harrie B. Chase, Augustus N. Hand, Learned B. Hand, and Thomas W. Swan. Manton obviously had been a consummate actor, for his demeanor in the inner sanctum of the judicial conference room—as well as in public view on the bench—appeared to have given them no indication of his corruption.

As the trial developed Manton's image emerged as an active businessman and real estate operator.

He owned a paper products company, a carpet-cleaning establishment, a laundry concern, two large hotels, eight apartment houses, 14 two-family houses and over 200 acres of undeveloped land.

With the 1929 crash, his corporate empire began to crumble. This fact was not generally known. At the same time that the New York Times was suggesting editorially in 1931 that judges be kept out of business, it reported that Judge Manton was probably the richest federal judge in the United States.

By 1934, Manton's properties, heavily mortgaged at pre-depression prices, were either undergoing foreclosure or were on the brink of it. Moreover, he was $730,000 in debt, a hopeless bankrupt.

Between June, 1934, and May, 1935, he made a remarkable recovery, moving from a net debt position of $730,000 to a net worth of $750,000—an unusual happenstance for a federal circuit judge.

Manton claimed this financial recovery was due to a series of "loans," advance payments on contracts, and sales of stock.

Of this income, $184,000 had been paid to him in cash.

Prosecuting Attorney John T. Cahill skillfully presented the government's case, contending that Manton's sudden prosperity was due in large part to bribes and loans from parties having litigation in the courts over which he presided.

The weight of the evidence was overwhelming. Several who had been involved in bribes testified for the government. Recordak copies made by banks of bribes paid by check to Manton were introduced into evidence, as well as a photostatic copy of a note which an untrusting briber had demanded of Manton as promise of performance, in exchange for the advance payment of a bribe.

A number of bizarre details came to light during the trial.

The briber in one case engaged two different fixers to purchase Manton's decision. Apparently neither knew of the other's efforts until Manton's trial.

In another case, the briber received a refund from Manton when, unable to persuade either of the other two circuit judges to render a favorable ruling, he joined them in an adverse ruling. The briber, armed with evidence of the bribe, then blackmailed Manton into writing a letter to the Department of Justice expressing doubts of the defendant's guilt. But the department was not taken in.

Sometimes, it is interesting to note, the briber held back adequate reserves to pay the federal income tax on the bribe.

At the conclusion of the Manton trial, the presiding judge said in his charge to the jury:

"The charge of conspiracy to sell justice, made against an appellant federal judge, is hitherto unprecedented in the 150 years of the federal judiciary."

The jury deliberated only four hours before returning a verdict of guilty. Manton was sentenced to two years' imprisonment with a fine of $10,000—the only federal judge to be so punished.

On his appeal of the verdict to the Supreme Court, Manton's brief contained an extraordinary plea:

"From a broad viewpoint, it serves no public policy for a high judicial officer to be convicted of a judicial crime. It tends to destroy the confidence of the people in the courts."

The Supreme Court was unimpressed. The conviction was sustained.

III. JUDGE J. WARREN DAVIS WAS "GIFTED PSYCHOPATH"

No judge ever betrayed so fully his early promise as J. Warren Davis of the Third Circuit Court of Appeals. He distinguished himself quite unenviably as the second senior judge of a federal circuit to be indicted as a corrupt judge.

Davis received a B.A. degree from Bucknell and a divinity degree from Crozer Theological Seminary, where his scholarship was rewarded with an invitation to remain and teach Sanskrit, Greek and classical Hebrew. He added to his learning by sojourns at the University of Chicago and the University of Leipzig.

At the conclusion of his teaching career, he entered the ministry and held a pastorate at the Baptist Church in Pedricktown, N.J.

But, as an eminent psychiatrist was later to observe, Davis was "A gifted psychopath." Behaving in a way reminiscent of Aldous Huxley's father Grandier and Sinclair Lewis' Elmer Gantry, Davis seduced and impregnated the young daughter of a member of his congregation and was driven in disgrace from his pastorate.

He then turned to the law, graduating from the University of Pennsylvania in 1906. In time, the reform politics of Woodrow Wilson beckoned. When Wilson became President, he appointed Davis U.S. attorney for New Jersey and in 1920 elevated him to the Third Circuit Court of Appeals.

After Davis assumed his judgeship, it became known to a select group, stockbrokers, bankers, and their lawyers, that Davis was a stock market addict, speculating far beyond his capacity.

When the crash of 1929 arrived, so did the day of reckoning. Davis was left hopelessly insolvent. His only unpledged asset was his honor. Now he decided to mortgage that.

Another victim of the 1929 crash, William Fox, the movie magnate, was undergoing the discomfort of bankruptcy in the U.S. District Court for New Jersey. He found Judge Davis a willing collaborator.

The judge, to finance the wedding of his daughter, "borrowed" $15,000 in $50 and $100 bills from Fox. Still desperate, Davis needed $12,500 more. Anxious for the cash, Davis met Fox on the corner of Twelfth and Chestnut streets in Philadelphia. The two men withdrew into a hallway and Fox handed the judge a newspaper containing 12 $1,000 bills and five $100 bills. What a scene these two men acted out in the shadows, the erstwhile millionaire film tycoon and the federal circuit court judge, as they transacted their strange business.

A change in Fox's fortunes was now visible. From 1936 to 1938, the court of which Davis was a member held for Fox five times. Davis was able to influence another senile and practically deaf and blind judge to sign the corrupt opinions which Davis had written and sold.

Fortunately for the public, the Supreme Court just as consistently reversed, denying Fox the fruits of his corruption.

Evidence collected in the Manton investigation began to point to Davis and to some of his corruptors, particularly Fox. In addition, some of Davis' colleagues began prodding the Department of Justice to act.

In an attempt to forestall action, Davis retired on April 5, 1939, with full salary and pension rights. It was no secret, however, that Davis was still under official scrutiny.

Newspaper stories about Davis began to appear at the end of 1939, and Davis and his corruptors now knew specifically that they were suspect. Davis was disturbed when he learned that the serial numbers of five of the $1,000 bills given to him by Fox had been recorded by the bank in which they were deposited.

Davis was anxious to find out where Fox secured the money and to reconstruct a believable story for the grand jury which was now investigating. For this purpose, he visited Fox in New York twice, registering at the hotel one time as "Herman Goldberg" and at another time as "Mr. Moon."

Fox, however, reluctant to get involved any further, fully confessed to the U.S. attorney. As a result, Davis and Fox, among others, were indicted by a federal grand jury in Philadelphia.

At the trial, Fox pleaded guilty. Davis went through the ordeal of two trials. In each one, the jury was unable to agree and the indictment was ultimately dismissed.

On Nov. 8, 1941, Attorney General Biddle requested Congress to impeach Judge Davis. Davis blocked this move by a full resignation, waiving pension and retirement rights.

He died in Norfolk, Va., his boyhood home, on Feb. 2, 1945.

IV. ALBERT JOHNSON: HIS CLERKS BECAME HIS PERSONAL SERVANTS

Judge Albert W. Johnson of the U.S. District Court for the Middle District of Pennsylvania by his mere survival as a federal image for 20 years (from 1925 to 1945) stands as a monument to a legal tradition—the morbid reluctance to expose a corrupt and venal judge.

How and why President Calvin Coolidge appointed Johnson a federal judge should be the subject of a clinical study by the

organized bar. It occurred over the objection of the bar and even the press of the district Johnson emerged from the depths of corrupt politics, and his character defects were both formidable and notorious.

Once on the bench, Johnson's behavior matched the direst predictions. Bankruptcy proceedings before his court were an open disgrace. Between 1925 and 1945, there were inquiries by the Judiciary Committee of the House of Representatives, investigations by the Department of Justice, complaints from his fellow judges, and charges by litigants. But they had no effect.

Finally in 1945, Max Goldschein, a special assistant to the attorney general, conducting a war frauds case before Johnson, decided to act. Supported by Attorney General Tom C. Clark, Goldschein convened a grand jury.

This was a most unusual investigation. The lawyers who practiced across the 400-mile breadth of the Middle District spoke of corruption but now "couldn't remember" or "could not find the records." There was nothing to go on but rumors.

According to these, whenever a case came into Johnson's court in which it was possible to arrange a "fix," one of the judge's sons was employed. But the sons, although lawyers, never appeared on record.

As Lester Velie, writing in Collier's Magazine, once said, "when Goldschein batters at the walls of a corrupted town, something must give." On April 21, 1945, the indictment began to come down. They involved mainly nine cases of corruption of Judge Johnson, of which seven concerned bankruptcy proceedings and two criminal actions.

Despite the indictment, Johnson refused to resign, not unlike the first reaction of Manton and Davis. Since the only way a federal judge can be removed is impeachment, Goldschein was appointed counsel to the Judiciary Committee of the House of Representatives by the then Congressman Estes Kefauver, with the view to an impeachment proceeding.

Among the matters Goldschein uncovered, in addition to Judge Johnson's active life as a real estate operator and private businessman, was an extraordinary arrangement concerning the Tea Springs Lodge, since 1931 a matter of dismay to lawyers practicing in the Middle District.

Ostensibly operated as a club, the Tea Springs Lodge seemed to be used exclusively by the judge and his sons. It had 74 members, who had each paid the $500 initiation fee plus dues. They got their money's worth, however—51 of them were appointees of Johnson as appraisers, trustees and attorneys for trustees and received fees totaling $265,648.

Probably even more extraordinary was a huge bribe of $250,000—none of which found its way to Johnson. The middleman, after receiving the bribe to pass on to Johnson, began to play cat and mouse with the judge. He announced that the bribe was to be $150,000 instead of the $250,000 he had already received.

Once with a discussion with the venal judge, the intermediary declared that it was his understanding that the split was to be 50–50. Johnson replied that it was to be 75–25, in the judge's favor. It was compromised at 66⅔–33⅓.

But the fixer solved the problem his own way—he kept all of it. One can only imagine Judge Johnson's emotions when he learned from Goldschein's investigation that the bribe was $250,000 and had long since been paid to the crooked middleman.

When it was apparent that an impeachment was a certainty, Judge Johnson resigned, waiving all rights, and the House of Representatives reluctantly dropped the matter—but not until it put the following revealing paragraph in its report:

"So far has this man gone in his loss of respect for himself and for the proprieties of his office that he even used his power of appointment of his official secretary and the deputized clerks of the United States District Court through the clerk to browbeat these federal employes, by compelling them to rent apartments in the buildings he owned at higher rentals than other tenants were paying him for similar apartments, and more than they thought they could afford to or wanted to pay.

"He raised their rent whenever the government raised their pay.

"He subjugated them to his own will and compelled them, throughout his tenure of office, to do the menial work of servants in his home, dusting, cleaning, and even washing his floors. This was done during their regular working hours as well as after."

Judge Johnson was subsequently tried on the criminal indictment. He was acquitted when two fixers, key witnesses against him, refused to repeat their grand jury testimony. But, by some poetic injustice, the fixers themselves were convicted and sentenced to the penitentiary.

Judge Johnson then entered the private practice of law, and one of the local bar associations elected him as their president.

V. REMOVAL

Why is their such a reluctance to expose a corrupt judge?

The problem is set forth with clarity by Henry S. Drinker, at the time Chairman of the Committee on Grievances of the American Bar Association.

"The difficulty in inducing a member of the bar to attack a corrupt judge lies in his natural fear of reprisals in case through influence, political or otherwise, the lawyer's efforts prove unsuccessful. As Emerson said to Justice Holmes, '. . . If you shoot at a king, you must kill him.' "

The lawyer engaged in private practice, however is not alone in this reluctance, for to remove a Federal judge is a formidable task.

A Federal judge may suddenly become afflicted with a helpless insanity or blindness, deafness, or senility; he may be convicted of murder, arson, or burglary; he may rend assunder the Canons of Judicial Ethics; or he may even be guilty of selling his justice. Despite all this he may be removed only by the process of impeachment.

By this method the House of Representatives prefers charges called an Impeachment. Upon these charges the entire Senate holds a trial where a "concurrance of two-thirds of the members present" is required to convict. Short of death or resignation, this is the only way to remove a Federal judge.

Impeachment is a costly, complicated, and cumbersome removal process, initiated rarely and then only with the greatest of reluctance. Much more effective has been its utilization as a potential weapon of exposure and disgrace, for in the most flagrant cases of judicial corruption on the Federal bench, misbehaving judges have, more often than not, chosen to resign rather than face the ordeal of impeachment. In the main, however, an examination of the evidence in the history of impeachment of judges would indicate its failure. It has protected neither the public interest nor the rights of the accused. It appears to be an anachronism that has long since lost its proper function.

In modern times the United States Senate has been called upon to legislate and examine the most important and complex of national and international relations, and its important duties seem to be without end. The impeachment proceedings which have actually taken place have stopped or delayed other business, so that the Senate could sit as a court and consider the removal of a Federal judge. Each Senator, to have fulfilled his function properly as a judge and juror in each case, would have been compelled, to hear as much as twenty days of testimony, to read over seven or eight hundred pages of the record, and to review many more thousands of pages of exhibits. This he would have had to do in addition to attending to legislative duties and the needs of constituents. Obviously, few if any Senators could perform all these duties conscientiously.

A criminal trial, according to the principles of Anglo-Saxon justice, demands that the judge, the jury, and the defendant be present at all stages of the trial. It requires that the judge and jury view all the evidence and hear all the witnesses in order to weigh the delicate question of truth and falsity of testimony. Consider what violence is done to this precept in an impeachment trial. Although a hundred Senators may vote and judge conviction or acquittal on an impeachment, the average attendance, experts have noted, has been fifteen. Once a House Manager was to observe there were only three Senators present and one of these was using the time to write letters, paying no attention to the proceedings. Impeachment trials have averaged from sixteen to seventeen days, and the case of Judge Archbald ran for six weeks—eloquent explanation why only eight judges have been impeached in the history of the United States. From the point of view of time consumed, an impeachment is a major Congressional event. The feeling cannot be escaped that Congress is sometimes willing to suffer a misbehaving judge rather than stop the legislative activities of the United States.

With a sort of perverse justice, the disgrace of impeachment during this century has been attached to four judges whose judicial actions were far less culpable than others whose judicial crimes were greater and whose guilt was clearer. But in those cases where there were strong indications of criminal activity or misbehavior, almost inevitably the offending judge resigned and the impeachment proceedings were dropped. Whenever testimony and evidence are not conclusive; whenever malice and the probity of witnesses are difficult to distinguish; whenever evil intent and poor judgment cannot be separated—here a hapless judge may elect to fight the issue through and stand trial before the Senate. As a result, the evidence points to the inescapable conclusion that an impeachment trial as a practical and historical matter has been reserved for the less flagrant cases of judicial abuse.

Altogether eight Federal judges have been impeached.

1. John Pickering, Judge of the District Court of New Hampshire, charged (1804) with drunkenness, tyrannous conduct and disregard for the terms of statutes. Convicted.

2. Samuel Chase, Associate Justice of the U.S. Supreme Court, charged (1805) with intemperate, arbitrary, and unjudicial conduct in sedition-law trials. Acquitted.

3. James H. Peck, Judge of the U.S. for the District of Missouri, charged (1830) with tyrannous treatment of counsel and arbitrary conduct. Acquitted.

4. West H. Humphreys, Judge of the District Court of the U.S. for the eastern, middle, and western districts of Tennessee, charged (1862) with supporting the secession movement. Convicted.

5. Charles H. Swayne, Judge of the Northern District of Florida, charged (1905) with falsifying expense accounts, nonresidence and use of a private car belonging to a railroad in receivership. Acquitted.

6. Robert W. Archbald, Judge of the U.S. Commerce Court, charged (1913) with using his official position for private gain and accepting loans for litigants. Convicted.

7. Harold Louderback, Judge of the Northern District of California charged (1932) with favoritism in the appointment of receivers. Acquitted.

8. Halsted L. Ritter, Judge of the Southern District of Florida, charged (1936) with

bankruptcy irregularities and income tax evasion. Convicted.

Congress has been continuously troubled by deficiencies of the impeachment process. From 1800 to the present Congress, bills have been constantly introduced attempting to remedy the difficulties. Now events have conspired to bring the reform movement back to life. It is apparent that this Congress will give it serious attention.

VI. LET THE SUPREME COURT DECIDE PROPRIETY OF JUDGES' OUTSIDE INTERESTS

One clear-cut conclusion emerges from the study of judicial misconduct of Judges Manton, Davis and Johnson.

Unsettled economic conditions, particularly those associated with a depression, coupled with a deteriorating state of a judge's financial condition, produce a climate in which judicial corruption can flourish.

But the corruption involved did not arrive in full bloom. Instead, it had a discernible evolution. What began as modest private investment and reasonable speculation in securities and real estate, grew to such proportions that they not only challenged the Canons of Judicial Ethics, but led ultimately to fiscal disaster.

The pressure of creditors, plus attempts to recoup, led to ever deeper involvement, to bolder forays into the business arena, until even the semblance of propriety disappeared.

Desperation became a colleague. Not only were these judges easy marks for corruptors, but they themselves were driven to place their judicial function on the market—to go on the prowl, as it were—for susceptible litigants and lawyers.

A judge certainly should have the right to invest and manage his assets, for mere business activity itself is not inherently objectionable. It should, however, take place in a manner consistent with the obligations of a judge. As the record of this series indicates, such activity was not always in accord with the integrity of the judicial process. The question arises as to who shall make the determination.

For the federal judiciary, at least, who is more able to make this judgment than the members of the Supreme Court?

But at present, this body is unable properly to make such a judgment, since it is not in possession of the necessary facts. The suggestion is proposed, therefore, that the Supreme Court, under its rule-making power, require statements not only from all circuit and district court judges but from its own nine members regarding their extrajudicial business activities.

These reports, of course, should remain confidential, available only to the court and a special master, to be appointed with the power to call for further data if necessary. But only the court shall act on the special master's report.

Knowledge that such information is in the hands of the supreme court would tend to resolve doubts—and doubt is an eroding element in any judicial process. Lawyers, litigants, colleagues, and the public generally could rest more securely, confident that a judge's private business activity is within the bounds of propriety and legality.

The proposal for self-regulation has an apparent flaw. Suppose a judge refuses—defies, so to speak—the power of the Supreme Court to require such financial reports. Since removal can take place only through the impeachment process, the Supreme Court would not have this ultimate power to enforce its rule.

But this is a difficulty not as serious as it appears. The prestige of the court and the sanctions available to it are such that a judge engaged in defiance would be in an unenviable position. Not the least of these would result from the interest of the judiciary committee of the House of Representatives.

An examination in one district alone indicates that in recent years several federal judges appear to have engaged in a lively business life.

We hasten to add that there are absolutely no facts which would indicate that any of these judges ever permitted their private business obligations to interfere with the integrity of the judicial process. As a matter of fact such activities were by no means covert or disguised. "Who's Who" various directories of directorships, and reports filed with governmental regulatory agencies open to the public all contained the relevant information.

From these public sources it can be learned that one judge was vice president, director, and half-owner of a food company; another was a director of a building materials company; still another sat as a trustee of a bank and as a director of an insurance company. During the latter judge's 13 years as a director, he received fees in excess of $100,000; in fact, one year he received more as a director than he did as a federal judge.

How much better it would be for the maintenance of public confidence in the judicial process if the public could be assured that these matters were within the knowledge of the Supreme Court.

Judicial responsibility for judicial conduct is indeed a modest proposal.

In his review of my book, "The Corrupt Judge," in the Sunday New York Times of Dec. 9, 1962, Sen. Estes Kefauver said that he would introduce a bill making my proposal a matter of law rather than leaving it to the discretion of the Supreme Court. He thereupon asked me to draft such a bill, which became S. 1613.

Unfortunately, Sen. Kefauver died before he could put the weight of his great personality and reputation behind the legislation. As a result, the bill never emerged from committee.

Recently, Sen. Joseph Tydings, D-Maryland, has taken up the cause and has introduced a long-needed comprehensive bill of judicial reform, S. 1506, including a section requiring financial disclosure by federal judges. He introduced this bill for himself and for Sens. Thomas F. Eagleton, D-Missouri, Charles E. Goodell, R.-New York, Mark O. Hatfield, R-Oregon, Warren G. Magnuson, D-Washington, Walter F. Mondale, D-Minnesota, Edmund S. Muskie, D-Maine, Hugh Scott, R-Pennsylvania, and Ralph W. Yarborough, D-Texas, and Edward M. Kennedy, D-Massachusetts.

Sen. Tydings' proposed legislation is a carefully reasoned and effective attack on the problem of judicial ills. In view of recent events, for the first time such reform legislation has an excellent chance of becoming law. It is to be hoped that Sen. Tydings and his colleagues will be successful in securing passage of the Judicial Reform Act.

TREATY COMMITMENTS OF THE UNITED STATES

Mr. SYMINGTON. Mr. President, as the Senate knows, on February 3, 1969, I was appointed chairman of the Subcommittee on U.S. Security Agreements and Commitments Abroad of the Senate Foreign Relations Committee. Since then, through many discussions here in Washington as well as extensive travel, the subcommittee and its staff have been working to obtain all pertinent information incident to these commitments and agreements prior to hearings and a subsequent report.

In the meantime, the subcommittee counsel, Mr. Roland Paul, has drawn up a brief analysis of the eight mutual security treaties under which the foreign policy of this Nation is currently operating; and also a summary of the five congressional resolutions which, in effect, create additional commitments.

I place this analysis and this summary in the RECORD, not only because I believe the Senate will be interested in the nature and degree of said commitments, but also because the excellent packaged manner in which this information is presented by Mr. Paul presages additional constructive effort as the subcommittee staff proceeds with its work.

I ask unanimous consent that these two memorandums—that with respect to treaty commitments and that with respect to resolutions—be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. TREATY COMMITMENTS

EIGHT SECURITY TREATIES

The United States has eight mutual security treaties with forty-two other countries, plus South Vietnam as a protocol, nonsignatory country under SEATO. These treaties and their parties are as follows:

1. Inter-American Treaty of Reciprocal Assistance, signed September 2, 1947, effective December 3, 1948, and the related Charter of the Organization of American States, signed April 30, 1948, effective December 13, 1951:

Argentina	Haiti
Bolivia	Honduras
Brazil	Mexico
Chile	Nicaragua
Colombia	Panama
Costa Rica	Paraguay
Dominican Republic	Peru
Ecuador	Trinidad and Tobago
El Salvador	Uruguay
Guatemala	Venezuela

2. North Atlantic Treaty, signed April 4, 1949, effective August 24, 1949:

Belgium	Italy
Canada	Luxembourg
Denmark	Netherlands
Federal Republic of Germany	Norway
France	Portugal
Greece	Turkey
Iceland	United Kingdom

3. Mutual Defense Treaty between the United States of America and the Republic of the Philippines, signed August 30, 1951, effective August 27, 1952.

4. Security Treaty between Australia, New Zealand, and the United States of America, signed September 1, 1951, effective April 29, 1952.

5. Treaty of Mutual Cooperation and Security between the United States of America and Japan, signed January 19, 1960, effective June 23, 1960.

6. Mutual Defense Treaty between the United States of America and the Republic of Korea, signed October 1, 1953, effective November 17, 1954.

7. Southeast Asia Collective Defense Treaty, signed September 8, 1954, effective February 19, 1955:

Australia (also under ANZUS).
France (also under NATO).
New Zealand (also under ANZUS).
Pakistan.
Philippines (also under a bilateral treaty).
Thailand.
United Kingdom (also under NATO).

(The free territory under the jurisdiction of the State of Vietnam, i.e., South Vietnam, is covered by the security guarantee of SEATO as a protocol country.)

8. Mutual Defense Treaty between the United States of America and the Republic of China, signed December 2, 1954, effective March 3, 1955.

ARMED ATTACK

With respect to an armed attack, the language used in these treaties falls into two categories. The North Atlantic Treaty provides that—

"An armed attack against one or more of [the Parties] in Europe or North America shall be considered an attack against them all; and consequently they agree that, if such an armed attack occurs, each of them . . . will assist the Party or Parties so attacked by taking forthwith, individually and in concert with the other Parties, such action as it deems necessary, including the use of armed force, to restore and maintain the security of the North Atlantic area."

Article 3 of the Inter-American Treaty of Reciprocal Assistance (the Rio Treaty), in slightly different language, is to the same effect with respect to an armed attack in the Western Hemisphere.

The later six security treaties provide, in almost identical language, that "aggression by means of armed attack in the treaty area against any of the Parties would endanger [each Party's] own peace and safety, and [each Party] agrees that it will in that event act to meet the common danger in accordance with its constitutional process."

In analyzing both sets of treaties, the essential factors for determination are, first, what constitutes an "armed attack" and, second, the level of response required in the event of such an attack. In most cases whether an armed attack has occurred or not is quite evident.[1] Certain cases where such may not be self-evident are discussed below.

The question to which the answer is generally more ambiguous is the magnitude of action called for by the treaty once an armed attack has occurred. This ambiguity stems from at least three factors. First, the language in all the treaties is rather imprecise in defining this feature of the obligation: "to assist in meeting the attack" in the Rio Treaty, "necessary . . . to restore and maintain the security of the North Atlantic area" in the North Atlantic Treaty, and "to meet the common danger" in the remaining six treaties. Second, the first two treaties explicitly, and the other six implicitly,[2] leave it up to each country to determine the steps it will take to counter the attack. Third, the internal decision in each country is subject to the constitutional processes of that country, including in the case of the United States the Congressional prerogative to declare war or not.

The language of the respective treaties could be parsed and compared to discover nuances of difference as to the level of action seemingly called for by each treaty, but this precision would be illusory. As a practical matter, the action required by every one of these treaties, being agreements among sovereign nations, will be determined by the principles referred to below and not by slightly varying phraseology. In fact, the difference in language between the two sets of treaties only occurred because of a desire by Secretary Dulles to make it clearer in the subsequent treaties that Congress was retaining its Constitutional right to declare war. As he stated before the Senate Committee on Foreign Relations:

"It seemed to me that the practical difference between the two from the standpoint of its giving security to the other parties was not appreciable. . . .

"I think that the difference practically is not great, but that the present formula does avoid at least a theoretical dispute as to the relative powers of the President and the Congress under these different formulas. . . .

"In a sense, it is perhaps not quite as automatic as the other, but that would depend on circumstances."[3]

Footnotes at end of article.

INTERNAL SUBVERSION

In two of the treaties, the Rio Treaty and the SEATO Treaty, there is positive language with respect to the possibility of an internal insurgency. These treaties announce in slightly varying language that—

"If . . . the inviolability or the integrity of the territory or sovereignty or political independence of any Party . . . is threatened in any way other than by armed attack or is affected or threatened by any other fact or situation that might endanger the peace of the area, the Parties shall consult immediately in order to agree on the measures which should be taken for the common defense."

Thus, the only obligation with respect to such an insurgency is consultation.[4] The other treaties do not deal with the situation of a strictly internal insurgency by affirmative language, but the result would be the same because such an occurrence would not come within the meaning of the term "armed attack."[5]

PRINCIPLES OF INTERPRETATION

Treaties among sovereign nations cannot be interpreted in the same light as contracts between individuals or companies for the simple reason that each nation is its own ultimate authority as to the interpretation of the obligations which it has entered into by a particular international agreement. Accordingly, the interpretation of a treaty entered into by the United States will be substantially affected by two underlying factors: First, the best interests of the United States, as perceived by its Government and, second, the sentiment within the American tradition to do "the right thing" based upon a notion of "fair play." This means that ambiguities in the language of mutual security agreements will almost always be resolved in favor of the best interests of the country making the interpretation, since by hypothesis what the "right thing to do" is not clear. On the other hand, even if the best interests of the country were the only guiding principle for interpreting international treaties, this does not render mutual defense commitments useless exercises, for sometimes it is in a nation's best interest to fulfill the fair import of its written defense commitment so as to maintain the faith of other countries in its military promises.

With the foregoing concepts as background, the following conclusions may be drawn with respect to what these security treaties "require" the United States to do under various circumstances.

ALL-OUT COMMUNIST ATTACK

The North Atlantic Treaty would probably require the United States to employ large-scale combat forces to meet an all-out communist attack involving the Soviet Union against one or more of our NATO allies. In this case, all of the underlying principles for interpreting the treaty—clarity of language, credibility, fair play, and the overriding best interests of the United States—point to this conclusion. There is no doubt but that an "armed attack" has occurred and substantial forces are necessary to "restore and maintain the security" of the North Atlantic area.

A similar conclusion for similar reasons would probably follow in the event of an overt Red Chinese attack upon Japan under the language of the Japanese defense treaty, which recognizes that an armed attack upon Japan would be dangerous to the peace and safety of the United States, necessitating American action to meet the common danger.

The legislative history of the North Atlantic Treaty supports the foregoing conclusion with respect to that alliance. The Report of the Senate Committee on Foreign Relations states that "the course of action envisaged in the treaty is substantially that which the United States would follow without the treaty. . . ."[6] Secretary Acheson reiterated before the Senate Committee on Foreign Relations that the Treaty would require, in his opinion, substantial American combat forces to repel an all-out communist attack. For instance, he said:

"If we should be confronted again with an all-out armed attack such as has twice occurred in this century and caused world wars, I do not believe that any action other than the use of armed force could be effective. The decision, however, would naturally rest where the Constitution has placed it."[7]

On the other hand, nothing in the North Atlantic Treaty or in any of the other treaties requires the United States to undergo a high risk of nuclear attack upon itself in defense of any of its allies if it does not choose to do so. As mentioned above, none of the treaties specify the level of force which this country is required to provide in defense of its allies; each treaty leaves it up to the respective parties to determine the defense contribution which it will make. At such an apocalyptic level of national commitment, the "best interests" factor becomes virtually conclusive in interpreting the obligation.

Another instance in which the United States would not be required by its treaty obligation to use all of the force at its disposal, in this case even all of its conventional forces, is exemplified by a full-scale attack by North Vietnam on Thailand (after having overrun Laos), occurring at a time like the present when the sentiment in this country is strongly against becoming involved in another land war in Asia. Such a situation would evidently be an "armed attack" within the meaning of the SEATO Treaty, requiring the United States "to act to meet the common danger." Nevertheless, under its right to determine the level of its own response under the treaty and because of the ambiguous language in the treaty, the United States may choose, for instance, only to provide air cover to the Thai forces, or even less support, even though such assistance may prove to be inadequate to defeat the attack.

NON-COMMUNIST ATTACK

The SEATO Treaty specifically limits the United States' obligation (beyond mere consultation) to situations involving communist attack. The language of the other treaties does not distinguish between communist and non-communist attack. Indeed, Secretary Acheson implied before the Senate Committee on Foreign Relations that the North Atlantic Treaty could require collective resistance even against another NATO member.[8] Nevertheless, in the current world situation, it would seem evident that the United States would interpret its obligation to apply only to communist aggression. A few days ago before the Senate Committee on Foreign Relations, Under Secretary U. Alexis Johnson acknowledged this to be his understanding with respect to the North Atlantic Treaty. The agreement between the United States and Pakistan,[9] entered into as part of the United States participation in CENTO[10] commits the United States "in case of aggression against Pakistan . . . [to] take such appropriate action, including the use of armed forces, as may be mutually agreed upon . . . in order to assist the Government of Pakistan at its request."

There is no substantial reference in this agreement or in the CENTO agreement to indicate that such commitment is directed solely against communist attack. Nevertheless, the United States has consistently maintained such interpretation, including during hostilities between Pakistan and India.

LIMITED COMMUNIST ATTACK

There are numerous situations that can be imagined involving the movement of troops across borders short of all-out attack. They

could well be termed "armed attacks" but there would be considerable ambiguity as to the appropriate means which this country should take in its best interests to counter such attacks. The United States may, under the language of the treaties, conclude that all-out resistance is appropriate; on the other hand, it may choose a more limited response, either involving armed force or not. It can be fairly concluded that none of these treaties require the United States to engage in an all-out war to counter limited probes by communist forces. In situations such as these, the right of each country to determine the course of action that it will take becomes especially relevant.

Several comments in the legislative history of the North Atlantic Treaty are relevant to this point. The Senate Report on the treaty states:

"Depending upon the gravity of the attack, there are numerous measures short of the use of armed force which might be sufficient to deal with the situation. Such measures could involve anything from a diplomatic protest to the most severe forms of pressure.[11]

The Chairman of the Senate Committee on Foreign Relations echoed the same point in the course of the hearings:

"The CHAIRMAN. This clause about an armed attack on any one nation being regarded as an armed attack on all leaves each nation free, however, not to consider any armed resistance if it should see fit; is that not true?

"Secretary ACHESON. That is what I was spelling out for Senator Thomas.

"The CHAIRMAN. The measures they take, if any, would be wholly within the judgment of each particular country."[12]

Also significant for the meaning of the subsequent treaties which he was to negotiate was the testimony which Mr. Dulles gave on the North Atlantic Treaty:

"Obviously the treaty does not attempt, in my opinion, to prescribe any military plan of action. As I said, it would be folly if the treaty were interpreted as meaning that because a certain country attacks in a certain particular way we have to respond in that particular place and in that particular manner. There is a flexibility about our strategy, which the treaty fully preserves, in my opinion."[13]

INTERNAL SUBVERSION

An internal insurrection supported from out of country only by means of equipment and training would probably not be considered an "armed attack." One supported, however, by armed assistance, such as by the infiltration of "volunteers", especially if they were operating in regular army units, would create a more doubtful case under the language of the treaties. This point is reflected in the Senate Report on the North Atlantic Treaty:

"Obviously, purely internal disorders or revolutions would not be considered 'armed attacks' within the meaning of article 5. However, if a revolution were aided and abetted by an outside power such assistance might possibly be considered an armed attack."[14]

This ambiguity is further evidenced by the contradictory testimony of Secretary Acheson and General Bradley, then Army Chief of Staff; the Secretary of State tending toward the position that such an insurrection would be an "armed attack" and the General tending to reach the opposite conclusion.[15] The conclusion, then, is that the requirement of the treaty in such a highly ambiguous situation, both as to the characterization of the conflict and the response called for, is to be interpreted in light of the best interests of the United States. This would mean in many cases that the United States would not be required to send substantial numbers of combat forces.

COLLECTIVE OR BILATERAL ASSISTANCE

It has sometimes been suggested that, with respect to the multilateral agreements, the decision of a number of parties not to respond to an armed attack would excuse the other parties from responding. The Rio Treaty has detailed provisions for collective action through an Organ of Consultation. The language of the other treaties would not seem to require such a collective decision before action is required on the part of any particular signatory individually to assist in meeting the attack. Even the Rio Treaty provides for individual action pending the convening of the Organ of Consultation.

OTHER OBLIGATIONS

Each of the treaties also has provisions calling for the providing of military equipment and training to develop the defense capabilities of the treaty members, and for consultations among the respective parties in the event of threats to their security.

CONGRESSIONAL RESOLUTIONS

The five major Congressional resolutions in the nature of security commitments abroad read, in relevant part, as follows:

1. Formosa Resolution, H.J. Res. 159, 69 Stat. 5, approved January 29, 1955:

"*Resolved* . . . That the President of the United States be and he hereby is authorized to employ the Armed Forces of the United States as he deems necessary for the specific purpose of securing and protecting Formosa and the Pescadores against armed attack, this authority to include the securing and protection of such related positions and territories of that area now in friendly hands and the taking of such other measures as he judges to be required or appropriate in assuring the defense of Formosa and the Pescadores."

2. Middle East Resolution, as Amended, H.J. Res. 117, 71 Stat. 5, approved March 9, 1957, as amended by the Foreign Assistance Act of 1961, 75 Stat. 424, approved September 4, 1961:

"[T]he United States regards as vital to the national interest and world peace the preservation of the independence and integrity of the nations of the Middle East. To this end, if the President determines the necessity thereof, the United States is prepared to use armed forces to assist any nation or group of such nations requesting assistance against armed aggression from any country controlled by international communism: *Provided*, That such employment shall be consonant with the treaty obligations of the United States and with the Constitution of the United States."

3. Cuban Resolution, S.J. Res. 230, 76 Stat. 697, approved October 3, 1962:

"*Resolved* . . . That the United States is determined—

"(a) to prevent by whatever means may be necessary, including the use of arms, the Marxist-Leninist regime in Cuba from extending, by force or the threat of force, its aggressive or subversive activities to any part of this hemisphere;

"(b) to prevent in Cuba the creation or use of an externally supported military capability endangering the security of the United States; and

"(c) to work with the Organization of American States and with freedom-loving Cubans to support the aspirations of the Cuban people for self-determination."

4. Berlin Resolution, H.C. Res. 570, 87th Congress, passed October 10, 1962:

"*Resolved* . . .

"(a) that the continued exercise of United States, British, and French rights in Berlin constitutes a fundamental political and moral determination;

"(b) that the United States would regard as intolerable any violation by the Soviet Union directly or through others of those rights in Berlin, including the right of ingres and egress;

"(c) that the United States is determined to prevent by whatever means may be necessary, including the use of arms, any violation of those rights by the Soviet Union directly or through others, and to fulfill our commitment to the people of Berlin with respect to their resolve for freedom."

5. Vietnam Resolution, H.J. Res. 1145, 78 Stat. 384, approved August 10, 1964:

"*Resolved* . . . That the Congress approves and supports the determination of the President, as Commander in Chief, to take all necessary measures to repel any armed attack against the forces of the United States and to prevent further aggression.

"SEC. 2. The United States regards as vital to its national interest and to world peace the maintenance of international peace and security in southeast Asia. Consonant with the Constitution of the United States and the Charter of the United Nations and in accordance with its obligations under the Southeast Asia Collective Defense Treaty, the United States is, therefore, prepared, as the President determines, to take all necessary steps, including the use of armed force, to assist any member or protocol state of the Southeast Asia Collective Defense Treaty requesting assistance in defense of its freedom."

INCREASE SOCIAL SECURITY BENEFITS NOW

Mr. BYRD of West Virginia. Mr. President, back in April the President suggested that social security benefits ought to be increased by 7 percent effective in

February 1970. More recently we have been reading in the papers that the House may not take up social security legislation in this session.

I would take this opportunity, Mr. President, to remind the Senate that in December 1967 we voted the last increase in social security benefits. That increase took effect for February 1968 and finally got to the social security beneficiaries with their March 3, 1968, checks.

In view of the fact that the present administration suggests a 7-percent benefit increase—and I quote from the President's message—"to take account of the rise in living costs," I think we should look at what has happened to the cost of living since the last time we voted to increase social security benefits.

In April of this year the Consumer Price Index stood at 126.4. This was 106.93 percent of the December 1967 index—118.2; 106.21 percent of the February 1968 index—119; and 105.77 percent of the March 1968 index—119.5.

These figures make it very clear that the time for a social security benefit increase is now and not next February. As of this moment the cost of living is more than 7 percent higher than it was when we voted for the last benefit increase. Even if we agreed on a 7-percent benefit increase today, it could not get to the beneficiaries before September or October. And, by that time, the cost of living clearly will be more than 7 percent above the cost of living for February or March 1968.

A 7-percent rise in social security benefits at this time need not be the definitive social security legislation of the 91st Congress. Rather, it should be looked upon as an immediate stopgap to the erosion of social security benefits through inflation.

In calling for an immediate increase in social security benefits, I am aware that social security legislation is considered tax legislation and therefore must be initiated in the House of Representatives. I would, however, remind our colleagues in the House of our collective duty to the 25 million people who depend on social security benefits for all, or a major part, of their income. These people are the ones whom inflation hurts the most. We can not delay an increase in their benefits for an unnecessary moment. Our elderly citizens need more money now—not next year—just to break even with the rising cost of living. I have been assured that a 7-percent rise in social security benefits can be had without any need to increase social security revenues. Therefore, there is no reason for delay.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

NATIONAL COMMITMENTS

Mr. DIRKSEN. Mr. President, I ask the Chair to lay before the Senate the unfinished business.

The PRESIDING OFFICER. The unfinished business will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. Senate Resolution 85, expressing the sense of the Senate relative to commitments to foreign powers.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Illinois?

There being no objection, the Senate resumed the consideration of the resolution.

Mr. DIRKSEN. Mr. President, I think the reasons why Senate Resolution 85 is before the Senate are quite understandable. I think everybody realizes the frustration that is before the Senate as a result of the conflict in Asia. It has gone on now for a great many years. Not only is there frustration here, but the people in the country are frustrated as well. Add to that the fact that after the so-called Tonkin Gulf resolution was enacted, and Members of the Senate discovered how much power was really delegated for the purpose of using our Armed Forces, it only added to their dismay.

Perhaps not the least of the reasons is a certain sense of senatorial ego. We do have some pride in this body and its constitutional powers and the way it has functioned over a long period of time. It is, of course, so easy to assert the prerogatives of the Senate under circumstances like these.

Then there is perhaps the apprehension that there is a kind of legislative erosion that develops in the circumstances and that, unless it is stopped, unless the damage already done is at least partially repaired, who shall say what an imbalance may come into our governmental structure?

I think, however, the Foreign Relations Committee was on better and more realistic ground on November 20, 1967, when it reported Senate Resolution 187. That resolution is available for anyone who wants to see it. The committee did at least one thing. It defined what concerned us; namely, the use of a promise of the Armed Forces of the country. Then there were what I thought were realistic limitations with respect to repelling attack and giving protection to the property and the lives of our citizens.

All that, however, is lacking in the resolution that is presently before us.

I think there are certain agreed aspects of this matter on which there would be no quibbling and perhaps no controversy. We all agree that the resolution is not binding. It does not bind the President of the United States. It does not bind the Commander in Chief. And if so, one can well argue, if it does not bind the Commander in Chief and the President, for all practical purposes it is a nullity and it can very well be ignored if the President so desires.

The second agreed factor is that this resolution cannot impair the President's constitutional powers, those vouchsafed by the organic law, and nothing we can do by way of resolution enacted by one branch of the Congress or by any statute can impair that power, and he can use it whenever he likes. It can, therefore, be completely ignored.

But I think we can agree also, Mr. President, that the resolution can well be misinterpreted, not only at home but abroad. We may have the idea that the leaders in other countries have a very sophisticated and refined sense of what our constitutional system really is and where the limitations are; but I am not sure that that is true, and particularly when you read it without the fine print on the front of pages of newspapers all over the world. It is always possible that they may come to the conclusion that, suddenly, the Senate of the United States has placed a limitation upon the power of the President and has, in fact, hancuffed him. That would be a dangerous thing, indeed. So I shudder a little at the prospect of that kind of interpretation.

But the difficulty is that it can be misinterpreted also at home. That is already evident, as we have had three resolutions with which to deal. Two of them have been reported out of the Foreign Relations Committee, the one in November of 1967 and the current resolution that is presently before us. So evidently the committee had a change of heart, modified the language very substantially, and has come in with wholly different language and, in my judgment, language that is quite unsatisfactory.

The other agreed fact, Mr. President, is that the President of the United States is opposed to this resolution. He has said so, not privately; he has said so publicly. There was nothing else that he could say except to utter his opposition, for if he failed to do so, he would put himself in the rather unhappy position of admitting that he was ready for an impairment of his constitutional power. No President could undertake to do that. So he states very freely and frankly that he is opposed to the resolution.

What, then, can we conclude if the resolution is passed? Simply that it has been forced upon the President of the United States against his will, that it has been forced upon him against his better judgment, in view of the fact that he has publicly stated his opposition. That might very well be interpreted as something of a break between the Senate and the President. I hope it is not, and I hope those who undertake to expose this whole action and set it before the people will not say that there is a break between the U.S. Senate and the President.

Mr. President, under those circumstances, it occurred to me that there ought to be a substitute resolution; but before I say more about it, I would like to just look again at the text of Senate Resolution 85.

The so-called whereas clause recites:

> Whereas accurate definition of the term "national commitment" in recent years has become obscured: Now, therefore, be it
> *Resolved*—

Mr. President, in drafting a resolution of this kind, I think if I had had a hand in the draftsmanship, and had concluded that that term was obscured, I certainly would like to have dispelled that obscuration if I could, and would have recited the clarification in the resolution itself. But the resolution fails to do so, because then it continues:

That it is the sense of the Senate that a national commitment by the United States to a foreign power necessarily and exclusively results from affirmative action taken by the executive and legislative branches of the United States Government—

There is no definition there of a national commitment. None whatsoever. So while it begins with the observation that that term is obscured, it does not remedy or cure the obscurity.

Finally, the last clause of the resolution says that this necessary and exclusive affirmative action shall be taken by the two branches, executive and legislative, "through means of a treaty, convention, or other legislative instrumentality specifically intended to give effect to such a commitment."

Mr. President, I have observed before that that is as wide open as a 40-acre field. It covers everything. Of course, invasion or intrusion upon the constitutional powers of the President is easy. One need only look at the history of the use of force by the President of the United States in his capacity as Commander in Chief to see how many instances there have been where, for one reason or another, it had to be used. One may go way back to 1798 and 1800, when we had a sort of a quasi-war with France. Troops had to be used. We had to defend ourselves, and the President was not about to ask the advice of Congress in the matter, in view of the danger that beset the country.

In 1801, we were at war with Tripoli over the machinations and depredations of the Tripoli pirates. There again, the forces had to be used.

In 1806, we had a problem with Mexico. Capt. Z. M. Pike, with a platoon of troops, on orders of Gen. James Wilkinson, invaded Spanish territory at the headwaters of the Rio Grande. Pike was imprisoned and later released.

That was on our home hemisphere and just across the border. Here was a case in which the President had to act quickly for the preservation of life and property.

In 1806, and for a period of 4 years thereafter, we had a problem in the Gulf of Mexico. Again, gunboats operated from New Orleans against Spanish and French privateers.

Of course, these privateer operators and pirates do not telegraph their purposes. They do not notify the President of the United States when they are going to strike. They strike, and they strike now, because the advantage that they seek is always one of surprise.

So there was the period when we had to contend with this problem in the Gulf of Mexico, and there again, armed action had to be taken without any declaration of war.

In 1810, west Florida was still Spanish territory. Governor Caliborne of Louisiana, on orders from the President, occupied with troops disrupted territories east of the Mississippi as far as the Pearl River. Actually, there was no armed clash, but the situation did require the intervention of troops under the direction of the Commander in Chief.

In 1812, President Madison and Congress authorized temporary occupation by American troops of Amelia Island and other parts of east Florida, which at the time were also Spanish territory, in order to prevent occupation by any other power. But when Gen. George Matthews took possession by naming himself the head of a revolutionary party, the United States disavowed his action because of irregularities.

In 1813, west Florida was still Spanish territory. On authority granted by Congress, General Wilkinson seized Mobile Bay with 600 soldiers. The small Spanish garrison gave in without fighting.

In 1813 and 1814, the Marquesas Islands were claimed by Spain. The U.S. forces built a fort on one of the islands to protect three captured prize ships.

Under all these circumstances, Mr. President, what was the President of the United States to do, and what would he do under a resolution like Senate Resolution 85?

Of course the resolution speaks about a commitment to a foreign power. Many of these incidents, I fancy, can be interpreted not to involve commitments. But in any event, there are some that would have to be considered as commitments.

In 1814 to 1825, in the Caribbean area, there were repeated engagements between American ships and pirates. In 1822, Commodore James Biddle employed a squadron of two frigates, four sloops of war, two brigs, four schooners, and two gunboats in the West Indies.

That was use of our Armed Forces. It did not necessarily involve a commitment to a foreign power, but it did involve use of our Armed Forces, and who shall say how it should be interpreted?

Mr. President, I could go through this long list, which I do not propose to do; but at this point, I ask unanimous consent that the entire list, which is many pages in length, be printed in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

USE OF U.S. ARMED FORCES IN FOREIGN COUNTRIES

II. INSTANCES OF USE OF U.S. ARMED FORCES ABROAD, 1798–1945

1798–1800—Undeclared naval war with France.—This contest included land actions, such as that in the Dominican Republic, city of Puerto Plata, where marines captured a French privateer under the guns of the forts.

1801–05—Tripoli.—The First Barbary War, including the *George Washington* and *Philadelphia* affairs and the Eaton expedition, during which a few marines landed with United States Agent William Eaton to raise a force against Tripoli in an effort to free the crew of the *Philadelphia*. Tripoli declared war but not the United States.

1806—Mexico (Spanish territory).—Capt. Z. M. Pike, with a platoon of troops, invaded Spanish territory at the headwaters of the Rio Grande deliberately and on orders from Gen. James Wilkinson. He was made prisoner without resistance at a fort he constructed in present day Colorado, taken to Mexico, later released after seizure of his papers. There was a political purpose, still a mystery.

1806–10—Gulf of Mexico.—American gunboats operated from New Orleans against Spanish and French privateers, such as LaFitte, off the Mississippi Delta, chiefly under Capt. John Shaw and Master Commandant David Porter.

1810—West Florida (Spanish territory).—Gov. Claiborne of Louisiana, on orders of the President, occupied with troops territory in dispute east of Mississippi as far as the Pearl River, later the eastern boundary of Louisiana. He was authorized to seize as far east as the Perdido River. No armed clash.

1812—Amelia Island and other parts of east Florida, then under Spain..—Temporary possession was authorized by President Madison and by Congress, to prevent occupation by any other power; but possession was obtained by Gen. George Matthews in so irregular a manner that his measures were disavowed by the President.

1812–15—Great Britain.—War of 1812. Formally declared.

1813—West Florida (Spanish territory).—On authority given by Congress, General Wilkinson seized Mobile Bay in April with 600 soldiers. A small Spanish garrison gave way. Thus we advanced into disputed territory to the Perdido River, as projected in 1810. No fighting.

1813–14—Marquesas Islands.—Built a fort on island of Nukahiva to protect three prize ships which had been captured from the British.

1814—Spanish Florida.—Gen. Andrew Jackson took Pensacola and drove out the British with whom the United States was at war.

1814–25—Caribbean.—Engagements between pirates and American ships or squadrons took place repeatedly especially ashore and offshore about Cuba, Puerto Rico, Santo Domingo, and Yucatan. Three thousand pirate attacks on merchantmen were reported between 1815 and 1823. In 1822 Commodore James Biddle employed a squadron of two frigates, four sloops of war, two brigs, four schooners, and two gunboats in the West Indies.

1815—Algiers.—The Second Barbary War, declared by our enemies but not by the United States. Congress authorized an expedition. A large fleet under Decatur attacked Algiers and obtained indemnities.

1815—Tripoli.—After securing an agreement from Algiers, Decatur demonstrated with his squadron at Tunis and Tripoli, where he secured indemnities for offenses against us during the War of 1812.

1816—Spanish Florida.—United States forces destroyed Nicholls Fort, called also Negro Fort, because it harbored raiders into United States territory.

1816–18—Spanish Florida—First Seminole War.—The Seminole Indians, whose area was a resort for escaped slaves and border ruffians, were attacked by troops under Generals Jackson and Gaines and pursued into northern Florida. Spanish posts were attacked and occupied, British citizens executed. There was no declaration or congressional authorization but the Executive was sustained.

1817—Amelia Island (Spanish territory off Florida).—Under orders of President Monroe, United States forces landed and expelled a group of smugglers, adventurers, and freebooters.

1818—Oregon.—The U.S.S. *Ontario*, dispatched from Washington, landed at the Columbia River and in August took possession. Britain had conceded sovereignty but Russia and Spain asserted claims to the area.

1820–26—Africa.—Naval units raided the slave traffic pursuant to the 1819 act of Congress.

1822—Cuba.—United States naval forces suppressing piracy landed on the northwest coast of Cuba and burned a pirate station.

1823—Cuba.—Brief landings in pursuit of pirates occurred April 8 near Escondido; April 16 near Cayo Blanco; July 11 at Siquapa Bay; July 21 at Cape Cruz; and October 23 at Camrioca.

1824—Cuba.—In October the U.S.S. *Porpoise* landed bluejackets near Matanzas in pursuit of pirates. This was during the cruise authorized in 1822.

1824—Puerto Rico (Spanish territory).—Commodore David Porter with a landing party attacked the town of Fajardo which

had sheltered pirates and insulted American naval officers. He landed with 200 men in November and forced an apology.

1825—Cuba.—In March cooperating American and British forces landed at Sagua La Grande to capture pirates.

1827—Greece.—In October and November landing parties hunted pirates on the islands of Argenteire, Miconi, and Andross.

1831–32—Falkland Islands.—To investigate the capture of three American sealing vessels and to protect American interests.

1832—Sumatra—February 6 to 9.—To punish natives of the town of Quallah Battoo for depredations on American shipping.

1833—Argentina—October 31 to November 15.—A force was sent ashore at Buenos Aires to protect the interests of the United States and other countries during an insurrection.

1835–36—Peru—December 10, 1835 to January 24, 1836, and August 31 to December 2, 1836.—Marines protected American interests in Callao and Lima during an attempted revolution.

1836—Mexico.—General Gaines occupied Nacogdoches (Tex.), disputed territory, from July to December during the Texan war for independence, under order to cross the "imaginary boundary line" if an Indian outbreak threatened.

1838–39—Sumatra—December 24, 1838, to January 4, 1839.—To punish natives of the towns of Quallah Battoo and Muckie (Mukki) for depredations on American shipping.

1840—Fiji Islands—July.—To punish natives for attacking American exploring and surveying parties.

1841—Drummond Island, Kingsmill Group.—To avenge the murder of a seaman by the natives.

1841—Samoa—February 24.—To avenge the murder of a seaman on Upolu Island.

1842—Mexico.—Commodore T. A. C. Jones in command of a squadron long cruising off California, occupied Monterey, Calif., on October 19, believing war had come. He discovered peace, withdrew, and saluted. A similar incident occurred a week later at San Diego.

1843—Africa, November 29 to December 16.—Four United States vessels demonstrated and landed various parties (one of 200 marines and sailors) to discourage piracy and the slave trade along the Ivory coast, etc., and to punish attacks by the natives on American seamen and shipping.

1844—Mexico.—President Tyler deployed our forces to protect Texas against Mexico, pending Senate approval of a treaty of annexation. (Later rejected.) He defended his action against a Senate resolution of inquiry. This was a demonstration or preparation.

1846–48—Mexico, the Mexican War.—President Polk's occupation of disputed territory precipitated it. War was formally declared.

1849—Smyrna.—In July a naval force gained release of an American seized by Austrian officials.

1851—Turkey.—After a massacre of foreigners (including Americans) at Jaffa in January, a demonstration by our Mediterranean Squadron was ordered along the Turkish (Levant) coast. Apparently no shots fired.

1851—Johanna Island (east of Africa), August.—To exact redress for the unlawful imprisonment of the captain of an American whaling brig.

1852–53—Argentina—February 3 to 12, 1852; September 17, 1852 to April (?) 1853.—Marines were landed and maintained in Buenos Aires to protect American interests during a revolution.

1853—Nicaragua—March 11 to 13.—To protect American lives and interests during political disturbances.

1853–54—Japan.—The "opening of Japan" and the Perry Expedition.

1853–54—Ryukyu and Bonin Islands.—Commodore Perry on three visits before going to Japan and while waiting for a reply from Japan made a naval demonstration, landing marines twice, and secured a coaling concession from the ruler of Naha on Okinawa. He also demonstrated in the Bonin Islands. All to secure facilities for commerce.

1854—China—April 4 to June 15 or 17.—To protect American interests in and near Shanghai during Chinese Civil strife.

1854—Nicaragua—July 9 to 15.—San Juan del Norte (Greytown) was destroyed to avenge an insult to the American Minister to Nicaragua.

1855—China—May 19 to 21 (?).—To protect American interests in Shanghai. August 3 to 5 to fight pirates near Hong Kong.

1855—Fiji Islands—September 12 to November 4.—To seek reparations for depredations on Americans.

1855—Uruguay—November 25 to 29 or 30.—United States and European naval forces landed to protect American interests during an attempted revolution in Montevideo.

1856—Panama, Republic of New Grenada—September 19 to 22.—To protect American interests during an insurrection.

1856—China—October 22 to December 6.—To protect American interests at Canton during hostilities between the British and the Chinese; and to avenge an unprovoked assault upon an unarmed boat displaying the United States flag.

1857—Nicaragua—April to May, November to December.—To oppose William Walker's attempt to get control of the country. In May Commander C. H. Davis of the United States Navy, with some marines, received Walker's surrender and protected his men from the retaliation of native allies who had been fighting Walker. In November and December of the same year United States vessels *Saratoga, Wabash,* and *Fulton* opposed another attempt of William Walker on Nicaragua. Commodore Hiram Paulding's act of landing marines and compelling the removal of Walker to the United States, was tacitly disavowed by Secretary of State Lewis Cass, and Paulding was forced into retirement.

1858—Uruguay—January 2 to 27.—Forces from 2 United States warships landed to protect American property during a revolution in Montevideo.

1858—Fiji Islands—October 6 to 16.—To chastise the natives for the murder of two American citizens.

1858–59—Turkey.—Display of naval force along the Levant at the request of the Secretary of State after massacre of Americans at Jaffa and mistreatment elsewhere "to remind the authorities (of Turkey) * * * of the power of the United States."

1859—Paraguay.—Congress authorized a naval squadron to seek redress for an attack on a naval vessel in the Parana River during 1855. Apologies were made after a large display of force.

1859—Mexico.—Two hundred United States soldiers crossed the Rio Grande in pursuit of the Mexican bandit Cortina.

1859—China—July 31 to August 2.—For the protection of American interests in Shanghai.

1860—Angola, Portuguese West Africa—March 1.—To protect American lives and property at Kissembo when the natives became troublesome.

1860—Colombia, Bay of Panama—September 27 to October 8.—To protect American interests during a revolution.

1863—Japan—July 16.—To redress an insult to the American flag—firing on an American vessel—at Shimonoseki.

1864—Japan—July 14 to August 3, approximately.—To protect the United States Minister to Japan when he visited Yedo to negotiate concerning some American claims against Japan, and to make his negotiations easier by impressing the Japanese with American power.

1864—Japan—September 4 to 14—Straits of Shimonoseki.—To compel Japan and the Prince of Nagato in particular to permit the Straits to be used by foreign shipping in accordance with treaties already signed.

1865—Panama—March 9 and 10.—To protect the lives and property of American residents during a revolution.

1866—Mexico.—To protect American residents, General Sedgwick and 100 men in November obtained surrender of Matamoras. After 3 days he was ordered by our Government to withdraw. His act was repudiated by the President.

1866—China—June 20 to July 7.—To punish an assault on the American consul at Newchwang; July 14, for consultation with authorities on shore; August 9, at Shanghai, to help extinguish a serious fire in the city.

1867—Island of Formosa—June 13.—To punish a horde of savages who were supposed to have murdered the crew of a wrecked American vessel.

1868—Japan (Osaka, Hiogo, Nagasaki, Yokohama, and Negeta)—Mainly February 4 to 8, April 4 to May 12, June 12 and 13.—To protect American interests during the civil war in Japan over the abolition of the Shogunate and the restoration of the Mikado.

1868—Uruguay—February 7 and 8, 19 to 26.—To protect foreign residents and the customhouse during an insurrection at Montevideo.

1868—Colombia—April 7—at Aspinwall.—To protect passengers and treasure in transit during the absence of local police or troops on the occasion of the death of the President of Colombia.

1870—Mexico, June 17 and 18.—To destroy the pirate ship *Forward*, which had been run aground about 40 miles up the Rio Tecapan.

1870—Hawaiian Islands—September 21.—To place the American flag at half mast upon the death of Queen Kalama, when the American consul at Honolulu would not assume responsibility for so doing.

1871—Korea—June 10 to 12.—To punish natives for depredations on Americans, particularly for murdering the crew of the General Sherman and burning the schooner, and for later firing on other American small boats taking soundings up the Salee River.

1873—Colombia (Bay of Panama)—May 7 to 22, September 23 to October 9.—To protect American interests during hostilities over possession of the government of the State of Panama.

1873—Mexico.—United States troops crossed the Mexican border repeatedly in pursuit of cattle and other thieves. There were some reciprocal pursuits by Mexican troops into our border territory. The cases were only technically invasions, if that, although Mexico protested constantly. Notable cases were at Remolina in May 1873 and at Las Cuevas in 1875. Washington orders often supported these excursions. Agreements between Mexico and the United States, the first in 1882, finally legitimized such raids. They continued intermittently, with minor disputes, until 1896.

1874—Hawaiian Islands—February 12 to 20.—To preserve order and protect American lives and interests during the inauguration of a new king.

1876—Mexico—May 18.—To police the town of Matamoros temporarily while it was without other government.

1882—Egypt—July 14 to 18.—To protect American interests during warfare between British and Egyptians and looting of the city of Alexandria by Arabs.

1885—Panama (Colon)—January 18 and 19.—To guard the valuables in transit over the Panama Railroad, and the safes and vaults of the company during revolutionary activity. In March, April, and May in the cities of Colon and Panama, to reestablish freedom of transit during revolutionary activity.

1888—Korea—June.—To protect American residents in Seoul during unsettled political conditions, when an outbreak of the populace was expected.

1888–89—Samoa—November 14, 1888, to March 20, 1889.—To protect American citi-

zens and the consulate during a native civil war.

1888—Haiti—December 20.—To persuade the Haitian Government to give up an American steamer which had been seized on the charge of breach of blockade.

1889—Hawaiian Islands—July 30 and 31.—To protect American interests at Honolulu during a revolution.

1890—Argentina.—A naval party landed to protect our consulate and legation in Buenos Aires.

1891—Haiti.—To protect American lives and property on Navassa Island when Negro laborers got out of control.

1891—Bering Sea—July 2 to October 5.—To stop seal poaching.

1891—Chile—August 28 to 30.—To protect the American consulate and the women and children who had taken refuge in it during a revolution in Valparaiso.

1893—Hawaii—January 16 to April 1.—Ostensibly to protect American lives and property; actually to promote a provisional government under Sanford B. Dole. This action was disavowed by the United States.

1894—Brazil—January.—To protect American commerce and shipping at Rio de Janeiro during a Brazilian civil war. No landing was attempted but there was a display of naval force.

1894—Nicaragua—July 6 to August 7.—To protect American interests at Bluefields following a revolution.

1894–96—Korea—July 24, 1894 to April 3, 1896.—To protect American lives and interests at Seoul during and following the Sino-Japanese War. A guard of marines was kept at the American legation most of the time until April 1896.

1894–95—China—Marines were stationed at Tientsin and penetrated to Peking for protection purposes during the Sino-Japanese War.

1894–95—China—Naval vessel beached and used as a fort at Newchwang for protection of American nationals.

1895—Colombia—March 8 to 9.—To protect American interests during an attack on the town of Bocas del Toro by a bandit chieftain.

1896—Nicaragua—May 2 to 4.—To protect American interests in Corinto during political unrest.

1898—Nicaragua—February 7 and 8.—To protect American lives and property at San Juan del Sur.

1898—Spain.—The Spanish-American War. Fully declared.

1898–99—China—November 5, 1898, to March 15, 1899.—To provide a guard for the legation at Peking and the consulate at Tientsin during contest between the Dowager Empress and her son.

1899—Nicaragua.—To protect American interests at San Juan del Norte, February 22 to March 5, and at Bluefields a few weeks later in connection with the insurrection of Gen. Juan P. Reyes.

1899—Samoa—March 13 to May 15.—To protect American interests and to take part in a bloody contention over the succession to the throne.

1899–1901—Philippine Islands.—To protect American interests following the war with Spain, and to conquer the islands by defeating the Filipinos in their war for independence.

1900—China—May 24 to September 28.—To protect foreign lives during the Boxer rising, particularly at Peking. For many years after this experience a permanent legation guard was maintained in Peking, and was strengthened at times as trouble threatened. It was still there in 1934.

1901—Colombia (State of Panama)—November 20 to December 4.—To protect American property on the Isthmus and to keep transit lines open during serious revolutionary disturbances.

1902—Colombia—April 16 to 23.—To protect American lives and property at Bocas del Toro during a civil war.

1902—Colombia (State of Panama)—September 17 to November 18.—To place armed guards on all trains crossing the Isthmus and to keep the railroad line open.

1903—Honduras—March 23 to 30 or 31.—To protect the American consulate and the steamship wharf at Puerto Cortez during a period of revolutionary activity.

1903—Dominican Republic—March 30 to April 21.—To protect American interests in the city of Santo Domingo during a revolutionary outbreak.

1903—Syria—September 7 to 12.—To protect the American consulate in Beirut when a local Moslem uprising was feared.

1903–14—Panama.—To protect American interests and lives during and following the revolution for independence from Colombia over construction of the Isthmian Canal. With brief intermissions, United States Marines were stationed on the Isthmus from November 4, 1903, to January 21, 1914, to guard American interests.

1904—Dominican Republic—January 2 to February 11.—To protect American interests in Puerto Plata and Sosua and Santo Domingo City during revolutionary fighting.

1904–5—Korea—January 5, 1904, to November 11, 1905.—To guard the American Legation in Seoul.

1904—Tangier, Morocco.—"We want either Perdicaris alive or Raisuli dead." Demonstration by a squadron to force release of a kidnapped American. Marine guard landed to protect consul general.

1904—Panama—November 17 to 24.—To protect American lives and property at Ancon at the time of a threatened insurrection.

1904–05—Korea.—Marine guard sent to Seoul for protection during Russo-Japanese War.

1906–09—Cuba—September 1906 to January 23, 1909.—Intervention to restore order, protect foreigners, and establish a stable government after serious revolutionary activity.

1907—Honduras—March 18 to June 8.—To protect American interests during a war between Honduras and Nicaragua; troops were stationed for a few days or weeks in Trujillo, Ceiba, Puerto Cortez, San Pedro, Laguna, and Choloma.

1910—Nicaragua—February 22.—During a civil war, to get information of conditions at Corinto; May 19, to September 4, to protect American interests at Bluefields.

1911—Honduras—January 26 and some weeks thereafter.—To protect American lives and interests during a civil war in Honduras.

1911—China.—Approaching stages of the nationalist revolution. An ensign and 10 men in October tried to enter Wuchang to rescue missionaries but retired on being warned away.

A small landing force guarded American private property and consulate at Hankow in October.

A marine guard was established in November over the cable stations at Shanghai.

Landing forces were sent for protection to Nanking, Chinkiang, Taku and elsewhere.

1912—Honduras.—Small force landed to prevent seizure by the Government of an American-owned railroad at Puerto Cortez. Forces withdrawn after the United States disapproved the action.

1912—Panama.—Troops, on request of both political parties, supervised elections outside the Canal Zone.

1912—Cuba—June 5 to August 5.—To protect American interests in the Province of Oriente, and Habana.

1912—China—August 24 to 26, on Kentucky Island, and August 26 to 30 at Camp Nicholson.—To protect Americans and American interests during revolutionary activity.

1912—Turkey—November 18 to December 3.—To guard the American legation at Constantinople during a Balkan War.

1912–25—Nicaragua—August to November 1912.—To protect American interests during an attempted revolution. A small force serving as a legation guard and as a promoter of peace and governmental stability, remained until August 5, 1925.

1912–41—China.—The disorders which began with the Kuomintang rebellion in 1912, which were redirected by the invasion of China by Japan and finally ended by war between Japan and the United States in 1941, led to demonstrations and landing parties for protection in China continuously and at many points from 1912 on to 1941. The guard at Peking and along the route to the sea was maintained until 1941. In 1927, the United States had 5,670 troops ashore in China and 44 naval vessels in its waters. In 1933 we had 3,027 armed men ashore. All this protective action was in general terms based on treaties with China ranging from 1858 to 1901.

1913—Mexico—September 5 to 7.—A few marines landed at Ciaris Estero to aid in evacuating American citizens and others from the Yaqui Valley, made dangerous for foreigners by civil strife.

1914—Haiti—January 29 to February 9, February 20 to 21, October 19.—To protect American nationals in a time of dangerous unrest.

1914—Dominican Republic—June and July.—During a revolutionary movement, United States naval forces by gunfire stopped the bombardment of Puerto Plata, and by threat of force maintained Santo Domingo City as a neutral zone.

1914–17—Mexico.—The undeclared Mexican-American hostilities following the Dolphin affair and Villa's raids included capture of Vera Cruz and later Pershing's expedition into northern Mexico.

1915–34—Haiti—July 28, 1915, to August 15, 1934.—To maintain order during a period of chronic and threatened insurrection.

1916–24—Dominican Republic—May 1916 to September 1924.—To maintain order during a period of chronic and threatened insurrection.

1917–18—World War I. Fully declared.

1917–33—Cuba.—To protect American interests during an insurrection and subsequent unsettled conditions. Most of the United States armed forces left Cuba by August 1919, but two companies remained at Camaguey until February 1922.

1918–19—Mexico.—After withdrawal of the Pershing expedition, our troops entered Mexico in pursuit of bandits at least three times in 1918 and six in 1919. In August 1918 American and Mexican troops fought at Nogales.

1918–20—Panama.—For police duty according to treaty stipulations, at Chiriqui, during election disturbances and subsequent unrest.

1918–20—Soviet Russia.—Marines were landed at and near Vladivostok in June and July to protect the American consulate and other points in the fighting between the Bolsheviki troops and the Czech Army which had traversed Siberia from the western front. A joint proclamation of emergency government and neutrality was issued by the American, Japanese, British, French, and Czech commanders in July and our party remained until late August.

In August the project expanded. Then 7,000 men were landed in Vladivostok and remained until January 1920, as part of an allied occupational force.

In September 1918, 5,000 American troops joined the allied intervention force at Archangel, suffered 500 casualties and remained until June 1919.

A handful of marines took part earlier in a British landing on the Murman coast (near Norway) but only incidentally.

All these operations were to offset effects of the Bolsheviki revolution in Russia and were partly supported by Czarist or Kerensky elements. No war was declared. Bolsheviki elements participated at times with us but Soviet Russia still claims damages.

1919—Honduras—September 8 to 12.—A landing force was sent ashore to maintain order in a neutral zone during an attempted revolution.

1920–22—Russia (Siberia) February 16, 1920, to November 19, 1922.—A marine guard to protect the United States radio station and property on Russian Island, Bay of Vladivostok.

1920—China—March 14.—A landing force was sent ashore for a few hours to protect lives during a disturbance at Kiukiang.

1920—Guatemala—April 9 to 27.—To protect the American Legation and other American interests, such as the cable station, during a period of fighting between Unionists and the Government of Guatemala.

1921 — Panama-Costa Rica. — American naval squadrons demonstrated in April on both sides of the Isthmus to prevent war between the two countries over a boundary dispute.

1922—Turkey—September and October.—A landing force was sent ashore with consent of both Greek and Turkish authorities to protect American lives and property when the Turkish Nationalists entered Smyrna.

1924—Honduras—February 28 to March 31, September 10 to 15.—To protect American lives and interests during election hostilities.

1924—China—September.—Marines were landed to protect Americans and other foreigners in Shanghai during Chinese factional hostilities.

1925—China—January 15 to August 29.—Fighting of Chinese factions accompanied by riots and demonstrations in Shanghai necessitated landing American forces to protect lives and property in the International Settlement.

1925—Honduras—April 19 to 21.—To protect foreigners at La Ceiba during a political upheaval.

1925—Panama—October 12 to 23.—Strikes and rent riots led to the landing of about 600 American troops to keep order and protect American interests.

1926–33—Nicaragua—May 7 to June 5, 1926; August 27, 1926, to January 3, 1933.—The coup d'etat of General Chamorro aroused revolutionary activities leading to the landing of American marines to protect the interests of the United States. United States forces came and went, but seem not to have left the country entirely until January 3, 1933. Their work included activity against the outlaw leader Sandino in 1928.

1926—China—August and September.—The Nationalist attack on Hankow necessitated the landing of American naval forces to protect American citizens. A small guard was maintained at the consulate general even after September 16, when the rest of the forces were withdrawn. Likewise, when Nationalist forces captured Kiukiang, naval forces were landed for the protection of foreigners November 4 to 6.

1927—China—February.—Fighting at Shanghai caused American naval forces and marines to be increased there. In March a naval guard was stationed at the American consulate at Nanking after Nationalist forces captured the city. American and British destroyers later used shell fire to protect Americans and other foreigners. "Following this incident additional forces of marines and naval vessels were ordered to China and stationed in the vicinity of Shanghai and Tientsin."

1933—Cuba.—During a revolution against President Gerardo Machado naval forces demonstrated but no landing was made.

1940—Newfoundland, Bermuda, St. Lucia, Bahamas, Jamaica, Antigua, Trinidad, and British Guiana.—Troops were sent to guard air and naval bases obtained by negotiation with Great Britain. These were sometimes called lend-lease bases.

1941—Greenland.—Taken under protection of the United States in April.

1941—Netherlands (Dutch Guiana).—In November the President ordered American troops to occupy Dutch Guiana but by agreement with the Netherlands government in exile. Brazil cooperated to protect aluminum ore supply from the bauxite mines in Surinam.

1941—Iceland.—Taken under the protection of the United States, with consent of its Government, for strategic reasons.

1941—Germany.—Sometime in the spring the President ordered the Navy to patrol ship lanes to Europe. By July our warships were convoying and by September were attacking German submarines. There was no authorization of Congress or declaration of war. In November the Neutrality Act was partly repealed to protect military aid to Britain, Russia, etc.

1941–45—Germany, Italy, Japan, etc.—World War II. Fully declared.

1942—Labrador.—Army-Navy air bases established.

SINCE 1945

1950—Korean action.
1957—Lebanon.
1962—Cuba.
1964—Vietnam.

Mr. DIRKSEN. If I wanted to bring this up to date, I could, of course, go down to these later incidents, such as, first of all, the recognition of the Soviet Union. That occurred in November of 1933. That was very definitely and unequivocally a commitment by the United States, through the President. He committed us to recognition of the Soviet Union after a long period when we did not recognize that country, and simply had had no dealings with her.

Pursuant to that commitment, there are certain things that we undertook and other things that the Soviet Union undertook. If anyone is curious, he can send to the Library of Congress and get the exchange of five different memorandums between President Franklin Delano Roosevelt and Maxim Litvinov who came here as a special representative of the Soviet Union.

There was no consultation with Congress. There was no consultation with the House of Representatives or with the Senate. However, that commitment was made.

The pending resolution speaks of a national commitment by the United States to a foreign power. It does not say what kind of commitment. So, one, perforce, is forced to the conclusion that it covers the whole field, whether military forces are employed or not.

We might consider still another item. That involves what happened as far as Lebanon was concerned, because in that case I remember quite well when the President of Lebanon requested of this Government that we send forces there because the country was in serious difficulty.

I recall also that President Eisenhower summoned the leadership of Congress to the White House. I remember very well that Alan Dulles, the head of the CIA, was there to give us the benefit of what his agency had developed by way of information that did not readily meet the naked eye.

I recall that Secretary John Foster Dulles was there to make a very brief observation on the situation that obtained. I remember then the remarks of the President of the United States and his determination that he was going to ascertain from everyone in that room at the White House what his views were with respect to committing 5,000 marines to Lebanon. That commitment was made. However, the leadership, while it could be regarded as representative of the Senate and of the House of Representatives, was still not the Senate. And it was not the House of Representatives. Yet it was done.

When we come to the case of Santo Domingo where lives and property were in jeopardy, there was no time to be lost. Troops had to be committed and sent there so as to dispel that danger and save lives and property.

I presume it can be said that the same thing happened when we dispatched planes to the Congo. There were limitations, of course, about how far they could proceed and where they could go. Yet, notwithstanding that fact, it was a commitment to what was then a kind of de facto government in the Congo. So, that would fall within the interdiction of a commitment as recited by Senate Resolution 85.

It has occurred to me, therefore, that the text of the pending resolution should be modified somewhat. I have found that Senate Resolution 187, which was passed by the Senate Committee on Foreign Relations in November of 1967, has been quite helpful in that respect.

A substitute will therefore be offered for the pending resolution, and that substitute does a variety of things.

First, it does recognize joint responsibility between the Senate and the President in the field of foreign policy. I think that is simply recognizing a fact. And I am willing publicly to so state.

Second, it does define what a national commitment really is.

Third, it limits that commitment of armed forces where hostilities are involved.

Fourth, it would apply to the future and not to any situation in which the United States is involved at the present time. To do so would only complicate the picture and obviously could do no good, because that situation could not be remedied or undone by anything that was retrospective in character.

It also includes the threat to national security. By that I mean that if there is a threat to our national security, the pending resolution or any other resolution or the sense of such a resolution would not apply if, for instance, a hostile power landed troops on Panama and got ready for some vicious action, no one would expect the Commander in Chief to wait until he was able to deal with the problem. He would want it done right away. And if, perforce, he had to come to the Senate and have it discussed,

how much time might elapse before expedient action can be had? So that is excluded.

Another exclusion is to repel an attack. I am pretty sure that no one now believes the hands of the Commander in Chief ought to be so tied that if there were an attack, either direct or constructive, he should not be able to act as quickly as he could get a message to the leaders of our Armed Forces. So that is taken out of the resolution.

Finally, it also extends to the protection of the United States citizens and their property. That was the case in Santo Domingo. There, of course, I believe the Commander in Chief was such on essentially good ground.

Those are clarifications that will appear in a modification that I am quite sure will be introduced in the Senate tomorrow. I earnestly hope that it will commend itself to the thinking and to the good judgment of the Senate.

I have discussed the matter with the majority leader, and I think I should supply him with a copy of the substitute at the present time with the understanding that it should not be disclosed for the moment because it will be introduced by members of the Foreign Relations Committee and not by the minority leader.

I think that is the appropriate thing to do. Senate Resolution 85 is being considered because of action by the committee. I think that committee members who are not too happy about the language of that text are the ones who should contrive to present new language for the consideration of the Senate. I think that will be done.

Mr. President, I yield the floor.

Mr. MANSFIELD. Mr. President, first let me express my deep and personal appreciation to the distinguished minority leader for letting me have the opportunity to preview, so to speak, the substitute which will be offered to Senate Resolution 85 tomorrow.

I assure the distinguished minority leader that this will be gone over very carefully and thoroughly and with an open mind.

I am pleased to note that the overall proposal pending before the Senate in effect has widespread approval on both sides of the aisle.

It is apparent, of course, that what the Senate is doing is facing up to a Senate responsibility. And if we cannot face up to it, no one else will.

It should be stated that we are not trying to deprive the President of any of his constitutional power, responsibility, or authority. In effect, what we are trying to do is to strengthen his hand so as to bring about a degree of understanding, accommodation, and cooperation which, in the opinion of many Senators, will be most beneficial to the welfare of the Republic.

The question of joint responsibility has been emphasized by the minority leader. That is one of the bases of the pending resolution. He also stated that what we are considering applies to the future, not to the past. That is true. Now is not the time to cry over spilt milk or spilt blood, although references could be made to the Dominican Republic, the Spanish bases question, and the Congo.

I think I should say, in all candor, that the genesis of the pending resolution lay in the action of the previous administration in dispatching three cargo transport planes to the Congo without any consultation whatsoever with Congress as a whole or with the Senate, and that as a result of that move, made independently and without our knowledge, a number of us, including the distinguished senior Senator from Georgia (Mr. RUSSELL), the President pro tempore of this body; the chairman of the Committee on Foreign Relations, the distinguished Senator from Arkansas (Mr. FULBRIGHT); the senior Senator from Montana, now speaking; and other Senators, engaged in a colloquy. As a result, what might have been a followup to those three planes did not take place, and it was not too long before those transports, having accomplished their mission, were returned to the United States. That was the genesis of the pending resolution.

It is now time for us to face up to the responsibilities that the modern day and age placed upon all of us. The purpose of the resolution is not to tie the hands of the President; the purpose of the resolution is not to indicate a return to isolationism, neo or otherwise; nor to indicate that we are withdrawing into a shell, foregoing our responsibilities or advocating unilateralism. The purpose of the resolution is to assert, after five decades of erosion, the constitutional responsibility of the Senate in the conduct of the foreign policy of the Nation.

Perhaps I should point out to the Senate that at present the United States has on the order of 2,700 bases overseas. Four hundred and twenty-nine of them are considered major, and 2,297 are considered lesser. These bases cover 4,000 square miles of territory in 30 countries. They contain 1,750,000 servicemen, their dependent families, and foreign employees. The bases cost this Government $4.8 billion a year to maintain.

Furthermore, the United States is committed, through treaties and mutual assistance pacts, to come to the defense of 48 nations. To enable it to carry out this global role, the United States maintains 1,500,000 Americans in uniform overseas. The responsibilities which this country has undertaken since the end of World War II have become worldwide. But the Nation has neither the wealth nor the population to support such a global policy; nor is it capable of filling any void that might occur when other nations withdraw from particular areas. We are stretched very wide; we are stretched very thin. What might have been good a decade or two ago is not necessarily good today.

To sum up, in brief, the purpose of the resolution is not to curtail the power of the President in any degree. The resolution is directed against no President in particular. It is an attempt to accommodate the institution of the Senate and the institution of the Presidency and to combine the responsibilities which both, under the Constitution, have in the field of foreign affairs.

I again assure the minority leader that what he intends to offer in the nature of a substitute will be given the most serious consideration. I am happy to note that there is almost unanimous approval on the part of the Senate, on both sides of the aisle, of the importance of a resolution of this kind and of the need for the adoption of a resolution having this intent. It is long overdue. The fault over the past five decades does not lie in the Presidency. The fault for the erosion of the powers of the Senate lies in this body itself. Only this body can correct that situation; and this body will, I am sure, do so in a way which will not be inimical to the interests, the authority, or the responsibility of the President, but in a way which I sincerely think will be of mutual benefit to both institutions.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Bartlett, one of its reading clerks, communicated to the Senate the intelligence of the death of Hon. WILLIAM H. BATES, late a Representative from the State of Massachusetts, and transmitted the resolution of the House thereon.

LEGISLATIVE PROGRAM

Mr. DIRKSEN. Mr. President, this is probably the right time to ask the distinguished majority leader about the program for the remainder of today and for tomorrow.

I may say, incidentally, that I have been unable actually to provide any speakers for today. I understand that the Senate will have an abundance of speakers tomorrow, and that other matters may also be considered tomorrow.

Mr. MANSFIELD. Yes.

ORDER FOR ADJOURNMENT UNTIL 11 A.M. TOMORROW

Mr. President, with the approval of the distinguished minority leader, I should like to make a unanimous-consent request on the part of the joint leadership that we consider having the Senate convene at 11 o'clock tomorrow morning.

Mr. DIRKSEN. That is agreeable.

Mr. MANSFIELD. I make that request at this time.

The PRESIDING OFFICER. Is there objection? The Chair hears none and it is so ordered.

Mr. MANSFIELD. The reason for this request is that it is the intention of the leadership to take up tomorrow the nomination of Otto F. Otepka, of Maryland, to be a member of the Subversive Activities Control Board.

It is also the intention of the leadership to take up the food stamp bill, which has been reported from the Committee on Agriculture and Forestry.

Both parties will have their policy meetings tomorrow. That will afford an opportunity for Senators who wish to speak on this or other subjects to do so.

It would be our hope that we could finish action on the pending resolution, if not tomorrow, certainly on Wednesday or Thursday at the latest.

It is also anticipated that sometime later in the week, after tomorrow, the Senate may convene an hour earlier, with the agreement of the minority leader,

so that certain Senators who have expressed a desire to do so may speak on the subject of the retirement of the Chief Justice of the United States.

It is also hoped that before we adjourn for the Fourth of July holiday—which, incidentally, includes only 1 workday—it will be possible to lay before the Senate the Department of Defense authorization bill, so that it may be the pending business when the Senate reconvenes on Monday, July 7.

That is about all I can say at this time.

NATIONAL COMMITMENTS

The Senate resumed the consideration of the resolution (S. Res. 85) expressing the sense of the Senate relative to commitments to foreign powers.

SENATE RESOLTION 85 AND CANADIAN OIL AGREEMENT

Mr. PROXMIRE. Mr. President, although some of the impetus for this resolution has come from the Vietnam situation, we ought not to overlook other committments entered into by the executive branch of our Government in apparent violation of both the law and the publicly stated policy of the President.

I am referring specifically to the secret agreement entitled "An Understanding Between the United States and Canada Regarding Overland Oil Imports From Canada to the United States" dated September 25, 1967. It, in effect, limits the amount of Canadian oil that can enter the United States in order to protect the markets of the U.S. oil producers.

This secret agreement was signed in apparent disregard for the published Presidential proclamation governing the mandatory oil import program and the legislation authorizing the President to limit imports in the name of national security.

The legislation authorizing the President to establish programs such as the mandatory oil import program is quite explicit—the only basis for such restrictions is national security.

Canadian oil is officially recognized as secure in the Presidential proclamation governing the mandatory oil import program because it exempts Canadian oil from import restrictions. No one disputes the fact that Canadian oil is secure.

However, this official, published proclamation did not deter the State Department which negotiated and signed this secret agreement with Canada in direct contradiction to the official, stated policy.

The Trade Agreements Act of 1954 which gave the President the power to restrict imports in the name of national security establishes certain conditions to be found and procedures to be followed before imports can be restricted. None of these conditions or procedures were observed in the signing of this secret agreement.

The President before restricting Canadian oil imports has to make a finding that Canadian oil imports were entering the United States in such volumes or under such circumstances that they threaten to impair the national security. No such determination was made. As a matter of fact, the President recognized that Canadian oil was a secure source in the published proclamation.

Because the power to limit imports is so important, Congress established some strict procedures which the President must follow before limiting imports in order to prevent abuses of that power. These procedures were not followed in signing the secret agreement. Congress did not intend to allow the carefully defined conditions for imposition of import limitations to be circumvented by secret agreements!

Finally, the secret agreement itself makes no attempt to relate its restrictive provisions to the national security interests of the United States—the only grounds for imposing limitations. I think it is quite clear from the language of the document that the only purpose of the secret agreement was to protect the American producing industry against the competition of Canadian oil, whether or not such competition would adversely affect national security. For example, the Canadian Government will request consultation regarding stipulated export levels, "only when it is satisfied that the United States customers of Canadian feedstocks have exercised every effort to secure reasonably available United States domestic supplies of feedstock and that established United States customers are not unduly expanding their market area or their share of the established market."

Such protectionist provisions are apparently controlling, regardless of their effect on the total national security interest. No attention is given to the strategic importance of vigorous and expanding oil refining and related chemical operations suitably dispersed, to the need to develop internal continental production and transport facilities, nor to the necessity for providing adequate fuel supplies for defense industries.

It would be difficult to imagine a more direct conflict with the admonition of the Ways and Means Committee in its report on the Trade Expansion Act:

> The interest to be safeguarded is the security of the Nation, not the output or profitability of any plant or industry except as these may be essential to the national security.

When this secret agreement came to light, I could not believe it. I asked the State Department which signed it and the Interior Department which administers the mandatory oil import program for an explanation.

I received a letter from the State Department indicating the reason for the secret agreement was "equity." While "equity" is a grand and noble concept, our Constitution has delegated the primary authority for defining "equity" to Congress. Congress has acted in this instance and passed a law. The State Department, thus, must operate within the bounds of "equity" as defined by Congress, not their own vague concepts of what "equity" should be.

The law in this case as well as the official implementation of that law is quite clear. The only legal basis for limiting imports is national security. And, even the State Department response indicated that Canadian oil was a secure source of supply.

As a matter of fact, this secret agreement actually impairs our national security. During the 6-day war in 1967, the last interruption in world oil supplies, Canada had over a million barrels a day in excess capacity which could not reach the market because there was not enough pipeline capacity to transport it. And, unless Canadian oil has access to U.S. markets there is no incentive to build the necessary pipelines. We all know that oil delivered by pipeline is far more secure than oil which must come from our domestic offshore wells. Why then should we discriminate against Canadian oil which comes into this country by overland pipeline? If national security is really the underlying theme of the mandatory oil import program, the development of such oil should be encouraged.

Moreover, in a period when the domestic price for crude oil is increasing at a rapid pace, the secret agreement denies U.S. refiners the advantage of the lower, relatively stable prices for Canadian imports. This is having an adverse effect on consumers in the Midwest where Canadian oil could be economically transported. Further, the secret agreement has the effect of bestowing a totally unwarranted competitive advantage on certain favored companies which are now obtaining Canadian oil in the Midwest. Thirteen refiners, including giants of the industry, have a monopoly on the importation of Canadian crude oil east of the Rockies. This monopoly is guaranteed by the secret agreement, which provides that Canadian oil is not to be sold to any new customers until the needs of existing customers have been satisfied. There plainly is no conceivable national security justification for fostering a permanent monopoly in the importation of inexpensive Canadian oil for 13 favored companies.

Furthermore, the secret agreement contains an embargo on shipments of Canadian oil to Chicago area refineries. This has resulted in a severe discrimination against a number of small refiners which, even under normal conditions, are at a competitive disadvantage vis-a-vis the major, integrated oil companies with all their tax advantages. For example, one small refiner in the Chicago area suffered additional costs of more than $250,000 in the first 3 months of 1969 alone because it was unable to obtain a reasonable amount of Canadian oil. This damage would be greater today because the major oil companies, in order to get a larger depletion allowance, have raised their domestic oil prices, thus, increasing the cost differential between Canadian and domestic oil. The delivered cost of domestic crude oil to the Chicago area is now more than 50 cents a barrel more expensive than the comparable cost of Canadian oil. Obviously, this creates a disastrous competitive situation for a small company, when even small refineries use many thousands of barrels of oil a day. Smaller refiners unable to obtain Canadian oil will increasingly be squeezed in competing with the major oil companies favored by special privileges under the secret agreement and the tax shelters open only to the large integrated oil compa-

nies. No national security justification, if any did in fact exist, could warrant perpetuation of these inequities.

How then could the State Department negotiate and sign such a secret agreement? I have asked that question of both the State and Interior Departments but still do not have a satisfactory answer. However, Mr. President, I think that you can only appreciate the full irony of the situation when you have seen the correspondence and the secret agreement. Thus, I ask unanimous consent to have them printed in the RECORD at this point.

The PRESIDING OFFICER (Mr. EAGLETON in the chair). Without objection, it is so ordered.

The material, ordered to be printed in the RECORD, is as follows:

DEPARTMENT OF STATE,
Washington, D.C., May 1, 1969.

Hon. WILLIAM PROXMIRE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR PROXMIRE: In your letter to Secretary Rogers of April 16, you asked for information concerning the 1967 United States-Canadian Oil Agreement.

This Agreement is closely related to the Mandatory Oil Import Program (MOIP) instituted in 1959 under the national security provision of the Trade Agreements Extension Act of 1958. The purpose of the program is to ensure a viable domestic petroleum industry and thus to avoid overdependence on oil imports which might be cut off in an emergency. Since the national security considerations are not entirely the same in the case of overland imports, it was decided to exempt Canada from the import restrictions.

Because of this exemption there was a rapid growth in Canadian oil exports to the United States. By 1967 it had become clear that if this growth continued, Canadian oil would soon absorb the entire increment of growth available to foreign suppliers under the MOIP. Venezuela—a traditional, secure supplier of oil with a friendly, democratic government—would have been particularly hard hit by this development. In the interest of equity, therefore, we worked out the Canadian agreement which called for a voluntary limitation of exports.

Although the provisions of the Agreement were generally known, its exact text remained privileged at the request of the Canadian Government until late last February. At that time Canada agreed to release the text of the Agreement for use in connection with the legal proceedings relating to Canadian oil.

As you know, the Administration has initiated a broad review of the oil import problem. The task force will consider the question of Canadian imports along with all other aspects of our import policy. So as not to prejudice the results of this review, we have told the Canadians we wish to keep the voluntary agreement in force for the time being.

If I can be of further assistance, please do not hesitate to let me know.

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
Assistant Secretary for Congressional Relations.

U.S. SENATE,
Washington, D.C., May 23, 1969.

Hon. WILLIAM P. ROGERS,
Secretary of State,
Washington, D.C.

DEAR MR. SECRETARY: On April 16, 1969 I requested an explanation for the secret agreement which we signed with Canada limiting the importation of Canadian oil. I gather from the Department's response that the reason for signing this secret agreement was that if the importation of Canadian oil were not limited then Venezuelan oil, another secure source of supply, would have been shut out of the United States market.

The answer raises three questions in my mind: First, if both Venezuelan and Canadian oil are secure sources of supply, why do we limit their importation? The only basis for limiting the importation of oil is to protect our national security. Yet, it seems to me, if we limit the importation of oil from secure sources, we impair our national security because in time of national emergency we would not be able to tap their excess capacity which would otherwise be available to us. There would be no means to transport the increased production to the United States.

Secondly, I would like to know what was the legal basis for signing this secret agreement with Canada. The only legislative basis for limiting oil imports is "national security", not "equity". You have indicated to me that Canadian oil is a secure source and this was officially recognized by granting an exception to Canadian oil from the restrictions of the Mandatory Oil Import Program. Yet, the only basis for signing this secret agreement you indicated to me in your letter was "equity".

Finally, I ask in my original letter why the secret agreement discriminates against the Chicago oil market. I still have not received an explanation.

Sincerely,

WILLIAM PROXMIRE.

DEPARTMENT OF STATE,
Washington, D.C., June 17, 1969.

Hon. WILLIAM PROXMIRE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR PROXMIRE: The Secretary has asked me to reply to your letter dated May 23 which posed questions about the agreement between the United States and Canada on oil imports.

The basic rationale behind the Mandatory Oil Imports Program was national security, as you have noted. The MOIP has tried and has been largely successful in maintaining a domestic industry capable of meeting our fuel needs in time of emergency. The primary means for achieving this end has been a limitation on imports of oil to 12.2 percent of domestic crude oil production.

Imports from Canada were initially exempt from the controls and they were not included in this limitation. When the program began, these imports were not important, only 56,000 barrels per day in 1959 into Districts I–IV, but they grew rapidly, displacing American production. In 1963 after Canadian exports to the United States had reached 115,000 barrels per day, the Oil Imports Administration began to count Canadian oil in the controlled imports without, however, placing restrictions on imports from Canada. The immediate result was that Canadian oil displaced imports from overseas rather than domestic oil. Canadian exports continued to grow rapidly and by 1967 had reached 253,000 barrels per day. By that time they were increasing at a rate greater than the total growth in imports. Other off-shore suppliers, notably Venezuela, faced an absolute decline in their exports to the United States.

It was in this context that an agreement was reached with Canada in 1967 to limit Canadian exports to the United States. Canada's exports were still unlicensed and Canada's special position as an overland supplier was still recognized; Canada was permitted to increase its exports to the United States by 26,000 barrels per day in 1968 and in each subsequent year through 1971. This was about two-thirds of the growth in our imports; the other third remained for Venezuela and all other exporters combined.

As long as Canadian oil is considered within the quota imports and Canadian crude oil prices are somewhat lower than domestic oil, unrestricted access of Canadian oil to our markets would mean a displacement of the relatively low-cost Venezuelan and Eastern hemisphere oils. While this would benefit those importers along the Canadian border who use Canadian oil, it would have an adverse effect on the large number of other importers who do not have physical access to Canadian oil and who would have their allocations for imports from overseas reduced. There would also be serious disruptions in the economy of Venezuela, our largest supplier of petroleum.

With respect to the legal basis for the 1967 agreement with Canada, section 2 of the Act of July 1, 1954, as amended (72 Stat. 678), and section 232 of the Trade Expansion Act of 1962 (76 Stat. 877) authorize import limitations in certain circumstances. Pursuant to these sections, findings and determinations have been made that adjustments in the imports of petroleum were neecssary so that such imports would not threaten to impair the national security, and Proclamation 3279 (24 F.R. 1781) was issued and from time to time amended. The agreement with Canada was concluded in implementation of this legislation and Proclamation.

In additon the President has constitutional authority in the conduct of foreign relations to regulate physical connections, such as pipelines, between the United States and a foreign country, and also to conclude executive agreements in harmony with United States domestic law.

Your letter of May 23 also asks the reasons behind the specific provision in the United States-Canadian agreement stating that no sales would be made in the Chicago area prior to 1970. There were several reasons for this. First of all, the original Canadian request for increasing the capacity of the Interprovincial Pipeline by construction of a "loop" through Chicago to Ontario, where the original line re-entered Canada, was for the purpose of transporting more oil to the Ontario area, not for delivery to the United States. Secondly, an important addition to our domestic pipeline system, Capline, was then under construction, and it was expected that Capline would be able to supply the Chicago area's growing needs during its initial period of operation. This has in fact proved true. The third reason was that we anticipated a tight supply situation for traditional Canadian customers, whose demands would be rising at the same time there would be a cut-back in the rate of Canadian export growth. We considered this situation would be difficult enough as it was without added pressures from new Chicago customers.

I have explained in some detail how the present system evolved and what situations existed when the notes were exchanged with Canada. As I indicated in my previous letter, the Administration is reviewing the entire oil import program. The oil import review task force will consider the question of imports of Canadian oil along with all other aspects of our import policy. It is therefore possible that changes will be made in our import program which will affect Canada, but in the meantime we expect Canada to abide by the 1967 understanding.

I hope the foregoing amplifies my earlier letter to you. If I can be of any further assistance, please do not hesitate to let me know.

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
Assistant Secretary for Congressional Relations.

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., June 9, 1969.

Hon. WILLIAM PROXMIRE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR PROXMIRE: Thank you for your letter of April 16 concerning overland exempt oil imports from Canada. We regret our delay in replying.

We are enclosing a copy of a memorandum of the agreement to which your letter refers. You will note the agreement provides for an orderly increase in Canadian exports into Districts I–IV commensurate with the anticipated growth of the domestic market.

The Interprovincial Pipeline was proposed as a complete loop via the Chicago area from Superior, Wisconsin to Ontario, Canada, and it was upon this basis that the Presidential Permit for a border crossing was approved. The restriction on deliveries into the Chicago area until 1970 was to assure that oil delivered from this pipeline would not cause a severe short term disruption of supply patterns during the construction stage.

The present oil import program has given Canadian oil imports special recognition with regard to national security. Canadian oil has, accordingly, received preferential treatment as compared to overseas imports and, as a result, Canadian imports have grown by over 500 percent since the start of the oil program. In fact, Canadian imports into Districts I through IV have been growing each year more than the total growth of imports in the United States under the 12.2 formula. Thus, imports from other Western Hemisphere countries have not experienced a corresponding growth.

The following tabulation indicates the recent trend in exports of Canadian oil to the United States:

CANADIAN OVERLAND OIL IMPORTS

[Thousand barrels daily]

Year	Districts I–IV		District V		Total actual
	Estimated	Actual	Estimated	Actual	
1965 (1st ½)	155	165	141	151	316
1965 (2d ½)	169	181	155	150	331
1966	180	212	155	172	384
1967	225	253	144	196	449
1968	280	328	135	176	504
1969:					
January	306	370	181	193	563
February	306	400	181	214	614

At the present time refineries directly connected to crude pipelines from Canada have a total capacity of over one and a half million barrels per day. Canadian imports could easily increase another half a million barrels a day or more over present levels and, thereby, almost eliminate present imports of crude oil from other countries to the East Coast. This in turn would create economic problems in countries which have been supplying oil to the United States and interrupt past trading relationships. It would also create inequities with regard to refineries in the United States since present import quotas would be greatly reduced or eliminated. This points up that under the present import program, overseas imports into the East Coast are distributed to all refineries in the country East of the Rockies (Districts I–IV), whereas the economic advantage of Canadian imports into the Northern area of the United States accrues directly to the refinery importing them. This, in turn, gives such refineries an incentive to increase imports of Canadian oil even though this reduces overseas imports into the East Coast.

It is our view that the growth rate of Canadian imports must be related to the domestic demand growth and the requirement for U.S. markets of other friendly oil exporting nations in order to maintain stable relationships with all exporting nations and to prevent refiners in one geographical area receiving inequitable benefits at the expense of other refiners throughout the nation. For these reasons we will urge compliance with the agreement within the framework of the present oil import program, which, as you know, currently is under review by an executive office task force.

Sincerely yours,

WALTER J. HICKEL,
Secretary of the Interior.

TEXT OF AN UNDERSTANDING BETWEEN THE UNITED STATES AND CANADA REGARDING OVERLAND OIL IMPORTS FROM CANADA TO THE UNITED STATES, SEPTEMBER 25, 1967

The Canadian Ambassador presents his compliments to the Secretary of State and has the honor to refer to recent discussions between Canadian and United States officials and recent talks between the Honorable Jean-Luc Pepin, Minister of Energy, Mines, and Resources, the Honorable Stewart Udall, Secretary of the Interior, and Anthony M. Solomon, Assistant Secretary of State for Economic Affairs, regarding Canadian levels of oil exports and the proposed looping of the Interprovincial Pipeline via Chicago.

The Ambassador has been authorized to inform the United States Government that the Canadian Government endorses the following arrangements:

(1) It will ensure, short of imposing formal export controls, that exports of refinery feedstocks, as currently defined by the National Energy Board of Canada as including crude oil, condensate and butanes, to districts I–IV do not exceed 280,000 b/d in 1968.

(2) It will on a similar basis ensure that the growth rates of exports of refinery feedstocks to District I–IV during the period 1969 through 1971 will not exceed 26,000 b/d per annum.

(3) It assures the United States Government that—

(a) The proposed Interprovincial Pipe Line Company's pipeline via Chicago will be a complete loop from Superior, Wisconsin to Ontario as outlined to United States officials

(b) The economic viability of the loop in the initial period is not dependent upon new customer outlets, and

(c) No sales will be made in the Chicago area prior to 1970.

(4) It assures the United States Government that it has been and continues to be the Government of Canada's policy to avoid disruption of United States markets and that it will exert every effort to ensure that Canadian exports of crude oil do not displace local production of crude oil in those states served by Canadian exports.

(5) It assures the United States Government that the growth needs of existing customers will be satisfied before additional petroleum volumes available from either growth in Canadian exports or from shutdowns of United States refineries now using Canadian crude, are directed toward development of new markets.

(6) It is understood and agreed that the above arrangements are contingent upon the issuance of a Presidential Permit for a border crossing associated with the construction of a loop line through Chicago and are subject to the following conditions and understandings:

(a) Only in the event of exceptional or emergency circumstances leading to changes in United States supply patterns may exports, pursuant to mutual agreement, exceed the specified limits made under the above commitments.

(b) At any time at the request of either government the two governments would consult with respect to any matter relating to the export of petroleum to the United States. In this regard the Government of Canada would request consultations regarding the above export levels only when it is satisfied that United States customers of Canadian feedstocks have exercised every effort to secure reasonably available United States domestic supplies of feedstock and that established United States customers are not unduly expanding their market area or their share of the established market.

(c) Any change in the United States mandatory oil import control program relevant to the commitments made by the Government of Canada, such as a change in the 12.2 per cent limitation would, of course, be the subject of consultation and possible changes in the above commitments and levels.

The Government of Canada would appreciate confirmation that these arrangements are satisfactory to the Government of the United States.

The Canadian Ambassador wishes to avail himself of this opportunity to renew to the Secretary of State the assurances of his highest consideration.

A. E. RITCHIE.

Mr. KENNEDY. Mr. President, I want to commend the Senator from Wisconsin on his most lucid and compelling presentation of the facts surrounding the secret understanding on oil imports between the United States and Canadian Governments.

This agreement raises the most serious issues of legality, propriety, and policy. I have myself tried in the course of our oil hearings in the Antitrust Subcommittee to elicit some explanation of the logic of this arrangement, and the answers I have received only convince me more that the agreement is contrary to the public interest.

In an effort to obtain an understanding of the legal issues involved, I wrote to the Attorney General exactly 1 month ago today and posed the following questions:

Under what constitutional authority did the U.S. Government act?

Under what congressional act or delegation of authority did the U.S. Government act?

Under what provision of Proclamation 3279 did the U.S. Government act?

Is the understanding consistent with the General Agreement on Tariffs and Trade?

I also note that section 5 in effect limits the recipient of oil to existing customers. Knowing of the concern of your Department with limitations on competition, I would appreciate your opinion as to whether this provision violates general antitrust policies.

I ask unanimous consent that a copy of the entire letter be presented in the RECORD. As yet I have received no answer to this letter, but since the area is a complex one, I am hopeful that the delay is only an indication that the answers will be responsive and complete.

Certainly this kind of agreement

bears the closest scrutiny, and the procedures which enable it to be arrived at in secret deserve the most searching review.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MAY 23, 1969.

Hon. JOHN N. MITCHELL,
Attorney General,
Washington, D.C.

DEAR MR. ATTORNEY GENERAL: Enclosed is a copy of a note dated September 25, 1967, which formalizes a secret Understanding between the United States and Canadian governments. This note, which first became public two months ago, sets forth assurances by the Canadian government that it will control to specified limits the quantity of oil exported to the United States from Canada. These assurances were required of the Canadian government as conditions for the issuance of a Presidential permit for a border crossing associated with a proposed pipeline loop.

I would appreciate your opinion as to the legality of this Understanding, and specifically, answers to the following questions:

Under what constitutional authority did the U.S. Government act?

Under what Congressional act or delegation of authority did the U.S. Government act?

Under what provision of Proclamation 3279 did the U.S. Government act?

Is the Understanding consistent with the General Agreement on Tariffs and Trade?

I also note that Section 5 in effect limits the recipient of oil to existing customers. Knowing of the concern of your Department with limitations on competition, I would appreciate your opinion as to whether this provision violates general anti-trust policies.

In view of your personal interest in and appreciation of the need to adhere to procedural safeguards, I look forward to having your opinion of this secret Understanding.

Sincerely,

EDWARD M. KENNEDY.

ORDER OF BUSINESS

Mr. DOLE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. TYDINGS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE MILITARY-INDUSTRIAL COMPLEX

Mr. TYDINGS. Mr. President, there is no issue which concerns thoughtful Americans more than the problem of realistic military budgets and the problem of the proper relationship among the Defense Department, defense procurement, Congress, and the budget processes of our Nation.

This month, two excellent theses relating to this issue have made their appearance in print.

The first is an article published in Harper's magazine, written by John Kenneth Galbraith, former Ambassador to India and adviser of Presidents. The second article was published in the New York Times Magazine on yesterday, June 22, written by Richard F. Kaufman, a member of the staff of the Joint Economic Subcommittee on Economy in Government, which is headed by the Senator from Wisconsin (Mr. PROXMIRE). The substance of his article relates to a prophetic statement of the late President Eisenhower:

We must guard against unwarranted influence by the military-industrial complex.

Mr. President, I ask unanimous consent to have both these articles printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Harper's magazine, June 1969]

HOW TO CONTROL THE MILITARY

(By John Kenneth Galbraith [1])

In Janurary as he was about to leave office, Lyndon Johnson sent his last report on the economic prospect to the Congress. It was assumed that, in one way or another, the Vietnam war, by which he and his Administration had been destroyed, would come gradually to an end. The question considered by his economists was whether this would bring a decrease or an increase in military spending. The military budget for fiscal 1969 was $78.4 billions; for the next year, including pay increases, it was scheduled to be about three billions higher. Thereafter, assuming peace and a general withdrawal from Asia, there would be a reduction of some six or seven billions. But this was only on the assumption that the Pentagon did not get any major new weapons—that it was content with what had already been authorized. No one really thought this possible. The President's economists noted that plans already existed for "a package" consisting of new aircraft, modern naval vessels, defense installations, and "advanced strategic and general purpose weapons systems" which would cost many billions. This would wipe out any savings from getting out of Vietnam. Peace would now be far more expensive than war.

With Richard Nixon the prospect for increased arms spending would seem superfically to be better. During the election campaign he promised to establish a clear military superiority over the Soviets, an effort that he could not believe would escape their attention. Their response would also be predictable and would require a yet larger effort here. (At his first press conference Mr. Nixon retreated from "superiority" to "sufficiency.")

Melvin Laird, the new Secretary of Defense, while in the Congress was an ardent spokesman for the military viewpoint, which is so say for military spending. And his Under Secretary of Defense, David Packard, though the rare case of a defense contractor who had spoken for arms control, was recruited from the very heart of the military-industrial complex.

Just prior to Mr. Nixon's inauguration the Air Force Association, the most eager spokesman for the military and its suppliers, said happily that "If the new Administration is willing to put its money where its mouth is in national defense some welcome changes are in the offing." And speaking to a reporter, J. Leland Atwood, president and chief executive officer of North American Rockwell, one of the half-dozen biggest defense firms, sized up the prospect as follows: "All of Mr. Nixon's statements on weapons and space are very positive. I think he has perhaps a little more awareness of these things than some people we've seen in the White House." Since no one had previously noticed the slightest unawareness, Mr. Atwood considered the prospect very positive indeed.

Yet he could be wrong. Browning observed of Jove that he strike the Titans down when they reach the peak—"when another rock would crown the work." When I started work on this paper some months ago, I hazarded the guess that the military power was by way of provoking the same public reaction as did the Vietnam war. Now this is no longer in doubt. If he remains *positive*, the military power will almost certainly do for President Nixon what Vietnam did for his predecessor. But it might also lead him to a strenuous effort to avoid the Johnson fate. Mr. Nixon has not, in the past, been notably indifferent to his political career. The result in either case would be an eventual curb on the military power—either from Mr. Nixon or his successor.

Or so it would seem. What is clear is that a drastic change is occurring in public attitudes toward the military and its industrial allies which will not for long be ignored by politicians who are sensitive to the public mood. And from this new political climate will come the chance for reasserting control.

The purpose of this article is to see the nature of the military power, assess its strengths and weaknesses, and suggest the guidelines for regaining control. For no one can doubt the need for doing so.

II

The problem of the military power is not unique; it is merely a rather formidable example of the tendency of our time. That is for organization, in an age of organization, to develop a life and purpose and truth of its own. This tendency holds for all great bureaucracies, both public and private. And their action is not what serves a larger public interest, their belief does not reflect the reality of life. What is done and what is believed are, first and naturally, what serve the goals of the bureaucracy itself. Action in the organization interest, or in response to the bureaucratic truth, can thus be a formula for public disservice or even public disaster.

There is nothing academic about this possibility. There have been many explanations of how we got into the Vietnam war, an action on which even the greatest of the early enthusiasts have now lapsed into discretion. But all explanations come back to one. It was the result of a long series of steps taken in response to a bureaucratic view of the world—a view to which a President willingly or unwillingly yielded and which, until much too late, was unchecked by any legislative or public opposition. This view was of a planet threatened by an imminent takeover by the unified and masterful forces of the Communist world, directed from Moscow (or later and with less assurance from Peking) and coming to a focus, however improbably, some thousands of miles away in the activities of a few thousand guerrillas against the markedly regressive government of South Vietnam.

The further bureaucratic truth that were developed to support this proposition are especially sobering. What was essentially a civil war between the Vietnamese was converted into an international conflict with rich ideological portend for all mankind. South Vietnamese dictators became incipient Jeffersonians holding aloft the banners of an Asian democracy. Wholesale graft in Saigon became an indispensable aspect of free institutions. An elaborately rigged election became a further portend of democracy. One of the world's most desultory and impermanent armies became, always potentially, a paragon of martial vigor. Airplanes episodically bombing open acreage or dense jungle became an impenetrable barrier to men walk-

[1] J. K. Galbraith has written more than one man's share of the influential books of this era, including "American Capitalism" and "The Affluent Society" (just reissued in a new edition by Houghton Mifflin). He was a supporter of Adlai Stevenson and John F. Kennedy, was Ambassador to India 1961–63, and continues to teach at Harvard as Paul M. Warburg Professor of Economics.

ing along the ground. An infinity of reverses, losses, and defeats became victories deeply in disguise. Such is the capacity of bureaucracy to create its own truth.

There was nothing, or certainly not much, that was cynical in this effort. Most of the men responsibly involved accepted the myth in which they lived a part. For from the inside it is the world outside which looks uninformed, perverse, and very wrong. Throughout the course of the war there was bitter anger in Washington and Saigon over the inability of numerous journalists to see military operations, the Saigon government, the pacification program, the South Vietnam army in the same rosy light as did the bureaucracy. Why couldn't they be indignant instruments of the official belief—like Joseph Alsop?

As many others have observed, the epitome of the organization man in our time was Secretary of State Dean Rusk. Few have served organization with such uncritical devotion. A note of mystification, even honest despair, was present in his public expression over the inability of the outside world to accept the bureaucratic truths just listed. Only the eccentrics, undisciplined or naive, failed to accept what the State Department said was true. His despair was still evident as he left office, his career in ruins, and the Administration of which he was the ranking officer destroyed by action in pursuit of these beliefs. There could be no more dramatic—or tragic—illustration of the way organization captures men for its truths.

But Vietnam was not the first time men were so captured—and the country suffered. Within this same decade there was the Bay of Pigs, now a textbook case of bureaucratic self-deception. Organization needed to believe that Castro was toppling on the edge. Communism was an international conspiracy; hence it could have no popular local roots; hence the Cuban people would welcome the efforts to overthrow it. Intelligence was made to confirm these beliefs, for if it didn't it was, by definition, defective information. And, as an unpopular tyranny, the Castro government *should* be overthrown. Hence the action, thus the disaster. The same beliefs played a part in the military descent, against largely nonexistent Communists, on the Dominican Republic.

But the most spectacular examples of bureaucratic truth are those that serve the military power—and its weapons procurement. These have not yet produced anything so dramatic as the Vietnam, Bay of Pigs, or Dominican misadventures but their potential for disaster is far greater. These beliefs and their consequences are worth specifying in some detail.

There is first the military belief that whatever the dangers of a continued weapons race with the Soviet Union these are less than those of any agreement that offers any perceptible opening for violation. If there is such an opening the Soviets will exploit it. Since no agreement can be watertight this goes far to protect the weapons race from any effort at control.

Secondly, there is the belief that the conflict with Communism is man's ultimate battle. Accordingly, one would not hesitate to destroy all life if Communism seems seriously a threat. This belief allows acceptance of the arms race no matter how dangerous. The present ideological differences between industrial systems will almost certainly look very different and possibly rather trivial from a perspective of fifty or a hundred years hence if we survive. Such thoughts are eccentric.

Third, the national interest is total, that of man inconsequential. So even the prospect of total death and destruction does not deter us from developing new weapons systems if some thread of national interest can be identified in the outcome. We can accept 75 million casualties if it forces the opposition to accept 150 million. This is the unsentimental calculation. Even more unsentimentally, Senator Richard Russell, the leading Senate spokesman of the military power, argued on behalf of the Army's Sentinel Anti-Ballistic Missile System (ABM) that, if only one man and one woman are to be left on earth, it was his deep desire that they be Americans. It was part of the case for the Manned Orbiting Laboratory (MOL) that it would maintain the national position in the event of extensive destruction down below.

Such, not secretly but as they have been articulated, are the organization truths of the military power. The beliefs that got us into (and keep us in) Vietnam in their potential for disaster pale as compared with these doctrines. We shall obviously have accomplished little if we get out of Vietnam but leave unchecked in the government the capacity of this kind of bureaucratic truth. What, in tangible form, is the organization which avows these truths?

III

It is an organization or a complex of organizations and not a conspiracy. Although Americans are probably the world's least competent conspirators—partly because no other country so handsomely rewards in cash and notoriety the man who blows the whistle on those with whom he is conspiring—we have a strong instinct for so explaining that of which we disapprove. In the conspiratorial view, the military power is a collation of generals and conniving industrialists. The goal is mutual enrichment; they arrange elaborately to feather each other's nest. The industrialists are the *deux ex machina*; their agents make their way around Washington arranging the payoff. If money is too dangerous, than alcohol, compatible women, more prosaic forms of entertainment or the promise of future jobs to generals and admirals will serve.

There is such enrichment and some graft. Insiders do well. H. L. Nieburg has told the fascinating story of how in 1954 two modestly paid aerospace scientists, Dr. Simon Ramo and Dr. Dean Woolridge, attached themselves influentially to the Air Force as consultants and in four fine years (with no known dishonesty) ran a shoe-string of $6,750 apiece into a multimillion-dollar fortune and a position of major industrial prominence.[2] (In 1967 their firm held defense contracts totaling $121 million.) Senator William Proxmire, a man whom many in the defense industries have come to compare unfavorably to typhus, has recently come up with a fascinating contractual arrangement between the Air Force and Lockheed for the new C–5A jet transport. It makes the profits of the company greater the greater its costs in filling the first part of the order, with interesting incentive effects. A recent Department of Defense study reached the depressing conclusion that firms with the poorest performance in designing highly technical electronic systems—and the failure rate was appalling—have regularly received the highest profits. In 1960, 691 retired generals, admirals, naval captains, and colonels were employed by the ten largest defense contractors—186 by General Dynamics alone. A recent study made at the behest of Senator Proxmire found 2,072 employed in major defense firms with an especially heavy concentration in the specialized defense firms.[3] It would be idle to suppose that presently serving officers—those for example on assignment to defense plants—never have their real income improved by the wealthy contractors with whom they are working, forswear all favors, entertain themselves, and sleep austerely alone. Nor are those public servants who show zeal in searching out undue profits or graft reliably rewarded by a grateful public. Mr. A. E. Fitzgerald, the Pentagon management expert who became disturbed over the C–5A contract with Lockheed and communicated his unease, and its causes to the Proxmire Committee, had his recently acquired civil-service status removed and was the subject of a fascinating memorandum (which found its way to Proxmire) outlining the sanctions appropriate to his excess of zeal. Pentagon officials explained that Mr. Fitzgerald had been given his civil-service tenure as the result of a computer error (the first of its kind) and the memorandum on appropriate punishment was a benign gesture of purely scholarly intent designed to specify those punishments against which such a sound public servant should be protected.

Nonetheless the notion of a conspiracy to enrich and corrupt is gravely damaging to an understanding of the military power. It causes men to look for solutions in issuing regulations, enforcing laws, or sending people to jail. It also, as a practical matter, exaggerates the role of the defense industries in the military power—since they are the people who make the most money, they are assumed to be the ones who, in the manner of the classical capitalist, pull the strings. The armed services are assumed to be in some measure their puppets. The reality is far less dramatic and far more difficult of solution. The reality is a complex of organizations pursuing their sometimes diverse but generally common goals. The participants in these organizations are mostly honest men whose public and private behavior would withstand public scrutiny as well as most. They live on their military pay or their salaries as engineers, scientists, or managers or their pay and profits as executives and would not dream of offering or accepting a bribe.

The organizations that comprise the military power are the four Armed Services, and especially their procurement branches. And the military power encompasses the specialized defense contractors—General Dynamics, McDonnell Douglas, Lockheed, or the defense firms of the agglomerates—of Ling-Temco-Vought or Litton Industries. (About half of all defense contracts are with firms that do relatively little other business.) And it embraces the defense division of primarily civilian firms such as General Electric or AT&T. It draws moral and valuable political support from the unions. Men served these organizations in many, if not most, instances, because they believe in what they are doing—because they have committed themselves to the bureaucratic truth. To find and scourge a few malefactors is to ignore this far more important commitment.

The military power is not confined to the Services and their contractors—what has come to be called the military-industrial complex. Associate membership is held by the intelligence agencies which assess Soviet (or Chinese) action or intentions. These provide, more often by selection than by any dishonesty, the justification for what the Services would like to have and what their contractors would like to supply. Associated also are Foreign Service Officers who provide a civilian or diplomatic gloss to the foreign-policy positions which serve the military need. The country desks at the State Department, a greatly experienced former official and ambassador has observed, are often "in the hip pocket of the Pentagon—lock, stock, and barrel, ideologicaly owned by the Pentagon."[4]

---

[2] *In the Name of Science* (Chicago, Quadrangle Press, 1966). This is a book of first-rate importance which the author was so unwise as to publish some three years before concern for the problems he discusses became general. But perhaps he made it so.

[3] General Dynamics 113, Lockheed 210, Boeing 169, McDonnell Douglas 141, North American Rockwell 104, Ling-Temco-Vought 69. All of these firms are heavily specialized to military business; General Dynamics, Lockheed, McDonnell Douglas and North American Rockwell almost completely so.

[4] Ralph Dungan, formerly White House aide to Presidents Kennedy and Johnson and former Ambassador to Chile. Quoted in George Thayer, *The War Business* (Simon

Also a part of the military power are the university scientists and those in such defense-oriented organizations as RAND, the Institute for Defense Analysis, and Hudson Institute who think professionally about weapons and weapons systems and the strategy of their use. And last, but by no means least, there is the organized voice of the military in the Congress, most notably on the Armed Services Committees of the Senate and House of Representatives. These are the organizations which comprise the military power.

The men who comprise these organizations call each other on the phone, meet at committee hearings, serve together on teams or task forces, work in neighboring offices in Washington or San Diego. They naturally make their decisions in accordance with their view of the world—the view of the bureaucracy of which they are a part. The problem is not conspiracy or corruption but unchecked rule. And being unchecked, this rule reflects not the national need but the bureaucratic need—not what is best for the United States but what the Air Force, Army, Navy, General Dynamics, North American Rockwell, Grumman Aircraft, State Department representatives, intelligence officers, and Mendel Rivers and Richard Russell believe to be best.

In recent years Air Force generals, perhaps the most compulsively literate warriors since Caesar, have made their views of the world scene a part of the American folklore. These in all cases serve admirably the goals of their Service and the military power in general. Similarly with the other participants.

Not long ago, Bernard Nossiter, the brilliant economics reporter of the Washington *Post*, made the rounds of some of the major defense contractors to get their views of the post-Vietnam prospect. All, without exception, saw profitable tension and conflict. Edward J. Lefevre, the vice-president in charge of General Dynamics' Washington office, said "One must believe in the long-term threat." James J. Ling, the head of Ling-Temco-Vought, reported that "Defense spending has to increase in our area because there has been a failure to initiate—if we are not going to be overtaken by the Soviets." Samuel F. Downer, one of Mr. Ling's vice-presidents, was more outspoken. "We're going to increase defense budgets as long as those bastards in Russia are ahead of us." A study of the Electronics Industries Association also dug up by Mr. Nossiter (to whom I shall return in a moment) discounted the danger of arms control, decided that the "likelihood of limited war will increase" and concluded that "for the electronic firms, the outlook is good in spite [sic] of [the end of hostilities in] Vietnam."

From the foregoing beliefs, in turn, comes the decision on weapons and weapons systems and military policy generally. No one can tell where the action originates—whether the Services or the contractors initiate decisions on weapons—nor can the two be sharply distinguished. Much of the plant of the specialized defense contractors is owned by the government. Most of their working capital is supplied by the government through progress payments—payments made in advance of completion of the contract. The government specifies what the firm can and cannot charge to the government. The Armed Services Procurement Regulation states that "Although the government does not expect to participate *in every management decision*, it may reserve the right to review the contractor's management efforts. . . ." (Italics added.)

In this kind of association some proposals will come across the table from the military. Some will come back from the captive contractors. Nossiter asked leading contractors, as well as people at the Pentagon, about this. Here are some of the answers.

From John W. Bessire, General Manager for Pricing, General Dynamics, Fort Worth: "We try to foresee the requirements the military is going to have three years off. We work with their requirements people and therefore get new business."

From Richard E. Adams, Director of Advanced Projects, Fort Worth Division of General Dynamics, who thought the source was the military: "Things are too systematized at the Pentagon for us to invent weapons systems and sell them on a need."

On the influence of the military he added: "We know where the power is [on Capitol Hill and among Executive Departments]. There's going to be a lot of defense business and we're going to get our share of it."

From John R. Moore, President of Aerospace and Systems Group of North American Rockwell: "A new system usually starts with a couple of military and industry people getting together to discuss common problems."

After noting that most of his business came from requirements "established by the Defense Department and NASA," he concluded: "But it isn't a case of industry here and the government here. They are interacting continuously at the engineering level."

And finally from a high civilian in the Pentagon: "Pressures to spend more. . . . In part they come from the industry selling new weapons ideas and in part from the military here. Each military guy has his own piece, tactical, antisubmarine, strategic. Each guy gets where he is by pushing his particular thing."

He added: "Don't forget, too, part of it is based on the perception of needs by people in Congress."

The important thing is not where the action originates but in the fact that it serves the common goals of the military and the defense contractors. It is, in the language of labor relations, a sweetheart deal between those who sell to the government and those who buy. Once competitive bidding created an adversary relationship between buyer and seller sustained by the fact that, with numerous sellers, any special relationship with any one must necessarily provoke cries of favoritism. But modern weapons are bought overwhelmingly by negotiation and in most cases from a single source of supply. (In the fiscal year ending in 1968, General Accounting Office figures show that 57.9 per cent of the $43 billion in defense contracts awarded in that year was by negotiation with a single source of supply. Of the remainder 30.6 per cent was awarded by negotiation where alternative sources of supply had an opportunity to participate and only 11.5 per cent was open to advertised competitive bidding.)[5] Under these circumstances the tendency to any adversary relationship between the Services and their suppliers is minimal. Indeed, where there are only one or two sources of supply for a weapons system, the interest of the Services in sustaining a source of supply will be no less than that of the firm in question in being sustained.

Among those who spoke about the sources of ideas on weapons needs, no one was moved to suggest that public opinion played any role. The President, as the elected official responsible for foreign policy, was not mentioned. The Congress came in only as an afterthought. And had the Pentagon official who mentioned the Congress had been pressed, he would have agreed that its "perception of needs" is a revelation that almost always results from prompting by either the military or the defense industries. It was thus, for example, that the need for a new generation of manned bombers was perceived (and provided for) by Congress though repeatedly vetoed an unnecessary by Presidents Kennedy and Johnson. But in the past the role of the Congress has been overwhelmingly acquiescent and passive. As Senator Gaylord Nelson said in the Senate in February 1964: ". . . an established tradition . . . holds that a bill to spend billions of dollars for the machinery of war must be rushed through the House and the Senate in a matter of hours, while a treaty to advance the cause of peace, or a program to help the underdeveloped nations . . . guarantee the rights of all our citizens, or . . . to advance the interests of the poor must be scrutinized and debated and amended and thrashed over for weeks and perhaps months."

IV

We see here a truly remarkable reversal of the American political and economic system as outlined by the fathers and still portrayed to the young. That view supposes that ultimate authority—ultimate sovereignty—lies with the people. And this authority is assumed to be comprehensive. Within the ambit of the state the citizen expresses his will through the men—the President and members of the Congress—whom he elects. Outside he accomplishes the same thing by his purchases in the market. These instruct supplying firms—General Motors, General Electric, Standard Oil of New Jersey—as to what they shall produce and sell. But here we find the Armed Services or the corporations that supply them making the decisions and instructing the Congress and the public. The public accepts whatever is so decided and pays the bill. This is an age when the young are being instructed, in my view rightly although with unnecessary solemnity, to respect constitutional process and seek change within the framework of the established political order. And we find the assumed guardians of that order, men with no slight appreciation of their righteousness and respectability, calmly turning it upside down themselves.

How did this remarkable reversal in the oldest of constitutional arrangements come about? How, in particular, did it come about in a country that sets great store by individual and citizen rights and which traditionally has been suspicious of military, industrial, and bureaucratic power? How did it come to allow these three forces to assert their authority over a tenth of the economy and something closer to ten-tenths of our future?[6]

V

Six things brought the military-industrial bureaucracy to its present position of power. To see these forces is also to be encouraged by the chance for escape.

First there has been, as noted, the increasing bureaucratization of our life. In an economically and technologically complex society, more and more tasks are accomplished by specialists. Specialists must then have their knowledge and skills united by organization. Organization, then, as we have seen,

and Schuster). The appearance of the State Department as a full-scale participant in the military power may have been the hopefully temporary achievement of Secretary Rusk. Apart from a high respect for military acumen and need, he in some degree regarded diplomacy as subordinate to military purpose. In time such attitudes penetrate deeply into organization.

[5] Testimony of Elmer B. Staats, Comptroller General, before Senator Proxmire's Committee (November 11, 1968).

[6] I have argued elsewhere (*The New Industrial State*, Houghton Mifflin, 1967) that with increasing industrialization the sovereignty of the consumer or citizen yields to the sovereignty of the producer or public bureaucracy. Increasingly the consumer or citizen is made subordinate to their needs. I have been rather sharply challenged. But in the very important area of military production, about 10 per cent of the total we see that producer sovereignty is accepted and avowed. Not even my most self-confident critics would be wholly certain of my error here.

proceeds to assert its needs and beliefs. These will not necessarily be those of the individual or community.

In what Ralph Lapp has called the weapons culture, both economic and technological complexity are raised to the highest power. So, accordingly, are the scope and power of organization. So, accordingly, is the possibility of self-serving belief.

It is a power, however, which brings into existence its own challenge. The same technical and social complexity that requires organization requires that there be large numbers of trained and educated people. Neither these people nor the educational establishment that produces them are docile in the face of organization. So with organization come people who resist it—who are schooled to assert their individual beliefs and convictions. No modern military establishment could expect the disciplined obedience which sent millions (in the main lightly schooled lads from the farm) against the machine guns as late as World War I.

The reaction to organization and its beliefs may well be one of the most rapidly developing political moods of our time. Clearly it accounted for much of the McCarthy strength in the last year—for if Dean Rusk or General Westmoreland were the epitome of the organization man, Eugene McCarthy was its antithesis. Currently one sees it sweeping ROTC off the campuses—or out of the university curricula. It is causing recruiting problems for big business—and not alone the defense firms. One senses, if the draft survives, that it will cause trouble for the peacetime Armed Forces.

But so far the impressive thing is the power that massive organization has given to the military industrial complex and not the resistance it is arousing. The latter is for the future.

Second in importance in bringing the military-industrial complex to power were the circumstances and images of foreign policy in the late Forties, Fifties and early Sixties. The Communist world, as noted, was viewed as a unified imperium mounting its claim to every part of the globe. The postwar pressure on Eastern Europe and on Berlin, the Chinese revolution, and the Korean war, seemed powerful evidence in the case. And, after the surprisingly early explosion of the first Soviet atomic bomb, followed within a decade by the even more astonishing flight of the first Sputnik, it was easy to believe that the Communist world was not only politically more unified than the rest but technologically stronger as well.

The natural reaction was to delegate power and concentrate resources. The military Services and their industrial allies were given unprecedented authority—as much as in World War II—to match the Soviet technological initiative. And the effort of the nation's scientists (and other scholars) was concentrated in equally impressive fashion. None or almost none remained outside. Robert Oppenheimer was excluded, not because he opposed weapons development in general or the hydrogen bomb in particular, but because he thought the latter unnecessary and undeliverable. That anyone, on grounds of principle, should refuse his services to the Pentagon or Dow Chemical was nearly unthinkable. Social scientists responded eagerly to invitations to spend the summer at RAND. They devoted their winters to seminars on the strategy of defense and deterrence. The only question in this time was whether a man could get a security clearance. The extent of a man's access to secret matters measured his responsibility and influence in public affairs and prestige in the community.

The effect of this concentration of talent was to add to the autonomy and power of the organizations responsible for the effort. Criticism or dissent requires knowledge; the knowledgeable men were nearly all inside. The Eisenhower Administration affirmed the power of the military by appointing Secretaries of Defense who were largely passive except as they might worry on occasion about the cost. The Democrats, worrying about a nonexistent missile gap and fearing, as always, that they might seem soft on Communism, accorded the military more funds and power, seeking principally to make it more efficient.

This enfranchisement of the military power was in a very real sense the result of a democratic decision—it was a widely approved response to the seemingly fearsome forces that surrounded us. With time those who received this unprecedented grant of power came to regard it as a right. Where weapons and military decision were concerned, their authority was meant to be plenary. Men with power have been prone to such error.

Third, secrecy confined knowledge of Soviet weapons and responding American action to those within the public and private bureaucracy. No one else had knowledge, hence no one else was qualified to speak. Senior members of the Armed Services, their industrial allies, the scientists, the members of the Armed Services Committees of the Congress were in. It would be hard to imagine a more efficient arrangement for protecting the power of a bureaucracy. In the academic community and especially in Congress there was no small prestige in being a member of this club. So its influence was enhanced by the sense of belonging and serving. And, as the experience of Robert Oppenheimer and other less publicized persons showed, it was possible on occasion to exclude the critic or skeptic as a security risk.

Fourth, there was the disciplining effect of personal fear. A nation that was massively alarmed about the unified power of the Communist world was not tolerant of skeptics or those who questioned the only seemingly practical line of response. Numerous scientists, social scientists, and public officials had come reluctantly to accept the idea of the Communist threat. This history of reluctance could now involve the danger—real or imagined—that they might be suspected of past association with this all-embracing conspiracy. The late Senator Joseph R. McCarthy would not have been influential in ordinary times; but he and others saw or sensed the opportunity for exploiting national and personal anxiety. The result was further and decisive pressure on anyone who seemed not to concur in the totality of the Communist threat. (McCarthy was broken only when he capriciously attacked the military power.)

Fear provided a further source of immunity and power. Accepted Marxian doctrine holds that a cabal of capitalists and militarists is the cutting edge of capitalist imperialism and the cause of war. Anyone who raised a question about the military industrial complex thus sounded suspiciously like a Marxist. So it was a topic that was avoided by the circumspect. Heroism in the United States involves some important distinctions. It requires a man to stand up fearlessly, at least in principle, to the prospect for nuclear extinction. But it allows him to proceed promptly to cover if there is risk of being called a Communist, a radical, an enemy of the system. Death we must face but not social obloquy or political ostracism. The effect of such discriminating heroism in the Fifties and Sixties was that most potential critics of the military power were exceptionally reticent.

In 1961, in the last moments before leaving office, President Eisenhower gave his famous warning: "In the councils of government we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-industrial complex. The potential for the disastrous rise of misplaced power exists and will persist." This warning was to become by a wide margin the most quoted of all Eisenhower statements. This was principally for the flank protection it provided for all who wanted to agree. For many years thereafter anyone (myself included) who spoke to the problem of the military power took the thoughtful precaution of first quoting President Eisenhower. He had shown that there were impeccably conservative precedents for our concern.

Fifth, in the Fifties and early Sixties the phrase "domestic priority" had not yet become a cliché. The civilian claim on federal funds was not, or seemed not, to be overpowering. The great riots in the cities had not yet occurred. The appalling conditions in the urban core that were a cause were still unnoticed. Internal migration had long been under way but millions were yet to come from the rural into the urban slums. Poverty had not yet been placed on the national agenda, with the consequence that we would learn how much and how abysmal it is. And promises not having been made to end poverty, expectations had not been aroused. The streets of Washington, D.C., were still safer than those of Saigon. Travel by road and commuter train was only just coming to a crawl. The cities' air and water were dirty but not yet lethally so.

In this innocent age, in 1964, taxes were reduced because there seemed to be danger of economic stagnation and unemployment from raising more federal revenue than could quickly be spent. The then Director of the Budget, Kermit Gordon, was persuaded that if an excess of revenue were available the military would latch on to it. Inflation was not a pressing issue. Military expenditures, although no one wished to say so, did sustain employment. Circumstances could not have been better designed economically speaking, to allow the military a clear run.

Sixth and finally, in these years, both conservative and liberal opposition to the military-industrial power was muted. Nothing could be expected, in principle, to appeal less to conservatives than a vast increase in bureaucratic power at vast cost. In an earlier age the reaction would have been apoplectic. Some conservatives in an older tradition—men genuinely concerned about the Leviathan State—were aroused. Ernest Weir, the head of National Steel and the foe of FDR and the New Deal, Alf M. Landon, the much-underestimated man who opposed Roosevelt in 1936, Marriner Eccles, banker and long-time head of the Federal Reserve, and a few others did speak out. But for most it was enough that the Communists—exponents of a yet more powerful state and against private property too—were on the other side. One accepted a lesser danger to fight a greater one. And, as always, when many are moderately aroused some are extreme. It became a tenet of a more extreme conservatism that civilians should never interfere with the military except to provide more money. Nor would there be any compromise with Communism. It must be destroyed. Their military doctrine, as Daniel Bell has said, was "that negotiation with the Communists is impossible, that anyone who discusses the possibility of such negotiation is a tool of the Communists, and that a 'tough policy'—by which, *sotto voce*, is meant a preventative war of a first strike—is the only means of forestalling an eventual Communist victory."[7] To an impressive extent, in the Fifties and Sixties this new conservatism, guided by retired Air Force Generals and the redoubtable Edward Teller, became the voice of all conservatism on defense policy.

The disappearance of liberal criticism was almost as complete—and even more remarkable. An association of military and industrial power functioning without restraint would have been expected to arouse liberal

[7] Quoted by Ralph E. Lapp in *The Weapons Culture* (Norton, 1968).

passion. So also the appropriation of public power for private purpose by defense contractors, some of them defining missions for the Services so as to require what they had to sell. But liberals did not react. Like conservatives they accepted a lesser threat to liberty to forestall a greater one. Also it was not easy for a generation that had asked for more executive power for FDR and his successors over conservative opposition to see danger in any bureaucracy or remedy in stronger legislative control. This was a too radical reversal of liberal form.

The generation of liberals which was active in the Fifties and Sixties had also been scarred by the tactics of the domestic Communists in politics and the trade-union movement. And members of this generation had seen what happened to friends who had committed themselves to the wartime alliance with the Soviets and had nailed their colors to its continuation after the war. Stalin had let them down with a brutal and for many a mortal thump. Those who escaped, or many of them, made common cause with the men who were making or deploying weapons to resist Communism, urging only, as good liberals, that there was a social dimension to the struggle. As time passed it was discovered that many good and liberal things—foreign aid, technical assistance, travel grants, fellowships, overseas libraries—could be floated on the communist threat. Men of goodwill became acomplished in persuading the more retarded to vote for foreign-aid legislation, not as a good thing in itself but as an indispensable instrument in the war against Communism. Who, having made this case, could then be critical of military spending for the same purpose?

Additionally in the Fifties and Sixties American liberals were fighting for the larger federal budget not for the things it bought but for the unemployment it prevented. Such a budget, with its stabilizing flow of expenditures and supported by personal income taxes which rose and fell with stabilizing effect, was the cornerstone of the New or Keynesian Economics. And this economics of high and expanding employment, in turn, was the cornerstone of the liberal position. As noted it was not easy for liberals to admit that defense expenditures were serving this benign social function; when asked they (*i.e.* we) always said that spending for education, housing, welfare, and civilian public works would serve just as well and be much welcomed as an alternative.

But there was then no strong pressure to spend for these better things. Accordingly it was not easy for liberals to become aroused over an arms policy which had such obviously beneficent effects on the economy.

By the early Sixties the liberal position was beginning to change. From comparatively early in the Kennedy Administration—the Bay of Pigs was a major factor in this revelation—it became evident that a stand would have to be made against policies urged by the military and its State Department allies—against military intervention in Cuba, military intervention in Laos, military intervention in Vietnam, an all-out fallout shelter program, unrestricted nuclear testing, all of which would be disastrous for the President as well as for the country and world. A visible and sometimes sharp division occurred between those who, more or less automatically, made their alliance with the military power, and those—Robert Kennedy, Adlai Stevenson, Theodore Sorensen, Arthur Schlesinger, Averell Harriman, and, though rendering more homage to the organizations of which they were a part, George Ball and Robert McNamara—who saw the dangers of this commitment. With the Johnson Administration this opposition disappeared or was dispersed. The triumph of those who allied themselves with the bureaucracy was the disaster of that Administration.

The opposition, much enlarged, then reappeared in the political theater. Suspicion of the military power in 1968 was the most important factor uniting the followers of Senators Kennedy, McCarthy, and McGovern. Along with the more specific and more important opposition to the Vietnam conflict, it helped to generate the opposition that persuaded Lyndon Johnson not to run. And the feeling that Vice President Humphrey was not sufficiently firm on this issue—that he belonged politically to the generation of liberals that was tolerant to the military-industrial power—unquestionably diluted and weakened his support. Conceivably it cost him the election.

VI

To see the sources of the strength of the military-industrial complex in the Fifties and Sixties is to see its considerably greater vulnerability now. The Communist imperium, which once seemed so fearsome in its unity, has broken up into bitterly antagonistic blocks. Moscow and Peking barely keep the peace. Fear in Czechoslovakia, Yugoslavia, and Romania is not of the capitalist enemy but the great Communist friend. The more intimate calculations of the Soviet High Command on what might be expected of the Czech (or for that matter the Romanian or Polish or Hungarian) army in the event of war in Western Europe must not be without charm. Perhaps they explain the odd military passion of the Soviets for the Egyptians. The Soviets have had no more success than has capitalism in penetrating and organizing the backward countries of the world. Communist and capitalist jungles are indistinguishable. Men of independent mind recognize that after twenty years of aggressive military competition with the Soviets our security is not greater and almost certainly less than when the competition began. And although in the Fifties it was fashionable to assert otherwise ("a dictator does not hesitate to sacrifice his people by the millions") we now know that the Soviets are as aware of the totally catastrophic character of nuclear war as we are—and more so than our more articulate generals.

These changes plus the adverse reaction to Vietnam have cost the military power its monopoly of the scientific community. This, in turn, has damaged its claim to a monopoly of knowledge including that which depends on security classification. Informed critics are amply available outside the military-industrial complex. When earlier this year Under Secretary of Defense Packard sought, in an earlier tradition, to discredit the opposition of Dr. Herbert A. York, former Director of Defense Research and Engineering, to the ABM, on the grounds that the latter did not have access to secret information, the effort backfired. The only person whose credibility was damaged was Secretary Packard. In consequence men are now available to distinguish between what weapons are relevant to an equilibrium with the Soviets, what destroys this balance by encouraging a new competitive round, and what serves primarily the prestige of the Services and the prestige and profits of the contractors. The attacks on the Sentinel-Safeguard ABM system could never have been mounted in the Fifties.

Additionally, civilian priority has become one of the most evocative words in the language. Everywhere—for urban housing and services, sanitation, schools, police, urban transportation, clean air, potable water—the needs are huge and pressing. Because these needs are not being met the number of people who live in fear of an urban explosion may well be greater than those who are alarmed by the prospect of nuclear devastation. For many years I have lived in summers on an old farm in southern Vermont. In the years following Hiroshima we had the advance refugees from the atomic bomb. Now we have those who are escaping the ultimate urban riot. The second migration is much bigger than the first and has had a far more inflationary effect on local real-estate values.

Certainly the day when military spending was a slightly embarrassing alternative to unemployment is gone and, one imagines, forever.

With all of these changes has come a radical change in the political climate. Except in the darker reaches of Orange County and suburban Dallas (where defense expenditures also have their influence) fear of Communism has receded. We have lived with the Communists on the same planet now for a half-century. An increasing number are disposed to believe we *can* continue doing so. Communism seems somewhat less triumphant than twenty years ago. Perhaps the Soviet Union is yet another industrial state in which organization—bureaucracy—is in conflict with the people it must educate in such numbers for its tasks. Mr. Nixon in his many years as a political aspirant was not notably averse to making capital out of the Communist menace. But neither, if a little belatedly, was he a man to resist a trend. Many must have noticed that his warnings overt or implied of the Communist menace in his Inaugural Address were rather less fiery than those of John F. Kennedy eight years earlier.

The anxiety which led to the great concentration of military and industrial power in the Fifties having dissipated, the continued existence of that power has naturally become a political issue. There are many who think that Mr. Nixon sacrificed some, perhaps much, of his lead when, in the closing days of the Presidential campaign, he promised to revitalize the arms race with an effort to establish clear superiority over the Soviets. There can be little question that General Curtis LeMay, far from attracting voters to Governor George Wallace in 1968, was a disaster. At a somewhat lower level than Eisenhower, MacArthur, Patton, and Bradley, LeMay was one of the *bona fide* heroes in the American pantheon. But his close association with the military power, especially his long efforts to make nuclear warfare palatable, if not altogether appetizing, to the American public, was unnerving. As noted a stand-up-to-it heroism is combined with a deep sensitivity when the nuclear nerve is touched.

If the potential followers of Governor Wallace were capable of alarm over the military power, then the potential opposition is not confined to the bearded and barefoot left. (This, as in the case of Vietnam, will be the first assumption of the bureaucracy.) Nor is it. Concern reaches deeply into the suburban middle class and business community. During the summer of 1968, if I may recur once more to personal experience, I was concerned with raising money for Eugene McCarthy. We raised a great deal: the efforts with which I was at least marginally associated produced some $2.5 million. Overwhelmingly we got that money from businessmen. Opposition to the Vietnam war was, of course, the prime reason for this support. But concern over the military power was a close (and closely affiliated) second. When one is asking for money one very soon learns what evokes response.

Social concern, however inappropriate for a businessman, was most important but there were also very good business reasons for being aroused. In 1968, the hundred largest defense contractors had more than two-thirds (67.4 per cent) of all the defense business and the smallest fifty of these had no more in the aggregate than General Dynamics and Lockheed. A dozen firms specializing in military business (*e.g.*, McDonnell Douglas, General Dynamics, Lockheed, United Aircraft) together with General Electric and A T & T had a third of all the business. For the vast majority of businessmen the only association with the defense business is through the taxes they pay. Not even a subcontract comes their way. And they have another cost. They must operate in communities that are starved for revenue, where, in consequence, their business is exposed to disorder and violence

and where materials and manpower are preempted by the defense contractors. They must also put up with inflation, high interest rates, and regulation on overseas investment occasioned by defense spending. The willingness of American businessmen to suffer on behalf of the big defense contractors has been a remarkable manifestation of charity and self-denial.

Two other changes have altered the position of the military power. In the Fifties the military establishment of the United States was still identified in the public mind with the great captains of World War II—with Eisenhower, Marshall, MacArthur, Bradley, King, Nimitz, Arnold. And many members of a slightly junior generation—Maxwell Taylor, James Gavin, Matthew Ridgway, Curtis LeMay—were in positions of power. Some of these soldiers might have done less well had they been forced to fight an elusive and highly motivated enemy in the jungle of Vietnam encumbered by the leisurly warriors of the ARVN. (At one time or another, Eisenhower, MacArthur, Gavin all made it explicitly clear that they would never have got involved in such a mistake.) The present military generation is intimately associated with the Vietnam misfortune. And its credibility has been deeply damaged by its fatal association with the bureaucratic truths of that war—with the long succession of defeats that become victories, the victories that become defeats, and brilliant actions that did not signify anything at all. In the Fifties it required courage for a civilian to challenge Eisenhower on military matters. Anyone is allowed to doubt the omniscience of General Westmoreland.

Finally, all bureaucracy has a mortal weakness; it cannot respond effectively to attack. The same inertial guidance which propels it into trouble—which sends it mindlessly into the Bay of Pigs or Vietnam even when disaster is evident—renders it helpless in self-defense. It can, in fact, only mimic itself. Organization could not come up with any effective response to its critics on Vietnam. The old slogans—we must resist worldwide Communist aggression, we must not reward aggression, we must stand by our brave allies—were employed not only after repetition had robbed them of all meaning but after they had been made ludicrous by events. In the end Secretary of State Rusk was reduced to mnemonic speeches about our commitments. Organized thought was incapable of anything better.

So with the military power—only more so. One of the perquisites of great power is that its use need not be defended. In consequence kings, czars, dictators, capitalists, even union leaders—when their day of accounting comes have rarely been able to speak for themselves. As the military power comes under scrutiny, it will be reduced to asserting that its critics are indifferent to Soviet or Chinese intentions, unacquainted with the most recent intelligence, militarily inexperienced, naive, afraid to look nuclear destruction in the eye. Or it will be said that they are witting or unwitting tools of the Communist conspiracy. Following Secretary Laird's effort on behalf of the ABM (when he deployed from new intelligence an exceptionally alarming generation of Soviet missiles) a special appeal will be made to fear. A bureaucracy under attack is a fortress with thick walls but fixed guns.

VII

It is a cliché, much beloved of those who supply the diplomatic gloss for the military power, that not much can be done to limit the latter—or its budget—so long as "American responsibilities" in the world remain unchanged. And for others it is a persuasive point that to reduce the military budget will require a change in foreign policy.

But these changes have already occurred. In the years following World War II there was a spacious view of the American task in the world. We guarded the borders of the non-Communist world. We prevented subversion there and put down wars of liberation elsewhere. In pursuit of these aims we maintained alliances, deployed forces, provided military aid on every continent. This was the competition of the superpowers. We had no choice but to meet the challenge of that competition.

We have already found that the world so depicted does not exist. Superpowers there are but superpowers cannot much affect the course of life within the countries they presume to see as on their side. In part that was the lesson of Vietnam; annual expenditures of $30 billion, a deployment of more than half a million men, could not much affect the course of development in one small country. In lands as diverse as India, Indonesia, Peru, and the Congo we have found that our ability to affect the development is even less. We have also found, as in the nearby case of Cuba, that a country can go Communist without inflicting any overpowering damage.

What we have not done is accommodate our military policy to this reality. Military aid, bases, conventional force levels, weapons requirements still assume superpower omnipotence. (And the military power still projects this vision of our task.) Our foreign policy has, in fact, changed. It is the Pentagon that hasn't.

VIII

To argue that the military-industrial complex is now vulnerable is not to suggest that it is on its last legs. It spends a vast amount of public money, which insures the support of many (though by no means all) of those who receive it. Many Senators and Congressmen are slow to criticize expenditures in their districts even though for most of their supporters the cost vastly exceeds the gain. (Defense contracts are even more concentrated geographically than by firm. In 1967 three favored states out of fifty—California and New York and Texas—received one-third. Ten states accounted for a full two-thirds. In all but a handful of cases the Congressman or Senator who votes for military spending is voting for the enrichment of peope he does not represent at the expense of those who elect him.) And there is the matter of habit and momentum. The military power has been above challenge for so long that to attack still seems politically quixotic. One recalls, however, that it once seemed quixotic to be against the Vietnam war.

Nonetheless control is possible. I come to my final task. It is to offer a political decalogue of what is required. It is as follows:

(1) *The goal, all must remember, is to get the military power under firm political control. This means electing a President on this issue next time. This, above all, must be the issue in the next election.*

However, for the next three and a half years, not much can be done about the Presidency. Also if Mr. Nixon does not resist the military power he will follow President Johnson into oblivion—conceivably taking quite a few others with him. This one must suppose he will see. So while all possible moral pressure must be kept on the President, the immediate target is Congress.

(2) *Congress will not be impressed by learned declamation on the danger of military power. There must be organization.* The last election showed the power of that part of the community—the colleges, universities, concerned middle class, businessmen—which was alert to the Vietnam war. Now in every possible Congressional District there must be an organization alert to the military power. Anciently, legislators up for election have pledged themselves to an "adequate national defense," a euphemism for according the Pentagon a blank check. In the next election everyone must be pressed for a promise to resist military programs and press relentlessly for negotiations along lines indicated below. Any Senator or Congressman who does not believe that the Congress should exercise strict supervision over the Pentagon, that the latter should be strictly answerable to Congress both for its actions and its expenditures, confesses his indifference to the proper role of the legislative body. He will be better at home.

This effort must not be confined to the North, the Middle West, or West. In the last five years there has been a rapid liberalization of the major college and university centers of the South. Nowhere did McCarthy or Kennedy draw larger and more enthusiastic crowds than in the big Southern universities. Mendel Rivers, Richard Russell, Strom Thurmond, John Tower, and the other sycophants of the military from the South must be made sharply aware of this new constituency—and if possible be retired by it.

(3) *The Armed Services Committees of the two houses must obviously be the object of a special effort.* They are now, with the exception of a few members, a rubber stamp for the military power. Some liberals have been reluctant to serve on these fiefs. No effort, including an attack on the seniority system itself, should be spared to oust the present functionaries and to replace them with acute and independent-minded members. Here too it is important to get grassroots expression from the South.

(4) *The goal is not to make the military power more efficient or more righteously honest. It is to get it under control.* These are very different objectives. The first seeks out excessive profits, high costs, poor technical performance, favoritism, delay, or the other abuses of power. The second is concerned with the power itself. The first is diversionary for it persuades people that something is being done while leaving power and budgets intact.

(5) *This is not an antimilitary crusade. Generals and admirals and soldiers, sailors, and airmen are not in the object of attack. The purpose is to return the military establishment to its traditional position in the American political system.* It was never intended to be an unlimited partner in the arms industry. Nor was it meant to be a controlling voice in foreign policy. Any general or admiral who rose to fame before World War II would be surprised and horrified to find that his successors in the profession of arms are now commercial accessories of General Dynamics.

(6) *Whatever its moral case there is no political future in unilateral disarmament.* And the case must not be compromised by wishful assumptions about the Soviets which the Soviets can then destroy. It can safely be assumed that nuclear annihilation is as unpopular with the average Russians as it is with the ordinary American, and that their leaders are not retarded in this respect. But it is wise to assume that within their industrial system, as within ours, there is a military-industrial bureaucracy committed to its own perpetuation and growth. This governs the more precise objectives of control.

(7) *Four broad types of major weapons systems can be recognized.* There are first those that are related directly to the existing balance of power or the balance of terror vis-a-vis the Soviets. The ICBM's and the Polaris submarines are obviously of this sort; in the absence of a decision to disarm unilaterally, restriction or reduction in these weapons requires agreement with the Soviets. There are, secondly, those that may be added within this balance without tipping it drastically one way or the other. They allow each country to destroy the other more completely or redundantly. Beyond a certain number, more ICBMs are of this sort. Thirdly there are those that, in one way or another, tip the balance or seem to do so. They promise, or can be thought to promise, destruction of the second country while allowing the first to escape or largely escape. Inevitably, in the

absence of a prospect for agreement, they must provoke response. An ABM, which seems to provide defense while allowing continued offense, is of this sort. So are missiles of such number, weight, and precision as to be able to destroy the second country's weapons without possibility of retaliation.

Finally there are weapons systems and other military construction and gadgetry which add primarily to the prestige of the Armed Services, or which advance the competitive position of an individual branch.

The last three classes of weapons do not add to such security as is provided under the balance of terror.[8] Given the response they provoke, they leave it either unchanged or more dangerous. But all contribute to the growth, employment, and profits of the contractors. All are sought by the Armed Forces. The Army's Sentinel (now Safeguard) Anti-Ballistic Missile system is urged even though it is irrelevant and possibly dangerous as a defense. As Mr. Russell Baker has said, it is based at least partly on the assumption that the Chinese would "live down to our underestimates of their abilities and produce a missile so inferior that even a Sentinel can shoot it down." But it holds a position for the Army in this highly technological warfare. The Air Force wants a new generation of manned bombers, their vulnerability notwithstanding, because an Air Force without such bombers—with the key fighting men sitting silently in underground command posts—is much less interesting. And Boeing, General Dynamics, Lockheed, North American Rockwell, Grumman, and McDonnell Douglas are naturally glad that this is so. The Navy wants nuclear carriers and their complement of aircraft, their vulnerability also notwithstanding, for the same reason.

A prime objective of control is to eliminate from the military budget those things which contribute to the arms race or are irrelevant to the present balance of terror. This includes the second, third, and fourth classes of weapons mentioned above. The ABM and the MIRV (the Multiple Independently-targeted Reentry Vehicle), both of which will spark a new competitive round of a peculiarly uncontrollable sort, as well as manned bombers and nuclear carriers are all of this sort. Perhaps as a simple working goal, some five billions of such items should be eliminated in each of the next three years for a total reduction of fifteen billion.[9]

(8) The second and more important objective of control is to win agreement with the Soviets on arms control and reduction. This means, in contrast with present military doctrine, that we accept that the Soviets will bargain in good faith. And we accept also that an imperfect agreement—for none can be watertight—is safer than continuing competition. It means, as a practical matter, that the military role in negotiations must be sharply circumscribed. Military men—prompted by their industrial allies—will always object to any agreement that is not absolute, self-enforcing, and watertight. Under such circumstances arms-control negotiations become, as they have been in recent times, a charade. Instead of halting the arms race they may even have the effect of justifying it. "After all we are trying for agreement with the ————." The Congress and the people must make the necessity for this control relentlessly clear to the Executive.

(9) Independent scientific judgment must be mobilized in this effort—as guidance to the political effort, for advice to Congress, and of course, within the Executive itself. The arms race, in its present form, is a scientific and mathematical rather than a military contest. Those military can no longer barricade themselves behind claims of military expertise or needed secrecy, opposing views must be reliably available.

But decisions on military needs are still made in a self-serving compact between those who buy weapons and those who sell. So the time has come to constitute a special body of highly qualified scientists and citizens to be called, perhaps, the Military Audit Commission. Its function would be to advise the Congress and inform the public on military programs and negotiations. It should be independently, *i.e.* privately, financed. It would be the authoritative voice on weapons systems that add to international tension or competition or serve principally the competitive position and prestige of the Services or the profits of their suppliers. It would have the special function of serving as a watchdog on negotiations to insure that the military power is excluded.

(10) Control of the military power must be an ecumenical effort. Obviously no one who regards himself as a liberal can any longer be a communicant of the military power. But the issue is one of equal concern to conservatives—to the conservative who traditionally suspects any major concentration of public power. It is also an issue for every businessman whose taxes are putting a very few of his colleagues on the gravy train. But most of all it is an issue for every citizen who finds the policy images of this bureaucracy—the Manned Orbiting Laboratory preserving the American position when all or most are dead below—more than a trifle depressing.

IX

A few will find the foregoing an unduly optimistic effort. More, I suspect, will find it excessively moderate, even commonplace. It makes no overtures to the withdrawal of scientific and other scholarly talent from the military. It does not encourage a boycott on recruiting by the military contractors. It does not urge the curtailment of university participation in military research. These, there should be no mistake about it, will be necessary if the military power is not brought under control. Nor can there be any very righteous lectures about such action. The military power has reversed constitutional process in the United States—removed power from the public and Congress to the Pentagon. It is in a poor position to urge orderly political process. And the consequences of such a development could be very great—they could amount to an uncontrollable thrust to unilateral disarmament. But my instinct is for action within the political framework. This is not a formula for busy ineffectuality. None can deny the role of those who marched or picketed on Vietnam. But, in the end, it was political action that arrested the escalation and broke the commitment of the bureaucracy to this mistake. Control of the military power is a less easily defined and hence more difficult task. (To keep the military and its allies and spokesmen from queering international negotiations will be especially difficult.) But if sharply focused knowledge can be brought to bear on both weapons procurement and negotiation; if citizen attitudes can be kept politically effective by the conviction that this is the political issue of our time; if there is effective organization; if in consequence a couple of hundred or even a hundred members of Congress can be kept in a vigilant, critical, and aroused mood; and if for the President this becomes visibly the difference between success and failure, survival and eventual defeat, then the military-industrial complex will be under control. It can be made to happen.

[From the New York Times Magazine, June 22, 1969]

AS EISENHOWER WAS SAYING: "WE MUST GUARD AGAINST UNWARRANTED INFLUENCE BY THE MILITARY-INDUSTRIAL COMPLEX"[1]

(By Richard F. Kaufman[2])

Eight years have gone by since President Eisenhower opened the door on the military-industrial skeleton in the closet. Yet only recently has research started to hang some real meat on his bony, provocative phrase, "military-industrial complex." What is emerging is a real Frankenstein's monster. Not only is there considerable evidence that excessive military spending has contributed to a misallocation of national resources, but the conclusion seems inescapable that society has already suffered irreparable harm from the pressures and distortions thus created.

Military and military-related spending accounts for about 45 per cent of all Federal expenditures. In fiscal 1968, the total Federal outlays were $178.9-billion. The Defense Department alone spent $77.4-billion, and such related programs as military assistance to foreign countries, atomic energy and the Selective Service System raised the figure to $80.5-billion. The $4-billion program of the National Aeronautics and Space Administration and other activities intertwined with the military carry the real level of defense spending considerably higher.

To place the defense bill in perspective we should note that 1968 appropriations were less than $500-million for food stamps, school lunches and the special milk program combined. For all federally assisted housing programs, including Model Cities, they were about $2-billion. The poverty program received less than $2-billion. Federal aid to education was allotted about $5.2-billion.

---

[8] Charles L. Schultze, the former Director of the Budget under President Johnson and his associate William M. Capron, neither of them radicals in this matter, have recently observed that "Once we have achieved a minimum deterrent, plus an ample margin of safety and a healthy R & D program to be prepared for the future, it is difficult to conceive of any value the United States could gain from additional 'superiority' in nuclear forces. . . . we cannot attain a first-strike capability. And if we can retaliate with devastating force against a Soviet attack, what do we gain by having twice or three times that force? It adds nothing to our diplomatic strength in situations short of nuclear war. It does not add to deterrence—devastation twice over is no greater deterrent than devastation once. We can, to some extent, limit damage to the United States by having the capability, in a retaliatory strike, to target Soviet missiles and bombers withheld in a first strike. But the 'ample margin of safety' described above gives us such a capability already. Excessive superiority, in other words, gains us little of value, costs substantially in budget terms, and almost inevitably forces a Soviet response which eliminates the superiority temporarily gained." Unpublished memorandum. A valuable recent document on this whole subject is George W. Rathjens' *The Future of the Strategic Arms Race* (Carnegie Endowment for International Peace, 1969).

[9] I would urge leaving the space race out of this effort. The gadgetry involved is not uniquely lethal; on the contrary it channels competition with the Soviets, if such there must be, into comparatively benign channels. It has so far been comparatively safe for the participants—strikingly so as compared with early efforts at manned flight in the atmosphere and across the oceans. One observes, between ourselves and the Soviets, a gentlemanly obligation to admire each other's accomplishments which, on the whole, compares favorably with similar manifestations at the Olympic games or involving music and the ballet.

[1] Farewell radio and television address to the American people, Jan. 17, 1961.

[2] Richard F. Kaufman is an economist on the staff of the Joint Economic Subcommittee on Economy in Government, which Senator William Proxmire heads.

The funds spent on these programs and all those categorized as health, education, welfare, housing, agriculture, conservation, labor, commerce, foreign aid, law enforcement, etc.—in short, all civilian programs—amounted to about $82.5-billion, if the space and veterans' programs are not included, and less than $70-billion if the interest on the national debt is not considered.

The largest single item in the military budget—it accounted for $44-billion in 1968—is procurement, which includes purchasing, renting or leasing supplies and services (and all the machinery for drawing up and administering the contracts under which those purchases and rentals are made). Procurement, in other words, means Government contracts; it is mother's milk to the military-industrial complex.

The Pentagon annually signs agreements with about 22,000 prime contractors; in addition, more than 100,000 subcontractors are involved in defense production. Defense-oriented industry as a whole employs about 4 million men. However, although a large number of contractors do some military business, the largest share of procurement funds is concentrated among a relative handful of major contractors. Last year the 100 largest defense suppliers obtained $26.2-billion in military contracts, 67.4 per cent of the money spent through contracts of $10,000 or more.

Similarly, the Atomic Energy Commission's contract awards tend to be concentrated in a select group of major corporations. Of approximately $1.6-billion awarded in contracts last year, all but $104-million went to 36 contractors. As for NASA, procurement plays a larger role in its activities than in those of any other Federal agency. More than 90 per cent of its funds are awarded in contracts to industry and educational institutions. Of the $4.1-billion worth of procurement last year, 92 per cent of the direct awards to business went to NASA's 100 largest contractors.

In terms of property holdings, the result of almost two centuries of military procurement is a worldwide and practically incalculable empire. An almost arbitrary and greatly underestimated value—$202.5-billion—was placed on military real and personal property at the end of fiscal year 1968. Weapons were valued at $100-billion. Supplies and plant equipment accounted for $55.6-billion. Most of the remainder was in real estate. The Pentagon says the 29 million acres it controls—an area almost the size of New York State—are worth $38.7-billion. (The official Defense Department totals do not include 9.7 million acres, valued at $9-billion, under the control of the Army Civil Works Division or additional property valued at $4.7-billion.) The arbitrariness of those figures is seen in the fact that they represent acquisition costs. Some of the military real estate was acquired more than a century ago, and much of it is in major cities and metropolitan areas. The actual value of the real estate must be many times its acquisition cost.

But the important fact about procurement is not the extent of the Pentagon's property holdings; it is that defense contracting has involved the military with many of the largest industrial corporations in America. Some companies do almost all their business with the Government. Into this category fall a number of the large aerospace concerns—such giants as General Dynamics, Lockheed Aircraft and United Aircraft. For such other companies as General Electric, A.T.&T. and General Motors, Government work amounts to only a small percentage of the total business. But the tendency is for a company to enlarge its share of defense work over the years, at least in dollar value. And whether defense contracts represent 5 per cent or 50 per cent of a corporation's annual sales, they become a solid part of the business, an advantage to maintain or improve upon. A company may even work harder to increase its military sales than it does to build commercial sales because military work is more profitable, less competitive, more susceptible to control through lobbying in Washington. The industrial giants with assets of more than $1-billion have swarmed around the Pentagon to get their share of the sweets with no less enthusiasm than their smaller brethren.

The enormous attraction of military and military-related contracts for the upper tiers of industry has deepened in the last few years as military procurement has increased sharply. For example, G.E.'s prime-contract awards have gone up from $783-million in 1958 to $1.5-billion in 1968; General Motors went from $281-million in 1958 to $630-million in 1968. While much of this increase can be traced to the Vietnam war boom and many contractors would suffer a loss of business if the war ended, there was steady growth in the defense industry during the fifties and early sixties (in 1964 and 1965, before the Vietnam build-up, there was a decline in prime-contract awards). In the five years from 1958 to 1963—five years of peace—the value of G.E.'s prime contracts increased $217-million and General Motors' rose $163-million. The same trend can be shown for many of the large corporations in the aerospace and other industries.

What seems to be happening is that defense production is gradually spreading throughout industry, although the great bulk of the funds is still spent among relatively few companies. Still, as the defense budget increases the procurement dollars go further. The geographical concentration of defense production in the industrialized, high-income states also suggests that military contracts have come less and less to be restricted to an isolated sector of the economy specializing in guns and ammunition. Military business has become solidly entrenched in industrial America.

Considering the high degree of mismanagement and inefficiency in defense production and the tendency for contractors to want more sales and therefore to support the military in its yearly demands for a larger budget, this is not a healthy situation. The inefficiency of defense production, particularly in the aerospace industry, can hardly be disputed. Richard A. Stubbing, a defense analyst at the Bureau of the Budget, in a study of the performance of complex weapon systems, concluded: "The low over-all performance of electronics in major weapon systems developed and produced in the last decade should give pause to even the most outspoken advocates of military-hardware programs." He found that in 13 aircraft and missile programs produced since 1955 at a total cost of $40-billion, fewer than 40 per cent of the electronic components performed acceptably; two programs were canceled at a cost to the Government of $2-billion, and two programs costing $10-billion were phased out after three years because of low reliability.

And the defense industry is inefficient as well as unreliable. Albert Shapero, professor of management at the University of Texas, has accused aerospace contractors of habitually over-staffing, over-analyzing and over-managing. A. E. Fitzgerald, a Deputy Assistant Secretary of the Air Force, in testimony before the Joint Economic Subcommittee on Economy in Government, described poor work habits and poor discipline in contractors' plants. In the same hearing, a retired Air Force officer, Col. A. W. Buesking, a former director of management systems control in the office of the Assistant Secretary of Defense, summarized a study he had conducted by saying that control systems essential to prevent excessive costs simply did not exist.

In a sense, industry is being seduced into bad habits of production and political allegiance with the lure of easy money. And industry is not the only sector being taken in. Consider conscription (3.6 million men in uniform), the Pentagon's civilian bureaucracy (1.3 million), the work force in defense-oriented industry (4 million), the domestic brain drain created by the growth in military technology, the heavy emphasis on military research and development as a percentage (50 per cent) of all American research, the diversion of universities to serve the military and defense industry. These indicators reveal a steady infiltration of American values by those of the military establishment: production for nonproductive use, compulsory service to the state, preparation for war. In the process, the economy continues to lose many of the attributes of the marketplace. In the defense industry, for all practical purposes, there is no marketplace.

The general rule for Government procurement is that purchases shall be made through written competitive bids obtained by advertising for the items needed. In World War II the competitive-bid requirements were suspended. After the war the Armed Services Procurement Act was passed, restating the general rule but setting out 17 exceptions—circumstances under which negotiation would be authorized instead of competition. The exceptions, which are still in use, are very broad and very vague. If the item is determined to be critical or complex or if delivery is urgent or if few supplies exist and competition is impractical or if emergency conditions exist or if security considerations preclude advertising, the Pentagon can negotiate for what it wants.

When President Truman signed this law in 1948 he saw the possibilities for abuse and wrote to the heads of the armed services and the National Advisory Committee for Aeronautics. "This bill," he said, "grants unprecedented freedom from specific procurement restrictions during peacetime. . . . . There is danger that the natural desire for flexibility and speed in procurement will lead to excessive placement of contracts by negotiation and undue reliance upon large concerns, and this must not occur." Unfortunately, Truman's apprehensions were well justified. Last year about 90 percent of the Pentagon's and 98 percent of NASA's contract awards were negotiated under the "exceptions."

What this means is that there is no longer any objective criterion for measuring the fairness of contract awards. Perhaps more important, control over the costs, quality and time of production, insofar as they resulted from competition, are also lost. Negotiation involves informal discussion between the Pentagon and its contractors over the price and other terms of the contract. It permits subjective decisionmaking on such important questions as which firms to do business with and what price to accept. The Pentagon can negotiate with a single contractor, a "sole source," or it can ask two or three to submit proposals. If one later complains that he had promised to provide a weapon at a lower price than the contractor who obtained the award, the Pentagon can respond by asserting that the price was not the major factor, that the Government simply had more faith in the contractor who won. This, in effect, is how the Army responded to the Maremont Corporation's recent challenge of a contract award to General Motors for the M–16 rifle. The Pentagon, because of its almost unbounded freedom to award contracts, can favor some companies. And over long periods, this practice can lead to a dependence by the Government on the technical competence of the suppliers on whom it has come to rely. For example, the Newport News Shipbuilding Company has a virtual monopoly on the construction of large aircraft carriers.

Typically, the Pentagon will invite a few of the large contractors to submit proposals for a contract to perform the research and development on a new weapon system. The one who wins occupies a strategic position. The know-how he gains in his research work gives him an advantage over his rivals for the larger and more profitable part of the program, the production. This is what is

meant when it is said that the Government is "locked in" with a contractor. Because the contractor knows he will obtain a lock-in if he can do the initial research work, there is a tendency to stretch a few facts during the negotiations.

Contractor performance is measured by three factors: the total cost to the Government of the weapon system, the way in which it functions and the time of delivery. During the contract negotiations over these factors the phenomenon known as the "buy-in" may occur. The contractor, in order to "buy in" to the program, offers more than he can deliver. He may promise to do a job at a lower cost than he knows will be incurred or to meet or exceed performance specifications that he knows are unattainable or to deliver the finished product long before he has reason to believe it will be ready.

Technically, the contractor can be penalized for his failure to fulfill promises made during the negotiations, but the Government rarely insists on full performance. The contractor knows this, of course, and he also knows the "get-well" strategem. That is, he can reasonably expect, on practically all major weapons contracts, that should he get into difficulty with regard to any of the contract conditions, the Government will extricate him—get him well.

The contractor can get well in a variety of ways. If his costs run higher than his estimates, the Pentagon can agree to pay them. (Cost increases can be hidden through contract-change notices. On a typical, complex weapon system, the changes from original specifications will number in the thousands; some originate with the Pentagon, some are authorized at the request of the contractor. The opportunities for burying real or phony cost increases are obvious, so much so that in defense circles contract-change notices are sometimes referred to as "contract nourishment.") The Government can also accept a weapon that performs poorly or justify a late delivery. If for some reason it is impossible for the Pentagon to accept a weapon, there is still a way to keep the contractor well. The Pentagon can cancel a weapon program for the "convenience" of the Government. A company whose contract is canceled for default stands to lose a great deal of money, but cancellation for convenience reduces or eliminates the loss; the Government makes reimbursement for costs incurred. An example of this occurred recently in connection with the F–111B, the Navy's fighter-bomber version of the TFX.

Gordon W. Rule, a civilian procurement official who had responsibility for the F–111B, said in testimony before the House Subcommittee on Military Operations that General Dynamics was in default on its contract because the planes were too heavy to meet the height or range requirements. Rule proposed in a memorandum to Deputy Secretary of Defense Paul H. Nitze that the contract be terminated for default. At the same time, Assistant Secretary of the Air Force Robert H. Charles and Roger Lewis, the General Dynamics chairman, proposed that the Navy reimburse the company for all costs and impose no penalty. Nitze's compromise was to make reimbursement of $216.5-million, mostly to General Dynamics, and to impose a small penalty.

In a memo written last year Rule made this comment on the attitude of defense contractors: "No matter how poor the quality, how late the product and how high the cost, they know nothing will happen to them."

There are many other ways to succeed in the defense business without really trying. The Pentagon generously provides capital to its contractors; more than $13-billion worth of Government-owned property, including land, buildings and equipment, is in contractors' hands. In addition, the Pentagon will reimburse a supplier during the life of his contract for as much as 90 per cent of the costs he reports. These are called "progress" payments, but are unrelated to progress in the sense of contract objectives achieved; they correspond only to the costs incurred. The progress payments are interest-free loans that provide the contractor with working capital in addition to fixed capital. They minimize his investment in the defense business and free his assets for commercial work or for obtaining new defense work.

Investigations by the General Accounting Office have revealed that the Government's money and property have been used by contractors for their own purposes. The most recent incident involved Thiokol Chemical Corporation, Aerojet-General (a subsidiary of General Tire & Rubber Company) and Hercules, Inc. From 1964 through 1967 they received a total of $22.4-million to be used for work on the Air Force Minuteman missile program. The Government accountants found that the three contractors misused more than $18-million of this money, spending it for research unrelated and inapplicable to Minuteman or any other defense program.

The defense industry is perhaps the most heavily subsidized in the nation's history. Thanks to Pentagon procurement policies, large contractors find their defense business to be their most lucrative. Although no comprehensive study of such profits has been made, the known facts indicate that profits on defense contracts are higher than those on related nondefense business, that they are higher for the defense industry than for manufacturing as a whole and that the differential has been increasing. In a study that compared the five-year period from 1959 through 1963 with the last six months of 1966, the General Accounting Office found a 26 per cent increase in the average profit rates negotiated. Admiral Hyman G. Rickover has testified that suppliers of propulsion turbines are insisting on profits of 20 to 25 per cent, compared with 10 per cent a few years ago, and that profits on shipbuilding contracts have doubled in two years.

The figures cited by Rickover relate to profits as a percentage of costs, a measure that often understates the true profit level. The more accurate measure is return on investment. An example of the difference was demonstrated in a 1962 tax-court case, North American Aviation v. Renegotiation Board. The contracts provided for 8 per cent profits as a percentage of costs, the tax court found that the company had realized profits of 612 per cent and 802 per cent on its investment in two succeeding years. The reason for the huge return on investment was the Defense Department policy of supplying both fixed and working capital to many of the larger contractors. In some cases the amount of Government-owned property exceeds the contractor's investment, which is sometimes minimal. It is no wonder that contractors prefer to talk about profits as a percentage of costs.

Murray Weidenbaum, recently appointed Assistant Secretary of the Navy, found in a study that between 1962 and 1965 a sample of large defense contractors earned 17.5 per cent net profit (measured as a return on investment), while companies of similar size doing business in the commercial market earned 10.6 per cent.

The Pentagon has attempted to answer the critics of high defense profits by citing the findings of the Logistics Management Institute, a think tank that has done a study showing declining defense profits. The trouble with the institute's study is that it used unverified, unaudited data obtained on a voluntary basis from a sample of defense contractors. Those who did not want to participate simply did not return the questionnaires, in fact, 42 percent of those contacted provided no data. There is no way of knowing whether the group of contractors who refused to participate in the study included the ones making the highest profits.

There is almost no risk in defense contracting except that borne by the Government. If a major prime contractor has ever suffered a substantial loss on a defense contract, the Pentagon has failed to disclose his name, although it has been requested to do so by members of Congress. On the other hand, the disputed Cheyenne helicopter and C–5A cargo plane projects could conceivably result in large losses for Lockheed, the contractor in both cases. Lockheed asserts that it might still make a profit on the C–5A (which is being produced in a Government-owned plant), and denies that it is at fault in the cancellation of production on the Cheyenne helicopter (on which research work has been resumed). Past experience suggests that one should await the final decision, which may be two years in coming, before making flat statements about profit and loss.

In fairness, it ought to be pointed out that Secretary of Defense Melvin R. Laird has talked about a new get-tough policy with contractors. New procurement techniques that would, for instance, require contractors to meet specific cost benchmarks have been announced; increased prototype development is planned; greater public disclosure of cost overruns and performance or scheduling problems have been promised; the production of the Cheyenne helicopter and the Air Force's Manned Orbiting Laboratory program have been canceled. Whether any of these measures will produce real savings has yet to be determined. The Pentagon is famous for its paper reforms.

The defense industry, in addition to providing high profits at low risk, offers fringe benefits for everyone. One of the important advantages for those in procurement on either side of the bargaining table, is the opportunity for career advancement. There is a steady march of military and civilian personnel back and forth between the Pentagon and the defense industry. It is not considered unusual for someone like Maj. Gen. Nelson M. Lynde Jr. to retire from the Army after being directly involved in the procurement of the M–16 rifle and go to work five months later for Colt Industries, originally the "sole source" of the M–16; nor is it a matter for comment when Lieut. Gen. Austin Davis retires from the Air Force after playing an important role in procurement for the Minuteman missile program and becomes vice president of North American Rockwell, one of the Minuteman's prime contractors.

This is not to say that the interchange of personnel between the Pentagon and the defense industry is harmful in itself or that it ought to be prohibited. There is a problem in finding qualified people, and one would not want to deprive either the Pentagon or contractors of a source of trained manpower. While it would not be fair to condemn the practice and everyone engaged in it out of hand, there is a serious conflict-of-interest problem.

The conflict-of-interest laws apply primarily to military personnel and are easily evaded. Therefore, the solution to the problem does not seem to lie in expanding the legal restrictions. What might help is the public disclosure of the names of high-ranking Pentagon officials who have moved on to jobs in the defense industry and those who have made the reverse trip. The Subcommittee on Economy in Government has recommended that such a list be compiled. It would facilitate scrutiny of the interchange problem by revealing obvious conflicts of interest that should be investigated.

Individuals in the field of procurement naturally have an interest in the continued growth and importance of their field. The same could be said of people in many other fields. What is disturbing here is the opportunity that many officials have to influence procurement policy while in the Pentagon and then benefit from their actions or those of their former associates when they join the defense industry or, possibly, one of the 16 Federal-contract research centers supported by the Pentagon.

The 16 centers, including the Rand Cor-

poration and the Institute for Defense Analysis, receive at least 85 per cent—and in some cases as much as 99 per cent—of their income from the Pentagon. With contracts totaling more than $300-million a year, they form a kind of halfway house between the military establishment and the defense industry, serving the interests of both.

Last year, Senator J. W. Fulbright, the chairman of the Senate Foreign Relations Committee, obtained from the Pentagon a list of the top officials of the research centers and their prior Government affiliations. Seven center presidents and five vice presidents—including Maxwell D. Taylor, former chairman of the Joint Chiefs of Staff—had once held high posts in the Defense Department. Taylor's salary as president of the Institute for Defense Analysis was reported as $49,200; he also, of course, received retirement pay as a general. The highest-paid research-center officer was the president of the Aerospace Corporation, an Air Force creation, who received $90,000 a year.

In hearings last fall before the Subcommittee on Economy in Government, Senator William Proxmire looked briefly at the Logistics Management Institute, a Pentagon-created research center that worked exclusively for the Defense Department until recently, when it obtained permission to devote 10 per cent of its time to other assignments. Senator Proxmire learned that, of the institute's 18 professional staff members, six came directly from defense contractors, six were formerly employed by research centers or consultant firms whose work was heavily defense oriented and one was a retired Air Force Reserve officer.

More recently, Proxmire asked the Pentagon for a list of the retired regular military officers holding the ranks of Army colonel, Navy captain or higher employed by the 100 largest defense contractors. As of February, 1969, 2,072 retired regular military officers were employed by the 95 top contractors who responded to the inquiry, an average of 22 in each company. The 10 companies employing the largest number had 1,065 on their payrolls, an average of 106, triple the average number they employed in 1959.

Proxmire, in a March 24 speech, commented, "What we have here is almost a classic example of how the military-industrial complex works." His point was that there is a growing community of interests between the military and the large contractors and that it militates against the public interest. Former high-ranking military men have a special entrée to the Pentagon, they have friendships with those still there and may even negotiate contracts or be involved in developing plans and specifications with officers with whom they served, whom they promoted or vice versa. "In addition," Proxmire said, "there is the subtle or unconscious temptation to the officer still on active duty. After all, he can see that over 2,000 of his fellow officers work for the big companies. How hard a bargain does he drive with them when he is one or two years away from retirement?"

The interchange of personnel, according to testimony by Admiral Rickover, has helped spread a business-oriented philosophy in the Defense Department. One might equally well observe that a military-oriented philosophy has been spread in the defense industry. Several kinds of institutional arrangements in addition to the interchange of personnel help bind military power to industrial wealth. Representatives of industry, in such groups as the Aerospace Industries Association, and of the military, in such organizations as the Air Force Association, agree on the basic issues: a large military budget, a high cost base in defense production, no losses, high profits and Congressional and public compliance.

Though ostensibly preoccupied with national security and maintaining a strong defense against potential foreign aggressors, these institutions interpret domestic criticism of military spending as a problem of the highest priorty. Witness a meeting of the Industry Advisory Council and representatives of the Defense Department in October, 1968. (The Industry Advisory Council is one of a dozen or more business-advisory groups which meet regularly with officials in the Pentagon to discuss matters ranging from foreign policy to the latest proposed changes in armed services procurement regulations. The Industry Advisory Council until recently was called the Defense Industry Advisory Council. Dropping the word "Defense" from its name suggests its concern over public relations. The council's membership at the time of the October meeting included the presidents or board chairmen of Boeing, G.E., Brown and Root, Western Electric, DuPont, Lockheed, Newport News Shipbuilding, Northrop, General Dynamics, Olin Mathieson, Tenneco, Litton, and Ford.)

The immediate outcome of the October meeting was an outline of major problems facing the Pentagon and industry. The outline and a memorandum from Assistant Secretary of Defense Thomas Morris were circulated to officials on the assistant-secretary level of the Defense Department and each of the armed services. The subject was: "Fundamental Problem Areas: Key areas worthy of joint exploration by D.O.D. and industry in calendar year 1969."

Four major problem areas were listed. The first was how to "maintain public and Congressional confidence in the integrity and effectiveness of defense procurement and contractor performance." Others were how to obtain full compliance with procurement policies by both Pentagon and industry officials; how to maintain a healthy defense-industrial base, and how to increase the effectiveness of the major-weapon-system acquisition process.

The memo, in discussing how to shore up lagging public and Congressional confidence in the defense procurement process, listed some more specific "detailed problems," including these: uniform-accounting-standards legislation; excess-profits hearings; the Truth-in-Negotiations Act; General Accounting Office investigations and audits; investigations of such specific programs as the TFX and the M–14 rifle and statutory profit limitations. In other words, the chief worries of the industry and Pentagon representatives in 1969 are legislation that would tighten controls on procurement and defense profits, the investigation of specific weapons programs and investigations and audits by Government accountants.

The danger of the military-industrial complex lies in its scale. Reasonable men will tolerate a war machine as a necessary evil. It is the size of the machine and its claim on national resources and individual lives that is at issue. What is alarming is the growth of the complex.

The great leap of the military budget in the last few years, from about $50-billion to $80-billion, and its earlier growth, beginning with the Korean war, have helped to bring about serious stresses in the economy. Although no one factor can be identified as the sole cause of inflation, it is no accident that the three most recent price surges accompanied sharp increases in military spending between 1950 and 1953 (the Korean war period), between 1955 and 1957 and since the buildup in Vietnam began. Defense expenditures have contributed substantially to these inflationary trends. The consequent reduced value of savings and fixed-income assets during each of these periods is an indirect cost of defense; the 10 percent tax surcharge made necessary by the Vietnam build-up is a much more direct one.

More ominous than the economic consequences of a bloated defense budget are expanding and sometimes furtive military activities in such areas as foreign affairs, social-science research, domestic riot control and chemical and biological warfare. In hearings last year on Pentagon-sponsored foreign-affairs research, Senator Fulbright quoted from a 1967 report of the Defense Science Board (a scientific counterpart to the business-advisory groups): "The D.O.D. mission now embraces problems and responsibilities which have not previously been assigned to a military establishment. It has been properly stated that the D.O.D. must now wage not only warfare but 'peacefare' as well. Pacification assistance and the battle of ideas are major segments of the D.O.D. responsibility. The social and behavioral sciences constitute the unique resource for support of these new requirements. . . ."

Fulbright's reminder that the military's responsibility is "to prosecute war or to provide military forces which are capable of defending against an external attack" might have sounded like naiveté to the Pentagon, but his point is important. Social-science research conducted in foreign countries by foreigners should, if it is to be supported at all, be supported by the State Department, not the Pentagon. Research into socio-cultural patterns or the social organization of groups or processes of change should not be a military responsibility. Yet the Pentagon does support foreign research all over the world, awarding contracts to G.E. to make projections of "future world environments" and to McDonnell-Douglas to do a study entitled "Pax Americana," later retitled "Projected World Patterns, 1985."

The Army's new domestic "war room" in the basement of the Pentagon is also of doubtful legitimacy. This "operations center" is supposed to help dispatch and coordinate troops for urban riots (maybe that's "pacification assistance"). Even assuming the need for this kind of activity, one can raise the same question that disturbs Senator Fulbright with regard to social-science research: Is this a proper military responsibility?

The most recent example of the Pentagon's "independent thinking," brought to light by the efforts of Congressmen Richard D. McCarthy and Cornelius Gallagher, is the controversial Army plan to transport about 27,000 tons of obsolete poison gas across the country by train to New Jersey to be loaded onto old hulks, towed out to sea and sunk. Both the State Department and the Interior Department have a direct interest in this project, yet the Army did not bother to coordinate its plans with them until long after the plans were formulated.

Such incidents as the construction of the domestic war room and the independent decision to ship poison gas across the country symbolize the drift of power in the executive branch to the Pentagon and show the extent to which military authority has exceeded its traditional limits. Swollen by overgenerous appropriations, the defense budget has become the source of frightening political as well as economic power. Practically freed of the fiscal limitations that restrain other agencies, the Pentagon seems to be able to exercise its will in almost any area it chooses, foreign or domestic, from negotiating a new lease for bases and promising military assistance to Spain (as it was recently alleged to have done) to launching programs of social reform.

The nature of the problem was simply stated recently at a hearing of the House Subcommittee on Military Operations. Testifying was Phillip S. Hughes, deputy director of the Bureau of the Budget. Representative William Moorhead had charged that the bureau was unable to scrutinize Defense Department expenditures to the same extent that it reviews nondefense spending. The budget requests of Government agencies, except the Defense Department, are subjected to an independent analysis and review, which is then submitted to the Budget Director. The director makes his recommendations to the President, subject to challenge by the Cabinet officer concerned. But the Defense Department is treated differently. In the Pentagon, Moorhead said, Budget Bureau

analysts must work alongside their Defense counterparts, not independently. The results of this joint review are submitted to the Secretary of Defense, who sends it to the President, subject to challenge by the Budget Director. The result is that the burden of persuading the President to change the budget he receives is shifted from the agency head to the Budget Director in the case of the defense item, but only there. (The Nixon Administration's Budget Director, Robert P. Mayo, testified recently that the defense budget would be transmitted to the President in the future just as other departmental requests are.)

"The most relevant consideration," Hughes testified, "is, in blunt terms, sheer power—where the muscle is—and this is a very power-conscious town, and the Secretary of Defense, and the defense establishment are a different group to deal with, whether the Congress is dealing with them or whether the Budget Bureau is dealing with them. . . ."

The military-industrial complex has become a massive, tangled system, half inside, half outside the Government. Like the Gordian knot, it is too intricate to be unraveled. But like the dinosaur, its weakness lies in its great size. If its intricacy rebuffs us, its grossness is vulnerable; it can be reduced by substantially cutting the defense budget.

This is the only viable immediate solution, for innovations in contractual procedures, regulatory statutes such as the Truth-in-Negotiations Act and such watchdog agencies as the General Accounting Office have not been able to cope effectively with the major excesses in military procurement. The Bureau of the Budget has been in a subordinate position, notwithstanding its recent success in challenging the Manned Orbiting Laboratory funds and its claims to more power over the defense budget. The deck is stacked against those who would sit down across the table from the military-industrial complex.

The only way to change the game is to cut the budget.

ORDER OF BUSINESS

Mr. TYDINGS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

DEATH OF REPRESENTATIVE WILLIAM H. BATES, OF MASSACHUSETTS

Mr. BROOKE. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives.

The PRESIDING OFFICER. The Chair lays before the Senate a message from the House of Representatives, which will be read.

The legislative clerk read as follows:

H. RES. 450

Resolved, That the House has heard with profound sorrow of the death of the Honorable William H. Bates, a Representative from the State of Massachusetts.

Resolved, That a committee of fifty-seven Members of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

Resolved, That as a further mark of respect the House do now adjourn.

Attest:

W. PAT JENNINGS,
Clerk.

Mr. BROOKE. Mr. President, I submit a resolution, for my colleague from Massachusetts (Mr. KENNEDY) and myself, and ask for its immediate consideration.

The PRESIDING OFFICER. The resolution will be read for the information of the Senate.

The legislative clerk read the resolution (S. Res. 214) as follows:

S. RES. 214

Resolved, That the Senate has heard with profound sorrow the announcement of the death of Hon. William H. Bates, late a Representative from the State of Massachusetts.

Resolved, That a committee of two Senators be appointed by the Presiding Officer to join the committee appointed on the part of the House of Representatives to attend the funeral of the deceased Representative.

Resolved, That the Secretary communicate these resolutions to the House of Representatives and transmit an enrolled copy thereof to the family of the deceased.

Resolved, That, as a further mark of respect to the memory of the deceased, the Senate do now adjourn.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. BROOKE. Mr. President, WILLIAM BATES had all of the attributes of an ideal public servant: a keen intellect, the ability to grasp difficult problems, a deep sense of compassion and understanding, a notable sense of humor, and above all those traits of character and integrity which earned for him the respect of his colleagues and constituency alike. I am sure that the people of the Sixth District, no matter what their political affiliation, feel that they have lost a very good friend. It is certain that the Commonwealth has lost one of her most distinguished sons and the Congress a Member of the first rank. BILL BATES would have been one of the last to consider himself indispensable, but with his passing I think that all of us are conscious that his place will be a difficult one ever to fill. He served his district, his Commonwealth, and his Nation with never less than total excellence and with utmost fidelity and devotion. My wife joins me in extending to Mrs. Bates and all of the family our heartfelt sympathy. It is a tragedy that a man like Congressman BILL BATES, in the prime of his life and with so many years of service yet unfulfilled, should have been taken from us.

The PRESIDING OFFICER. The question is on the adoption of the resolution.

The resolution was unanimously agreed to.

The PRESIDING OFFICER. Pursuant to the resolution, the Chair appoints the two Senators from Massachusetts, Senator BROOKE and Senator KENNEDY, to join with a like committee of the House to attend the funeral of the deceased Representative.

ADJOURNMENT

Mr. BROOKE. Mr. President, in accordance with Senate Resolution 214, and as a further mark of respect to the memory of the deceased, Representative BATES, I move that the Senate do now adjourn.

The motion was unanimously agreed to; and (at 2 o'clock and 39 minutes p.m.), under the previous order, the Senate adjourned until tomorrow, Tuesday, June 24, 1969, at 11 o'clock a.m.

NOMINATIONS

Executive nominations received by the Senate, June 23, 1969:

NATIONAL SCIENCE FOUNDATION

William David McElroy, of Maryland, to be Director of the National Science Foundation for a term of 6 years, vice Leland J. Haworth.

DIPLOMATIC AND FOREIGN SERVICE

Luther I. Replogle, of Illinois, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Iceland.

Kenneth Rush, of New York, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Federal Republic of Germany.

J. Fife Symington, Jr., of Maryland, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Trinidad and Tobago.

Samuel E. Westerfield, Jr., of the District of Columbia, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Liberia.

U.S. CIRCUIT JUDGE

Eugene A. Wright, of Washington, to be U.S. circuit judge, ninth circuit, vice a new position created under Public Law 90-347 approved June 18, 1968.

ASSOCIATE JUDGE

W. Byron Sorrell, of Maryland, to be an associate judge of the District of Columbia Court of General Sessions for the term of 10 years, vice a new position created under Public Law 90-579.

U.S. MARSHAL

Robert G. Wagner, of Ohio, to be U.S. marshal for the northern district of Ohio for the term of 4 years, vice R. Ben Hosler.

FEDERAL POWER COMMISSION

Albert Bushong Brooke, Jr., of Maryland, to be a member of the Federal Power Commission for the term of 5 years expiring June 22, 1974, reappointment.

IN THE NAVY

Vice Adm. Kleber S. Masterson, U.S. Navy, and Rear Adm. Robert J. Stroh, U.S. Navy, for appointment to the grade of vice admiral when retired, pursuant to title 10, United States Code, section 5233.

CONFIRMATIONS

Executive nominations confirmed by the Senate, June 23, 1969:

MISSISSIPPI RIVER COMMISSION

Maj. Gen. Andrew Peach Rollins, Jr., O24237, Army of the United States (brigadier general, U.S. Army), to be a member and President of the Mississippi River Commission, under the provisions of section 2 of an act of Congress approved June 28, 1879 (21 Stat. 37; 33 U.S.C. 642).

CALIFORNIA DEBRIS COMMISSION

Col. Charles R. Roberts, Corps of Engineers, to be a member of the California Debris Commission, under the provisions of section 1 of the act of Congress approved March 1, 1893 (27 Stat. 507; 33 U.S.C. 661).

EXTENSIONS OF REMARKS

CITIZENS OF UTICA, N.Y., HONOR FRED J. PURCELL

HON. ALEXANDER PIRNIE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. PIRNIE. Mr. Speaker, on Friday, June 20, I was privileged to participate in a community tribute to a very distinguished citizen. On that date the citizens of Utica, N.Y., honored Fred J. Purcell for his service to his fellow man.

Those of us who shared in saluting Mr. Purcell did so with mixed emotions. On the one hand we were pleased to evidence our appreciation for all that our honored guest had done for his community, the people with whom he had worked, and the projects with which he was identified. We also were happy for Mr. Purcell, because we knew how much his election as vice president of the International Association of Machinists and Aerospace Workers meant to him and his family.

On the other hand, we were admittedly somewhat sad, because we knew that the elevation of Mr. Purcell to new and more important responsibilities within his labor organization would require the Purcells to move on.

The realization that this able, civic-minded, dedicated Utican would no longer be available to assist with local projects had an impact on us all. A Fred J. Purcell does not come along everyday. As we listened to the many tributes to this outstanding individual we knew we were losing someone who had contributed so much to so many. The loss will not be easily overcome.

A review of Mr. Purcell's record of achievements makes it easy to understand why he is held in such high esteem by the people of Utica. The following brief biographical sketch from the souvenir progam prepared especially for last Friday's testimonial dinner gives one a glimpse of a man and an indication of why he will be long remembered by those of us who proudly claim him as a friend. We wish him well in his new endeavor and we are confident that he will continue to distinguish himself as a dedicated, faithful, and energetic servant to his fellow man.

The biographical sketch follows:

BIOGRAPHICAL SKETCH OF HON. FRED J. PURCELL

Many who achieve success have a passion for making others aware of their achievements. Somehow each step up the ladder seems to be accompanied by great fanfare.

Fred Purcell is a delightful exception to that rule. While compiling a spectacular record in labor management and community service, his performance has been quiet, modest, and constantly superior.

While many of our distinguished citizens become globe trotters at the drop of an expense account, Fred chose to follow his destiny right here in the Mohawk Valley. His story is overwhelming proof that a man of extraordinary professional talents and a genuine concern for his community need not concern himself with success. Society brings success to such men by continually tapping them for greater responsibilities.

Fred's list of achievements, offices, and awards, both professional and civic, are a catalog of more than 20 years of service to labor management, which began in 1951 when he was elected Business Representative for District Lodge 157. He has held such key posts as Vice-President, Public Relations Director, and the President of the New York State Council of Machinists, President of the Greater Utica Federation of Labor, President of the Northeastern Conference of Machinists and President of the Greater Utica Federation of Labor, AFL–CIO. The list of his assignments could fill many pages. Suffice it to say that quietly and modestly Fred has emerged as a national leader in the labor movement.

Despite the grueling demands of his many labor posts, Fred somehow managed to find the time when asked to serve, whether the call was from occupation, community, or country. In World War II, Fred again distinguished himself, as he has throughout his career. While serving with the infantry in Italy and France, he was wounded and received the Purple Heart with two Oak Leaf Clusters. Following the war, he returned to Utica, and through the years he has served his city well.

He has been President of the Greater Utica Community Chest and Planning Council, Chairman of the United Fund Campaign, a member of numerous hospital, philanthropic, and church organizations. His devotion to the cause of labor and his community are inseparable, since Fred joined the ranks of labor while still attending St. Francis de Sales High School. In the American tradition, he sold newspapers, and worked in drug and grocery stores to earn money while still a student.

His wife, Betty, is also a native Utican, and she and their three children have shared the burden placed upon the family of a man in demand. Unfortunately, there are not many gifted with the dedication, the stamina, and the talent to bear the burden of leadership. The few who are, like Fred Purcell, fortunately find it impossible to say "no" when asked to serve.

RESOLUTION ADOPTED BY THE RICHMOND CHAPTER OF THE MILITARY ORDER OF THE WORLD WARS

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, June 23, 1969

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Extensions of Remarks a resolution adopted on May 15, 1969, by the Richmond Chapter of the Military Order of the World Wars.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF RICHMOND CHAPTER OF THE MILITARY ORDER OF THE WORLD WARS

Whereas our democratic institutions and way of life can survive only when supported by an educated citizenry, which can be attained only when our universities and colleges maintain ever-growing standards of scholarship; and

Whereas our institutions of learning are being deliberately subverted by revolutionary groups under the guise of "academic freedom" and seek, as does one which assumes the name of The Students for a Democratic Society, "to destroy the myth of American Democracy"; and

Whereas it is vital that these subversives be dealt with promptly and with all the force necessary to end their campaign of sit-ins, lock-outs, armed threats, arson, and numerous acts of vandalism; Now, therefore, be it

Resolved, That the administrative officials of all institutions of learning be governed by the following principles: That students be encouraged to make suggestions and recommendations for the betterment of their colleges and universities and that careful consideration be given them; that the administration discuss such recommendations with the students whenever they are not accompanied by force or the threat of force or other means of coercion; that in those cases where students are guilty of vandalism or other crimes, or persist in sit-ins or lock-outs, that they be criminally prosecuted and expelled permanently from the institution they seek to destroy; and be it further

Resolved, That a copy of these resolutions be sent to the president of each college and university within the United States.

Certified Official:

FRANKLIN R. SIBERT,
Commander.

THE 30TH SESSION OF THE INTERGOVERNMENTAL COMMITTEE FOR EUROPEAN MIGRATION

HON. TOM RAILSBACK

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. RAILSBACK. Mr. Speaker, recently I had the privilege of representing the Judiciary Committee at the 30th session of the Intergovernmental Committee for European Migration. Also representing our committee were the gentleman from New Jersey, PETER W. RODINO, JR., the gentleman from Connecticut, THOMAS J. MESKILL, and the gentleman from California, CHARLES E. WIGGINS.

During the meeting, Ambassador Graham A. Martin, Special Assistant to the Secretary of State for Refugee and Migration Affairs, announced the United States would contribute half a million dollars for the current year bringing the total American commitment to about $4 million out of the total $24 million budget.

Ambassador Martin, in a speech before the committee, described the organization as an effective instrument that serves "both people in need and countries in need of people."

My colleague, the gentleman from New Jersey, PETER RODINO, JR., spoke for the entire delegation when he said he was "proud that the United States has given further substance to its interest in ICEM by an additional contribution."

He also stated that ICEM is "an important and indispensable organ of the international community in this ever-changing world."

Senator MATHIAS correctly noted that the organization "manages insurgences of refugees, moving them expeditiously to new homes; and it locates new opportunities for people in developed countries dissatisfied with their present homes or threatened by diminishing job possibilities."

I commend the speeches of Ambassador Martin, my colleague PETER RODINO, JR., and Senator MATHIAS to the Members of the House and include them herewith:

STATEMENT BY H. E. MR. GRAHAM MARTIN, SPECIAL ASSISTANT TO THE SECRETARY OF STATE

At the outset, Mr. Chairman, may I extend to you, the two Vice-Chairmen, and the Rapporteur my congratulations on your respective elections. My Delegation is most pleased to have the opportunity to participate in the Council's deliberations under your able leadership.

I should also like to extend through you, Mr. Chairman, a warm welcome to our new Director, Mr. John Thomas. We listened with keen interest to his statement to the Council and were very favourably impressed with the breadth and depth of his report—all the more so in view of the few short months that Mr. Thomas has held the Directorship. It seems abundantly clear that he tackled the job of directing our Committee in a vigorous and imaginative way and we compliment him on an excellent beginning.

In his report, the Director has referred to ICEM's record of achievements with his customary modesty; he has highlighted the Committee's current problems with frankness and candour, and cited the Committee's new directions and objectives with a note of hope and a note of cautious optimism. His statement, coupled with the Status Report we have reviewed in document MC/914, offer on the 1969 Programme and Budget, which we have reviewed in document MC/914, offer much food for thought and provide an excellent basis for the Council's deliberations.

In this framework, Mr. Chairman, I should like now to comment on those matters of particular interest and concern to my Government.

With the clear and present need so great, it is interesting to speculate on why our response, our collective and individual response, has been so slow.

Proximity etches the anxieties and needs of the displaced and dispossessed in very sharp lines. Where there is direct contact, the awareness of the compelling necessity for an adequate response is very clear. In those instances where our communications media have adequately reported the plight of individuals and groups, we have all seen that the response of the individual citizens of our countries has been prompt, generous and forthcoming.

I venture to suggest that part of our problem may be that documents and bare statistics tend to blur the picture. Perhaps we have become so accustomed to dealing with ICEM's role in the field of refugee resettlement in terms of mere statistics, that we may have lost sight of the wretched human drama behind them. If this is the case with those of us who are supposed to be the professionals of our governments in this field, we can certainly understand a diminishing awareness of the dimensions of the problem on the part of the citizens of our countries, and of our principals in our governments who have the unenviable task of determining the priorities for all too scarce governmental budgetary resources.

So, perhaps, it might be useful if we here today clearly recognize that the problem of refugees in Europe is a very sizeable and a continuing one. At this very moment, Camp Traiskirchen, near Vienna, is filled to capacity with new refugees from Eastern European countries, as are Camps Latina and Capua in Italy, Camp Zirndorf in Germany, the refugee hostel in Istanbul, and the refugee processing facilities in Beirut. In Spain, the processing pipeline is clogged with Cuban refugees; throughout the asylum areas of Western Europe and the Near East, the offices of the voluntary agencies are teeming with these and other categories of new refugees, including sizeable numbers from among minority groups of certain Eastern European and Arab countries.

Yes, Mr. Chairman, I believe those of us here know that the problem is real, the numbers are great, and the process of resettlement—which offers the best solution to the high majority of refugee cases—is costly. In the current year alone, according to the budget document before us, ICEM will expend over $9 million on its refugee programme.

But, Mr. Chairman, the problem still remains of how we translate our knowledge of the need into effective action on the part of our governments in providing the resources that ICEM must have to carry out the mission this Council has given it.

During the meeting of the Sub-Committee on Budget and Finance last week, we learned that the $744,000 deficit in this section of the Budget represented an inability on the part of ICEM to handle 5,000 to 7,000 refugees who will present themselves for movement during the current year. Perhaps, Mr. Chairman, it would be useful for all of us to remind their governments that this would involve not only suffering on the part of the refugees concerned, but a considerable increase in care and maintenance costs for the asylum governments and for other governments and agencies contributing to such costs, as well as the overcrowding in the refugee camps and processing centres.

We might remind our governments, Mr. Chairman, that history indicates that, if we permit this to happen, the eventual cost in money as well as in stark human misery will be far greater.

We might also remind our governments that there does not presently exist any other international mechanism except ICEM that is qualified to deal with these particular types of problems. We might, therefore, recommend that ICEM's established record of effectiveness deserves the increased financial resources that are now needed to meet the increased load it is called upon to carry.

We have noted that during the first four months of this year, ICEM has moved 16,200 refugees. Taking account of the number of potential refugee migrants in the asylum areas of Western Europe and the Near East at the present time—and I believe a conservative estimate would place the number at 40,000—and to add the current rate of influx of new refugees—running, I understand, approximately at the rate of 4,000 per month—it seems very clear that ICEM will be called upon to move as many, if not more, refugees in 1969 as in 1968—greater numbers than at any time since 1956/1957.

Now, in view of this heavy workload, we can take some comfort from the fact that ICEM is a viable organization, and that it is responding so effectively to the resettlement needs of the continuing heavy flow of new refugees. But, Mr. Chairman, I suggest that realism dictates that as responsible officers of the respective Member Governments, we cannot escape the fact that ICEM's ability to operate effectively in the area of refugee resettlement is in direct ratio to the measure of financial support provided to the Committee for this purpose.

My Government, Mr. Chairman, wishes to leave no doubt of its great concern that the status report before us still shows a deficit for the current year in Section II—Refugee Migration—in the amount of $744,000.

Now, if we may review for a moment the position with respect to resources, as we understand it, only 12 of ICEM's 31 Member Governments are making contributions to the refugee area of the Budget in the current year.

The question might well be raised whether the burden of meeting the needs of refugees has ceased to be a responsibility of the entire International Community—or whether the spirit of international solidarity in the face of humanitarian need has been somewhat foresaken. We cannot believe this to be the case. Rather, we are confident that a better appreciation on the part of governments, and of our citizens, of the continuing refugee activity in Europe—a new awareness of the problem facing ICEM—a new awareness of ICEM's uniqueness and proved record of effectiveness—will bring forth the necessary support.

Permit me, Mr. Chairman, to express the confident hope that those Member Governments which are not now contributing to this important area of activity will recognize the dire need and find a way to provide some measure of financial assistance—and that those governments which are already contributing will find it possible to do even more.

Our goal, I suggest, must be 100 per cent participation and 100 percent coverage of our refugee budget. I am reminded, Mr. Chairman, that back in 1960 when the Committee was facing a somewhat similar problem the representative of Switzerland at that time presented to the Fourteenth Special Session of the Executive Committee a formula for the financing of refugee movements, which called for per capita contributions from the country of temporary asylum; per capita contributions from country of final settlement; and contributions from member governments of ICEM.

Mr. Chairman, we suggest that it might now be appropriate to reconsider this or some other imaginative formula to provide for the assured financing of the Committee's refugee resettlement activities. I hope that the other Members of the Council may give us the benefit of their thinking and that perhaps the Council may be able to instruct the Budget Sub-Committee to thoroughly explore this question in the coming months and to report to us the results of their deliberations at the Council meeting in November.

If I may, I shall turn now, Mr. Chairman, to Section III of the Programme and Budget—the Latin American Programme—in which we face a shortfall of $450,000.

As the Council is well aware, my Government was among those which were instrumental in establishing the Selective Migration Programme for Latin America. We have supported the Programme since its inception in 1964.

Looking back at the difficulties experienced—and the Council will recall that the principal problem was finding suitable skilled and professional workers—it is regrettable, and indeed I may say it is ironic, that this Programme faces curtailment owing to lack of funds just at the time when the Committee's machinery is reaching a high standard of performance, and the Programme is showing favourable growth. According to the Status Report before us, increases are being achieved in nearly all the emigration countries, and there is reason to believe that the target of 2,000 highly skilled and professional movements could be reached in the current year.

The United States believes that ICEM has an important contribution to make to the over-all development of Latin America and we respectfully urge the Administration to review the Selective Migration Programme with each Member nation of the Committee, and particularly so with the Latin American Members, with a view to achieving a broader appreciation of its merits and mutual advantages—and to gain the necessary finan-

cial support to permit its continued operation and favourable growth.

With respect to Section I—National Migration—we note with satisfaction that this area of the Budget, which calls for the movement of 29,200 persons at a cost of $9,875,000, is in balance. We commend those governments having a particular interest in this part of the Committee's programme for making available the necessary financing. My Government finds it gratifying that the ICEM mechanism is able to assist in this positive way in the very important process of nation-building.

With respect to the Administrative Budget, Mr. Chairman, the United States is prepared to accept adoption of the new assessment scale which calls for an increase in the United States assessment from 29.77 per cent to 33.5 per cent. We note with some concern, however, that the tentative proposed scale before us totals only 98.56 per cent and we hope that measures will be taken to raise it to the necessary 100 per cent level.

We believe it is necessary for the Administration, under its new Director, to thoroughly review its own organizational pattern, its procedures, and its staffing in order to ensure responsiveness to current realities, to ensure the maximum effectiveness for the minimum costs. We believe this needs to be done, Mr. Chairman, and from the Director's statement, we are confident that under his leadership it will be done. We believe that such a review might result in the elimination of staff positions no longer necessary, or those members of the staff whose productiveness does not meet the reasonable criteria of performance Member Governments have a right to expect. We do not believe this standard of excellence has been wholly maintained in recent years, but we fully expect that it will be maintained in the future.

On our part, my Government strongly believes that the Council, in insisting on the maximum efficiency and effective performance, automatically accepts the corollary obligation to ensure that the compensation rates for the staff are periodically adjusted to ensure comparability with other international civil servants located in Geneva. This has been the practice of the Council in the past, and it is inconceivable to my Delegation that the Council will fail to recognize that the violation of one of the first principles of effective administration—the necessity for fair, adequate and just compensation—will certainly not assist the new Director in his endeavours to rapidly restore the organization to the peak of effectiveness the situation we face demands and which the Council will demand of him. We, therefore, hope very much that in due course the Council can resolve in justice and equity the question of fair and adequate compensation for the staff.

I have spoken before of measures we might undertake to bring home to our own governments and our own citizens the crucial importance of the current ICEM mission.

In this regard, Mr. Chairman, the United States Government commends the intention of the new Director to hold discussions with those Governments which have withdrawn from the Committee, i.e. Canada, France, Sweden, New Zealand, the United Kingdom, and Venezuela. The return of some or all of these Governments would be immensely beneficial to the Committee and should in our view be supported by all Member Governments.

Aside from governments, another source of support and co-operation which cannot be overlooked are the voluntary agencies. Since the end of the Second World War, an enormous share of the burden of assisting refugees and migrants has fallen on these privately-supported organizations. The voluntary agencies have been able to respond generously to the needs of refugees because of the contributions of their constituents representing nationality, religious and other groups. They also have developed a worldwide network for resettlement in other lands. Individual governments and international organizations could duplicate the infrastructure and expert staff of the voluntary agencies only with great effort and expense.

We would like to commend to the Administration the continuation of the close and cordial relationship which already exists between ICEM and the voluntary agencies and we recommend the ICEM consider expanding its use of the voluntary agency facilities. A closer relationship with the voluntary agencies which have constituents in many of the countries that are Members of ICEM may also serve to increase popular understanding and government support for the Committee. We are pleased to note from the Director's statement that he intends to make full use of these resources.

And as a final suggestion to my colleagues, Mr. Chairman, may I suggest that all of us exploit to the fullest degree possible the extraordinary talents of advocacy possessed by our new Director. I do not refer to the advocacy of a skilled professional with rare charm and great gifts of lucid exposition, although our new Director possesses these attributes. But he adds a burning personal conviction in the usefulness and the essentiality of the ICEM mission which carries great conviction.

Last November, I informed the Council that President Johnson had personally approved the presentation of Mr. Thomas as a candidate for the ICEM directorship. Our new President had been in office not yet a month, with all the problems of settling in a new American Administration, when Mr. Thomas was ready to leave for Geneva. Yet, President Nixon extended the allotted time four-fold while he and Mr. Thomas discussed ICEM, its mission, its contribution—the contribution it was uniquely equipped to make to meet the challenge before us today. As I listened to them talk on and on, I was certain that if, in the past, there had been concern over American support of ICEM, there need be no such concern for the future. And the presence of several of the most distinguished members of the Senate and the House of Representatives, who have taken the time from their busy schedules to attend this meeting of this Council, gives ample evidence that full support for ICEM is not confined to the Executive Branch but is thoroughly shared by our Legislative Branch as well. Within minutes of that meeting between President Nixon and Mr. Thomas, President Nixon signed a determination order more than doubling the funds available to my office for the current fiscal year. I am, therefore, able to inform the Council of an additional contribution of $500,000 for ICEM, which will bring the total contribution of my Government to ICEM for the current year to slightly more than $3.5 million.

As Mr. Thomas continues his normal courtesy calls on Member Governments, I venture to express the hope that he will be of as much assistance to my colleagues on the Council as he was to me.

If there is further deterioration resulting in an increased refugee flow, we are prepared to assist further in helping to cover the costs of ICEM's increasing activities. However, unless more governments respond more generously than has already been indicated, ICEM will not have the funds to move all the presently estimated number of refugees and migrants who will present themselves for resettlement assistance.

In previous years when deficits threatened, there was general agreement that ICEM must find a way not to limit its operations, not to restrict the movement of refugees awaiting resettlement, not to curtail its programme owing to lack of funds. This has been a laudable objective, Mr. Chairman, but I suggest that we may now have reached the point where this policy no longer seems realistic. Unless Member Governments are willing to fund the activities which ICEM can so effectively carry out, there appears to be no other answer except the curtailment of operations.

We would certainly hope that this step will not be necessary. We do not believe it will be necessary if all of us take the measures that are necessary to reawaken our governments and our citizens to the dimensions of the need. I have ventured to suggest a few steps which might be helpful in achieving this objective and I would very much welcome additional suggestions from my colleagues in this Council, many of whom are far more experienced than I am, and from whom I have learned so much in these exchanges.

But I do have one deep, unshakeable conviction. I do know my people, and I do know a bit about yours. Together they constitute the repository of all that is decent, all that is good, and all that is humane. They remain dedicated to the common principles of justice, of mercy, of the necessity for providing asylum for the oppressed and the persecuted. And since our governments are governments of the people, if our people fail in providing sufficient resources to avoid a curtailment in the operations of this organization, I would submit that it will only be because we have failed in our obligation to adequately inform them of the need.

May I conclude my remarks, Mr. Chairman, with a word of tribute to and confidence in our organization—the ICEM vehicle itself which so effectively serves both people in need—and countries in need of people.

Indeed the ICEM vehicle has already carried more than 1.6 million persons to new homes and new lives. This year it will carry 80,000 more, and who dares to predict how many it will be called upon to carry in the years ahead?

ICEM is an investment in the future—an investment in human lives, in economic stability, and in the prosperity and happiness of the Free Word.

Our task is to provide it with the resources to discharge the mission we have given it. I am confident that we will.

Thank you, Mr. Chairman.

STATEMENT OF HON. PETER W. RODINO, JR.

I thank you for offering me this opportunity to address the Council. It has been my privilege to attend these sessions for many years and I always look forward to the pleasure of visiting with old friends who have long been associated with ICEM and to meet with new delegates and with delegates who come to Geneva representing new members of ICEM.

ICEM is a changing organization not only within delegations but with emphasis on programs to meet the changing needs. The past 17 years have abundantly evidenced the fact that emergency situations suddenly crop up and all indications predict that new and perhaps more crucial situations will demand the resources that this organization can offer. ICEM is, in the estimation of the United States Congress, an important and indispensible organ of the International Community in this ever-changing world.

It was most gratifying to learn at the Executive Session and this Council Session that some of the old issues, although not forgotten, are no longer a point of serious debate. The three graphic pillars—refugee assistance—national migration—selective migration—so well described several sessions ago by Dr. Kraam of the Netherlands are acknowledged as the foundation of ICEM. Furthermore, the need for continuation of ICEM's programs is unanimously endorsed.

However, an old problem is still evident and continues to plague the otherwise harmonious objectives of the Council. The budg-

et and the financial short-fall are always a serious threat to ICEM's very existence which each Council must face.

There is a negative cloud hovering over any approach to ICEM's financial structure and this dilemma, it seems, has been prevalent throughout ICEM history.

ICEM was conceived in 1951 as a temporary organization to cope with what was viewed at that time as a soon to be solved problem of resettling large numbers of refugees lingering in camps. The tragic circumstances surrounding long tenure in refugee camps were solved through the good offices of ICEM. The organization furthermore geared operations to assist in the movement of migrants who were desirous of finding new lands of opportunity. Once again ICEM proved its value to the free world and the individual.

In retrospect we see that the need for services to both refugees and migrants is as important today as it was during the first 17 years of ICEM's existence. With an acknowledged need for ICEM, why must we face during each Council Session the question of the solvency of this organization?

This issue is the direct result of the failure of member-governments to view ICEM as a permanent organization. The acceptance of permanency must be the fourth pillar to confer the stability with which to give this organization a foundation of strength and durability. Recognition of this need must be developed in the Council and then conveyed to the proper authority in each member Government. It has been stated during the course of this Session that there is a definite lack of appreciation and knowledge about the intricacies of this international organization. The Administration of ICEM as well as the delegates have the obligation of presenting the good works, the value of ICEM in a complex World and the future necessity to all who will listen. We need not hesitate for a moment to realize that so long as men and women are oppressed they will seek freedom and we must make freedom as inexpensive to them as feasibly possible.

Furthermore, I sympathize with the youth of today who no longer feel the need to be tied to the past. They are 20th Century adventurers willing to go to new lands and find for themselves new opportunities. The new world and the old world are no longer distant places and the heritage engrained in young people from the old world will be an infusion of strength in the new world. Whatever assistance ICEM can render to the young people of today, young people who are on the move in every aspect, will undoubtedly benefit all countries.

Let us no longer say that if ICEM did not exist today it would have to be created. But let us say that ICEM does exist today and it must exist tomorrow!

I speak today as a member of a bi-partisan Congressional delegation. In our delegation are Hon. Thomas Meskill of Connecticut, Thomas Railsback of Illinois, and Charles Wiggins of California. We pledge our support to an *old* or *new* or *perhaps renewed* member of ICEM, your new director, John Thomas. Mr. Thomas has shared the confidence of the Congress for many years and has earned the new respect and trust by his direction of the Cuban Refugee program and the program involving refugees in Vietnam. We have known Mr. Thomas not only as an expert in the field of refugees but as an administrator of the highest caliber. He has had responsibility for millions and millions of dollars when he was serving the United States. Although the budget of ICEM is somewhat less, the objectives are certainly no less important.

I know, and my colleagues from the Congress concur with me, that ICEM is fortunate to have his talent at the helm of the organization. I trust that the Council will assure him the tools that any administrator needs in carrying out the objectives of his office. Mr. Thomas has the whole hearted support of the United States Government, the Executive as well as the Legislative Branch, and we look forward to a new era and of new accomplishment of ICEM under his leadership.

I am proud that the United States has given further substance to its interest in ICEM by an additional contribution. We, in the Congressional delegation, compliment Ambassador Martin for his statement yesterday before the Council, and hasten to endorse each of his pointed observations. His reference to "people in need and countries in need of people" is a practical as well as a humane and noble objective of ICEM.

We will return to Washington with renewed fervor and confidence in ICEM.

STATEMENT OF HON. CHARLES MCC. MATHIAS

First, I would like to say that it is a great pleasure to return to a meeting of ICEM and that as a member of this delegation representing the United States at this eminent gathering, I feel both honored and challenged.

As a member of the United States Senate, it is a particularly happy opportunity to salute the new Director, Mr. John Thomas, whose experience and talents offer such promise to ICEM's future. It goes without saying that I am glad to have this reunion with the Deputy Director, Walter Besterman, with whom I have been associated in various capacities for a number of years.

This is a formidable time for international organizations, subverted by old nationalist values and ambitions and confronted by nearly convulsive change. And it is a particularly momentous period for ICEM and other groups dealing with international migration.

This Committee faces a turbulent world where waves of disruption often cast adrift large numbers of refugees. In a sense, the organization governs a nation in transit, composed of thousands of migrants, united by a desire for freedom and the will to seek it. In fact, as an organization shaped chiefly by function and purpose rather than by geography or ethnology, it has a greater future than many nations. Certainly ICEM's supranational character accords better with world economic and technological trends than does the world fragmentation by geographic nation-states.

I predict that ICEM and other functional organizations will increase in importance as the years pass. One can envisage a future when world migration among nations will reach the level it already has achieved within highly industrialized countries. In the United States, for example, 20 percent of the population moves every year seeking new opportunities; state lines, once nearly as significant as current national boundaries in Europe, pose a negligible obstacle.

At present, however, movement of people in the world economy lags far behind movement within the largest countries and far behind the expansion of world trade. One can predict that this gap will narrow in the future as artificial national restrictions are reduced to allow freer play of world economic forces. And as this gap narrows, the nation of migrants, the province of ICEM, will grow.

This long-affirmative growth of ICEM in support of world economic solidarity will undoubtedly be accompanied by increasing short-term responsibilities arising from national disruptions. Nationalist habits are strong and will not easily accept the internationalist imperatives. But future trends will not favor countries that recoil from the world economy, whether chiefly for ideological reasons, as in Communist states, or from fear of competition, as in some underdeveloped lands. Unable to put their growing populations to work productively, economically isolationist governments will face demands from their people to leave for less stagnant and repressive realms. Such patterns are already evident in refugee-generating areas like Cuba, Haiti, East Europe, and China.

ICEM, thus, has two closely related functions: It manages insurgencies of refugees, moving them expeditiously to new homes; and it locates new opportunities for people in developed countries dissatisfied with their present homes or threatened by diminishing job possibilities. ICEM's record of accomplishment is auspicious in regard to both facets of its responsibility.

II

In the early 1950's, as the nations of Europe completed their recovery from World War II, it became clear that displaced persons do not fall into place as easily as disrupted economies. The jigsaw national boundaries, particularly in East Europe, were separating people from both families and opportunities. Existing international organization on the continent, though increasingly efficient in moving goods and capital, seemed to pass by the human casualties of change. Some of the refugees wandered unattended in the bustle of European economic growth. Their hope drying up, others clotted in dismal refugee camps, which challenged the Samaritan conscience of the world.

In 1952, a new organization, which we now know as ICEM, conceived by men who knew that they could not pass by on the other side, stopped by the road of European revival—then rapidly becoming a superhighway—to help these victims of war and international strife. Like its predecessor, the International Refugee Organization, and other agencies concerned with the problem, ICEM's chief motive was humanitarian. Its function was to expedite refugees and other migrants to homes in other countries. In a large measure, the focus was on getting the refugees *out* of Europe and to such underpopulated areas as Australia, Brazil, and Canada as well as to the United States, which cherishes a long tradition as a haven for the homeless and the persecuted.

ICEM's accomplishments during this period were heroic. In times of special stress the organization rose to the occasion magnificently. During a few weeks after the Hungarian and Suez crises in 1956, ICEM assisted in permanently relocating more than 150,000 Hungarians as well as 10,000 Egyption Jews and Christians. On a single day, November 30th of that year, the organization moved over 5,400 Hungarians from their Austrian refuge. I know from personal observation how the condition of refugee camps has changed and how those few still now open have the aspect of gateways and not of cells or forgotten corners.

During its lifetime, ICEM has arranged transport for more than 750,000 refugees and changed the prevailing mode of refugee management in Europe from long detention to rapid relocation. As the demoralizing camps gave way to bustling processing centers, hopelessness among refugees gave way to high expectancy. And in clearing the camps, ICEM also relieved the conscience of the world.

Along with the refugees, ICEM has also assisted in transporting almost 900,000 national migrants. These are potential or spiritual refugees, ready to seek better opportunities or flee oppression. ICEM offers them the opportunity. Often usefully skilled, they—even more than the average refugee—represent a world resource. In a sense their movement is a capital flow. More precisely, technical manpower is an indispensable catalyst for the effective investment of existing funds and generation of new capital.

In the early years of ICEM when Western European countries had a major labor sur-

plus, there were large numbers of such migrants. In recent years Common Market countries, particularly Germany, have faced a labor shortage and have tended to import labor. As the boom levels off, however, there are signs that many of these migrants may find their jobs threatened. ICEM will have a new opportunity in aiding less developed countries to meet their manpower needs.

In this realm, ICEM is already making unique contributions, moving skilled Europeans to Latin America at a rate of over 2,000 annually. ICEM confers with governmental authorities in Latin America to help them determine priority needs for personnel; it interviews some 25 candidates for each available place, offers language and cultural training, and transports the migrants. Finally, it aids Latin American immigration officials in receiving them.

Since manpower bottlenecks are a major obstacle to economic growth in the region, this kind of manpower assistance pioneered by ICEM is uniquely valuable. It represents a permanent and dynamic contribution to the recipient economies rather than funds to be repaid at interest or grants that tend to dissolve on contact with the enormous needs of the less developed countries. Its cost of approximately $800 per skilled worker or professional placed in a new job contrasts strikingly with the $10–15,000 required to bring technical advisers to the region for short periods under AID. I congratulate ICEM for this effort and hope it can be expanded greatly in the future.

III

I believe, therefore, that ICEM's long experience, together with world trends toward increasing manpower mobility, portend steady growth in the organization's potentialities. Its possible role in alleviating refugee emergencies, such as those in Hong Kong, Czechoslovakia, and Cuba needs no elaboration. I only hope that ICEM succeeds in raising the money to expand its activities in these areas; I pledge my own support to the effort and I am confident of interest and assistance in the Congress transcending any partisan consideration. I also urge that whenever propitious the organization extend overtures of cooperation to Communist countries in order to reduce the complications of migration to the West. As a functional agency, ICEM may be able to negotiate successfully where bilaterial initiatives would fail.

Probably the most vital effort of ICEM, because it is virtually unique, is its program of skilled and professional migration to Latin America. In its cost effectiveness in meeting a crucial development need, I believe this approach has few peers in the foreign assistance programs of the wealthier countries. I think the program should go forward as rapidly as possible and again I will do what I can to encourage U.S. funding.

To meet its growing opportunities, I believe ICEM should change complicated consultation procedures that needlessly diminish its resourcefulness and flexibility. One of the organization's greatest assets, repeatedly demonstrated, is its ability to act expeditiously. This potential should not be restricted to its past areas of operation. I think ICEM has amply shown it deserves our trust.

I look forward to a most promising future for this organization. ICEM responds effectively to perhaps the most dangerous long-term world problem—the growing gap between the rich and poor nations. It is supranational and so are what I believe to be the most important trends in the world economy. It is humanitarian, and I believe the conscience of the world is becoming increasingly sensitive to the plight of refugees. I am proud to be associated with this immensely important undertaking.

RHODESIAN INDEPENDENCE—JUNE 20, 1969

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. RARICK. Mr. Speaker, on Friday, June 20, 1969, the voters of Rhodesia approved of the Declaration of Independence from Britain. In so doing, Rhodesia became the first British colony to declare its independence since the U.S. Declaration of Independence on July 4, 1776.

In just 11 days—on July 4—we will celebrate our Declaration of Independence from England and from tyranny flowing from taxation without representation.

It is interesting to note that in 1776, the American voters were not given an opportunity at the polls to vote for or against freedom—rather it was handled by elected representatives of the various States. In Rhodesia, to the contrary, all voters had a chance to be counted in taking this final step of no return from British domination.

Today Rhodesia, by the landslide wishes of her people, is a free self-governing nation of laws based upon a constitution and as such is entitled to the full respect of free men the world over.

I join with millions of other free men in extending my congratulations to the sovereign Republic of Rhodesia and wish every success to her as her people strive to move forward in peaceful progress under the rule of law.

A local news clipping follows:

[From the Evening Star, Washington (D.C.) June 21, 1969]

BREAK IS FINALIZED: RHODESIA VOTES FOR REPUBLIC

SALISBURY, RHODESIA.—Rhodesians finalized their long goodby with Britain last night by voting overwhelmingly in favor of a republic.

With only scattered boxes out, unofficial figures showed a vote of 50,000 to 11,000 for independence and favored Premier Ian Smith's constitutional proposals to insure white rule by 44,000 to 16,000.

In Salisbury, an ultra-rightwing stronghold, the constitutional vote was 527 to 359 in favor of the government.

"That's the way, to hell with Britain!" shouted a man in the growing crowd in the town center. Cheers went up as the results were posted. A young man raised his beer bottle as the last figures appeared and yelled, "Good old Smithy, show them what we're made of!"

Smith said today he was elated with the decision.

"Maybe it will make the world sit up and say to themselves maybe we should give these people a little bit of recognition," said the 51-year-old Smith. He unilaterally declared Rhodesia independent from Britain on Nov. 11, 1965, rather than give in to eventual black majority rule.

"This is what is needed for the rest of the world—a strong positive message," the premier told newsmen at his party headquarters.

Of 4.2 million blacks in Rhodesia, 9,123 were eligible to vote—about 10 percent of the nation's 90,074 eligible voters. About 36 percent of the nation's 228,000 whites were eligible.

The next step for the Smith government is to present a new constitutional bill to parliament, which begins a new session June 25.

The new constitution set the stage for election of a new government, but government sources said this could be delayed until mid-1970.

Rhodesia's declaration of independence was the first by a British colony since the United States declared itself independent on July 4, 1776.

INFLATION AND FARM PROFITS

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. LANGEN. Mr. Speaker, there has been much discussion in recent days about the economy and the effect of inflation on various aspects of our society. One seriously affected economic group to suffer from higher prices and tighter money is the American farmer. Remarks addressed to the farm problem in this regard have come from Agriculture Secretary Clifford Hardin. Mr. Hardin has outlined four administration proposals to help solve the problem of uncontrolled economic expansion. I submit those remarks for the RECORD:

STATEMENT BY SECRETARY OF AGRICULTURE HARDIN ON INFLATION CONTROL

Farm people, perhaps more than any other group in the Nation, have a strong stake in seeing inflation curbed. For that reason—among others—it is crucial that timely action on President Nixon's program if inflation is to be stopped and our economic health restored.

Domestically, the damaging results in inflation are clearly seen. Farmers are special victims because their costs rise while their incomes are held down by heavy production. They are caught in a squeeze between prices paid and prices received.

Once prices of production goods of nonfarm origin increase, they seldom decline. For example, prices of farm machinery have risen every year since 1955. Prices of motor vehicles have followed a similar pattern except for a slight dip in 1960 and 1961.

Farm production expenses have been increasing steadily since 1953. It appears that nearly all of the expected increase of $2 billion in farm production expenses this year will be the result of price increases rather than the result of greater quantities of supplies and equipment purchased.

I have just returned from Europe, where I have had opportunity to see what the American inflation is doing to our agricultural trade. Inflation increases the costs of our products and makes it harder for us to get our farm products into foreign markets. This is a very serious matter for American farmers.

Inflation can be stopped, but only by applying steady fiscal and monetary restraint to pull the economy back to a sustainable growth rate.

The Administration has proposed a budget that will result in a sizeable surplus—a surplus that is essential if we are to curb inflation. To guarantee that surplus—to guard against an inflationary deficit—the President has proposed the following program:

First, he has pared the adjusted January budget by $4 billion.

Second, he has asked Congress to extend the income tax surcharge. The President is committed to eventual elimination of the surtax. In fact, his proposal includes cutting it in half on January 1, 1970, and ending it on June 30, 1970.

The *third* Administration proposal is to repeal the seven per cent investment tax credit. This repeal will produce revenue to enable us to cut the surtax in half next January first.

A *fourth* proposal will postpone for one year the scheduled reduction of excise taxes on automobiles and telephone services. The primary purpose in this case, too, is to produce revenue in an area where demand remains strong.

INDEPENDENCE DAY OF KUWAIT

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. POWELL. Mr. Speaker, we take this opportunity to send warm felicitations to the Amir, Sheikh Sabah Al-Salim Al-Sabah of Kuwait, and Kuwait's Ambassador to the United States, Mr. Talat Al-Ghoussein, on the occasion of the eighth anniversary of Kuwait's independence.

On June 19, 1961, the governments of the United Kingdom and the State of Kuwait exchanged notes which recognized the independence of the desert kingdom at the head of the Persian Gulf. Kuwait emerged from under the protective cloak of the British into an aura of crisis, for the nation of Iraq challenged the new status of the Kuwaitis. Diplomacy and reason averted a potential clash between Arab brothers and the nation of Kuwait assumed its place as a sovereign and independent state in the family of nations. On July 21, 1961, the Arab League welcomed its newest member into the regional organization, and on May 14, 1963, Kuwait became the 111th member of the United Nations.

For over two centuries, Kuwait has been ruled by the Al-Sabah family, in the Arab tradition of recognizing the leadership qualities and the sound wisdom of the most able men of the nation. Kuwait has continued to rely on the Al-Sabah rulers, but the Kuwaitis have blended the Arab tradition of the King's council with the modern concepts of democracy. The present Amir of Kuwait, Shaykh Sabah Al-Salim Al-Sabah, is advised by his Council of Ministers who represent the people directly before their leader, and by the National Assembly, an elected legislature. In the nation's second elections, held on January 25, 1967, a new national assembly took office for a term of 4 years.

Kuwait has not remained isolated within its boundaries, but has reached out to help and assist other peoples and other nations in the Middle East through the Kuwaiti Development Fund. Projects supported by the fund range from railways in Sudan, to an agricultural program in Tunisia, to the improvement of the Suez Canal in the United Arab Republic. The Kuwaiti fund is supported from state oil revenues earned by the oil industry, which is operated in cooperation with British and American firms.

The people of Kuwait have been twice blessed, once by Allah for the bounty of the oil beneath their soil and again by the wisdom of the men in the government. Schools, hospitals, universities, clinics, highways, houses, recreation facilities, industries, and water supplies were the first priority of the Kuwaiti Government. The result has been the rapid modernization of the state with the people being the first beneficiaries of the wealth that the oil produced. Today, every Kuwaiti has free medical care and free education supported by the state and the opportunity to earn a dignified living in the profession of his choosing.

The continued success of the nation of Kuwait is assured by the wisdom and good judgment of the Kuwaiti people. On this eighth anniversary of the independence of the state of Kuwait, we extend our most heartfelt congratulations and express the hope that the people of Kuwait will witness many more such happy days.

MILLIKIN UNIVERSITY JAZZ BAND

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. SPRINGER. Mr. Speaker, I would like to report to my colleagues in the Congress on the recent successes of the Millikin Jazz Band from Millikin University in Decatur, Ill. The band has just completed a tour to seven countries under the State Department's cultural presentations program. A report from the Portugese Embassy described their first performance in Lisbon as a "resounding success." The report stated further that "the band made a great impression not only because of their superior musicianship, but for their outstanding representation of American youth, excellent behavior, and appearance." Mr. Frank Shakespeare, Director of the U.S. Information Agency, reports to me that the Embassy was flooded with requests for additional performances. Portugese student groups pleaded for the band's return visit en route back to the United States.

The parents of one member of the band have advised me that their son reports the same overwhelming requests after all other scheduled appearances. The band drew capacity audiences at every stop. He also stated that newspaper reports as well as advice from the State Department indicated they reached people abroad through the medium of music in a way which might strengthen our hope of peace.

In this era in which some young people of this Nation seem to achieve headline attention through student disruptions, revolt against leadership, and disrespect for authority, I wanted to take this opportunity to bring to the attention of my colleagues in the House and the Senate and to the Nation the constructive actions and success of this group. They have truly brought great credit to themselves, to Millikin University, to the State of Illinois, and to the entire Nation.

EVERGLADES

HON. WILLIAM L. HUNGATE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. HUNGATE. Mr. Speaker, in view of the current national concern over the Everglades, I would call attention to a recent article in the Christian Science Monitor:

BATTLE RAGES OVER EVERGLADES PARK

(By Robert Cahn, staff correspondent of the Christian Science Monitor)

WASHINGTON.—In the afterglow of the Senate Interior Committee's hearings on the environmental threats to Everglades National Park, it is clearly evident that the park's long-term prospects for survival are not encouraging.

But all is not lost, say conservation groups working to save the park, especially if national citizen pressure can turn around forces now at work. Or if the conflicting aims and actions of federal, state, and county government can somehow be coordinated to work on behalf of environmental objectives.

The major problems brought out at the hearings are the lack of an assured water supply to the park which has been severely damaged by drought in past years, the expected air, noise, and water pollution from a new airport being built along the north boundary of the park, the danger of water pollution from agricultural use of insecticides near (and even within) park boundaries, and the presence of large pockets of private landholdings within the park which are subject to commercial development.

A 21-YEAR BATTLE AIRED

The two days of testimony brought into public glare a 21-year battle over water between the National Park Service and the Army Corps of Engineers, and the continued refusal by the engineers to give a guarantee of water to the park for future years.

The State of Florida was portrayed as keeping the pressure on the engineers not to give the park a priority over the water demands of people and agriculture.

Concerning the threat of a major international "jetport" on the north border of the park, the testimony disclosed conflict between the Departments of Interior and Transportation.

Introduced into the record was a May 29, 1969, memo prepared by Interior Secretary Walter J. Hickel's legal department, accusing the Department of Transportation of having (during the Johnson administration) violated an act of Congress in assisting development of the jetport without determining that no feasible and prudent alternatives existed or that the program included all possible planning to minimize harm to the park.

NELSON CHAMPIONS PARK

The State of Florida and the Dade County (Miami) Port Authority were also not in agreement over the jetport, and state witnesses conceded that proper environmental planning had not been done.

On the plus side, the hearings brought forth a congressional champion for the park in Sen. Gaylord Nelson, who had just re-

turned from a personal inspection of conditions in the Everglades National Park. The Wisconsin Senator has become somewhat of an expert on ecology. And he challenged the philosophy accepted by some officials in Washington and in Florida, that nothing can be done except form study groups.

Senator Nelson heatedly announced he would oppose further spending of federal money on southern Florida water projects until the Army engineers and the state can work out an agreement with the park. The Senator brought out that the federal government has spent $170 million on flood control and irrigation in central and southern Florida over the past 20 years.

FUND FREEZE PROPOSED

"I don't want to give them any more money if they are going to steal water from our park, or won't guarantee it," the Senator said heatedly during a debate with Lt. Gen. William F. Cassidy, Army Chief of Engineers.

"I will do everything I can to stop the appropriations," he continued, "and I think I can get some conservationists to help."

True to his word, Senator Nelson went before the Senate appropriations subcommittee on public works June 12 and proposed that no part of the proposed $9 million 1970 budget appropriation for the central and southern Florida flood-control project be expended until the Senate and House "are advised that the Secretary of the Interior and the Secretary of the Army have made a mutually satisfactory arrangement to provide water to the park."

AIRPORT STUDY SET

Another plus was the announcement that the Departments of Interior and Transportation are forming a task force to investigate environmental problems of the proposed new airport. Henry M. Jackson, Senate Interior Committee chairman, however, suggested that the Army engineers and appropriate air-pollution authorities from the Department of Health, Education, and Welfare be brought into the deliberations.

Perhaps the most encouraging sign for park advocates was the strong testimony from conservation groups showing their intention of making a nationwide issue out of saving the Everglades.

Interior Undersecretary Russell E. Train, the leadoff witness, said the park "has the dubious distinction of having the most serious preservation problems, facing the National Park Service today, attracting the concern of informed citizens and ecologists throughout the world."

Mr. Train said he had begun discussions with Secretary of the Army Stanley R. Resor "which may hopefully lead to a satisfactory agreement" (on a water guarantee).

ENGINEERS' POSITION STATED

However, Mr. Train admitted, the request that former Interior Secretary Stewart L. Udall had made to the Attorney General's office for a legal opinion on whether the Corps of Engineers did have power to regulate water in southern Florida, has been withdrawn.

The Corps of Engineers takes the position that it cannot guarantee water supplies without concurrence of the State of Florida. The engineers has "assured" the park of an adequate supply of water for the future. But they are not willing to guarantee in writing the 315,000 acre-feet a year of regulated flow which park experts say is the minimum needed for survival.

The point of difficulty is whether future water shortages will be shared on the basis of demands of 1970, or the demands of the year when they occur.

UNCERTAINTY EXPRESSED

General Cassidy told the committee that the corps' plans could assure water for the park up to the year 2000. Mr. Train said, "I don't think there is a person in this room who can feel anything but some uncertainty as to rates of growth in southern Florida. They have had a tendency to outstrip all projections. So that while we welcome this assurance, we don't now rest easy as a result of having it."

Nathaniel P. Reed, special assistant to the Governor of Florida for natural resources, outlined the state's priorities.

"Man is priority No. 1, and his activities such as farming and ranching are No. 2," he said. "And somewhere along the line sufficient water will be made available for the park to tide it over the hump until the spring rains begin again."

SIERRA CLUB REPRESENTED

Mr. Reed, who personally is an ardent conservationist and seeks to preserve the park, added shock value to the hearings with his appraisal of the situation:

"A very real question is whether the ecosystem which is the national park can survive. I believe it can. Perhaps not as it was, but as an example of what it was."

Sierra Club spokesman Gary A. Soucie charged that "the U.S. public is unwittingly subsidizing the destruction of Everglades National Park."

Mr. Soucie produced figures which he said showed that in one south Florida water district, the federal government had invested $2.5 million in a $5.8 million water project aiding 32,608 acres of watershed. Of the 21,170 acres in sugar cane, 16,000 of them are owned by one company. And except for county taxes and corporate taxes, the company does not pay for the water it uses, Mr. Soucie said.

Senator Nelson, Senator Jackson, and several witnesses were highly critical of what they called the Dade County Port Authority's lack of environment considerations in planning the new airport in a 39-mile-square area alongside the park. Although the jetport is being readied only for training flights now, officials of the port authority have spoken of plans for an airport bigger than Kennedy International, and with a community of more than half a million people near the jetport.

Mr. Soucie quoted from a Dade County Port Authority report which noted that, "the Everglades National Park south of the site at Tamiami Trail assures that no private complaining development will be adjacent on that side."

Commented Mr. Soucie: "The national park was simply viewed as empty space with no one to complain about the noise except the alligators."

PORT OFFICIAL QUOTED

A National Audubon Society spokesman placed into the record the following, part of a newspaper interview with Richard Judy, Dade County Port Authority deputy assistant director.

"Regardless of what the environmental plan might dictate, however, 'we're going to build the jetport,' Judy said. Judy predicted 'the forces that will come to play will destroy the conservationists.'"

The Everglades situation is the type of problem the newly announced Cabinet-level President's Council on Environmental Quality will be concerned with, Mr. Train told Senator Jackson.

The Senate Interior Committee chairman, author of a bill for a national policy on the environment and an independent council of environmental advisers, commented that the disagreement among Cabinet members "points up the need to have some advisers available to the President, like we have in the Council of Economic Advisers, to assist the President in trying to look at the entire structure."

ECUADOR'S CONCILIATORY ACTION IS TO BE COMMENDED

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. PELLY. Mr. Speaker, last Wednesday, June 18, an Associated Press dispatch from Lima, Peru, quoted Peruvian Foreign Minister Adqardo Mercado to the effect that Peru, Chile, Ecuador and the United States might meet and discuss the controversial fishing dispute under which our fishing vessels have been regularly seized during the past 15 years. The ray of hope of resolving this long and unfortunate problem was most encouraging.

However, any optimistic expectations were rudely shattered last Friday morning when news was released that one of the three Latin countries previously named, Ecuador, had made a mass seizure of American tuna boats some 22 miles off the Ecuadorian coast. This report came just as I was preparing to urge President Nixon to ease existing U.S. sanctions against these neighbors to the south as a gesture of our sincere desire to meet and resolve our differences.

The outlook for negotiations appeared bleak, indeed, until later in the day when it was announced that the Ecuadorian Government had ordered our fishing vessels released, and thereby hope of a meeting was restored.

Mr. Speaker, I know I speak for all the members of the House Fish and Wildlife Conservation Subcommittee who have been seeking a solution of the long-standing dispute when I say we are highly appreciative of the conciliatory action of Ecuador.

And, Mr. Speaker, in the same spirit of amity, the United States now, it seems to me, must do everything possible to ease the causes of friction and thereby help bring these traditionally friendly neighbors to the conference table. Meanwhile, Ecuador is to be commended for releasing our fishing boats.

In this connection, hereinafter is the text of a letter I have sent to President Nixon:

DEAR MR. PRESIDENT: As you know, there is a possibility that Peru, Chile, Ecuador and the United States may be able to arrange a meeting to discuss and to resolve the long-standing differences over fishing rights which have resulted in seizures of American tuna fishing vessels for many years.

I am writing you this letter as the author of an amendment to the Foreign Arms Sales Act whereby sales are prohibited to any foreign nation that seizes U.S. fishing vessels outside the 12-mile limit.

This amendment provides that the President can suspend this provision and it seems timely and appropriate in view of a possible four-Nation discussion on our long-standing fishing disputes that by Executive Action you suspend this ban on sales in order to ease the friction that has prevented a settlement of the fishing dispute with our Latin American neighbors who claim a 200-mile fishing limit.

It seems to me that the action last week by Ecuador in releasing our fishing vessels which it had seized earlier, indicates a sim-

ilar friendly step on our part might well contribute toward restoration of traditional amiable relations with our Latin American neighbors.

Respectfully,

THOMAS M. PELLY,
Representative in Congress.

TWENTY-FIFTH ANNIVERSARY OF THE GI BILL

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. SCHERLE. Mr. Speaker, yesterday, June 22, was the 25th anniversary of the enactment into law of the GI bill. By enacting this important landmark legislation on June 22, 1944, just 16 days after the D-day invasion, the U.S. Congress pledged to provide funds for homes, education, and business opportunities for American servicemen when the war ended. The Congress acted unanimously in passing this legislation.

America has felt a great obligation to those who have sacrificed for their country. Those who serve in the military are placed at a disadvantage in our competitive society by their having been displaced for a period of time from the social and economic life of our country. No government or people can give back these lost years to these men and women who man our Nation's defenses, but the GI bill and its successors at least partially provided equitable relief, giving the veteran concrete assistance in getting a fresh start on his re-entry into civilian life.

Under the first and the subsequent Korean war and cold war GI bills, more than 10 million American veterans have either gone to college or taken specialized training. This investment provided the Nation with 380,000 new teachers, 84,000 new doctors, 30,000 new dentists, 15,000 new nurses, millions of skilled craftsmen and businessmen, and thousands of leaders on every level of government and enterprise. Perhaps hundreds of the Members of Congress, including myself, would not have had opportunity to have completed their higher education but for the assistance provided by the GI bill.

The GI bill created the biggest housing construction boom in our history. Since enactment of the first GI bill the Veterans' Administration has guaranteed 7 million home loans. These loans not only helped the veteran, but the housing boom which resulted boosted our entire economy, with every economic sector feeling the beneficial impact. The so-called "readjustment" period following World War II became a period of expansion, not retraction.

The veteran has been a direct beneficiary of this legislation, but all America has also benefited with the increased availability of professional men and technicians, higher living standards, better housing, greater revenues from increased incomes. The investment in human beings has been repaid many times over. All three GI bills produced unparalleled programs and benefits, with unparalleled successes and achievements.

With the passing of the silver anniversary of the World War II GI bill, it is time to take stock and review these GI programs. The problems of the veteran of Vietnam may be entirely different than those of the veteran of World War II. Many returning from Vietnam are not participating in GI bill educational benefits. This is partially explainable through the much higher percentage of those serving in Vietnam who already had completed their higher education before entering the service, and through the fact that unemployment is very low and returning veterans easily find employment without obtaining further training. This does not appear, however, to explain fully the change. President Nixon's Committee on the Vietnam veteran is studying possible improvements in our GI programs to meet problems of readjustment of the present-day veteran, and the committees of Congress should make a similar review. America owes it to these young men and women who have sacrificed so much for their Nation, and for the cause of freedom everywhere.

LET US REASON TOGETHER ON THE GRAPE BOYCOTT ISSUE

HON. CHARLES M. TEAGUE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. TEAGUE of California. Mr. Speaker. I call to the attention of my colleagues the following very interesting editorial from the Bataan News in Sacramento, Calif. This is a publication which has wide circulation among Filipinos in the State of California.

The editorial follows:

LET US REASON TOGETHER ON THE GRAPE BOYCOTT ISSUE

The grape boycott with all its implications and potential danger to the nation, calls for *sober thinking*. The warring parties . . . the union and the growers . . . are highly aroused, and before they are emotionally carried away, some sober approach to the problem must be made.

The good *book*, upon which most of our philisophies and social behavior is based, says: "Come let us reason together."

The time for reasoning together has come.

At this stage of the grape boycott struggle, the right of the workers to organize and belong to a union of their own choosing is no longer an issue. The growers have conceded that point. What is left to do is to devise the provision of the law that will define and regulate the conduct and behavior of the growers and the farm workers.

In attempting to solve the problem, we must put above all the welfare of the workers, the growers and the general public. The workers are human beings whose interest and whose efforts must be justly compensated. They are worthy of their labors. The growers are the ones who provide foods for empty stomachs, and because the health and welfare of the nation depends on them, their interest must be carefully safeguarded. The public, who buys the goods produced by the growers and the workers, must be considered too. Let us not forget, he foots the bill.

The greatest and most serious area of disagreement is on the issue of strike. This is the big stick allowed by our present laws to the workers to force the employers into submission. This may be or may not be a good law, but all in all it has seen America become the greatest and wealthiest nation on earth. The growers, at this stage, are no longer objecting to a law allowing a strike clause; they are wanting and insisting that a strike, if it occurs, should not be allowed at the critical *time of harvest*.

In as much as we are thinking soberly and are reasoning together, let us consider that demand. Is it fair and just?

The union is insisting that its right to strike should not be restricted. It is insisting that it is in our statute books which were freely used in the past. It must be kept that way, it insists.

It is true that the unions have freely used the right to strike without any restriction as to time and place. They've used it in the steel industry, automobile industry, craft industry, etc. Stoppages of work in those industries have occurred time and time again, and when the strikes are over, work resumed as usual without any total loss. Steel is not perishable.

But let us look at the farming industry. Its products are highly perishable. In the growing of crops, *weather and time*, are delicately involved. After tediously culturing the plants, the crops mature at a certain time. When the crops are ripe and ready to be gathered in, they must be harvested right there and then. *Or else they go to rut.*

If the union decided to stroke at that particular time of harvest, the crops would not wait till the strike is over. It just wouldn't wait for no man. If it is not harvested and processed at that particular time, the foods are wasted. It is that simple.

We are sure that everybody realizes the importance of agriculture not only to the individual but to the nation. The growers produce foods and fibers, upon which the health and welfare of the nation depends. Agriculture is still our number on economy, and still is the biggest employer in the nation.

Now, then, if we pass a law giving the workers the right to strike at harvest time, we would be hurting our number one economy. We would be endangering the health and welfare of the nation because such strikes will prevent us from harvesting the crops.

After reasoning together we find that it is incumbent that the farm workers should be allowed to belong to a union of their own choosing so that their interest could be protected. They could exercise the right to strike at any time except at the critical time of harvest. The foods should not be allowed to go to waste.

We believe that this is the human and practical thing to do.

JOE McCAFFREY, "VOICE OF CAPITOL HILL"

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. MOORHEAD. Mr. Speaker, there is a saying that, "speech is a mirror of the soul; as a man speaks, so is he."

This is an apt description of Joe McCaffrey, well-known Washington radio and TV commentator, for Joe has been "telling it like it is" long before the phrase became popular.

Joe's commentaries, which often reflect his delightful Irish wit, are forth-

right, fair, reliable, and highly professional.

He is not only a great commentator, but a fine gentleman, and on the occasion of his 25th year of broadcasting in the political arena, it is a pleasure to join the many friends of Joe McCaffrey in saying—you are more than a "household word"; you are the voice of Capitol Hill. Keep up the good work.

LEGISLATION TO EXTEND THE GOLDEN EAGLE PASSPORT

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. BROYHILL of Virginia. Mr. Speaker, last year the 90th Congress in amending the Land and Water Conservation Fund Act repealed the annual Federal recreation area permit, known as the Golden Eagle passport. The Federal agencies still have authority to collect recreation fees, but after March 31, 1970, there will be no annual permit which may be used at all Federal recreation fee areas.

The Golden Eagle passport, of which 692,300 were issued between 1965 and 1968 and 403,100 so far in fiscal 1969, permits the bearer and everyone within a private vehicle and attached camper or trailer, to use one or all of the over 3,000 national parks, forests, and refuges, as well as other federally operated recreational areas, with the payment of a single $7 fee.

I am convinced that the people in my district in Virginia, as well as for the many hundreds of thousands of other Americans, who enjoy the wonders of nature, the national parks, the national forests, and other Federal recreation areas, the Golden Eagle passport is an unsurpassed bargain in outdoor recreation. I think there is no doubt as to the interest in preserving this simple method of collecting this fee, either for the Government or from its user citizens. As personal opinion, if for no other reason than its simplicity, it ought to be maintained as an example that all acts of this Government are not confusing and complicated. Not only does the Golden Eagle passport benefit the hundreds of thousands of our citizens who travel across the breadth of this land in campers and trailers, its users also put revenues into the land and water conservation fund. This revenue helps finance such projects as Federal acquisition of additional authorized areas, multipurpose metropolitan parks, snow-ski areas, campgrounds, swimming pools, and bicycling paths in all the 50 States, the District of Columbia, and our territories.

After a slow start in 1965, when only $633,600 in fees were collected, ever-increasing acceptance and demand has increased estimated receipts in fiscal 1969 to $5,200,000. The Golden Eagle passport has proved its value and popularity. We must not let it expire.

Mr. Speaker, it is for these reasons that I offer for introduction legislation to extend this program. My bill will establish separate fee programs for entrance to and use of areas administered for outdoor recreation and related purposes by the Secretary of the Interior and the Secretary of Agriculture, and for other purposes. This bill will extend the Golden Eagle passport indefinitely. One small change will be made to the fee now in use; the present fee is to be increased from $7 annually to $10. This increase is acceptable to the users as reasonable and the funds collected are to be used directly for the users benefits. I have been told it is still a bargain.

Mr. Speaker, I urge early consideration and action on my bill.

RUSSIA AND THE "PUEBLO"

HON. JACK EDWARDS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. EDWARDS of Alabama. Mr. Speaker, when the U.S. Navy ship *Pueblo* was hijacked by the North Koreans about 18 months ago, there was considerable opinion in some places that Moscow was terribly embarrassed by such a rash act, and that the North Koreans had committed this piracy in spite of Russian efforts to prevent it.

Opinions such as this come from the same people who are flabbergasted when a few months later Russian armies invaded Czechoslovakia. In the view of these people the Soviet Union was supposed to have renounced the use of power.

Insofar as information is available to the public today, there is no certainty that the Soviet Union played a role in seizure of the *Pueblo*.

However, a news item pointing in this direction appeared today, and I include it at this point in my remarks as a development of real interest to those concerned with this issue:

CZECH DEFECTOR SAYS RUSSIA SPARKED SEIZURE OF PUEBLO

A high Czechoslovakian defense official who defected to the United States last year said yesterday that the Soviet Union collaborated with North Korea in the capture of the U.S. intelligence ship Pueblo.

The assertion by Gen. Jan Sejna in a copyrighted article in the July issue of Reader's Digest runs counter to the official position in Washington that the Russians had little—if anything—to do with the Pueblo's capture.

Sejna based his contention primarily on remarks he said were made by Soviet Defense Minister Andrei Grechko while Grechko was drinking heavily at a party in Prague in May, 1967, and on the words of a Soviet general who announced the Pueblo's seizure to the Czechs the day after it happened.

Sejna quoted Grechko as saying:

"It is absolutely insolent the way the Americans sail their —— ships around as if they owned the water. Their espionage ships come right up to our shores to spy on our communications. But I can tell you this: We have decided to humble the Americans. Just as we humiliated them in the air by shooting down the U–2, we are going to humiliate them at sea by grabbing one of these ships."

Sejna said Grechko did not say when, where or how this would occur but that he indicated the Pacific area had been chosen because it was considered an "American preserve."

He quoted Grechko as saying: "Our Korean comrades, of course, are not capable of carrying this off without us. But we will guide and protect them."

He heard nothing more, Sejna said, until Jan. 24, 1968, when Soviet Col. Gen. Aleksandr Kushchev, the chief Warsaw Pact representative in Prague, announced the seizure at a meeting at the Czech Defense Ministry.

"During the night we learned that, with the collaboration of our Korean comrades, we have achieved a great success," Kushchev was quoted as saying. He then told—with an air of surprise, Sejna said—how the Pueblo had "capitulated" without firing a shot, leaving thousands of undestroyed documents, and how "it took Washington literally hours to pull itself together and even begin to react."

Sejna said other Soviet officers later confirmed Kushchev's account, and subsequent briefings indicated that "the intelligence information the Russians were extracting from the Pueblo was immensely valuable."

Until February, 1968, Sejna was the Communist Party official in charge of political control of the Czech Defense Ministry and General Staff, and frequently saw Soviet and Warsaw Pact officials. He flew to the United States when Antonin Novotny lost power in the 1968 Czech political crisis.

REPORT OF SOUTH VIETNAM STUDY TEAM

HON. RICHARD D. McCARTHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. McCARTHY. Mr. Speaker, a U.S. study team made up of eight prominent individuals recently visited South Vietnam. The team was sent there by a group of well-known churchmen concerned about the war and by reports of political repression in South Vietnam. The members included our distinguished colleague, the gentleman from Michigan (Mr. CONYERS) and a noted Jesuit, the Reverend Robert Drinan, S.J., dean of Boston College Law School.

I found the report of the U.S. study team illuminating as well as disturbing. I was, for instance, surprised to learn that although most Catholics in South Vietnam support the Thieu government, a significant segment is critical of the war and of the present Government. The team found Catholics who want a closer tie with the Buddhists, who are actively seeking an early peace. Many of these Catholics are seeking what some call a "third solution"—between communism and militarism. Father Hoang Quynh, for instance, who is an active member of the All-Religion Citizens' Front, has worked with Buddhists in trying to prevent further friction between the Buddhist and Catholic communities. There are other Catholics who are close to Pope Paul's VI's views on negotiations and peace. They have won the confidence of Buddhist leaders.

Mr. Speaker, I believe the study team our colleagues will study its report and I join with others in praising the gentleman from Michigan for his part in this important effort.

NEVADA CHAPARRAL TEA, A POSSIBLE CANCER CURE?

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. BARING. Mr. Speaker, with all the talk and debate about cigarettes allegedly causing cancer and with the keen interest this past week in House passage of a cigarette bill, I feel research underway in my State of Nevada and neighboring Utah deserves attention nationwide in regard to the drive of mankind to cure disease.

Therefore, I offer for the RECORD today a report from the Nevada Ranch and Home News about a "tea" made from a Nevada bush which the Indians have apparently been using for years as a sort of cure-all. This Indian habit has drawn the attention of some doctors in Reno and Utah at the respective universities with the thought being that perhaps the so-called "tea" may be a cancer cure.

I submit the news release for inclusion at this point in the RECORD:

DESERT CREOSOTE BUSH SHOWS PROMISE AS CANCER CURE

A little "Chaparral" or "Indian" tea brewed from the leaves of the desert creosote bush just might cure cancer.

Sound like an Indian medicine man talking or maybe a barker for patent remedies? If current research proves fruitful, it could be a highly trained and expert medical doctor.

"I've kidded some of my students that maybe the intricate and sophisticated world of medical science is catching up with the medicine men," said Dr. Ronald Pardini, associate professor of biochemistry at the University of Nevada, who is engaged in research concerning the creosote tea. Dr. Pardini delivered a paper last Friday, June 13 at a regional meeting of the American Chemical Society in which he discussed phases of the research into a derivative of the creosote bush leaves that has indicated some promise as an anti-cancer drug. The meeting was held in Salt Lake City, Utah.

Staff members of the Biochemistry Department, College of Agriculture, at the University of Nevada including Dr. Pardini, Dr. Dean C. Fletcher, chairman of the Department, and James C. Heidker, a graduate student working toward the Ph D. have now been conducting research on the creosote bush derivative for a number of months.

Dr. Fletcher related an intriguing story about how the research got started. Interest was first generated, he said, at the University of Utah Medical School concerning an elderly patient who was suffering from a melanoma or cancer of the face which had metastasized or spread. Previous surgeries had not helped. A radical surgery was recommended for the removal of a considerable amount of tissue but the person, due to his advanced age, refused. The disease was felt terminal and the old man went back to his home in St. George, Utah to wait. Some months later he returned to the University of Utah and exhibited a miraculous recovery. When questioned the only deviation from his normal routine was the drinking each day of the "Chapparal" tea as recommended by an old Indian friend. At any rate, the man's story intrigued those at the Utah Medical School enough to seriously look into the tea.

Researchers at Utah, according to Dr. Fletcher, were able to isolate the active ingredient in the creosote leaves which appeared to be the only material which might inhibit cancer growth. This was "Nordihydroguaiartic Acid" or NDGA. When extracted this appears as a white powder that can be chemically synthesized in the laboratory and administered in capsule form.

Dr. Fletcher, who is a member of the clinical faculty of the School of Medicine, Utah University, became acquainted with the drug and decided to experiment with it in Nevada. So far only the University of Utah and Nevada are working with the "tea". The two university's are cooperating in the research.

Dr. Pardini's particular phase of the study, and that which he reported upon at the Salt Lake meeting, is to determine the site of action of the drug or where in the cell it works and how it works. Previous to coming to Nevada, Dr. Pardini had been associated with the Stanford Research Institute where he had worked on screening tests for anti-cancer drugs. Specifically he had researched the phenomenon of mitochondrial functions within the cell. This is the portion of the cell where energy metabolism takes place. He had worked with various drugs which inhibit mitochondrial functions, and in turn inhibit cancer cell growth. Dr. Pardini found NDGA to be a potent inhibitor of mitochondrial enzymes. It also appeared to work specifically on diseased or cancerous cells and not on other cells. His work also showed that the inhibiting action of NDGA was specific to the compound and not a nonspecific anti-oxidant effect. He also postulated how it can work to inhibit tumor growth.

Meanwhile, Dr. Fletcher has been working with the medical fraternity in Reno in actually administering the drug to patients. Similar work is also being done in Salt Lake. In addition, researchers at Utah are gathering case history studies on Indian people who have traditionally taken the tea to determine how this might have influenced or effected incidence of cancer or certain types of cancer.

"All we can say at this time," said Dr. Fletcher, "is that the drug appears extremely interesting and interesting enough that we are continuing study on it."

In the "Chaparral Tea" derived from *Larrea Divaricata*, one of the creosote bushes of the Southwest and found in Nevada, may be some hope in the fight against cancer. Indians in the country have had faith in it for a long time.

THE ACCOMMODATING ASTRONAUTS

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. TEAGUE of Texas. Mr. Speaker, on Monday, May 19, 1969, the Washington Daily News carried an editorial describing the flight of Apollo 10 and the contribution of Astronauts Stafford, Young, and Cernan to the Apollo program and to the future of manned space flight. The key facts of this editorial are that these astronauts place the importance of space exploration above their own aggrandizement. I commend this editorial to your reading:

THE ACCOMMODATING ASTRONAUTS

The trio of astronauts now on their way to the moon in the Apollo 10 spaceship have got to go down as three of the most accommodating men in history

Their predecessors in Apollo 9, who blazed the trail to the moon two months ago, had the thrill of looking back across space and seeing Earth as a bright blue ball of life.

And in mid-July of the three astronauts aboard Apollo 11 two will have the incomparable experience of being the first human beings ever to set foot upon another celestial body.

So the three men now flying Apollo 10 are sort of middle men, short on glamor—relatively—but long on the services they are called upon to perform. For their flight is the dress rehearsal for the planned moon landing. They are to make the final checkouts of the lunar landing craft by twice descending to within nine miles of the moon's surface, and they are to take a close look at the landing sites targeted for July's history-making moment.

Yesterday, everything seemed to go off "on the tick"—blastoff from Cape Kennedy, the long rocket "burn" that headed them racing for the moon, and the needle-threading link-up of the command ship with the lunar landing vehicle.

We pray that the rest of the trip will go without a hitch and that the three—Tom Stafford, John Young and Gene Cernan—will return safely from their most obliging service.

HONOR PLEDGE OF FOUNDING FATHERS

HON. MARGARET M. HECKLER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mrs. HECKLER of Massachusetts. Mr. Speaker, "Honor Pledge of Founding Fathers" was the title of a very incisive editorial by the Taunton Gazette recently. In a time of considerable confusion concerning the spirit of the more radical members of the younger generation, this editorial speaks to a key issue which has often been overlooked. It addresses itself to the problems of method and mental attitude which are so important in determining the character of any movement for change. I offer the full text of the editorial for consideration by all my colleagues, who share my concern over the crisis of spirit in our society:

HONOR PLEDGE OF FOUNDING FATHERS

The revolts taking place on the nation's campuses are a "symptom of the serious moral duplicity in our history and culture as well as the perversion of values in our society," says a psychiatrist.

The students are wise to the "say one thing and do another" attitude that pervades society, says Dr. Charles de Leon, assistant professor of psychiatry at Case Western Reserve University in Cleveland, Ohio.

"They know that two of our greatest heroes, George Washington and Thomac Jefferson, their flowery rhetoric about democracy and justice notwithstanding, were simple slaveowners."

This is, to be sure, fact of history. But before anyone condemns the American experiment as a monumental sham and clossal fraud, perhaps we may be permitted to ask a silly question.

If Presidents Washington and Jefferson were slaveowners, why is not President Richard Nixon a slaveowner?

Perhaps it is because Nixon is a Quaker, as was Benjamin Franklin, who spent the last years of his life vainly petitioning Congress to abolish slavery.

Well, then, why is not former President Lyndon B. Johnson, a southerner, a slaveowner?

Perhaps it is because the Industrial Revolution has simply made slavery impractical today. But slavery was abolished long before farming was mechanized.

The answer is, of course, that eight decades after the signing of the Declaration of Independence, with its "flowery rhetoric," the American people could no longer tolerate the existence of an institution so contrary to the ideals on which the nation was founded. They could solve the contradiction no other way but to fight a Civil War.

"In that war more than 600,000 men died," writes Mary Joan White in the Wall Street Journal. "Legal slavery also died. Whether slavery could have been abolished short of war is questionable, but it is certain that the methods employed by the radicals stirred public passions to the point that leaders who tried to work through to a peaceable, just solution were cut off.

"Nor did the fearful price buy true freedom for the Negro. The nation has not finished with the bitterness, political division and racial injustice that survived the war."

"Instead of sectional lines, racial and generational lines are being drawn today militant blacks and radical youth are attacking the problems of an admittedly imperfect society in terms of moral issues and with any means at hand . . .

"In their attitudes and strategy, the young radicals and black militants are the direct descendants of both the abolitionists and the southern radicals, an uneasy mix surely. Like the abolitionists, they have a rather arrogant assurance that they are so right, that they are above the law in their choice of means to their ends. Like the southern radicals, they are so committed to their own view of the issues that they insist on being allowed to rule or ruin the system. Their attitude and more extreme methods are absolutely totalitarian."

Benjamin Franklin detested the compromise with slavery written into the Constitution, but he believed that one, united nation, even with slavery, held more hope for the future of mankind than a collection of sovereign, bickering states.

Washington and Jefferson, too, had qualms about slavery, but they were products of their environment (the South), even as Franklin was the product of his (the North).

Should we scorn Washington and Jefferson as "simple slaveowners," or should we not bless them and all the others who "brought forth on this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal"—even if that liberty and that equality are still imperfectly realized?

Shall we declare another civil war between the generations and the races, or shall we not grant a measure of good will to all sides and all factions and attempt to reason together?

COMMUNITY PRIDE, INC.

HON. DONALD W. RIEGLE, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. RIEGLE. Mr. Speaker, I have recently learned of the work being done in the Watts area of Los Angeles by a nonprofit community action corporation to improve housing conditions and create job opportunities. Their primary goal is both to rehabilitate old, broken-down homes and to build new ones. By using local unemployed craftsmen, and training the unskilled and unemployed, they are using local people to help in this community improvement effort. With evidence of their initial success, this organization plans to expand their efforts into other areas such as community shopping centers.

Mr. Speaker, when this group first began their work, there was little assistance from the white community, local business and financial organizations, or from the Government. However, as their projects gained momentum, concerned businessmen in the Los Angeles area took an active interest in the activities of Community Pride, Inc.

The article entitled "Helping an Infant Black Firm" tells the story of Community Pride, Inc. Because I believe that there is a growing interest in the positive efforts of business firms to assist the disadvantaged, I recommend this article to all interested Government officials as it outlines the way in which established business concerns can work together with community action groups to improve our poverty areas, and I include it herewith:

HELPING AN INFANT BLACK FIRM—VOLUNTEER PUBLIC RELATIONS GIVES A HAND TO NEW ENTERPRISE IN THE WATTS AREA

(By Robert B. Wolcott and David Nuffer)

(NOTE.—Robert B. Wolcott is chairman of Wolcott, Carlson & Company, Los Angeles. David Nuffer, formerly senior account executive with Wolcott, Carlson & Company, is now director of public relations at VSI Corporation, Pasadena.)

The talk is loud, the proposals and recommended programs many and varied. Unfortunately, the efforts to alleviate the urban ghetto problem have not been large. Tokenism may be on the way out; we have reached the point where the pat on the back can no longer take the place of the necessary sweat and money.

What can business do to help and, more specifically, what can public relations practitioners do?

Our firm, through one of its clients, the Earle M. Jorgensen Company, learned of a grass roots organization in the South Central—or Watts—area of Los Angeles, dedicated to eradicating two of the area's most persistent problems—poor housing and lack of jobs. Its name is Community Pride, Inc., incorporated in 1966 as a non-profit corporation with the assistance of top Los Angeles business leaders.

Public relations for CPI was taken on by Wolcott, Carlson Company, Inc. as a public service. We prepared the original public relations program; handled the first major press conference, which announced the formation of the organization; helped with subsequent press conferences, and encouraged the involvement of some members of the Los Angeles Chapter of the Public Relations Society of America. We are continuing to counsel and assist CPI as other Los Angeles business and public relations leaders pitch in with their time and talent.

The results?

To date more than $100,000 has been loaned, donated or pledged to CPI and a line-of-credit for $200,000 has been established at the Bank of America. To date CPI has rehabilitated approximately 50 homes and provided jobs for nearly 100 Negroes.

With these initial results in hand, the organization's leaders are looking for new avenues through which to expand their efforts into such ventures as community shopping centers and prefabricated homes. The U.S. Department of Housing and Urban Development (HUD) has approached CPI to enlist its efforts in other projects, such as new dwelling construction (including multi-family units), administration of rent supplement and consumer education programs, and ple of the area with government and private community-wide efforts to acquaint the peo- programs.

CPI is now one of four groups involved in the housing problems of South Central Los Angeles and is the most successful.

How did CPI get started? And what role did public relations play in its growth?

CPI was incorporated as a non-profit corporation in June, 1966. There was little help at first from the white community, from business and financial organizations or from government programs. Then concerned businessmen took an interest in CPI as offering one of the soundest approaches to urban problems.

CPI's primary goal is to rehabilitate homes and build new ones in the blighted area and sell them to deserving, low-income families at prices they can afford (less than $15,000). By using local unemployed craftsmen, and by training the unskilled in carpentry, electrical wiring, roofing, plumbing and landscaping, etc., CPI is helping to relieve unemployment. In order to meet its goals, CPI originally needed two things:

1. Financial help from HUD under the Federal Housing Administration Act—section 221(h) (Program for Purchase and Rehabilitation of Housing for Resale to Low Income Purchasers); and

2. Financial help from the business community in the form of initial operating capital to put the business enterprise into motion, since 221(h) cannot be used for this purpose.

HUD had already promised its support. Prime need was a working fund of approximately $250,000. CPI proposed to obtain this amount from industry on a business-like loan basis at a reasonable interest rate with a one to three year maturity date. The premise was that business could get involved on terms it would understand.

The basic public relations objectives for CPI were set down as follows:

1. Generate knowledgability and credibility on the part of the Los Angeles business public about CPI, its objectives, and its business-like orientation.

2. Establish CPI nationally in the business and government communities as a model program for alleviating housing and employment problems in the ghettos of the country, and thus help provide direction for use of funds.

3. Increase general public knowledge about CPI, its origin, nature, and objectives, and thus attempt to help in lowering the barrier between minority and majority communities.

4. Provide media exposure for business and government organizations that provide assistance to CPI.

5. Provide media exposure of people involved in making CPI work, from administrators to laborers.

6. Help create an identity of a community on the upswing—through CPI as an important contributor—and thus help in creating public and business confidence in the South Central Los Angeles area.

7. Help insure knowledge in the area that CPI would not mean cessation of government monies.

PUBLICS DEFINED

To meet these objectives, we established certain target publics. In order of importance these are: Los Angeles business and financial leaders, firms and institutions; state and national business and financial leaders, firms and institutions; the general public; and the Negro community.

Since this was a strong local story, our primary media targets are: financial and general news sections of Los Angeles metropolitan newspapers; daily and community newspapers; and TV and radio news and documentary programs. Our secondary media targets are: the national business press; financial and general news sections of major

city newspapers; the Negro press; and government publications.

The peg for the first major CPI announcement was a tour of Watts and surrounding areas on February 26, 1968, by more than 30 leading Los Angeles businessmen, virtually all of whom saw Watts and "Charcoal Alley" for the first time. The tour concluded with a box lunch presentation by Bishop George Scott, Jr., executive vice president of CPI, at the Union Baptist Church in Watts.

The story was widely told the following day in the Los Angeles area in both newspapers and the electronic media. Then work began on an information brochure and a 25-minute film for showing on TV and to groups in South Central Los Angeles.

Following the first announcement, CPI leaders could concentrate on raising money for its operating fund. The task wasn't easy, and it soon became apparent that completion of the first major project—rehabilitation of five homes—was essential.

This was achieved in early September, 1968, and plans were made to publicize the move-in of the first family to have a CPI home. By this time, the local chapter of PRSA had been approached for its endorsement and Joseph Roos, executive director of the Jewish Community Center, accepted the chairmanship of a local public relations committee.

The city councilman from the area was invited to speak, standard press kits were prepared and media and business leaders invited. Once again, the story was favorably treated by Los Angeles media.

The next major event was the announcement of the first home in the nation to be built under financing by Section 235 of the new Federal Housing and Urban Development Act of 1968. By this time, PRSA member Jack P. Whitehouse had joined the public relations effort.

Whitehouse now heads a special committee that works in conjunction with other advisory and working groups in finance, architecture, building and communty relations. Members of Whitehouse's committee include: Ed Coyle, manager of public relations for Western Gear Corp.; Jim Hurley and Ray Burns of the Pacific Lighting Co.; Paul Lewis from the Whitehouse agency and Joe Roos.

The effort thus far for CPI have produced excellent results as commounity leaders increase their personal involvement in the city's problems.

HOW TO HELP

Admittedly, CPI is not the only answer to the problem of low-income urban living, but it is workable and will help considerably in its alleviation and success of the efforts points to a useful role for public relations in the public service field.

To those wishing to explore this field we recommend the following: 1. find out what's going on; 2. evaluate your findings; 3. recommend an action program; 4. carry it through—whether individually, by group or by PRSA chapter assistance; 5. report your results, and 6. keep the faith!

To those who wish to help, our final advice is: Don't wait for someone to come to you. Black organizations are springing up all over the country and the list will increase as President Nixon's "Black Capitalism" concept gains support. Topnotch public relations counsel and assistance is as vital to these organizations as to any successful company.

GOVERNMENT FISCAL YEAR

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. LANGEN. Mr. Speaker, it is time for the whole Congress to recognize that our present fiscal year is an obstacle to good government and public welfare. By having the fiscal year begin on the first of July we are raising the overall level of governmental spending, depriving the underprivileged and the poor of effective and efficient programs, delaying cooperative Federal programs by as much as a year and casting a certain doubt on the credibility of governmental statistics. I strongly urge immediate consideration of my proposal for a calendar fiscal year, which would cure these present deficiencies. Although change of a long-established custom is difficult to achieve in Government, my proposal would not cause hardship on any governmental body or agency and would, on the contrary, alleviate or even eradicate difficulties and hardships now suffered by both Government and the public. Early passage of this proposal would greatly facilitate the minor technical changes needed for the Government and the public to adapt to the calendar fiscal year.

It has been a long-recognized fact that appropriations bills are seldom finalized by the first of July, which is the present legal beginning of the fiscal year. The Congress has, by a continuing resolution each year, authorized each program to continue spending at a level which would not exceed the lower of either the budget or the previous year's appropriations. Once a department or agency has begun spending money at this artificial level, it would experience difficulties in readjusting to a substantial decrease in appropriations from the artificial level set by the continuing resolution. Naturally, "Parkinson's Law" would take care of any increase and the additional money would be spent—even if not wisely or efficiently. In either case tax dollars would be wasted in inefficient spending caused by inadequate or no advance planning. Efficient administration is clearly the key to seeing that every dollar spent on social programs will benefit the poor and the underprivileged to the greatest degree possible rather than being lost in a cumbersome bureaucracy due to lack of direction.

Let us take a hypothetical case to show just how failure to finalize appropriations bills before the beginning of the fiscal year would raise the overall level of governmental spending. Suppose that program A had been appropriated $1 million one year and the budget called for the same amount for the next year. However, although the Congress had indicated no particular controversy with respect to the program, the final appropriations passed in December was for only $500,000, that is, 50 percent of the spending level authorized by the continuing resolution. One can readily see that the administrators of program A, counting on at least a continuance of the appropriations level of $1 million, would have spent by the end of December almost all of the $500,000 appropriated.

Even if the administrators eventually saw the possibility of a cut in appropriations they might choose to discount an appropriations cut and continue to spend on the basis of the continuing resolution, counting on a supplemental appropriation if there is a cut. In a case of this type the administrators would have a clear case for a supplemental appropriation on the grounds that the Congress itself—by its failure to finalize the appropriations bill by the beginning of the fiscal year—caused the program to spend all its money with the fiscal year only half gone. If the Congress then wishes the program to continue, it will be forced to pass a supplemental appropriation for the remainder of the fiscal year, thus raising the overall spending level higher than the Congress originally intended. If the Congress is trying to keep to a budget ceiling, as it now is, some other program may then have to suffer in order to furnish funds for the supplemental appropriation. In this way and to this degree the Congress loses its control over executive spending and may exceed its own self-imposed fiscal limitations.

My proposal for a calendar fiscal year would eliminate this problem forever, because the fiscal year would begin on the first of January after all the appropriations bills have been finalized prior to adjournment in December—or earlier. More importantly, with advance notice of the final appropriations each department or agency would have an opportunity to plan ahead efficiently for the increase or reduction of a program; and the tax dollar, being utilized more efficiently, will then produce the greatest actual benefit to those individuals the program was intended to reach.

Now we all surely want the greatest portion of each dollar appropriated for social programs to benefit the poor and underprivileged directly. However, we deprive the underprivileged of the maximum benefit of these programs—and thus raise the administrative costs of social programs—when we allow the whole poverty program to go without direction. The present authorization expires in about 2 weeks, a new authorization bill is not yet ready and funds cannot be appropriated to administrative agencies that no longer exist. What greater chaos could exist? Even with stopgap legislation, to continue the programs at their present level cannot restore the proper order or enough direction for efficient administration. With the fiscal year beginning on the first of July, it is almost impossible for the Congress to complete hearings and make appropriate changes in the bill for this most complex and vital program. When all of this is allowed to occur, the one to suffer the most is the one who most needs help: the poor and the underprivileged.

In most of the national social and public works projects, the nature of the legislation requires funding jointly from Federal, State, and even local sources. Sometimes the State has to match Federal funds in a certain ratio or the Federal Government has to reimburse the State for certain types of expenditures. In either case the particular project will probably be delayed. Detailed planning cannot be accomplished in the first case until the State or local community knows just how much money it needs for the project, while in the second case, the State or local community may not state the project until there are appropriated funds out of which they can be reimbursed.

Vocational schools thought that they had found a way out of the latter situa-

tion by budgeting grants to students under the vocational education—work-study program at the beginning of each fiscal year. Naturally, they expected to be reimbursed from funds for that purpose which had been appropriated regularly each year. In fiscal year 1968 such funds were given to the Neighborhood Youth Corps in the Department of Labor and earmarked for distribution by the Office of Education. However, in fiscal year 1969, athough sufficient funds were appropriated to the Department of Labor for use in the vocational education—work-study program, the funds were not earmarked and were to be administered by the Neighborhood Youth Corps itself under an administrative reorganization. The vocational schools could not get the funds from the Office of Education as before and were left with the idea that no such funds existed. Only recently—and after most of the funds had been expended—were some schools able to determine the true facts and obtain partial reimbursement. The primary cause of this problem can be laid to the July 1 fiscal year and the inability of Congress to finalize appropriations bills by this deadline. Otherwise the schools would not have had to anticipate the Federal funds in their own budgets each year and make themselves subject to possible loss of their operating funds if funds for the program were not available.

Having the fiscal year begin on the first of July also makes programs subject to certain physical environmental factors which can cause delay in the execution of the program. Construction projects, particularly in the Northern States, cannot be started in the winter months—which may last as long as from October to April. Some of these projects, such as road construction and buildings, require a substantial part of the primary construction to be completed before the winter months if the whole project is not to be started anew in the spring. In fact, they may not be started until the following spring even if the appropriations were finalized by the first of July, since considerable advance planning is needed and sometimes the primary construction itself cannot be completed in 4 months. However, in all of these cooperative efforts there would be adequate time for advance planning to be completed and for construction to be started if the funds were made available for a calendar fiscal year. Seasonal problems and delays could then be avoided.

While upsetting basic economic and social planning, the July 1 fiscal year also casts doubt on the credibility of Government statistics. Most of the Government is geared to the fiscal year and has a tendency to collect figures which pertain to the fiscal year and not to the calendar year. Individuals and private concerns rarely put out facts and figures for public consumption unless they cover a calendar year. Corporate annual reports, for instance, are required by law to cover the calendar year. When faced with the need to correlate and make sense out of all the thousand types of figures available, even an expert may throw up his hands in dismay. Even in the Government itself the Department of Agriculture generally uses the July 1 fiscal year for its foreign trade statistics while the Commerce Department employs the calendar year for the same statistics. Who is truly able to reconcile these two sets of figures or even determine whether they are in agreement? A calendar fiscal year would solve most of this problem and help avoid costly duplication of fiscal year versus calendar year figures.

My proposal, Mr. Speaker, for a calendar fiscal year would not only lead us out of the difficulties I have just described, but would also save the Federal Government millions of dollars. The types of difficulties are not hypothetical, but represent very real problems which face our Government each year. Much money could be saved by the orderly administration and clear direction which a calendar fiscal year would bring, and the Congress would have more time for deliberations on the complexities of fiscal matters and on administrative regulation. Most legislation is far too complicated to be started and finished within 6 months. The plain fact of the matter is that when the congressional leadership provided for an August recess, it tacitly said that it did not expect to finish conducting its business before August. Nevertheless, almost all pressing business is completed prior to adjournment—be it in October, November, December, or earlier. The money saved and the efficiency gained by giving just those 6 months is so valuable and so important that we cannot afford to wait to pass this legislation.

Do we want our programs to accomplish all that they were originally intended to do? Do we want to save millions of dollars in efficient administration? If we do, then now is the time to give all governmental bodies the fiscal certainty which is necessary for sound planning and for orderly, effective, and efficient administration.

ESSAY ON THE TROUBLED TIMES BESETTING OUR NATION

HON. TOM RAILSBACK

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. RAILSBACK. Mr. Speaker, recently a young man from my district was one of the winners of the Dwight D. Eisenhower summer intern contest sponsored by the Illinois Republican State Central Committee. Carl Hawkinson, 21, a graduate of Galesburg High School and a junior at North Park College of Chicago, won the contest by writing an incisive and in-depth essay on the troubled times besetting our Nation.

Mr. Hawkinson, who submitted his piece anonymously along with other contestants, is the son of John Hawkinson, Republican chairman of Knox County.

Young Hawkinson rightly states in his essay:

America is not on the verge of collapse. It has the resources, both physically and spiritually, to meet the demands of the late twentieth century. We need men in politics who see the promise in America. They must see the wrongs and try to correct them, but they must keep an eye on the great traditions of the United States.

I commend this well written and clearly thought out essay, which follows, to my colleagues:

ESSAY BY MR. HAWKINSON

The last decade has been a turbulent one for America and the world. War in Vietnam and the Middle East have been near to the hearts of all concerned citizens. Years of discrimination have resulted in the pressure which we feel in all of our major cities. Violence in the streets and the increasing activities of organized crime make the appeal for law and order a most popular one. The voices of dissent are feeling alienated from what they call the establishment. Radical use of street tactics are repulsive to most of us. The lines are being drawn in America. Even our college campuses are the scenes of armed confrontations. There is no communication between the followers of George Wallace and the followers of Tom Hayden.

But communication has never been open between the radicals in ours or any society. Our problem is threatening to expand in scope. Blacks feel alienated from the establishment and our cities explode on an expanding scale. Many young people are dropping out, rather than trying to fulfill their lives in our increasingly technological society. The national spirit is being sapped by war, riots, and assassinations. The radicals say that the revolution is at our doorstep. Is America really in peril of violent revolution?

A year ago that question would have seemed ridiculous to me. The events of 1968 have made it a serious question. Serious thinking and concerned individuals are pondering the crisis of America. The United States is not historically immune. We think of ourselves as a young nation, and yet we are the oldest continuous republic in the world. We must seriously analyse our institutions and our beloved traditions. Our fear for security must not cause us to cling adamantly to the status quo. Change is a fact of the human experience and we must channel it rather than hide from it.

Although I see wrongs in America and am working to improve her, there is much in her essence and her tradition that causes me to love her. To some it seems outdated, but the playing of the national anthem causes a tingling in me. America needs her patriots and it needs her dissenters. It needs changes and it deserves our efforts to make her great. Neither revolution nor the status quo will answer her needs.

We start our journey with the duty of preserving the good things about America and with the obligation to change the things which adversely affect the lives of her citizens. The scope of our journey is outside the realm of any individual or small group of citizens. We don't look for a political messiah in the United States. In fact, we have built-in precautions against one. We can't allow a small minority to rule the lives of 200 million citizens. Whether it be the political or the economic arena, competition and cooperation have always been the vital forces in our struggle for greatness.

Some of our problems arise when groups forget the principles of competition and cooperation. They think that they have the whole truth. Only they know how society should operate. Members of the John Birch Society and Students for a Democratic Society both feel that they should be running this country. They mistakenly think that their way would be the best way for all of the people. Their motives are not selfish, but they are born in an intellectual pride. This is the kind of pride which doesn't recognize the rights of other citizens to successfully create their own version of how

things ought to be done. It is the kind of pride which thumbs its nose at the thought of compromise.

Although men must live with principles, they must also live with each other. Men must learn when to compromise and when to stand behind their principles. The common good must not be the conception of a small group, but a program arrived at by the interaction of all the people. Our system of government is the best way yet discovered to fulfill the common good. It is not a perfect system, and this we cannot afford to forget. When we idolize the system we tend to ignore the wrongs in our society. Clinging to the system can be a shield used to fend off change. When we use it thusly, we are inviting revolution.

One problem with compromise is that it sometimes ignores minorities. Minorities deserve the same rights in spite of their lack of political power. These rights are not limited to the rights of opportunity. Opportunity always means that some will not succeed. We have taken some important steps in safeguarding the welfare of those who are unable to take advantage of opportunity, but we have not solved the whole problem. Hunger, inadequate housing and medical care, and a general lack of necessities are present along with the great abundance produced by our expanding economy. America is rich enough to feed, clothe, and give medical care and adequate housing to all of her citizens.

Our enemies have given plenty of cause for concern for our defense. We must not answer fear with hatred. We must answer our enemies by remaining strong and yet pursuing peace. We have enough missile strength to destroy Russia many times over. We should show a willingness to end the arms race, rather than a hatred which causes us to speed it up. We think nothing of spending billions for defense, and yet we drop poverty programs which are wasting only a couple hundred thousand dollars. Our priorities must be rearranged.

America is not on the verge of collapse. It has the resources, both physically and spiritually, to meet the demands of the late twentieth century. We need men in politics who see the promise in America. They must see the wrongs and try to correct them, but they must keep an eye on the great traditions of the United States. Our leaders must not be afraid to mold opinion, and they must also represent the views of their constituencies. Our representatives are not solely responsible for the welfare of our society. In the final analysis, we as citizens are responsible for her greatness. We must be concerned, not apathetic. We must be understanding, not filled with hate. We must show charity, not greed. We must seek change and love our heritage. We must not be afraid to step forward into a wonderful new American era. The United States can go forward, only if we go forward together, armed with tradition, hope of change, and love for our brothers.

APOLLO—AND AFTER

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. TEAGUE of Texas. Mr. Speaker, an editorial of Tuesday, May 20, 1969, in the Birmingham News asks the question of where our national space program is going following the lunar landing, and points to the contribution our astronauts have made in making this Nation preeminent in science and technology. Because of the significance of this editorial, I commend it to the reading of my colleagues and to the general public:

APOLLO—AND AFTER

Three more brave men are en route on another leg of the most exciting voyage in human history. Thomas Stafford, Eugene Cernan, John Young, crewmen of Apollo 10, are taking the penultimate step toward the moon. In July, if all goes well, man will set foot on the moon's surface.

While Apollo 10 so far has been as spectacularly successful as earlier missions in this sequence, the most dangerous part of the flight is still to come—orbiting of the moon, low-level scouting of landing areas in the weird Lunar Excursion Module of the type which will be used to make a touchdown in Apollo 11, and return home.

As did the three astronauts who preceded them in lunar orbit, Stafford, Cernan and Young go not only on the thrust of the magnificent machine designed and built by Dr. Werner von Braun's Saturn team at Huntsville, but also on the wings of the prayers of millions of countrymen and other well-wishers around the world.

As the climatic moment of America's manned space program approaches—thought has turned more and more toward the post-Apollo era.

Will the space program be continued? At what level? Toward what new goals?

These are not easy questions, for beyond the scientific and other factors involved there is the matter of money—many billions of tax dollars. Should space research and exploration continue to rate high priority? Or should the space program be cut back so more funds could be diverted to other needs?

The News understands that considerable rethinking of the U.S. space effort will be in order, and that some cutback in the level of spending, at least for awhile, is probable. But we believe that a drastic reduction in the program would be a mistake.

We are only on the beaches of the universe beyond our own small planet. There are more space seas to sail, more worlds to explore.

We cannot neglect our earthly problems and responsibilities. But neither should we lower our eyes from the stars.

Shepard, Glenn, Grissom, White, Lovell, Borman, Anders, Stafford, Cernan, Young—they are names on a roster with Columbus and Magellan and Lindbergh and thousands of famous and anonymous men and women who dared the unknown, who blazed historic trails.

Stop now? We have barely begun.

ABOLISH THE DRAFT?

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. NELSEN. Mr. Speaker, Claude N. Swanson, contributing editor of the Fairmont, Minn., Sentinel, is one of the finest conservative editorial voices in our district. He has kindly provided me with a recent editorial in which he argues that so long as the U.S. Armed Forces are restrained from military victory in Vietnam, the draft cannot be replaced with a volunteer army. I include his thought-provoking analysis at this point in my remarks:

ABOLISH THE DRAFT?

(By Claude N. Swanson)

There is talk of abolishing the draft, depending on voluntary enlistments for a fighting force to defend our country. The draft has never been popular. It was because of compulsory military service that our fathers, grandfathers and others before them left Europe. But, we have it here.

If the "experts" think that we could recruit a volunteer fighting force of sufficient size to protect this country, they have another "think" coming. Not under present and past conditions could this be accomplished.

Is any young man in his right mind going to volunteer to serve in a fighting force that is not permitted to win? As happened in Korea when President Truman fired General MacArthur as he was about to administer the coup de grace to North Korea. Or, as our fighting forces have been forbidden (by our non-military experts in the Pentagon) to bomb enemy shipyard docks, to set up "sanctuaries" in Cambodia and elsewhere, from which the enemy is free to attack, but which our men mustn't touch?

No, our young men are not crazy. Far from it. And they are (those who survive) the very ones that will have to pay for the mistakes of our politicians and so-called "experts."

More than 60,000 of our sons, husbands, brothers have been killed in Korea and Vietnam; a quarter of a million more have been wounded. Isn't it about time we turned our fighting men loose and let them fight to win? If not, let's call them home.

THE SHORTSIGHTED ATTITUDE OF THE ADMINISTRATION ON STUDENT FINANCIAL AID PROGRAMS

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. EILBERG. Mr. Speaker, I rise today to comment on what I believe is an extremely naive and shortsighted attitude on the part of the administration with respect to its budget requests for the various programs which provide assistance to students who seek a higher education, but whose families cannot afford the full expense involved in such an undertaking. I refer especially to the educational opportunity grants program, the national defense student loan program, the college work-study program, the guaranteed student loan program, and the health professions student loan program.

A summary recently prepared by the Office of Education of the Department of Health, Education, and Welfare reveals that for the 1969–70 school year there will be only $461 million available for three major Federal student loan programs—the educational opportunity grants program, the national defense student loan program, and the college work-study program. For these same three programs, institutions have expressed a need for $814 million and regional panels have approved $682 million. I would like to insert in the RECORD at this point a table which gives a State-by-State breakdown of institutional requests for these programs, the amount approved by panels, the amount of funds which are available, and the percentage of approved requests which can be granted:

TABLE 1

	National defense student loan program, 1969–70				College work-study program, 1969–70			Educational opportunity grants, initial awards, 1969–70			
	Institutional requests	Panel approved	Funds available	Percent	Institutional requests	Panel approved	Estimated percent	Institutional requests	Panel approved	Funds available	Percent
Total	$317,873,424	$273,322,121	$155,000,000		$274,969,531	$219,327,606	74	$119,549,871	$98,707,386	$68,137,040	
Alabama	5,559,358	4,567,605	2,205,761	48.82	7,597,656	5,251,083	87	3,020,511	2,427,697	1,135,047	48.00
Alaska	112,658	112,658	66,443	58.98	377,443	318,000	60	55,500	47,500	29,874	62.89
Arizona	3,602,825	3,283,433	1,751,328	56.59	2,725,957	2,221,318	68	1,492,625	1,189,700	704,789	66.19

THE EDUCATIONAL OPPORTUNITY GRANTS PROGRAM

This program was initiated as a result of the Higher Education Act of 1963. It is designed to make a higher education avaliable to students who demonstrate exceptional financial need. A student is eligible to receive a grant under this program if he is studying full time and if his finances are extremely limited. He does not need a high academic record to qualify. Grant recipients receive $200 to $1,000 per academic year, depending on their needs. Every educational opportunity grant recipient also receives a matching grant from a scholarship program in an amount equal to the educational opportunity grant. Recipients of EOG grants may also receive Veterans' Administration payments provided that the combination of EOG money, matching award, and Veterans' Administration benefits do not exceed the student's need. Under the program these grants may be renewed for up to 4 years of undergraduate study.

This year the colleges and universities across the country have mounted an aggressive search for disadvantaged students. This is due in part no doubt to some pangs of conscience on their part, but also to the fact that such action is a requirement in order to participate in the educational opportunity grants program. As a result, the colleges and universities have turned up approximately 200,000 applicants who have been approved by review panels which examined the applications of the colleges applying for the funds. If the estimate of the money which has been requested for this program for the upcoming school year is correct, based on figures submitted by the colleges and universities this means that only about 100,000 new students will receive the assistance provided by this program as compared to over 145,000 for the past school year. In my home State of Pennsylvania this means that only about 65 percent of the need for educational opportunity grants will be met. Within the present framework of social unrest and agitation for increased opportunity, it is bad policy pragmatically, as well as in principle, to curtail one of the most promising programs to help the disadvantaged achieve the benefits of a higher education and thereby frustrate the expectations that were raised when the Congress enacted the program.

THE NATIONAL DEFENSE STUDENT LOAN PROGRAM

The national defense education program was established under the National Defense Education Act. This program establishes loan funds at public and nonprofit private American colleges and universities, accredited postsecondary business schools, and technical institutions to permit undergraduate and graduate students to complete their education. Participating institutions in the program contribute $1 to the loan program for every $9 of Federal funds which are provided and institutions which are unable to supply the matching funds may borrow additional Federal funds for that purpose. Any accredited college or university is eligible to apply to participate in the program if it admits secondary school graduates as regular students and offers a program acceptable as full credit toward a bachelor's degree. Undergraduate and graduate students are eligible if they are carrying at least one-half of the normal full-time academic workload, are capable of maintaining good academic standing, and are in need of assistance to complete their education.

The cutback in the national defense education loan program is even more serious than that in the educational opportunity grants program. For the 1969–70 academic year, the administration recommends that only $155 million be made available for loans. This compares to institutional requests for $318 million and panel approved requests for $273 million. This is substantially below the level of $190 million in national de-

fense education loan program funds which were available during the last school year. If the program is funded at the level which has been proposed by the administration, participation will be down to 398,000. This is a significantly lesser number than the 442,000 who were supported under the program for the past school year. This situation is made even more serious in view of the tremendous enrollment increases which are expected at our colleges and universities. I believe that full funding of this program is critical, because it is this program which can be used to offset some of the dislocations which could result from the inadequate funding of the educational opportunity grants program. In my home State of Pennsylvania the funding level which the administration has requested for this program will mean that only 65 percent of the panel approved loans can be made. In 15 of the 50 States, the funds available will meet less than 50 percent of the approved requests, the lowest figures being 34 and 37 percent for South Dakota and North Dakota respectively. Utah is the only State in which the full amount of needed funds will be available.

THE COLLEGE WORK-STUDY PROGRAM

The college work-study program helps students finance their educations by providing grants to colleges and universities which support projects for student employment on and off campus up to an average of 15 hours per week during regular academic periods and up to 40 hours per week during vacation periods. All employment must be with their public or nonprofit agencies including the school itself. Federal matching funds pay 80 percent of the cost of the work-study program. The participating colleges and universities provide the other 20 percent. College work-study programs are designed to both combine with and supplement other student financial assistance programs such as scholarships, the educational opportunity grants program and student loans. Under this program, job preference must be given to students who come from families which are unable to support the full cost of a higher education for their children.

This year, the college work-study program, with carryover funds, will spend about $162 million. The administration's budget request for the program is $161.2 million. On the surface this seems to be a modest cut, but to understand its full impact two factors must be considered. First, wages paid to students participating in this program increase each year in line with the prevailing minimum wage rates. Second, the number of institutions participating in the program has recently increased by some 20 percent. As a result, on a national basis, about 20,000 fewer students will be able to participate.

THE GUARANTEED STUDENT LOAN PROGRAM

The guaranteed student loan program makes loans available to undergraduate and graduate students enrolled in eligible institutions ranging from vocational schools to degree-granting institutions. Students with adjusted gross family incomes of less than $15,000 are eligible to participate and receive Federal payments of interest charges up to 7 percent on their loans, during school years prior to the repayment period and during authorized periods of deferment. Deferment of payment may be granted during any period which the borrower is attending an eligible institution on a full-time basis, serving in the Armed Forces, Peace Corps, the Teacher Corps or VISTA. Applications for loans under this program are obtained from and submitted to lenders who are participating in the program, the schools themselves or the State guarantee agency. To participate a student needs a certification of enrollment and a statement of his family's income.

The deficiencies in the educational opportunity grants program, the national defense student loan program, and the college work study program leave a very great shortage to be met and the guaranteed student loan program is the only remaining source. This source will be further strained by the action which the administration has taken with respect to the health professions loan program. The appropriations level for this program for the 1969 fiscal year was $15 million. The same amount has been requested by the administration for the upcoming fiscal year. However, the administration has ignored the fact that there will be $15 million less for the program this year, because a $15 million revolving fund which was used for the program last year, in addition to the regular appropriation, has all but been exhausted. Since the Government is no longer selling participation sales certificates, this money will not be replenished.

The Department of Health, Education, and Welfare advises me that they expect the guaranteed student loan program to take up the slack. The idea of the administration that the health professions loan program slack will be taken up by the guaranteed student loan program is idealistic at best. This is pointed up by a report I have just reviewed on the operation of the guaranteed student loan program for this year through January 31. I was most surprised to find that 85 percent of the families whose loans are insured by the program and 93 percent of those receiving loans under the State program had incomes of less than $12,000. Even more surprising, in view of the fact that the guaranteed student loan program was designed to provide assistance to families in the middle-income brackets, is the fact that 36 percent of the federally insured loans and 57 percent of the State program loans were made to families with incomes of under $6,000. I would like at this point to include in the RECORD a table which gives the status of the program in this regard. This table points up the fact that the program is not serving that clientele for which the Congress intended it. As a result many thousands of middle-income youngsters are facing the prospect of not being able to seek a higher education:

TABLE 2.—GUARANTEED STUDENT LOAN PROGRAM

ANNUAL LOAN VOLUME

	Amount
Fiscal year:	
1966	$77,000,000
1967	248,000,000
1968	436,000,000
1969 (1st 6 months)	450,000,000+

TABLE 2.—GUARANTEED STUDENT LOAN PROGRAM—Con.

DISTRIBUTION OF LOANS

	Percent	
	State guaranteed	Federally insured
By adjusted family income:		
0 to $2,999	29.55	14.97
$3,000 to $5,999	27.15	21.38
$6,000 to $8,999	22.46	25.33
$9,000 to $11,999	13.88	23.10
$12,000 to $14,999		14.10
$15,000 and over		1.12
Distribution by sex:		
Male		63.96
Female		34.88
No response		1.16
Distribution by race:		
White		87.52
Negro and other		6.54
No response		5.94

LENDER PARTICIPATION

Type of lender	Percent of lenders	Percent of loans
National banks	40.2	46.8
State banks	45.8	40.5
Mutual savings bank	1.5	2.7
Savings and loans	4.6	5.4
Credit unions	7.8	2.6
Other	.1	2.1
Total	100.0	100.0

Two things stand out in the report which I referred to above. The first is that—contrary to the fear of many colleges—the banks have really been giving priority on loans to students from low-income families. The second is that if there is a shortage of guaranteed loan funds for the next year, it is primarily needy students who will be deprived of the assistance which the program provides and not those students for whom the program was intended since they have not been participating in the numbers we anticipated when we enacted the program. Since the operating results of the program indicate it has not provided the relief of middle- and upper-income families that was intended when the legislation authorizing the program was passed, there seems to be little reason for not adopting my bill which provides for a tax credit for educational expenditures by parents. I am particularly alarmed by the fact that the guaranteed student loan program has not been helping the students it was designed to, because it is this program which my constituents must rely on to send their sons and daughters to college. The people of the Fourth Congressional District are not wealthy and the overwhelming proportion of their incomes are below $15,000, but not as low as those families, whose children have received the advantages of the program. I think that the administration is being penny-wise and pound foolish if it thinks that the programs providing aid to students seeking a higher education are doing the job as is. It is obvious that we cannot afford anything but full funding of all these programs.

When the Higher Education Act of 1965 was passed, the prime rate of interest was 5 percent or lower. However, th credit shortage of 1966 cut sharply into the amount of funds which were available for loans under the guaranteed student loan program. Now, with the prime rate recently increased to 8½ percent, hundreds of banks and other

money lenders are telling the Government that they may have to curtail sharply or end guaranteed student loans in expectation of a real loan crunch. At stake is more than $640 million in Government guaranteed loans to about 750,000 students.

Colleges have been aware of this serious situation for some time but they are only now learning of their specific situations as they receive their notices of allocations for the various programs. Students, on the other hand, will not receive information about their requests for loans for several weeks. If as expected, the money for guaranteed loans begins to dry up, it is quite probable that a great number of students will be forced to give up their plans for a higher education. This would truly create a national emergency in higher education.

Colleges already feel that the Federal Government is guilty of a breach of faith in the management of the educational opportunity grant program and there is a very real danger that other programs will suffer the same fate if action is not taken soon by the administration. There is clearly no cheap or easy solution to the problem. One step would be an increase in national defense education loan program money of $160 million up to the full appropriations authorization of $275 million and to increase the educational opportunity grant program up to the limit for initial awards. I believe about $15 million would be needed for this. I realize only too well that $130 million cannot be added slightly to the budget but I believe that some nonessential defense spending cuts might provide the funds needed with ease. The human cost in terms of frustrated students and their parents just is not worth the price of any other approach.

On the guaranteed loan program, it appears to me that this program is at the crossroads. Some years ago a determination was made that the Government should no longer make loans directly to the students, but that the private sector should be relied upon to implement the program. We cannot expect banks and other lending institutions to make student loans on a charitable basis and get the statutory limit of 7 percent interest when they could use their increasingly limited reserves to get returns of at least 8½ percent. We must decide if we want the Government to reassume its role in making these student loans. If not, we must move to make the program more attractive for the banks without increasing the cost to the student. There are several alternative ways in which this could be achieved. First perhaps the idea of a Federal student loan bank should be explored. Second, thought should be given to legislation authorizing the Office of Education to pay the banks who make loans an interest subsidy in an amount ranging from 1 to 3 percent above the 7-percent statutory figure approved by the Congress last year. By utilizing this approach, banks could afford to make the loans without loosing money, the Government would be able to vary the interest subsidy depending on the market interest rates, and the cost to the student would remain at 7 percent. As an added inducement to the banks and other lending institutions to participate in the guaranteed student loan program, States might take action to provide that banks which have State money on deposit must make a specified dollar amount of loans or lose these deposits.

I believe further that the Office of Education should explore the possibility of State trust funds participating in the program as lenders and that some serious thought should be given to the issuance of an education bond which would be sold to the public at a 6- or 7-percent interest rate. These bonds could carry a longer maturity so that they would not compete with savings bonds. Not only would this approach make millions of dollars available for student loans, but it would no longer make it necessary for banks to make student loans at a loss or with virtually no profit.

Mr. Speaker, I believe that the House should consider the interest subsidy approach, which I have outlined briefly, as a stopgap measure until such time as it becomes apparent whether the best approach to assure the continuing availability of student financial assistance is through the private sector or with the Government making the loans directly.

Also, I encourage all my colleagues to carefully review the administration's education budget before they are faced with the appropriations bill on the floor. I believe you will be as alarmed as I am about where cuts are proposed.

MEMORIAL DAY TRIBUTE

HON. HENRY P. SMITH III

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. SMITH of New York. Mr. Speaker, our Nation has recently paid tribute to those who have given their lives so that we here in America may continue to enjoy the blessings of freedom.

On Memorial Day, May 30, 1969, a particularly inspiring message was delivered by Erie County executive, B. John Tutuska, at the veterans' section of Forest Lawn Cemetery, Buffalo, N.Y. Mr. Tutuska, former Erie County sheriff, has recently assumed the responsible and challenging duties as Erie County executive.

I commend his message to the reading of my colleagues in the Congress and include it herewith:

REMARKS BY MR. B. JOHN TUTUSKA

We stand here today in reverent tribute to the memory of those who gave their lives for America, so that Americans could live on in the traditions of American liberty and freedom.

Memorial Day in some respects is somewhat of a paradox:

It is a significant occasion—a beautiful occasion.

But it also is a sad occasion—a sacred occasion.

Why is Memorial Day a significant and beautiful occasion?

Because it personifies the sentiment of the American people for the patriots who gave their lives for the greatest cause in the whole world—our country!

Memorial Day teaches an unforgettable lesson in patriotism. It exemplifies the deep feeling that is held by young and old alike for those who died for our country—who made the supreme sacrifice in the great struggles in which America has been involved.

Memorial Day unveils a tenderness without parallel on the part of those among us here who participated in World War I or World War II—or the Korean conflict or the present Vietnam conflict. It also reveals a tenderness on the part of young people who simply know of the two world wars and possibly the Korean struggle as history—or, as in the case of Vietnam, history-in-the making.

Yes, those are the sentiments that make Memorial Day a significant and beautiful occasion.

Why is Memorial Day also a sad and sacred occasion?

Because it brings with it sad and sacred memories—as we recall anew the great and tragic events that led to the establishment of Memorial Day—a day for solemn and reverent tribute to those who gave their all for their country.

Time marches on inexorably—and in its rapid flight, time has borne us on its wings till we are half a century removed from the end of World War One—a quarter of a century since the close of World War Two. In the meantime, we have gone through a bloody Korean conflict—and are now engaged in a cruel conflict in Vietnam—a conflict which we fervently pray will be ended before another Memorial Day rolls around.

Since the end of World War I fifty years ago—and there may be some among us here today who served in what was heralded at the time as the war to end all wars—since the first World War ended half a century ago, America has been thrust into World War II—acclaimed as the war to save the world from Hitler—and then into the Korean conflict and now the Vietnam Struggle. As was the case with Korea, we are in Vietnam for the avowed purpose of protecting the liberty and freedom of people in oppressed nations—to save them from the clutches of communism.

And so it is in keeping with our American conscience that we observe Memorial Day—a day on which we remember and honor those who sacrificed and died in the wars of the last fifty years, and in the earlier wars—and also those who sacrificed and have since died. We remember them for the invaluable service they performed in defense of their country, and for humanity.

We honor our heroic and patriotic dead by being true men—and true women—by faithfully fighting the battles of our day, even as they fought, and are fighting, the battles of yesterday, and those of today. We pay to them this honor on this specific day—Memorial Day—so proclaimed originally after the Civil War and observed by North and South alike.

Memorial Day was officially proclaimed in 1868—and set for May 30th—by Civil War General John A. Logan. In doing so, General Logan in whom burned a deep love for his country and for his comrades in arms, spoke these words:

"If other eyes grow dull and other hands shake, and other hearts grow cold in the solemn trust, ours shall keep it well so long as the light of warmth, the warmth of life, remain to us."

So for more than a hundred years—since three years after the end of America's bloody Civil War—Memorial Day has been observed on May 30th each year with impressive ceremonies and patriotic parades.

Nothing I can say or do here can add to the lustre of those who in defense of their country have fallen in America's wars.

Nothing any of us can do or say anywhere at any time can make shine brighter the memory of those patriots who gave everything, even life itself, so that our nation might live, and so that right and justice might prevail.

There is no word, no action, that can speak as eloquently as the deeds of the fallen heroes that gave true meaning to the spirit of service and sacrifice.

And so we stand here today, in the veterans' section of this beautiful cemetery—under auspices of fourteen different veterans' organizations joined together for this occasion as the United Veterans Memorial Day Committee—paying humble homage to those who fought and died to preserve our American heritage, and to help freedom-loving people in other lands to gain their liberty.

Americans—and dedicated citizens of other countries—are making history these days with amazing, hitherto undreamed of journeys into space—to the moon now, to other planets, eventually.

But no matter what the future holds for mankind—no matter what new fields and new areas are developed and conquered—we shall always observe Memorial Day each year, a day consecrated to our fighting men and women who laid down their lives for their cherished America. Yes, we shall always observe Memorial Day as a special day dedicated to patriotism.

These graves around us, in this quiet and peaceful sector of this beautiful cemetery, constitute a public shrine—a mecca to which we come, as patriots, to renew our devotion to the cause for which these patriots died—our country.

Their valor preserved America—made possible a bigger and a better America—painted America indelibly on the world's landscape as the land of individual freedom and liberty. Perpetuation of our American traditions was purchased with their blood—blood that was spilled not only on American soil but on ground thousands of miles distant.

We pray to God that in the not too far distant future, the day will come when it no longer is necessary for American boys to be sent to far-away lands to fight for freedom and liberty of strange peoples.

We pray that some day it will no longer be necessary for nations to engage in war at all.

But until that day comes—we must ever remain alert and on guard against the forces that would crush our American way of life—that would deprive our people of the liberty and freedom which were earned at such heavy cost in blood and treasure. We must dedicate ourselves everlastingly to the task of maintaining the sacred heritage that we proudly call America—a sacred heritage for which those whose memories we honor today laid down their lives.

U.S. FOOTWEAR PROMOTION URGED

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. NELSEN. Mr. Speaker, I wish to urge U.S. businessmen to undertake a massive selling campaign on behalf of American-made footwear. A real promotional effort is needed because foreign shoe imports are ruining the American footwear industry, and hurting U.S. leather suppliers and farm income in the process.

Shoe imports have shot up 600 percent since 1960, and more than 100 percent between 1967 and 1968. Foreign leather shoe imports were 36 percent greater last year than the year before.

As a result, U.S. footwear production is off nearly 10 percent for the first quarter of 1969, at least seven shoe factories have closed down, and growth in the domestic industry has been halted.

The American shoe industry is being jeopardized and its farm suppliers right along with it. We need to promote an American shoe-in.

FORD FOUNDATION FUNDS ANOTHER COMMUNIST OPERATION

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. RARICK. Mr. Speaker, in my remarks last Thursday, June 19, at page 16682, I commented on the fraud called Afro-American studies. I had discussed the utter absurdity of Herbert Aptheker, the Communist Party theoretician, now employed as a professor at Bryn Mawr College as an expert in Afro-American studies.

To any who study the documentation on Comrade Aptheker, it must be obvious that the reason he, a white man, is the leading expert in Afro-American history is that he is the author, originator, and promoter of the entire scheme devised to further exploit unstable Negroes. Their resentment is whipped up in order to place Aptheker's indoctrinated troops on campuses. Now he, as an educational expert, will continue to promote racism and division of our people.

Any thinking American knows there is no such thing as Afro-American history. There is American history with a contribution played by individual Negroes.

Now with a 10 percent surtax extension facing the hard-working American people, we find that the tax-dodging Ford Foundation announces a $1 million gift to expand Afro-American studies. In reality, a subsidy to a Communist indoctrination and infiltration front.

Mr. Speaker, I include a clipping from the Washington Post for June 22 and an editorial from the Main Line Chronicle, Ardmore, Pa.:

[From the Washington Post, June 22, 1969]

HOWARD GETS $143,500 TO AID IN BLACK STUDIES

Howard University has received a $143,500 grant from the Ford Foundation to finance a new Afro-American studies department, permitting students to major in Afro-American studies for the first time in the 102-year history of the college.

The grant to Howard was part of $1 million in gifts announced by the Ford Foundation today to expand Afro-American studies.

Other schools receiving grants are Yale, Princeton, Rutgers, Morgan State College in Maryland, and Lincoln University in Pennsylvania.

The new department at Howard was authorized by the faculty and university trustees this spring. It was one of the prime demands made by students in a protracted series of protest at the school.

Vincent J. Browne, dean of Howard's College of Liberal Arts, said the Afro-American studies department would "pull together and coordinate" about 30 existing courses dealing with American Negroes. It will also develop new interdisciplinary courses, he said, cutting across the traditional fields of history, economics, sociology and government.

The department will have full-time faculty members of its own, Browne said, as well as sharing faculty members with other departments.

Students will be able to major in Afro-American studies, he said, after completing the regular general education requirements in their freshman year.

"It will be operated just as the other departments are in the college," Browne said.

The foundation's $150,000 grant to Morgan State College will be used to update and revise materials used in the school's present courses dealing with American Negroes and to prepare study guides for new courses. The materials will be printed and distributed throughout the country.

The Ford Foundation also contributed $200,000 to the National Endowment for the Humanities to help support 15 summer institutes for nearly 1000 faculty members who will teach Afro-American studies courses this fall.

[From the Main Line Chronicle, June 19, 1969]

EDUCATION OR INDOCTRINATION?

Bryn Mawr College is a free-loading guest in the community. It pays no taxes but shares our municipal services. If a college administration assumes that the community will accept academic arrogance as academic freedom, it had better be set straight.

It has become increasingly noticeable of late that the college has lowered its standards and is going in more for indoctrination than higher education. You see it in the product.

None of the faculty will admit he is a Communist—which is, by the way, a libelous word, unless party membership can be documented. But too many members of the faculty are Marxist in effect and, as we have often said, equals to the same or equal things are equal to each other.

We have had to live with this, and there is nothing the Township can do but to accept the fact that we are playing host to an institution that is corrupting the minds of young people and working with the enemies of our government.

The administration now feels bold enough to appoint one of the leading Communist Party activists to its lecturing staff. This is an affront to the community, and to the alumnae of Bryn Mawr College as well.

The real significance of the appointment is what this means to the Red Party. Dr. Herbert Aptheker, the appointee, expressed it in the following words: "It is thrilling, with wide national significance for the Communist Party." And noting that the request for his appointment was made by black and white militants, he added: "It also reflects something of what the student movement is all about, which many people have failed to understand."

The meaning we are to take from this is that the "student movement" is aiming for a Communist takeover. Non-Communists have been saying that all along.

Dr. Aptheker's life has been devoted to the spread of Communism by indoctrination of students. He is a member of the party's National Committee and a director of the American Institute for Marxist Studies.

He successfully indoctrinated his own daughter who, with Mario Savio, started all the trouble at Berkeley.

The Federal Bureau of Investigation has a whole dossier on the man, going back more than 30 years.

His call to Bryn Mawr must not be taken lightly. It has given his whole party a lift,

and its members are saying that it now puts them on a level of acceptance with the Republican and Democratic parties.

Residents of the community should let the college administration know what they think of this affront, this show of contempt for decent American opinion.

Resentment should be shown, first of all, by the alumnae, either by voice or—what is more expressive—by holding back on gifts.

Alumnae tell us that when they are solicited for gifts and when they mention with dismay the pink hue the college has acquired, they are told: "Oh, yes, but this can be changed by continued loyalty." Oh, yes? The appointment of Dr. Aptheker proves that the administration values what transient black commies want above what the public thinks of the college.

They may go in for "intellectualism" at Bryn Mawr, but they don't show much intelligence.

WHAT'S HAPPENING AT BLUE EARTH?

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. NELSEN. Mr. Speaker, a most interesting experiment involving Federal, State, and food processing industry interests has been in progress in my congressional district. This experiment, a pilot study in self-certification conducted at the Green Giant Co.'s plant in Blue Earth, Minn., is designed to assure quality control and indicates, perhaps, the direction that will prove least costly yet most effective for consumers, producers, and guardians of the public interest. The initial findings are reported in an article, "What's Happening at Blue Earth?" appearing in the April issue of FDA Papers. I include the article at this point in my remarks for the particular benefit of colleagues in the House Interstate and Foreign Commerce Committee, who also have responsibilities in this area:

WHAT'S HAPPENING AT BLUE EARTH?

(NOTE.—Will self-certification work in the food processing industry? Will it work as a practical matter in all food processing plants? What do working level FDA officials think of the concept in these early stages? How receptive are State officials responsible in the pertinent areas? What reservations does industry have or may it be expected to have about self-certification as a way of life? What room is there for improvement in self-certification for quality assurance as it has developed so far?

(Early in 1968 the Green Giant Co. decided that it couldn't afford to ignore the implications in a concept that had been under study by the FDA for some time and was already undergoing limited pilot testing in an arrangement between FDA and another large food processing firm, General Foods. Green Giant's next step was to see how self-certification might work in its own backyard. Whereupon the company, despite reservations about some features and a little uneasiness about the whole new concept of an industry-Government partnership in quality assurance, let FDA know it was willing to give self-certification a fair try for a limited number of products at its plant in Blue Earth, Minn.

(The agreement that resulted included the Minnesota Department of Agriculture as an active participant, since MDA under State law is responsible for covering canning plants. The three-way pilot plan, agreed upon in June 1968, has been under way ever since, and the participants—Green Giant, MDA, and FDA's Minneapolis District—have gained some definite impressions and reached some tentative conclusions from their separate points of view about self-certification as a working tool and how it has affected their interests or responsibilities so far. These remarks, passed on in informal narrative to Nathaniel L. Geary, Special Assistant for Quality Assurance in FDA's Bureau of Compliance, are recounted on the following pages.)

THE INDUSTRY VIEWPOINT

(By C. B. Way)

When we first heard about the Self-Certification Program, many of us had doubts about any such cooperation with a regulatory agency. The food industry had always resisted FDA attempts to get at its records. The attitudes prevailing between inspectors and inspected have been standoffish, to put it mildly. The Self-Certification Program goes against all this; thus, most of the food industry looked askance at such a program.

However, we cannot really be for or against something with which we are unacquainted. Since one company with a proven quality assurance program had, at least tentatively, accepted a Self-Certification Program, it made sense to us to investigate it. This was all we had in mind when we visited FDA in January 1968. Just to find out what it was all about.

Soon after, we tried setting up a model program for a peas and corn plant just to see how it might look. There were no definite plans by either party to implement it at that time. However, one thing led to another, and by June of 1968 we had an agreement, all duly signed, to proceed with a pilot program.

One of the philosophies we developed during this "investigation" of the program was that we thought FDA ought to know more about our business insofar as its operation affected the consumers' health. The old business of "let them do it the hard way" changed to "let us show you." It was not necessary to disclose any classified information, or to give away the keys to the vault, so to speak. We felt that if FDA were to know more about our business, it could write more realistic laws and regulations, and, more importantly, be in a better position to determine the need for various laws and regulations; or so we reasoned. To put it another way, voluntary compliance is one way to keep from being legislated or regulated out of business. Thus, while we were quite reserved about giving out information at first, these reservations soon disappeared.

During the course of this investigation, some differences had to be overcome. One was a "language barrier" or divergence of terminology. To a canner, "raw product" is the green produce as it is harvested. To an FDA'er, it is any product fed into the system, such as tin cans, salt, water, etc. Other differences of opinion as to which areas were "critical" or potentially hazardous had to be settled.

Early in the planning it was suggested that the Minnesota Department of Agriculture (MDA) be a part of this program and, thereafter, the planning meetings became three-way sessions. The agreement was signed in June 1968 by Dr. Goddard of FDA, Mr. Schwandt of MDA, and Mr. Cosgrove of Green Giant. It covered one plant, canning only peas and whole kernel corn.

Basically, the agreement provides that Green Giant will (1) make certain pertinent quality control records available to MDA and FDA, (2) submit monthly reports listing any deviations from the agreed-on specifications, (3) give to FDA and MDA a copy of all corporate quality assurance inspection reports, and (4) submit to FDA and MDA copies of any complaints received from any source about products covered by the agreement. It also says that FDA and MDA will give to Green Giant copies of their full inspection reports and complaints they receive from any source on the products covered by the agreement.

The specifications which go with the agreement are not public information. What they do is establish preventative courses of action to be taken in such areas as fill of container, pesticide residue, foreign objects, etc. They also set up courses of action to be taken when a deviation occurs or is suspected. These courses of action are all part of the company standard operating practices, and no changes were made as a result of this program. It should be noted that the program concerns itself only with product safety, not product elegance.

A very important part of the agreement is that a deviation from the agreed-on specifications does not necessarily constitute a violation of the law.

One of the things we pressed for, and which we still feel is important in selling this program to the food industry, is the complete absence of publicity, if it is ever found necessary to recall a product from the market. Normally seizures, detentions, and the like are a matter of public record. Our theory was that we were giving FDA and MDA otherwise confidential information which they would not normally have and therefore we ought to be able to recall a product from the market, if necessary, without it being a matter of public record. At this writing, no basic laws have been changed, but a change along these lines is under consideration.

Some results of the self-certification trial program have been that there is an open channel of communications between MDA, FDA, and Green Giant; there has been no increase in quality costs to the company; inspection costs to the taxpayer will ultimately be reduced; concentration of regulatory agencies' resources can be placed in areas where serious health hazards exist; and an air of mutual trust and respect among the participating groups has developed.

THE STATE VIEWPOINT

(By G. H. Steele)

Minnesota Department of Agriculture has been working with Minnesota canners in both a regulatory and service manner since 1921 when our cannery license law was first enacted.

Services rendered include quality grading, incubation for keeping quality, bacteriological and chemical analyses of ingredients and finished products, and periodic inspections of plants for sanitation compliance.

When we first learned of FDA's intention to inaugurate a pilot study for Self-Certification in Minnesota, we speculated as to what effect this might have on our cannery program and whether or not this might be Federal intervention or creative federalism.

We were invited to patricipate in the study by contributing to the limit of our resources and capabilities. As a result, we performed in our usual manner, leaving to FDA whatever laboratory and inspection work we were not able to perform.

Our philosophy always has been that every processor must carry out quality and sanitation control to the utmost of his ability to assure the best possible product for the consumer. To this end, the Minnesota Department of Agriculture should interfere only to assist and advise the processor or to take regulatory action when necessary.

The Self-Certification pilot study supplied for the first time the opportunity for FDA, MDA, and Green Giant Co. each to examine his capabilities and to evaluate procedures and methodology in use to determine if they should be continued or discarded.

At the same time, open discussion of our philosophies and programs gave each par-

ticipant a more intimate knowledge of the others and made working together much more meaningful.

For the most part, the study program as originally initiated was continued, procedures being discontinued only when they appeared to serve no useful purpose. This was done only after open discussion at monthly meetings or by notification from one of the participants.

What has this study accomplished?

It resulted in mutual trust and respect for each other, thus providing a good climate for further cooperation.

It revealed to each participant what the other was attempting to accomplish.

Certain procedures were found to have little or no value and a need for others became apparent.

Each participant saw his ideas and program evaluated by the others and for the State at least this will guide us in updating our cannery program.

The format of the agreement had to be simplified and the language of the specifications had to be given in layman's terms (the layman often being the regulatory official).

As more experience was gained in the pilot study, it became apparent that not every canner can take part in Self-Certification to the same degree as others who have greater quality control resources. Consequently, some means must be developed to supply such canners, as well as other food processors having limited control resources, with services from qualified agencies, so they can install adequate Self-Certification Programs.

From our experience, we feel that every food processor needs his own Self-Certification Program so he can give assurance from day to day that his products will retain their position in the market. Nothing short of resident inspection would accomplish this end if it were to be supplied by Government. Therefore, a processor must perform quality and sanitation control of his own products if he is to assure the best possible products for the consumer.

The Self-Certification Program appears to be the most desirable and efficient way to meet this need.

THE FDA DISTRICT VIEWPOINT

(By Horace A. Allen and James A. Davis)

Minneapolis District became involved in a self-certification program after Green Giant made preliminary inquiries of FDA in Washington early in 1968.

Most of the groundwork in setting up the agreement was handled by FDA in Washington, and in April the District made a pre-certification evaluation of the plant and facilities at Blue Earth, Minn. At about this time it became apparent that any agreement entered into by Green Giant and FDA should include the Minnesota Department of Agriculture, since this department is required by State law to cover the State's canneries. The self-certification concept was discussed with the Minnesota Department of Agriculture, and a three-way agreement was signed on June 26, 1968. This agreement covered a pilot study of self-certification at Green Giant's Blue Earth plant involving the production of canned peas and whole kernel corn.

The general requirements by FDA to protect the consumer by insisting on approved processing steps are, of course, public information. But the specific action taken by industry to put these general requirements into effect may constitute or involve trade secrets. Also available to the public is information about products recalled by industry after they leave the processor's warehouses and enter the normal distribution system to wholesalers and other distributors.

Initially the pilot study required more FDA manpower than would be given to any one plant during a normal canning season. However, we felt this was necessry to become thoroughly familiar with the plant and its operation and to be in a position to evaluate reports and information the firm would be expected to furnish when the pilot study was extended into an operational program.

As the program progressed, all parties to the agreement developed greater respect for each other's problems and abilities, and a freedom of communication evolved that has not historically characterized industry-Government relations. During some of our early meetings, occasional reservations developed, but these were quickly allayed by the frankness of our discussions. We learned that industry, because of its familiarity with a plant, was in a position to give us knowledge and information that could never be obtained through our unilateral inspections.

Our experience during this pilot study has shown us that as a regulatory agency, we can have a greater degree of confidence in the quality of the firm's product by evaluating its in-plant controls than by routine regulatory inspections and collection of samples.

THE FALLACY OF "FREEDOM" IN GREECE

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. FRASER. Mr. Speaker, last September 29 the Greek people voted, by a 92-percent majority, in favor of a new constitution proposed by the military junta that has ruled Greece since a coup in April 1967. Contrary to what the junta would have us believe, the election was not conducted in an atmosphere of freedom. Opposition to the constitution was ruthlessly stifled, and dissenters faced the prospect of a jail sentence.

Nine days before the referendum an American professor, George Anastaplo, spoke directly to the point of this repression at a banquet in Athens attended by about 30 Greeks. Dr. Anastaplo is lecturer in the liberal arts at the University of Chicago and chairman of the Political Science Department at Rosary College in Illinois. The dinner at which he spoke was given for 26 members of a group from the Chicago Council on Foreign Relations, who were visiting Greece under his direction. The banquet host was the Foreign Press Division of the Office of the Greek Prime Minister.

Following is a reconstruction of Dr. Anastaplo's extemporaneous remarks at the dinner as they were printed in the May issue of the Chicago Council's publication, "Notes on World Events":

DISSENT IN ATHENS

It may seem ungracious of me, after we Americans have just been treated to a meal which it is impossible to consider in any way blameworthy, to dissent as I am now obliged to do from what has been said to us tonight in defense of the way the present Greek government conducts itself.

It should be evident to all of you by now that I would have preferred on this occasion only to listen, and thus to learn. But I cannot completely ignore the challenge we have just heard from our official host in his determined effort to induce me to say something to this gathering. An American, he complains, should not wait to say in Washington what he dare not say in Athens. I therefore consent to comment on various of the things said to us this evening, as they now occur to me.

NO FREEDOM OF DISCUSSION

We have been reminded that Greece and the United States have long been allies in defense of the free world. I need not dispute our host's observation that one form of freedom is that in which discussion appears. There is no doubt that we had an opportunity tonight to exchange opinions, to ask questions, and for our host and his colleagues to give the answers of their government. But I must challenge his suggestion that this is proof that there is freedom of discussion in Greece today. For the fact of the matter is that such a discussion as ours tonight is not now generally permitted in Greece. The only people who dare speak as freely in public as we have here are some members of the present government, a few other men with the famous names of old families, and visitors who hold foreign passports. Most Greeks dare not speak as we have, except in the privacy of their homes and even there only with relatives and friends whom they can trust. All of you Greeks here tonight must know this. It cannot be forgotten that thousands of "enemies of the regime"—men and women of the Left, Center and Right—are still held in Greek prisons without trial and without any prospect of trial.

We have been reminded that the American Constitution also followed upon a revolution. This is certainly true. But I hardly think that justifies the manner in which the constitution to be voted on in Greece next week has been brought forth. The Constitution of the United States was written by fifty-five men freely selected by the American people to represent them. Who these men were, why they were selected and by whom was known to everyone. This is not the case here. What those men produced in 1787 was discussed publicly and freely for a year and more in circumstances where no man was afraid of being officially penalized for the position he took in public. That is not the case here. Rather, we know that the most distinguished opponents of your proposed constitution—the politicians who we know have had large popular followings for years—have been for some time under house arrest and will not be released before next Monday, and only then in order to be able to vote the following Sunday on the proposed constitution. It has been made clear to them that they are not to speak publicly against the constitution. How can it be said in such circumstances that a genuinely free referendum is being held, irrespective of how the balloting itself is conducted or comes out? How can an ordinary citizen be sure that he will not be regarded an "enemy of the regime" if he should be detected voting against the constitution proposed by his insistent government?

A FREE REFERENDUM?

Yet, we have been told several times this evening that we are about to witness free balloting, that this is confirmed by the fact that some newspaper criticism of specific articles in the proposed constitution has been permitted. But we Americans know what a free election is. We know this from our own experience. We know what a free election feels like. We know what it sounds like. We know what it looks like. And we know this is not it.

Several of my fellow-citizens have this evening remarked on the fact that there are only *NAI* (YES) signs on display in Greece these days. Nowhere can one see *OXI* (NO) signs. In fact, I have the past week seen only one *OXI* chalked on a wall—and even this had been almost rubbed out. It has been suggested to us tonight that such signs are not significant, that Greeks will freely vote for what they "believe in." But does the government really believe that its monopoly of propaganda is inconsequential? Considerable money has been spent by the government on these signs, as well as on the press, radio and

film. They are intended to shape the opinions of many who can be moved by such things, and they constantly remind everyone of who is in control here and of what is expected of them. We Americans do know what to think when we see government resources and government personnel marshaled as they have been here in a massive (and no doubt successful) campaign to produce the desired result. This is no more a free referendum than similar exercises are free either in Spain or in Russia.

And yet our host and his government have tried hard to persuade us that we are witnessing a genuinely free expression of the will of the Greek people. It seems important to them that Americans believe this. We Americans may not be informed enough about or familiar enough with Greek history and Greek affairs to be able to judge other claims of this government. But, as I have said, we do have the experience and the ability and the information to judge whether an election is truly free. And when we can see that this government claim about a free referendum, of which we have heard so much, is simply without foundation, what are we to think of all the other claims that we hear from the same government about what it has done for Greece, about what its motives are, about its innocence of deliberate torture of political prisoners, and about the imminent Communist danger from which it saved Greece by seizing power last year? Are we not entitled to judge what we may not know by what we can and do know?

THE AUTHORITY TO PRESCRIBE

We have been told several times this evening that Greek affairs of recent years required drastic medicine, that a doctor must sometimes prescribe harsh measures in order to save the life of the patient. But do we not all believe that an adult is entitled to select his own doctor, and to discharge him when he chooses? By what authority does the presiding doctor prescribe what is necessary for Greece? How can the Greeks be said to have selected him, when they did not even know who he was? What diploma does he have as a doctor? What proof of his qualifications is there aside from his self-serving testimony about himself? Certainly, we cannot accept as indicative of public approval of his regimen the fact that an unarmed people does not resist a determined government which is heavily armed.

The republican precedent of the Roman dictatorship has been cited to us in justification of what has happened here since April 1967. But it should be remembered that the Roman dictator (usually a citizen of recognized merit) was given his authority pursuant to the constitutional processes of the Roman Republic—and this was done only after debate and deliberation. It should also be remembered that the Roman dictator held his power for a fixed term, a term clearly stated in advance of his appointment. We have also been cited, in justification of the suspension of civil liberties in times of emergency, the experiences of Great Britain and the United States during the Second World War. But it should be remembered that Mr. Churchill was repeatedly obliged during that war to submit himself to the will of an elected parliament. The Americans present tonight remember the difficulties President Roosevelt had with the American Congress, even in time of war. And in both cases, these wartime leaders were chosen pursuant to the constitutional processes of free people, despite the existence then of emergencies far more threatening than anything confronting Greece today.

I feel honor-bound to address myself, before I close, to the remarks made by our host about Eleni Vlachou, a lady whom he knows, from our conversation during dinner, that I respect. Every Greek here tonight knows that before the coup of April 1967 Mrs. Vlachou published the most respected newspaper in Greece. You Greeks know that hers was a newspaper of the Right, that she was strongly anti-Communist (indeed, to my mind, too much so), and that she has repudiated the claims of the army officers who made the coup about the danger of Communism from which they saved Greece. You know that hers was the newspaper that most of you, and most of the supporters of the present government, once looked up to as the best in Greece. You know that your government made serious efforts for six months after the April 1967 coup to induce Mrs. Vlachou to resume publication of the newspaper she had immediately suspended upon being confronted by your press censorship, censorship which continues to this day. To disparage her as has been done tonight is simply unrealistic and even unbecoming. To honor her for the stand she has taken and the sacrifices she has made is to honor and to nourish and perhaps even to help revive the best in the Greek spirit. We will know that a significant measure of liberty has indeed returned to Greece when Mrs. Vlachou again publishes her newspaper freely, a newspaper in which I am sure there will be things with which I would be obliged to disagree. In any event, Mrs. Vlachou's exile, like that of your King, serves as a constant reminder that things are not right in Greece at this time.

I have directed my remarks this evening to the question of liberty, to the question of whether liberty exists in Greece today. This is not the occasion to examine the advantages and the excesses of liberty, to examine its conditions and its preservation—all matters about which much needs to be said in Greece as well as in the United States. I must also reserve for another occasion my discussion of what has been happening under the present government to the Greek economy, of what has already happened to the effectiveness of the army that a handful of junior officers has usurped, of what Greece is supposed to have been saved from and saved for by this unconstitutional usurpation, of what has happened to Greek relations with its friends and allies in the West since April 1967, and of what has been happening the past seventeen months to the civil services, to the functioning of government and to the quality of life in this country.

We have been speaking tonight of liberty. Liberty is what we Americans do know something about. And when an American visitor, who respects both the truth and Greece, is confronted as we have been at such length, not only tonight but ever since our arrival in Athens, by the insistence that liberty is to be found in Greece today, he is obliged to dissent, if he presumes to speak at all.

If what Greek citizens have now is what you mean by "liberty", then we should all reconsider what we mean by "the free world."

THE DAY THE EARTH WAS LOST

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. TEAGUE of Texas. Mr. Speaker, an editorial of Tuesday, May 20, 1969, in the Kansas City Times catches the significance and the exhilaration felt by all Americans and people throughout the world in the successful flight of Apollo 10. As the editorial points out the Apollo program is truly a journey of man into a new and unknown environment. Yet this undertaking has been done with the skill and initiative inherent in the American heritage. This editorial is an articulate statement of the importance of continued support of our Nation's quest for new knowledge and capability. I commend it to your reading, and include it herewith:

THE DAY THE EARTH WAS LOST

Early in their journey to the moon, one of the astronauts—during the first TV color spectacular from space—said somewhat wistfully:

"We're looking for earth right now. We'd like to show it to you but we can't find it."

The problem, of course, was one of the spacecraft's orientation. In time—after televising the docking with the lunar lander, which appeared much easier than parking on most city streets—the astronauts found the earth. And presented the show of shows as they sped moonward. But for a moment, the words of the astronaut seemed to capture the mixed feelings that the earthbound themselves have, in this mixed-up age we live in.

But the earth was found, and the astronauts will—if all goes according to schedule—find the moon. There is, we suppose, a bit of philosophy to be derived from this, but the philosophers and poets have not yet arrived in space. They will, in due time, the trail having been blazed for them by brave technicians and pilots, by the daring who prove that even a moment of human confusion means nothing.

For now, however, the course belongs to the astronauts, and no man could question the magnificence of their performance. The television cameras recorded the sheer beauty of the takeoff, of the maneuver in space and of the earth itself receding in the background. The astronauts routinely went about their business, apparently with that flawlessness which is the essence of their life. Men below watched in awe at this thing which their fellow men had wrought.

They—the earthbound—had been found by the space-borne camera, and there they were on camera. It was reassuring. Then the astronauts sped onward, toward the moon, lonesome, yet not alone. Earth, gorgeous and mysterious, had been displayed to its residents as it had never been displayed before. What a fantastic start on another of man's incredible journeys into the unknown! Sunday, the earth. Tomorrow, the moon. In time the poets and philosophers will have much to say about that.

DR. JOHN F. McHUGH DEFINES "FREEDOM" IN MEMORIAL DAY SPEECH

HON. FRED B. ROONEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. ROONEY of Pennsylvania. Mr. Speaker, I would like to commend a speech entitled "Footsteps for Freedom" which was delivered at West Park in Allentown, Pa., by Dr. John M. McHugh, who is principal of the Roosevelt Elementary School in Allentown, on Memorial Day 1969 to the reading of those who look at the CONGRESSIONAL RECORD.

This speech was recently called to my attention, and I believe there are points of considerable merit contained within it. I invite particular attention to the definitions of "freedom" in Dr. McHugh's remarks.

The text of his statement of May 30, 1969, follows:

FOOTSTEPS FOR FREEDOM

(By Dr. John F. McHugh)

Memorial Day, for me, has always been a special day. Perhaps it has been special because during my childhood I loved to watch the two parades in Allentown on each May 30th. I remember getting up early and trotting to Center Square to see the soldiers, to listen to the taps, and to gaze in wonder at the volley of shots fired and heard in center city. Then, I would sit on the curb and wait for the big parade to move up Hamilton Street toward West Park. I always loved a parade . . . and on Memorial Day I had a double joy of excitement because after the ceremonies in the park were completed, the parade formed again—on Turner street and proceeded back to the Square for the concluding ceremonies. On several Memorial Days I marched in these parades—always carrying the flag.

As I think back over these thirty years, I can still hear the footsteps of the units of soldiers, sailors, and marines as they marched proudly to the cadence of America's traditional marching songs. Perhaps it was these first footsteps that I heard which gave me some idea of what freedom was all about. I may have been too young to know the meaning of freedom, but I was taught in Allentown about the greatness of my country and a respect for her brave men.

What I did not know as a young child was that footsteps for freedom were heard all around the world in the name of our country. What I did not comprehend as a child was that some of these footsteps were now silenced because men gave their lives on battlefields to protect the land they loved and where I, an American, had the grand opportunity to live and to enjoy life.

I emphasize the memories of a young person to render a suggestion that the young of today listen to the footsteps for freedom.

And so today, I want to have a heart-to-heart talk with the young people of our community, and through them, with the young people of our nation.

Young Americans and Young Allentonians: Memorial Day is a day of reverence, remembrance, and respect. It is a day of reverance to Almighty God; a remembrance of the dead; a respect for the brave. But, my young friends, Memorial Day is a day for the living as well. It is a day for you and for me, for all of us, to look inside ourselves to find out personally how we feel about our God, our Country, and our respect for freedom.

Being the educator that I am, I want to ask you some questions; and while I wait and listen for your answers, I want to share some feelings that might help bridge the so-called generation gap which some people say exists in our community and nation today.

Young Americans and Young Allentonians: How do you feel about the American flag? Do you know its history? Do you know what it stands for? Does your heart swell with pride when you see it pass by? Do you give it the respect it rightfully deserves? Do you realize the symbolism of our flag, carried into battle, rallied the forces of men toward victories because men loved their flag because it represented for them the greatness of their country and their love for their nation? Do you realize that for millions of enslaved people around the globe, your flag has become the symbol of hope? The flag of America is a symbol of freedom because men died so that freedom might prevail. The footsteps for freedom have been led by the Stars and Stripes!

Young Americans and Young Allentonians: How do you feel about the Liberty Bell? Do you know its history? Do you realize that men and women were rallied by the tone of its peal during the dark days of a revolution—that the bell represents for us our independence. Have you been to Independence Hall or our own Liberty Bell Shrine to catch the feeling of what America is about—what her struggles have been, her promise kept, her greatness maintained? The Liberty Bell is a symbol and her tolling has guided the footsteps to freedom.

Young Americans and Young Allentonians: Have you met Abraham Lincoln? Do you know the story of his life? Have you learned from the lessons he taught? Are we truly brothers? Do you have malice for none and charity for all? Do you know he said that our nation was dedicated to the proposition that all men are created equal . . . that this nation shall have a new birth of freedom . . . that we are a government of the people, by the people, for the people . . . and that this nation shall not perish from the Earth! Did you know that Lincoln prayed, had faith in God, and was moved by the spirit of the Almighty during the dark days of civil strife in our nation when brother fought brother on American soil? In the parade of American Heroes, Lincoln's footsteps were for freedom!

Young Americans and Young Allentonians: Do you know our nation has been called a melting pot? Do you understand and appreciate that the greatness of our nation came into being because all races, men of all colors, and faiths in many religions contributed their worth, their culture, their traditions, and their individual dignity? Together they had a common purpose: to build a united states, and to set the course of history with America as a giant among nations. They came from different countries but they *became* Americans. A poem says it better:

"Just today we chanced to meet—
Down upon the crowded street,
And I wondered whence he came,
What was once his nation's name?
So I asked him, 'Tell me true—
Are you Pole or Russian Jew,
English, Irish, German, Prussian,
Belgian, Spanish, Swiss, Maravian,
Dutch, Greek or Scandinavian?'
Then he raised his head on high
as he gave me this reply:

" 'What I was is naught to me
In this land of liberty.
In my soul as man to man
I am just American!' "

The footsteps to freedom have been trod by men from many nations—now united as free-loving Americans.

Young Americans and Young Allentonians: Do you want to help your community? Your Nation? Yes, let your voices be heard. But, my young Americans, *let your deeds be respected!* Don't tear down that which took many years, hard work, and dedicated lives to build. And, don't build something in its stead for which someday you will be shameful. Dedicate your lives toward strengthening America—do not destroy her; for in destroying her, you will only destroy yourselves.

Now, my young Americans, I believe there is something which some of us, who are a generation or two older and perhaps a little more formally educated and experienced can share with you. It is this. You and all of us are living through a series of crises. Your age is different because you have known only the curse of crisis and never the fullest pursuits of peace. But we are in these crises together and I am afraid they will be with us for generations to come. What we need to do is adjust to crises, weather the storms, and hope that the lessons of greatness from our past history will endure our determinations to build greatnesses for the future.

Young Americans and Young Allentonians: Let's hope that our passions and our angers—grown out of our frustrations will turn into compassions and understandings—grown out of mutual respects one for the other. You need to understand that we are living in an interregnum period. One foot's in a world that's going, one's in a world that's coming. What we are going through is the price we have to pay for a new freedom. And the kind of foosteps you make will determine the kind of freedom we will have in the future.

Finally, remember that every right you have has a corresponding responsibility. Learn the history of your country well, remember the words of her heroes, and try to catch the feeling of pride exemplified by her many symbols.

Remember, too, of what America is *about*. She has problems to solve and she has progress to make. In trying to solve her problems, do not create problems, but determine the progress to be gained.

Young Americans and Young Allentonians: Your turn will come to lead us on. May your footsteps guide us toward that new freedom—a greater America, rich in traditions, and God grant, maybe you can bring us to an era of peace among men. In saluting you, we also challenge you. God Bless You in your endeavors!

CHIEF JUSTICE EARL WARREN

HON. JAMES H. SCHEUER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. SCHEUER. Mr. Speaker, during his tenure as Chief Justice of the United States, Earl Warren has consistently stood as a force for fairness and as a champion of equal justice under the law. A former district attorney, attorney general, and three-time Governor of California, Earl Warren brought to the Court a knowledge, not only of law, but also of public administration, which enabled him to understand the basic cross-currents and moral conscience of this Nation. Thus, the Court promoted true equality, while discarding hollow rhetoric and legal technicalities as contrary to the original meaning of the Constitution.

Under Justice Warren's leadership, the Supreme Court has vitalized the constitutional law of human rights. In the past 10 years, the Court has extended most of the important sections of the Bill of Rights to cover the States, thus protecting for all people those basic liberties which our Founding Fathers meant to be safeguarded from governmental interference. Specifically, the Court has strengthened the constitutional right to a fair trial by ruling that every man, rich or poor, has the right to counsel in a felony prosecution. The integrity of the electoral process has been strengthened by the Court's "one-man, one-vote" ruling, which declared that legislators represent people, "not trees or acres."

Warren demanded that true opportunity be provided for all Americans, when he wrote for the Court, in Brown against Board of Education, possibly his most famous decision, that segregation in the schools was unconstitutional, because a separate education imposed psychological burdens upon the Negro child which denied him an education equal to the one of his white counterpart. This decision made possible Supreme Court

consideration of a broad range of civil rights cases, reaching into other areas of segregated activity such as public accommodations, transportation, restaurants, and housing.

Because of his insight and integrity, Justice Warren helped open the doors which alerted the country to its responsibility for meeting the unfulfilled promises of equality for all. Associate Justice William Douglas asserts that Justice Warren "will be classified with Marshall and Hughes, who also saw the United States in large dimensions and recognized that the quality of justice is the measure of a nation's worth."

On this day of his retirement, I am honored to join in paying tribute to this man of concern and compassion, whose leadership has helped bring this country closer to realizing the ideal of a just society.

Mr. Speaker, this morning the New York Times published a very fine editorial tribute to the Chief Justice which expresses very well the views of many citizens. I am pleased to include it in my remarks:

THE CHIEF STEPS DOWN

With the retirement of Earl Warren as Chief Justice, the nation loses a man of personal courage, progressive conviction and humane understanding who has led the Supreme Court through one of the most decisive periods in the 180 years of its history.

Only three of Chief Justice Warren's predecessors—John Marshall, Roger Taney and Melville Fuller—served longer than his sixteen years and only under the early leadership of Marshall and Taney has the Supreme Court had more critical impact on the law and life of the nation. The Warren Court's school desegregation and other civil rights cases are surpassed in importance in their sphere only by the Taney Court's *Dred Scott* decision, while its reapportionment, redistricting and criminal due process decisions have consequences for the Federal system almost as great as the fundamental interpretations of the Marshall Court.

When President Eisenhower appointed Mr. Warren in 1953, there was little in his record in public life to foretell the kind of Chief Justice he would become. The school desegregation cases which were pending when he took his seat plunged Chief Justice Warren into racial and regional controversy during his very first year on the Court. But *Brown* v. *Board of Education* was a unanimous decision which evolved naturally out of several previous cases concerning racial discrimination. While the Warren Court has divided sharply on other issues, it has consistently been unanimous, or very nearly so, in striking down barriers to voting rights and forbidding public and private discrimination.

Chief Justice Warren struck a more distinctive personal note in his sensitivity to individual rights and due process. A concern for fair play, which is a synonym for due process, animated the Chief Justice and a majority of his colleagues in 1957 and subsequently in curbing the House Un-American Activities Committee, the Subversive Activities Control Board and the State Department's passport authority.

Because the apportionment of state legislatures and the districting of seats in the House of Representatives had long been considered a "political thicket" too dangerous for the Court to penetrate, grave abuses had developed in the American form of government. Beginning with *Baker* v. *Carr* in 1963, the Supreme Court under Chief Justice Warren came to the rescue of the underrepresented millions in the cities and the suburbs. If American federalism successfully masters the social crises of the coming decade, much credit will go to the Warren Court's rulings in favor of "one man, one vote" and equal districts.

These rulings were not without risk to the Court's authority and prestige because they did carry the Court into that ill-defined border zone where the judicial and the legislative powers meet and mingle. With good reason, critics of the Court contended that the justices had usurped some legislative authority. But defenders of the Warren Court replied that in the reapportionment cases as in the long stalemated issue of school segregation, years of Congressional evasion and irresponsibility made judicial intervention inevitable.

The rights of criminal offenders evoke little sympathy when rising crime rates have become a matter of national concern, but the Warren Court has moved against the tide of popular feeling. The Court has insisted that to have a lawyer, to remain silent, and to avoid being browbeaten into a confession are rights of every citizen. Future court decisions may perhaps reshape the particular definitions of this right as the unending task of judging continues, but the fundamental affirmations of the Warren Court in the field of criminal jurisprudence are in the best American tradition.

In meeting the issues of his Court service, Chief Justice Warren did not have the legal erudition of a Frankfurter or a Cardozo; the brilliant advocacy of a Hughes, or the thoroughly developed philosophy of a Holmes. He has depended instead upon an unblinking integrity, a firm common sense, and a deep feeling for the liberal and egalitarian values which moved Thomas Jefferson and the other founders of this nation. Those values must be brought to bear on the problems of each generation in live and relevant ways if the American ideal of self-government is to survive and flourish. It is to the lasting honor of Earl Warren that he contributed so effectively to that liveliness and relevance in his time.

DRAFT REFORM THROUGH RATIONAL PROCESS

HON. GILBERT GUDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. GUDE. Mr. Speaker, President Nixon's May 13 message to Congress on draft reform carried a message of greater import than perhaps first meets the eye. While the excellent proposals to improve the Selective Service System are of great significance in their purpose, the derivation of these proposals should give heart to those concerned with the notorious disregard of political action through rational, democratic process. The message here is how young people saw a problem, analyzed it, and made presentations and recommendations through established procedures to treat the problem.

This sequence is described in the following letter to the President from Mr. Jack McDonald, chairman of the Young Republican National Federation, which I commend to my colleagues:

MAY 27, 1969.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR PRESIDENT NIXON: I recently received from Mr. Klein a copy of your May 13th message to Congress concerning draft reform.

Let me, on behalf of young people of all political persuasions, express appreciation to you for forthrightly proposing these much needed reforms. Your proposals, if accepted by Congress, would allow the approximately 11,000,000 American men between 18 and 26 to plan their lives with a degree of certainty which has not been available to them in the past. You will thus remove from their lives—and from the lives of their families—one of the greatest frustrations which has been thrust upon young Americans in recent years. We congratulate you on your proposals.

Let me also add our encouragement for your longer-term goal of an all-volunteer Armed Forces. While this objective may be unattainable at the present time due to the Vietnam conflict, it is a worthy goal for which our Nation should continue to strive.

You may recall in July of 1968 that the Young Republican National Federation held hearings on draft reform in Washington in preparation for the presentation of the "Youth Plank" in our Party's 1968 Platform. We received testimony from General Hershey, Senators Tower, Brooke and Dominick, numerous Congressmen, as well as leaders of youth organizations and specialists in military manpower procurement. Our recommendations, which were presented to the Platform Committee and eventually became part of our Platform, were in strong agreement with both your May 13 proposals and your search for an all-volunteer army. We are therefore indeed proud to see our recommendations for change in America move toward reality.

Maybe there is some message here for the young people of America in that we, as young citizens, saw a problem; quietly and thoroughly analysed it; worked through the established procedures available for bringing orderly change; and now, to some extent, that change has been accomplished. In short, the young people of our Nation *can* accomplish change through legitimate channels rather than by riots and revolution.

A copy of this letter is being sent to all Republican members of Congress so that they may know of our strong support of your May 13 proposals. We pledge to you our continued support both as the leader of our Party and our Nation.

Sincerely,

JACK MCDONALD,
Chairman.

MARTIN LUTHER KING—SECURITY VIOLATION BY ROWAN

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. RARICK. Mr. Speaker, what started out as an effort to canonize Martin Luther King, Jr., has now degenerated to vitriolic attacks on J. Edgar Hoover and the FBI. In fact, several left-wing extremists including a gossip columnist even demanded the resignation of Mr. Hoover, because he told the truth.

Carl Rowan claims that through one of his sinecures in the repudiated Kennedy-Johnson administration he was enabled to eavesdrop on some of the King surveillance. Now, writing a column for his own profit, he talks about just what he wants to talk about and dismisses the balance as "barnyard gossip." This cavalier breach of security deserves attention on at least two grounds.

Should individuals who come into possession of classified security information under color of legitimacy be encouraged to peddle it in bits and pieces for their

own profit? Is not this still a crime? Should not Rowan have the opportunity to appear before an appropriate body—perhaps a committee of the Congress or even a grand jury—so that he can testify under oath as to what it was that he heard—that the American people, having no security clearance, must not be told?

Obviously Rowan can now tell the American people what caused Martin Luther King's decision to sidestep the civil rights movement and suddenly become a pro-Red leader in the peace agitation movement march in New York City. Expressly, was King's decision based on orders, because he was under party discipline?

If Rowan knows the answer, so does Ramsey Clark, and so does Nicholas Katzenbach. Can this be the reason that they are now demanding Mr. Hoover's resignation, so that this record can be destroyed and the true facts of the matter forever hidden from the American people?

If Rowan and company want to rehabilitate Martin Luther King, then it would seem that their activities would be dedicated to calling for the President to release the FBI files—not to destroy them.

In a test of credibility, J. Edgar Hoover needs no assistance—even against Rowan, Clark, and Katzenbach, and a bevy of leftwing college professors all at once. Against Robert Kennedy, under similar circumstances, the contest ended suddenly when it was realized that Hoover had the signature of the then Attorney General on the disclaimed authorization.

So that our colleagues may keep abreast of the ridiculous defense and disgusting confusion being created by people who know better, I include an assortment of news clippings over the past few days:

[From the Evening Star, June 19, 1969]

KING WIRETAP CALLED RFK'S IDEA: HOOVER REVEALS MEMO TO FBI CITED CONCERN OVER MARXISM

FBI Director J. Edgar Hoover today disclosed that wiretapping of the Rev. Martin Luther King's telephone was proposed by then Atty. Gen. Robert F. Kennedy to FBI officials in June 1963 and authorized over Kennedy's signature a few months later.

Hoover said the FBI has in its files two memorandums which make it clear that Kennedy conceived the idea of the wiretap on King and subsequently authorized the bureau to proceed with the wiretapping on Oct. 10, 1963.

The monitoring was discontinued on April 30, 1965, Hoover said.

Kennedy initiated the idea for the tap in a conversation with Courtney Evans, then assistant director of the FBI and liaison officer between the agency and the Justice Department, Hoover told The Star today.

MEMORANDUM CITED

Hoover said the FBI has a memorandum in its files from Evans to Hoover, dated in June, 1963. Evans reported that Kennedy said he was concerned about allegations that King was a student and believer in Marxism. Kennedy, according to the Evans memorandum, expressed concern that Marxism might infiltrate the race issue in the United States because of King's leadership of Negroes through his Southern Christian Leadership Conference.

Evans reported in the memo to the FBI director, Hoover said, that the attorney general was alarmed by alleged associations between King and a New Yorker with Marxist connections. Kennedy asked Evans, the memorandum said, whether it would be feasible to install electronic devices to monitor King's conversations in an effort to discover the extent of a possible threat to national security.

According to Evans' memo, the liaison man told Kennedy there were technical difficulties in installing such devices in the case of the Negro leader because he was a man who was almost constantly traveling.

Hoover told The Star that the FBI also told Kennedy at the time that they questioned the advisability of undertaking the electronic surveillance because of possible political repercussions.

On October 7, 1963, however, following subsequent discussion Hoover said he sent a memorandum to the Attorney General in which he reported that it was now technically feasible to apply telephone wire taps to King's telephone at SCLC headquarters in Atlanta, Ga., and at an unnamed address in New York City. This was, in effect, a request for authorization to proceed, the director said.

That Hoover memorandum bears the signature of "Robert F. Kennedy" in the lower left-hand corner over the handwritten date "10–10–63."

Aides to Sen. Edward M. Kennedy, D-Mass., said today he would have no comment on Hoover's disclosure.

Hoover made the bombshell disclosure today as the climax to a long series of charges and counter-charges involving Justice Department officials, the FBI and Star columnist Carl Rowan over the manner in which the conversations of King were intercepted by the Bureau.

Rowan charged in a column Sunday that the FBI had no authority to wiretap Dr. King's conversations and quoted former Attorney General Ramsey Clark as saying the implication that people thought Dr. King was a security threat is outrageous."

The following day, Associate FBI Director Clyde A. Tolson wrote a letter to Rowan in which he stated that the official wiretapping on King had the advance approval of Kennedy.

[From the Evening Star, June 20, 1969]

FBI WON'T TALK ABOUT ADDITIONAL WIRETAPPINGS

(By Carl T. Rowan)

The Federal Bureau of Investigation has refused to say whether it has ever tapped the telephones of any members of Congress as part of its job of "protecting internal security."

Clyde A. Tolson, the FBI associate director who disclosed in a letter to me that the telephone of the late Dr. Martin Luther King was tapped "strictly in the field of internal security," has also refused to say whether the FBI has tapped the telephones or bugged the homes of other civil rights leaders such as Roy Wilkins of the NAACP, Whitney Young of the National Urban League, the Rev. Ralph Abernathy of the Southern Christian Leadership Conference, or James Farmer, formerly of the Committee on Racial Equality and now an assistant secretary of Health, Education and Welfare.

In a curt exchange of letters with this reporter, Tolson takes the view that in revealing that the wiretap on King was authorized by the late Robert F. Kennedy, the FBI's purpose has "been accomplished" and "there is no need to continue this correspondence."

Thus the FBI seeks to evade the thrust of my recent column that Tolson labeled "scurrilous" by resting its case on an assortment of allegations against two dead men who cannot talk back.

First, in an all-out effort to protect the reputation of J. Edgar Hoover, the FBI has alleged that the wiretap on King was both suggested and approved by the late Senator Kennedy.

Check of records I kept on the King affair during my government days, including discussions of the matter with FBI officials, suggests that Kennedy did approve the wiretap, but that the FBI lies in stating that it was Kennedy's idea originally.

A significant point that was central to my column has been obscured by the "Hoover or Kennedy?" controversy. That is my point that the FBI can, does and will tap the phone or bug the dwelling of just about any American in the name of "internal security."

Rather than meet this point, the FBI wants the wiretapping-bugging controversy to focus on King because it possesses tape recordings and photographs that it thinks will blacken King's reputation.

(Tolson has carefully neglected to comment on my report that for years the FBI has had a small army of agents and allies roaming the country whispering the dirt about King.)

FBI strategy is based on the assumption that some of the public already hates King, others automatically despise heroes who turn out to have feet of clay, and still others are quick to adopt a holier-than-thou posture and throw the first stone. The assumption seems to be that if the FBI leaks enough degrading details about King the American people will forget the central charge in my column that the FBI found so wounding it finally decided to tell the American people part of the truth.

That charge, I repeat, is that we are a lot closer to becoming a police state than most Americans realize. Nothing illustrates this more than the current FBI campaign.

But the issue is not whether King was a saint—and perhaps this is the time for me to reveal that I have read the FBI reports based on electronic surveillance of the late Nobel prize-winner. I know how much dirt the FBI has dug up, and 90 percent of it is barnyard gossip that has nothing to do with "internal security" or "Marxist influences."

The question is: Should a powerful, police-investigative agency be permitted to tap an American's telephone, bug his home, sneak electronic devices into his hotel rooms, just because someone in the Justice Department (Hoover, Kennedy or whoever) thinks he has "Communist associates"? Ought not there be the safeguard of some court concluding that some "Clear and present danger" justifies such an invasion of a free man's privacy?

Was there a "clear and present danger" that King would endanger the nation's security. If so, why did the danger disappear on April 30, 1965, when the FBI claims it discontinued the wiretap? King was seeing the same "dangerous" people for almost three years after that.

The answer is that certain buggings and other surveillance of King did not end in April 1965. As a top government official, I read FBI surveillance reports on King long after the date when Hoover says the wiretaps were ended.

The answer is that the FBI will not admit to this later surveillance because it cannot claim that it was authorized by Attorneys General Nicholas DeB. Katzenbach and Ramsey Clark, both of whom are alive to defend themselves.

There is a fundamental point about the King affair that is valid no matter who authorized the wiretap and buggings. If the FBI had information that King was an enemy and menace to his country, we have courts and other proper channels in which to make whatever charges the FBI felt it could prove. This affords the accused a chance to face his accuser, to reply.

But the most frightful aspect of this whole business is to have FBI officials waging a campaign to destroy a man by rumor, by stealth, by whispers, by flashing dirty pictures in smoke-filled bars.

These are the legal and moral issues that the American public must face. And we must not be blinded to the reality by a shrewd campaign to make the late Robert F. Kennedy and the late Martin Luther King the villians.

[From the Evening Star, June 20, 1969]

KING WIRETAPPING DISPUTE WIDENS

(By Lyle Denniston)

Two former U.S. attorneys general, FBI Director J. Edgar Hoover and President Nixon have all entered the growing controversy over federal wiretapping on the late Dr. Martin Luther King Jr.

The new issue that last night divided Hoover and former Attorneys General Nicholas deB. Katzenbach and Ramsey Clark is whether the tap on King's telephone was the original idea of the late Atty. Gen. Robert F. Kennedy.

President Nixon, apparently rejecting the advice of a key aide, also stepped into the dispute to declare "complete confidence" in Hoover.

KEY POINT NOT DISCUSSED

However, Nixon did not discuss the question of whether it was Kennedy's idea to tap King's telephone.

The President, instead, commented only on the issue of basic authority for installing the device. He said he had "checked personally" and had found Hoover was correct in saying that no wiretaps were ever used without an attorney general's authority.

Hoover told The Evening Star yesterday that the FBI has in its files a June 1963 memorandum which—according to Hoover—showed that Kennedy had asked about the feasibility of using electronic devices to monitor King.

COUNTERATTACK

Hoover revealed the existence of two memorandums, in one of which he said Kennedy expressed concern about possible Marxist involvement with the late Negro leader.

Katzenbach, who was Kennedy's top aide, issued a statement last night saying that it is "false" to "say or imply that this tap was the original conception of Robert Kennedy."

Clark issued a separate statement describing Hoover's comments as "unfair and deceptive." He said Hoover repeatedly requested authorization for the wiretap.

Neither Katzenbach nor Clark disputed the suggestion that Kennedy had given the FBI permission to install the wiretap on King's telephone. Katzenbach said flatly that "there has never been an issue as to the fact that . . . Kennedy personally authorized each telephone wiretap—as had his predecessors and successors."

This had been the issue earlier this week, and it was the only issue on which the President commented at his press conference.

On Monday, Hoover's associate director, Clyde A. Tolson, said in a letter to Star columnist Carl T. Rowan that the device on King's telephone had been approved in writing in advance by Kennedy.

Yesterday, in another letter to Rowan, Tolson said that he had written to the columnist to "refute" a column in last Sunday's Star criticizing Hoover over the wiretapping incident. His Monday letter, Tolson said, had been written because of "your unwarranted charge that the wiretap . . . was unauthorized and illegal."

Having given his reply, the associate director said, "there is no need to continue this correspondence." This apparently amounted to a refusal to answer a series of other questions about wiretapping which Rowan had submitted to Tolson this week.

Appearing on television last night, Rowan said he had asked Tolson "how many other civil rights leaders" had been the subject of FBI wiretapping—including James Farmer, Floyd McKissick, Roy Wilkins and Whitney Young.

The question of whether an attorney general gave the FBI authority to install any wiretaps, on King or anyone else, has come up in recent years when the legality of electronic surveillance was contested in court.

For years, every administration has followed the practice that a "national security" wiretap is legal if it has been expressely authorized by the attorney general.

Tolson's letter Monday said the device used on King's telephone was used only for "national security" purposes.

But Hoover's discussion on the King wiretap with The Star yesterday switched the central question in the controversy away from the legality of the monitoring.

He discussed with Star representatives two memorandums he said the FBI had in its possession. The first of these, Hoover said, was a memo to him from Courtney A. Evans, who in 1963 was assistant director of the FBI and was the bureau's liaison man with Kennedy.

The Evans memo, Hoover said, reported on a conversation between Kennedy and Evans in which the attorney general was said to have asked about the technical feasibility of monitoring King.

The FBI chief said the Evans' memo related that Kennedy was concerned about reports that King had ties with a New York attorney with "known Communist connections," that King was a student of Marxism, but that he did not openly espouse Marxism because of his religious beliefs.

The purpose of the inquiry about electronic surveillance, Hoover's comments indicated, was to prove or disprove these reports.

Hoover also discussed a second document, in which the director said he advised Kennedy that it was technically feasible to apply wiretaps to King's telephones at two places—one on King's phones in Atlanta, Ga., and the other at an unnamed location in New York City. This memo, Hoover said, was dated Oct. 7, 1963, and contained Kennedy's signature and the date Oct. 10, 1963, at the bottom.

As a result of the October document, Hoover indicated, a wiretap was installed on King's telephone.

Former Atty. Gen. Katzenbach, who was Kennedy's deputy at the time, directly challenged Hoover's interpretation of the June 1963 memo. It was his first public attack on Hoover or the FBI.

"To say or imply that this tap was the original conception of Robert Kennedy—that he was the moving force in this situation—or that he had any doubts whatsoever as to Dr. King's loyalty or integrity is false."

"It is unworthy of the tradition of the FBI to attack in this fashion the reputation of two men who cannot defend themselves.

"Truth is seldom found in selective and partial disclosures of this type. What has been said is unfair to Sen. Kennedy and Dr. King, by no standard that I known consonant with that integrity and sense of justice which has always heretofore been the contribution of Mr. Hoover to the administration of American justice."

Former Atty. Gen. Clark's separate statement echoed these remarks. He described Hoover's statement to The Star as "unfair because it comes after Robert Kennedy and Martin Luther King have been murdered in the service of humanity and are unable to defend themselves.

"The truth of the matter cannot be denied through release of selected materials from FBI files."

Clark added that he thought Hoover's statement is deceptive in depicting Mr. Hoover as a reluctant eavesdropper of Dr. King. "He repeatedly requested me to authorize FBI wiretaps on Dr. King while I was attorney general. The last of these requests, none of which was granted, came two days before the murder of Dr. King."

The other person named in Hoover's comments—Courtney Evans, now a Washington attorney—was in San Juan, Puerto Rico, today, and was not answering his hotel telephone.

President Nixon's entry into the dispute came before the Katzenbach and Clark statements had become available.

A reporter at the White House press conference asked whether, in the aftermath of the wiretapping controversy, Hoover still had Nixon's confidence and whether any decision had been made "concerning his tenure."

Nixon replied that the director "does enjoy my complete confidence, and there has been no discussion with regard to his tenure as far as the future is concerned."

Hoover is past retirement age, but presidents have continued to grant him continuations in office from year to year.

Nixon did not stop with a direct answer to the reporter's question. He added:

"I should add further that with regard to the controversy on electronic surveillance that I checked personally into the matter as to whether or not that surveillance which had been discussed had been conducted by him and the FBI, by themselves, or whether it had, as is supposed to be the case always, been approved by the attorney general.

"I found that it had always been approved by the attorney general, as Mr. Hoover testified in 1964 and 1965."

[From the Washington Post, June 20, 1969]

KATZENBACH DISPUTES FBI ON KING TAP

Former Attorney General Nicholas deB. Katzenbach charged last night that FBI Director J. Edgar Hoover's account of why Dr. Martin Luther King's phone was tapped is false.

Katzenbach acknowledged that the wiretap was "personally authorized" by then Attorney General Robert F. Kennedy.

"But to say or imply that this tap was the original conception of Robert Kennedy . . . is false," Katzenbach said.

Other sources who held high positions in the Justice Department under Kennedy said the Attorney General approved the tap on Dr. King only after the FBI had urged him to "over and over and over again" for two years because the FBI believed Dr. King was either a communist or a tool of the Communist Party.

Kennedy's defenders spoke after President Nixon strongly supported Hoover.

Mr. Nixon told his press conference last night that his personal check had found that bugging "had always been approved by the Attorney General, as Mr. Hoover testified in 1963 and 1964."

The President made it clear that the recent disclosure of the King wiretapping and the controversy over who wanted it—Hoover or Kennedy—led him to look into the controversy personally.

Katzenbach, issuing a statement in New York, said that: "It is unworthy of the tradition of the FBI to attack in this fashion the reputation of two men who cannot defend themselves."

During Kennedy's first two weeks as Attorney General in early 1961, the other sources said, the FBI came to Kennedy and said that Dr. King was deeply involved with two members of the Communist Party.

FBI representatives repeated their charges frequently during the next two years, these sources, who held positions at assistant secretary level or above, said.

In the fall of 1963, Kennedy agreed to place a tap on King's Southern Christian Leadership Conference phone to verify or disprove the FBI allegations, the sources said.

The version of the incident that Hoover has made public is very similar—except that his account attributes the fears that Dr King was a Marxist to Kennedy.

Hoover told the Evening Star yesterday that Kennedy proposed tapping King's phone to discover if the civil rights leader was closely associated with Marxist ideas and had Marxist followers.

Hoover reportedly showed the Star two memoranda from 1963. The first, written by then assistant director of the FBI and liaison man with the Justice Department Courtney Evans, reported a conversation between Evans and Kennedy in which the Attorney General reportedly inquired whether tapping King's phone was feasible.

The second was Hoover's request for the wiretapping authorization; it bore Kennedy's signature and the date "10-10-63" in the lower left-hand corner.

An FBI spokesman made clear in response to questions that Hoover would not talk to the Washington Post. The spokesman said the Star story "speaks for itself" and would not comment further.

Evans, now in private law practice here, was reported to be en route to Puerto Rico and could not be reached.

The wiretapping of Dr. King's phone was disclosed during Cassius Clay's draft evasion hearing in Houston and has caused angry debate over the role of the FBI, a bureau of the Justice Department.

"I have never authorized installation of technical electronic devices without authority of the Attorney General," the Star quoted Hoover as saying. He said the King wiretap was stopped April 30, 1965—two months before former President Johnson issued an order banning the practice except in national security investigations.

As for his Administration's future policy on eavesdropping, Mr. Nixon said at his news conference the technique would be employed "sparingly," with concern for individual rights of privacy, "but very effectively" with the aim of protecting the United States from both internal and external danger.

The debate over wiretapping was fueled by th claim last week by Attorney General John N. Mitchell that the Executive Branch is immune from court supervision when it eavesdrops on allegedly subversive groups.

[From the Evening Star, June 22, 1969]

PROFESSORS ASSAIL STAND ON "BUGGING"

Thirteen professors from major law schools have joined to "firmly condemn" the Justice Department's new claim of unlimited power to use secret listening devices on home-front troublemakers.

In a letter yesterday to Atty. Gen. John N. Mitchell, the professors said:

"To grant such a claim would gravely threaten some of our most fundamental liberties as well as the role of law itself."

They linked the new "bugging" policy to the still-growing controversy over FBI wiretapping of the late Dr. Martin Luther King Jr. They asked:

"If Martin Luther King Jr., the Black Muslim Leader Elijah Muhammad and vigorous opponents of the Vietnam war are considered appropriate subjects for such gross violations of their rights, which groups vigorously seeking change, whether radical, liberal or conservative, is safe?"

BIG BROTHER ARGUMENT

The professors labeled the department's new theory of its power "the argument that Big Brother knows best."

Justice Department lawyers spelled out the newly broadened policy on electronic surveillance in papers filed a week ago in the pending federal case against New Left demonstrators at last summer's Democratic national convention in Chicago.

Whenever the attorney general deems it necessary to monitor secretly the conversation of groups and persons who might "foment violent disorders," the department claimed, he could do so on his own authority without getting approval in a court order.

The Fourth Amendment ban on "unreasonable" searches not approved by a court simply does not apply in such situations, the department claimed in a document filed with U.S. District Court in Chicago.

Never before had the department claimed that kind of authority except when gathering "foreign intelligence" about "external threats."

ADMITTED IN COURT

Atty. Gen. Mitchell's staff did not make this claim to power until after the department had been forced to admit, in a Houston federal court, that it had carried out extensive wiretapping and eavesdropping on Dr. King and Muhammad.

The wiretap on Dr. King has become the source of a deepening confict between FBI Director J. Edgar Hoover and two former U.S. attorneys general, Nicholas deB. Katzenbach and Ramsey Clark.

Hoover has said the late Atty. Gen. Robert F. Kennedy authorized the FBI to tap King's telephone and that it was Kennedy's original idea to do so. Both Katzenbach and Clark have said that it is "false" to attribute the proposal to Mr. Kennedy. Clark has suggested that "perhaps the time has come" for Hoover to retire.

The law professors' 800-word, strongly phrased protest to Mitchell seems likely to broaden the controversy to include current "bugging" policy in general.

Included among the 13 signers of the letter is one law dean, Louis H. Pollak of Yale. The other 12 are described as specialists in criminal and constitutional law.

The others are Anthony G. Amsterdam of Pennsylvania University, Vern Countryman of Harvard, Norman Dorsen of New York University, Steven B. Duke of Yale, Gerald Gunther of Stanford, Yale Kamisar and Arthur R. Miller of Michigan University, Kenneth W. Graham, Jr., of UCLA, Michael S. Josephson of Wayne State (Detroit), Edmund W. Kitch of Chicago University, Herman Schwartz of New York State University (Buffalo) and Alan Westin of Columbia.

"APPEARS IN CONFLICT"

The professors suggested that the Justice Department's claimed authority "appears to be in conflict" with last year's crime control law, which permits electronic monitoring to obtain evidence of riots, treason, sedition and subversion, but only with the advance approval of a federal court.

These are "precisely the crimes for which the department is seeking the authority to eavesdrop without judicial supervision."

Noting that "until just a few years ago," there was little demand for "bugging" except in "the most serious offenses like espionage, treason, kidnapping and murder," the professors commented:

"We firmly condemn this attempt to obtain such absolute power against our own people in domestic affairs."

If the department's claim to power is upheld, the professors said, this would "repudiate one of our oldest and most vital traditions"—that is, having a "neutral and detached" judge pass upon police requests for search power.

They concluded by suggesting that "the government has confessed error before in the interests of justice, and we call upon it to do so again in this instance."

[From the Evening Star, June 23, 1969]

CLAY'S LAWYERS DISPUTE FBI ACCOUNT OF BUGGING

(By Carl T. Rowan)

Attorneys for former heavyweight boxing champion Cassius Clay have filed papers in a federal court accusing FBI officials of lying about the wiretaps and buggings of the late Dr. Martin Luther King Jr. and Elijah Muhammad, leader of the Black Muslims.

Clay's lawyers said there were discrepancies between statements made here last week by FBI Director J. Edgar Hoover and other top FBI officials and testimony in a recent Clay hearing in U.S. District Court in Houston.

The brief, filed in the U.S. District Court in Houston late Friday, says the FBI has produced a "gap of credibility (that) now approaches a crater."

Clay's lawyers are seeking access to wiretap information and personnel that the government so far has avoided making available. The Clay hearings, in which the fighter seeks reversal of his conviction and five-year sentence for draft evasion, touched off the current furor over FBI wiretapping and bugging.

It was in these Houston court hearings that the government admitted that it had tapped the telephones of King and both wiretapped the phone and bugged the home of Elijah Muhammad.

A column by this reporter provoked the FBI to claim that the late Robert F. Kennedy, as attorney general, both proposed and authorized the tap of King's phones. Kennedy's successor as attorney general, Nicholas de B. Katzenbach, and his successor, Ramsey Clark, have both disputed the FBI claim that Kennedy proposed the wiretap on King, although they acknowledge that he approved it.

The brief filed in Houston could force the government to produce documents, wiretap and bugging transcripts and other information.

Here are some of the contradictions that are at issue:

1. Hoover told The Star that he had memoranda signed by Kennedy authorizing the wiretaps on King.

Kennedy resigned as attorney general on Sept. 3, 1964, but Hoover told The Star that the King wiretap was discontinued on April 30, 1965.

Since Katzenbach and Clark deny approving any King wiretaps, who approved FBI eavesdropping during the almost eight months after Kennedy left the attorney generalship?

2. The federal court brief claims that either Hoover lied in saying that the King wiretap was discontinued on April 30, 1965, or else FBI Special Agent Robert Nichols perjured himself in his Houston testimony.

"It was Special Agent Nichols who stated that the King wiretap had continued until April 4, 1968, the day of Dr. King's assassination," the brief states.

(The transcript of Nicholas' testimony has not been printed, so the brief reflects the memory of Clay's lawyer, Charles Morgan Jr. of Atlanta, and his associates. The New York Times has reported Nichols as testifying that he was in charge of the surveillance of King until May 1965 "and it was my understanding that it went on after that.")

3. The Star quoted Hoover as saying that on Oct. 7, 1963, he reported to Kennedy that it was technically feasible to wiretap telephones at headquarters of the Southern Christian Leadership Conference in Atlanta and at an unnamed location in New York.

But testimony in the U.S. District Court in Houston shows the government exhibiting

a log purported to be the result of a wiretap of King's home telephone.

This raises the question of how many King taps the FBI had, and which ones were approved by Kennedy or anyone else.

MARITIME LABOR-MANAGEMENT NEGOTIATIONS FOR ATLANTIC AND GULF COASTS ATTAIN SUCCESSFUL TENTATIVE AGREEMENTS—NOW IT IS UP TO CONGRESS TO IMPROVE THE MERCHANT MARINE

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mrs. SULLIVAN. Mr. Speaker, some weeks ago I expressed the hope that the 1969 maritime labor-management negotiations would be concluded amicably and that the Nation would be spared another shutdown of its merchant marine.

This happy situation is now a fact, at least so far as the Atlantic and gulf coasts are concerned. Four leading maritime unions have signed at least tentative agreements with groups of the shipowners. The National Marine Engineers' Beneficial Association, the National Maritime Union, and the American Radio Association reached satisfactory conclusions to the negotiations with the Maritime Service Committee several days before the June 15 deadline. The Masters, Mates & Pilots organization reached a similar arrangement on June 17, before there had been any substantial disruption of shipping.

I believe the men on both the management and labor sides of the table deserve great credit for this achievement. They have negotiated agreements which provide the men and women of the merchant marine with distinct improvements in conditions for the next 3 years. They have ruled out any escalation of benefits during that period, so that shipping management can make necessary long-range plans. They have accomplished this without need of Government aid or interference in the collective bargaining process.

It has been said that strikes make front page news, and agreements between unions and employers get buried back near the classified advertisements. Whether that is so or not, I think it important to stress the merit of this collective bargaining accomplishment. It is good for the parties involved and for the Nation as a whole. These unions and employers have demonstrated their maturity and their concern for the needs of the industry and the whole country.

Now, we in Government have a responsibility, a responsibility not to waste this 3-year breathing spell, but to move ahead toward the creation of a bigger, better, stronger merchant marine. It is tragic that our merchant marine has dwindled so dangerously. Now is the time to correct that trend. The men of labor and management have shown their good faith. I hope that we in Government will do no less. I believe the citizens of the country recognize that an American merchant marine should be second to none, that it should reflect the enterprise of the Nation, the advance of our great technology, and the American belief that a laborer is indeed worthy of his hire.

It is trite, perhaps, to say that there is no reason why a nation that can plan to send men to the moon cannot develop a modern fleet of merchant ships. Let us show, on the threshold of the 1970's, that America is at least as ready to take the initiative in the peaceful competition on the high seas of this planet earth as it is in the boundless realms of space.

TESTIMONY OF DR. PAUL WOODS, COORDINATOR, NDEA, TITLE III

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. FINDLEY. Mr. Speaker, in 1958, Congress, under title III of the National Defense Education Act, decided to provide funds to State and local school systems on a 50–50 basis for the purpose of purchasing instructional equipment and materials. At this time Congress declared:

States and local communities have and must retain control over and primary responsibility for public education.

The act acknowledged that—

The national interest requires . . . that the Federal Government give assistance to education for programs which are important to our defense. . . . It is therefore the purpose of this Act to provide substantial assistance in various forms to individuals, and to States and their subdivisions, in order to insure trained manpower of sufficient quantity to meet the national defense needs of the United States.

Dr. Paul Woods, coordinator for NDEA title III for the State of Illinois, believes that for this Nation to meet the new demands of technology and international relations, we shall need all the education that the Federal Government can help support on the State and local levels. He has prepared the following material as testimony for the retention of the present level of financing title III of NDEA. I am placing excerpts from Dr. Woods' statement in the RECORD today so that others in the Congress may have the opportunity to read and consider his valuable contribution to the consideration of this vitally important issue:

TESTIMONY OF DR. PAUL WOODS, COORDINATOR, NDEA TITLE III

Mr. Chairman, Members of the Subcommittee on Appropriations for Labor-HEW:

I come before you today to speak on behalf of education, and to express my extreme distress over the possibility that one of our most important and successful pieces of education legislation—Title III of the National Defense Education Act—might not be funded for fiscal 1970.

Gentlemen, you have before you an awesome responsibility. For, as you deliberate on this appropriations bill, you are doing far more than determining how many millions of dollars shall be spent on what program; you are reaching out and touching, sometimes imperceptibly, often dramatically, the lives of children—the future of this nation. Taken in that context, it is not inappropriate to suggest that your responsibility is all the more awesome because the decisions you come to in this chamber will affect not only the children of today, but the America of tomorrow. . . .

Specifically, however, I am concerned about the absence of an appropriation request for Title III of NDEA, and I am here to urge that you make an appropriation of the full amount authorized by Congress for fiscal 1970—$120 million.

Title III of NDEA (Public Law 85–864, as amended) authorizes two programs for the improvement of instruction. Part A authorizes $120 million for fiscal year 1970 to be matched by State and local school systems on a 50–50 basis for the purchase of instructional equipment and materials. The subjects covered are science, mathematics, modern foreign languages, history, geography, English, civics, reading, economics, and industrial arts. It also authorizes $10 million for administration of the program and for the employment of subject matter specialists, at the state level, to improve instruction in these ten subjects.

New legislation establishing Part B reinforces other Federal support in improving educational opportunity for deprived students.

The National Defense Education Act, including Title III, was brought into being in 1958. It passed with bi-partisan support and was signed into law by President Eisenhower on September 2, 1958. It has since been renewed four times, always with bi-partisan sponsorship, and the original three subject areas have been expanded to the ten set forth above. Corresponding with the expansion in subject areas and corresponding with the popularity and success of the program, authorizations have been increased as well.

The annual appropriations for Title III over the life of this Act have been as follows:

APPROPRIATIONS FOR TITLE III, NDEA

[In millions of dollars]

Fiscal year	Part A	
	Grants to States for equipment and materials	State administration
1959	49.28	1.35
1960	52.80	4.00
1961	47.52	3.75
1962	47.52	3.75
1963	47.52	3.75
1964	61.60	5.00
1965	70.40	5.20
1966	79.20	7.50
1967	79.20	7.50
1968	79.20	2.00
1969	75.74	2.00

These facts, I believe, point to a substantial interest in this program on the part of the Congress.

Now, for fiscal year 1970 the Administration has returned with a recommendation that no funds be appropriated for NDEA Title III, neither for Part A nor for the new Part B.

Although Title III of NDEA has not been pushed by either the Johnson or the Nixon budget personnel, the facts are that it is one of the more successful and popular education programs among the people who know it best: those who work with it in the field—the State and local educational agencies, and the school teachers and school administrators of our country.

Both the Office of Education and the Department of Health, Education, and Welfare made recommendations to the Budget Bureau that Title III be funded; the Office of Education recommended a level of $14.1 million for grants to the States, $1 million for loans to nonprofit private schools, and

$2 million for State administration; the Department of Health, Education, and Welfare recommended that $17.9 million be appropriaited for the new Part B—for direct grants to local education agencies. Although both of these suggestions of appropriations were modest to the point of being meaningless, the fact is that within the framework of the educational bureaucracy there is recognition that there is a need for the special kinds of services and programs that Title III provides.

NEEDS AS REPORTED BY STATE ADMINISTRATORS

In order to determine the bona fide needs of the States for funds under Title III of NDEA, in April of last year the National Audio-Visual Association surveyed the Title III administrators in the various State departments of education.

In reply to the survey, only 5 of the State administrators indicated that they were able to fill all requests from the local educational agencies for funds in fiscal year 1968. The other 44 who replied estimated that they could have used a total of about $31.8 million more than the $76.9 million actually spent.

The forty-nine State administrators who replied felt that a total of $116,035,417 in Federal funds would be needed under Title III for fiscal year 1969, and $128,260,000 for 1970, as compared to the $75,240,000 which was available under the fiscal year 1968 appropriation and under the 1969 appropriation.

HAS NDEA TITLE III BEEN EFFECTIVE?

At no time while recommending a reduction of funds for the purchase of equipment and the elimination of funds for supervisory services have Office of Education or Bureau of the Budget spokesmen implied any failure or unpopularity of the program. It is well that they have not. The weight of evidence demonstrates that the program has been instrumental in bringing about a very substantial improvement in education. Since 1958, when NDEA was passed, schools have been adopting the newly developed curriculums in the critical subject areas to meet the new demands of technology and international relations.

Recently, the Fairfax County School System, Fairfax, Virginia, embarked on a study designed to assess the relative achievement of fourth, fifth, and sixth grade pupils in a program saturated with visual media and contrasted with a similar program not including the media saturation. Evaluation was conducted over a period of one full school term, 1967–68, and four months of the second semester of 1967.

Results provide hard data that a program of instruction strongly supported by a heavy concentration of correlated media can make a positive influence on learning as measured by two well-known standardized tests—Lorge Thorndike verbal and non-verbal, and SRA Achievements Tests.

In November, 1968, the Research and Educational Planning Center of the College of Education of the University of Neveda, Reno, Nevada, J. Clark Davis, Director, Len L. Trout, Study Coordinator, turned in a "Study of the Bureau of National Defense Education Act Administration" for the State of California.

The results of this study are most pertinent for the deliberations of this committee. 918 questionnaires were mailed to every active, operating school district in California that had participated in Title III–A or III–B NDEA during the past three years. No place was prepared for signatures nor was any effort made to identify the respondent districts. Complete anonymity was thus insured. A total of 756 returns were received.

Question number four read: "To what extent can improved student achievement in your schools be attributed to programs initiated or assisted with Title III of NDEA?" The response was overwhelmingly weighted toward the "significant value" end of the scale. "Because the districts were involved in the planning, initiating, and funding of NDEA projects," the reporters concluded, "they recognized the value of the programs as related to student achievement."

Question five read: "To what extent do you feel that Title III of NDEA has made it possible to improve instruction in the critical areas covered by the Act?" Once again the response was overwhelming. From the report, again: ". . . almost half of the districts responding to the question indicated that NDEA had made it possible to improve instruction in the critical areas of English, civics, history, mathematics, *et al.*, in an amount of significance. Nearly as many reported that NDEA had made important contributions. The 638 reporting important or significant values greatly outweighs the 26 respondents reporting little or no value attached to the Title III contribution."

My own state of Illinois is one which has been particularly active using Title III funds to advantage. Following is a list of workshops and consultant visits in various subject areas in Illinois for fiscal year 1968, the last year for which figures are available.

ILLINOIS TITLE III NDEA, FISCAL YEAR 1968

Science: 49 workshops, 1,065 participants, 190 consultant visits.

Mathematics: 44 workshops, 1,443 participants, 466 consultant visits.

Foreign language: 13 workshops, 250 participants, 654 consultant visits.

Social studies: 28 workshops, 722 participants, 973 consultant visits.

English and reading: 79 workshops, 2,966 participants, 465 consultant visits.

Industrial arts: new program—no workshops, 200 consultant visits.

Grand totals: 213 workshops, 6,445 participants, 2,948 consultant visits.

Finally, the National Education Association, representing over one million teachers, has said of NDEA Title III, "It is the only program of Federal financial assistance for upgrading the quality of instruction in all of the major subjects of the elementary and secondary school curriculum."

This accumulation of expert opinion should not be taken lightly. Bearing it in mind, I sincerely hope you will not be taken in by vague generalities and assurances that the benefits of NDEA Title III will continue under ESEA. Instead, I ask you to be guided in your final decision by the recognition that NDEA Title III has been tried for ten years, that it has been tested and found effective, that it has been widely accepted in State and local education agencies, and that it is needed now as much as it was in 1958.

A BILL TO STRENGTHEN THE CERTIFICATE OF COMPETENCY PROGRAM

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. CORMAN. Mr. Speaker, I am pleased to join the gentleman from Tennessee, Chairman EVINS of the House Select Committee on Small Business; the gentleman from Massachusetts (Mr. CONTE), ranking minority member; and the members of its Subcommittee on Government Procurement, in introducing on June 17, 1969, H.R. 12188 which would strengthen the certificate of competency program of the Small Business Administration.

The bill, amending section 8(b)(7) of the Small Business Act, is designed to prevent certain procurement practices which restrict the beneficial use and purpose of the COC program and inhibit small business participation in Government procurement.

This legislation is in line with recommendation No. 26 of the House Small Business Committee's final report—House Report 1985, 90th Congress—as follows:

That, to strengthen the certificate of competency program, to increase competition and economy in Government procurement, and to preserve the integrity of the procurement process, legislation similar to H.R. 18041, introduced jointly on June 20, 1968, by all members of the subcommittee, be promptly considered by the appropriate legislative committee to amend section 8(b)(7) of the Small Business Act to prevent administrative restriction of the small business low bidder's right to appeal and Small Business Administration's authority to review, affirm, or reverse contracting officer determinations of alleged irresponsibility.

Equally disturbing to the subcommittee is that a contracting officer may determine that a small business low bidder, even though he has the capacity and credit to perform the contract, lacks the degree of *"tenacity and perseverance"* or *"integrity"* necessary, in his own judgment, to perform the contract. A spot check disclosed more than 200 such cases in fiscal year 1967 in the military departments and DSA. The report, however, does not disclose how many refusals to award contracts to the small business low bidders were based on alleged "lack of tenacity and perseverance" and how many on alleged "lack of integrity."

In such cases, DOD officials contend that the contracting officer need not refer his determination to SBA for review.

SBA testimony on this subject disclosed instances in which SBA notified the contracting officer that his determination to withhold the award based upon alleged lack of *capacity and credit* was to be reversed, whereupon the contracting officer promptly refused the award on the ground of alleged lack of *tenacity and perseverance.*

We had believed that the COC program served to encourage small business to compete against large business with knowledge and assurance that an erroneous or discriminatory refusal to award the contract to the small business low bidder for any such reasons could be reviewed and reversed by the Small Business Administration. The members of the subcommittee are understandably concerned with the discouraging effects that such practices by contracting officers have upon the small business community.

A small business firm, whether a newly found source or a veteran supplier, invited to bid in an open unrestricted procurement, realizes the risks of expense and time in preparing a proper bid. Even if he knows he can offer a lower price to the Government than his large business competitor, and even if he knows that he is *ready, willing, and able* to perform the contract for which he is invited to bid, he must now consider additional risks that have been built into the procurement process in the event that he should be the low bidder. His chance of obtaining the award will depend, in part, upon the attitude and action of the contracting officer. His low bid may be arbitrarily refused; and the review and reversal of the contracting officer's decision by SBA prevented. This condition is hardly conducive to a decision to compete and is undoubtedly a factor accounting for the increased failure rate of invited small business to bid (see Part III, A).

The beneficial purpose of the COC program is frustrated by such narrow or strained interpretations of the statute. The small business right of appeal and the scope of the independent investigation by SBA should include the issue whether the small business low bidder is *ready and willing*, as well as the issue whether he is *able*, to perform the contract in question.

As chairman of the Subcommittee on Government Procurement, I urge that prompt and favorable consideration be given to H.R. 12188.

The recommendation is based upon the following findings and conclusions of the Subcommittee on Government Procurement set forth in House Report 1975, 90th Congress:

CERTIFICATE OF COMPETENCY PROGRAM

Too often, contracting officers unjustifiably refused to award a contract to the small business low bidder because of alleged irresponsibility due to "lack of capacity or credit to perform the contract." Under such circumstances, the aggrieved small business low bidder has the right to appeal to the Small Business Administration for a Certificate of Competency (COC). If SBA, after an independent survey, reverses the contracting officer's determination, the certificate issued by SBA is binding on the contracting officer as to the contract in question. The COC program is a good one. It has saved the Government millions of dollars by enabling the awards to be made to a low bidder instead of a higher one.

The assurance of a right to appeal to SBA from an unwarranted refusal to award the contract undoubtedly encourages small business to bid. In many instances, however, either the appeal is either not taken or it is withdrawn before completion. The reasons for this vary, but are often attributable to fear of resulting disfavor, reprisal, or costly delays.

In all too many instances, the right to appeal is rendered meaningless through questionable procedures followed by contracting officers in the use of an *urgency* exception to circumvent the requirement for a COC referral. In a statement to the subcommittee, the Comptroller General of the United States described cases in which contracting officers delayed their determinations of nonresponsibility for several weeks or months, and, in one case, backdated the certificate of urgency, thus depriving the small business of its right of appeal.

AGRICULTURAL EDUCATION AND THE FUTURE FARMERS

HON. DON FUQUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. FUQUA. Mr. Speaker, vocational education in agriculture is a program of systematic instruction in agriculture at the secondary level. Secondary programs are conducted in public schools or classes for persons whose occupational objectives require knowledge and skills in agricultural subjects. The program is conducted under a plan of cooperation between local schools, State boards for vocational education, and the Office of Education, U.S. Department of Health, Education, and Welfare.

Instruction is given by teachers who are specially trained agricultural college graduates. Teachers usually are employed on a 12-month basis. The instructional program is designed to fit the needs of the individual student, based on his capabilities and interests, and the needs of the community. Specialized occupational training programs in agriculture prepare students for occupations in agriculture production, agriculture supplies, agriculture mechanics, agriculture processing and distribution, national resources development, ornamental horticulture, and Forestry.

The FFA, an integral part of instruction in agriculture, is a national organization of, by, and for students of vocational agriculture in public secondary schools. It is an educational, nonprofit, nonpolitical youth organization of voluntary membership, designed to develop agricultural dealership, character, thrift, scholarship, cooperation, citizenship, and patriotism. FFA is an integral part of the instructional program—a teaching tool. Students must be enrolled in vocational agriculture to become eligible for membership. They may retain their membership for 3 years following their graduation from high school, or until they are 21 years of age, whichever length of time is greater.

The FFA is operated in cooperation with the Vocational and Technical Education Division, Office of Education, U.S. Department of Health, Education, and Welfare, and with the various State Boards for Vocational Education and local high school departments of vocational agriculture. The head of the agricultural education in the U.S. Office of Education serves as National FFA adviser, another agriculture educator in the Office of Education serves as national FFA executive secretary. The State adviser for each State association of the FFA is the State supervisor of vocational agriculture, and the adviser of each local chapter is the high school teacher of vocational agriculture.

The national FFA organization was launched at Kansas City, Mo., in November 1928, following many years of development of vocational agriculture student organizations in the States and local communities. Originally incorporated under the laws of the State of Virginia, the FFA was granted a charter of incorporation by act of Congress in 1950—Public Law 740, 81st Congress.

At present the FFA has approximately 450,000 active members in nearly 8,500 local high school chapters located in rural and urban areas throughout the 50 States and Puerto Rico. Similar organizations have been established in Japan, the Philippines, Columbia, Mexico, Peru, South Vietnam, Thailand, and other countries.

Through participating experiences in the Future Farmers of America, members learn how to take part in meetings, to follow parliamentary procedure, to speak in public, and to cooperate with their fellow students in programs for individual and community betterment. Local chapters sponsor recreational activities, organize educational tours, conduct safety and home improvement campaigns, and hold parent-son banquets. They have been known to organize a local chamber of commerce where none existed, and to organize and manage a community fair. They frequently take on such jobs and the landscaping and beautification of school and church grounds in the community.

Many FFA activities are designed to stimulate the members to do better work in vocational agriculture. The advancement through degrees in the organization is based largely on achievement in agriculture. Awards offered through the FFA Foundation stimulate increased effort by the students. Included among these are awards for outstanding achievement in crop farming, farm and home electrification, forestry, home improvement, livestock farming, ornamental horticulture, poultry farming, agricultural mechanics, and soil and water management. A national chapter award program recognizes local chapters that have outstanding programs of activities. Awards also are provided for agriculture safety promotion by chapters, and for public speaking.

Numerous activities in the FFA are designed to develop leadership ability and the understanding and involvement in good citizenship development programs. Local chapters and State FFA associations conduct leadership development activities. Among them are chapter officer and member development activities, instruction conducted by the local agriculture instructor and in State leadership camps and centers which operate intensive leadership sessions during the summer.

During the week of June 23 to 28, 1969, for the first time chapter FFA presidents—officers who have their senior year in vocational agriculture and FFA still ahead of them—will be attending a national leadership and citizenship conference in the Nation's Capital. Much of the conference will involve the youth in leadership development activities, through participation in panel presentations, small group discussions, and workshop planning sessions at the National FFA Center, located near Alexandria, Va., and at the Olde Colony Motor Lodge Conference Center, which is the conference headquarters.

"FFA—Emphasis Agriculture" is the theme of this important national leadership and citizenship conference. The purpose of the conference is to inspire and inform these youth, preparing for occupations in agriculture, to meet the challenges of leadership in the FFA, the agricultural industry, their communities, and our country.

The program will focus on national and international careers in agriculture, American heritage, our U.S. Government, and the opportunities in the FFA. National FFA officers will moderate thought provoking sessions at the State Department, U.S. Department of Agriculture, the Department of Health, Education, and Welfare, and on Capitol Hill. Inspiring programs are planned at historical monuments and memorials in and around the Nation's Capital. The officers will meet their congressional leaders and discuss their future in agriculture with other national leaders in government, industry, and agricultural organizations.

A final outcome of the week's activities will be a strengthened belief in the FFA motto: "Learning to do, doing to learn: Earning to live, living to serve."

HELPING CHILDREN OVERCOME LEARNING DISABILITIES

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. PUCINSKI. Mr. Speaker, the General Subcommittee on Education, which I serve as chairman, will soon be holding hearings on H.R. 8660 and H.R. 9065, bills to provide assistance to children with learning disabilities.

In order for my colleagues in the House to better understand the multiple forms of learning disabilities in children—and their extent—I shall insert a series of articles on this subject in the CONGRESSIONAL RECORD.

The first of these articles discusses the symptoms of learning disabilities and how to help children overcome them.

Mr. Speaker, the article from Today's Health of May 1969 follows:

HELPING CHILDREN OVERCOME LEARNING DISABILITIES

(By Theodore Irwin)

A child may reverse letters when reading, appear clumsy, be overactive or forgetful, or have speech and spelling difficulties. These learning disabilities do not affect his intelligence. But they may mean that he needs special treatment and training.

When he reads aloud, seven-year-old Johnny reverses letters in words, saying "was" for "saw" and "cupperbut" for "buttercup." Susan, at six, can't tell left from right. In class, Bobby is hyperactive, exploding in sudden rages and tantrums. Other youngsters handle a pencil clumsily, can't concentrate, or seem confused in their speech.

Your own child may have one or more of these and other learning blocks. Yet he could be intelligent, his health, hearing, and eyesight perfectly normal. Your child would not be unique. According to Dr. James Cavanaugh, chief of pediatrics at Boston's St. Elizabeth Hospital, "one out of four American kids has some problem in regard to learning."

Often it's termed a "perceptual motor difficulty," involving impressions received through the senses and appropriate movements. It's possible—but by no means certain—that a child's special learning handicap may be due to a subtle, *slight* irregularity of brain function. The condition, or syndrome (a group of characteristic symptoms), has come to be generally known as minimal brain dysfunction (MBD) or special learning disabilities—a relatively new entity in the health field. Last May, a Congressional Subcommittee on Education conservatively estimated that one to three percent of our school population may have learning disabilities severe enough to require special remedial procedures.

This does *not* necessarily mean that if a child misbehaves or does poorly at school, his brain functioning is out of whack or that he's "retarded." He may just be a late starter, have a poor teacher, feel an emotional conflict, show an hereditary lag in development, or suffer a low-grade physical ailment. Some other innocuous hidden factor also could be responsible. Still, it is important for parents and teachers to understand, recognize, and knows what to do about MBD, if that's the eventual diagnosis.

The following careful definition of "learning disability" has been suggested by the National Advisory Committee on Handicapped Children: "Children with special learning disabilities exhibit a disorder in one or more of the basic psychological processes involved in understanding or in using spoken or written languages. These may be manifested in disorders of listening, thinking, talking, reading, writing, spelling, or arithmetic. They do not include learning problems which are due primarily to visual, hearing, or motor handicaps, to mental retardation, emotional disturbance, or to environmental disadvantage."

Various states refer to learning disabilities by other names, such as educational handicaps, special learning disorders, or perceptual impairments.

An increasingly recognized element in learning failure, minimal brain dysfunction is a catch-all technical phrase for widely differing problems. When a child is diagnosed as having MBD, he may have no demonstrable brain injury, as in cases of cerebral palsy or epilepsy, which show irregular electroencephalograph (EEG) patterns.

"MBD is largely an inference, and cerebral impairment is assumed," says Dr. Norman Sher, child psychiatrist at Maimonides Medical Center, Brooklyn, New York. "The assumption is that there is anatomic damage, that it may be minute and limited to highly focal areas of the brain."

Significantly, whatever hindrance in the nervous system there may be in a mild learning-disability case is "minimal," subtly affecting learning and behavior without evident lowering of a child's general intellectual capacity. In other words, these youngsters may be smart. When tested, they achieve near average, average, even above average in intellectual functioning.

About 100 symptoms of MBD have been identified, and each affected child has his own particular cluster. Signs may show up in various combinations of impaired visual or hearing awareness, language, memory, concept-formation, or muscular function.

Among early medical symptoms are slowness or awkwardness of movement, an inability to develop a sense of up and down, a deficiency in the senses of touch, time, or distance. An MBD-child's hearing, vision, and voice may be normal, but something in his brain centers may not understand the messages received by his eyes and ears; or his brain centers may not direct his tongue and lips to talk properly.

Behavioral clues include overactivity or underactivity, lack of normal attention span, and displays of unusual and changeable emotions. Educational symptoms are detected in a child's reading, writing, spelling, and arithmetic.

Many of the characteristics, however, tend to smooth out and vanish spontaneously as the child grows older, with the natural maturing of his central nervous system. Very bright children with reading problems often learn to read later, when they're highly motivated. They compensate for their original difficulty by interest and intelligence, though they may be hampered by a spelling problem.

If the multiple symptoms confuse you, the labels being applied to MBD are even more perplexing. "Terms are often used to lend a touch of mystification to ignorance," contends Dr. Alfred L. Abrams, senior staff psychiatrist at Queens College, New York.

In an effort to clarify the lingo, a task force of 14 experts was assigned to the job by the National Institute of Neurological Diseases and Blindness. Their report revealed that some 38 terms are employed to describe conditions grouped as minimal brain dysfunction. Labels range from "association-deficit pathology" to "organic behavior disorder," "perceptual cripple," "clumsy-child syndrome," and "dyslexia."

Perhaps the most familiar and fashionable term today is "dyslexia." Simply, this means a child is a poor reader. He may reverse letters or words, "mirror write," be unable to translate symbols on a printed page into meaningful ideas, or exhibit other symptoms.

The syndrome is *not* caused by brain damage, in the opinion of Dr. Lloyd J. Thompson of the University of North Carolina Medical School. It's accounted for, he believes, by "an innate or constitutional developmental lag," and a child can catch up through special treatment. Doctor Thompson calls dyslexia "a congenital word-blindness and word-deafness" comparable to color-blindness, which is independent of intelligence. Others say that while dyslexia often accompanies MBD, an MBD child is not necessarily dyslexic.

The very existence of specific dyslexia is questioned by some knowledgeable authorities, although more than 20,000 books, articles, and reports have been published on the condition. Dr. Henry F. Eichenwald of the University of Texas Southwestern Medical School maintains that most of what's written on dyslexia is "speculation, faddism, unproven theory, uncontrolled data, or dogma presented as fact." The vast majority of otherwise normal children called dyslexic, contends Doctor Eichenwald, could do as well, perhaps better, if they were left alone to "have time heal their trouble."

Parents are apt to accept, perhaps even welcome, the dyslexic label because it's respectable—not a report-card "F." If Mary brings home a poor paper from school, her suburban mother might say, "I must find out if Mary is dyslexic."

In cases of faulty learning ability attributed to MBD, what are the causes? Medical researchers have found that neurologic disorders such as MBD are significantly linked to pregnancy complications of the mother and to prematurity. In the prenatal period there may be "insults" (physical or chemical injuries) to the embryo or fetus; at birth, anoxia (lack of oxygen) could affect the central nervous system. Or there may have been an illness or injury during the critical development years of the brain and central nervous system. Frequently, however, the cause of the brain dysfunction cannot be traced.

It's not unusual for a learning problem to be tied to emotional disturbance. They could be related, but it's hard to say whether the learning trouble triggers the emotional upset or vice versa.

Says Dr. J. G. Minskoff, director of the U.S. Bureau of Education of the Handicapped: "Parents should bear in mind that a learning-disabled child may be physically intact and intellectually normal except for one or more areas, such as learning arithmetic."

Currently, concepts, orientations, and approaches to the problem vary widely among professionals in the field. Thus, they often differ over methods of diagnosis and treatment.

How is an MBD-learning disability detected?

"Diagnosis of minimal brain dysfunction," explains Dr. John Emmett Peters, director of child psychiatry, University of Arkansas Medical Center, "is made on the basis of clinical behavior, history, psychologic evaluation, and neurologic signs. These must be evaluated against the background of environmental and interpersonal factors."

Ideally, evaluation includes both a physical and an educational checkup. The first symptoms may be observed by a parent or teacher. Initially, the question is whether anything is wrong medically. The family physician, pediatrician, pediatric neurologist, and other specialists all may play a role.

Starting with a thorough medical history and physical (including neurological) examination, a full check should be made of vision and hearing. When advisable, the physician may ask for special tests. For example, he may order an EEG to record the electrical activity within the brain or refer the child to an endocrinologist for tests of brain chemistry.

An educational or behavioral diagnosis encompasses an analysis of the child's school record, psychological tests, an assessment of his speech and coordination, his ability to

use ideas meaningfully, his language development, plus observation of behavior in a variety of situations. With all this data, a hypothesis is arrived at to see what may be expected of the child and what can be done for him.

Experts explain that in most instances MBD is an unproved diagnosis. Warning against alarming parents with an unwarranted diagnosis of "brain disorder," Doctor Abrams of Queens College recommends that, in cases where brain dysfunction can't be proven, a descriptive term such as "delayed or irregular maturation" should be used.

Specialists in the field rely on a wide range of diagnostic tools. Some exams measure visual-motor functions or visual perception. Others focus on psychological areas as related to language abilities. Many phonics tests analyze a child's ability to relate sounds and symbols. The best diagnostic clinics tend to use several of these, plus observation of the subject.

Philosophies and techniques differ among clinics throughout the country. One of the most up-to-date facilities is the Learning Rehabilitation Service at Maimonides Medical Center. Part of the Community Mental Health Center, it was started three years ago as part of the child psychiatry program headed by Dr. Norman Sher. The service, helping about 650 children a year, was developed and is now directed by a vibrant educational psychcologist, Dr. Cecelia Pollack.

In her diagnosis of a child's learning problems, Doctor Pollack looks for developmental lags, beginning with observations of behavior (distractability, attention span, etc.). She notes such factors as coordination, directional awareness, and sense of rhythm. The child is asked to skip, hop, balance on a board, face right and left, throw and catch a ball. Sunday other psychological and physical tests are given. The service has access to such hospital departments as pediatrics and neurology; when necessary, a psychiatrist, ophthalmologist, speech therapist, or other specialists are consulted.

The other morning, chubby, eight-year-old Tommy bounced in for diagnosis. Hyperactive, he moved quickly, touching one object after another as though driven. He asked, "What's this?" and reached for some thing else without waiting for an answer. On various tests, he couldn't balance himself or tell one direction from another. When Doctor Pollack moved a pencil in front of him, Tommy moved his head and shoulders with it. His eye motions were erratic. Shown a sketch of a chicken, he failed to discriminate whether it was looking up or down. The psychologist said words like "swing-sling" and "butterfly—flutterby," and Tommy was asked to tell if they were the same or different.

During three such sessions, Tommy submitted to some 30 different tests. Then Doctor Pollack called in the boy's parents to analyze his condition. Tommy had perceptual motor disabilities and poor coordination. He was unable to deal with written symbols in a meaningful way, could not combine his visual auditory, and motion senses. Emotionally, he was on the level of a three-year-old. Based on the entire spectrum of symptoms, Doctor Pollack's diagnosis was that Tommy was a learning-disabled child.

The remedial program is based on the diagnosis. Doctor Pollack believes in delineating the areas of a child's weakness, then trying to treat these specific areas. "I prefer to call ours a "rehabilitation clinic," she says. "I believe learning functions *can* be rehabilitated."

For example, seven-year-old Martha may be given various visual exercises to help her develop a sense of spatial relationships—awareness of her body in space. Later, an intersensory reading method may heighten her reading skills. Such a method combines linguistic and phonic principles, employing visual, auditory, and kinesthetic (motion) senses. Speech-sound skills, letter recognition, and reading are developed gradually.

Many training methods begin with a phonic readiness kit to develop, a "phonetic ear." These systems work with sound, build them into words, then into sentences—in a programmed sequence. Thus Martha will learn to read, write, and spell simultaneously.

Elsewhere in the nation, efforts to help the learning-disabled take multiple forms. Mild cases may be corrected by a regular classroom teacher, but only a small percentage of schools give special attention to those with more severe difficulties. Sometimes two or three schools share the time of an itinerant special teacher and a resource room. A hopeful trend is the enactment by 13 states—including California, Illinois, and New Jersey—of legislation to set up educational programs to deal with learning disabilities.

"The need for clinical teaching is apparent from the great variety of programs presented," notes Dr. Jeanne McCarthy, associate professor of education, University of Illinois. "Each child has his own learning style. A system that works for one youngster may not work for another. So the teacher must precisely match the learner and his treatment. What these youngsters need is individualized attention."

UNIT RETAIL PRICE LABELING: RELIEF FOR THE HARASSED CONSUMER

HON. BERTRAM L. PODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. PODELL. Mr. Speaker, despite the 1966 Fair Packaging and Labeling Act, retailers and manufacturers of everyday household products are, more than ever before, harassing consumers with an unending variety of shapes and sizes of packages and commodities. Proliferation of containers and package sizes labeled with unlimited variations of confusing quantities and prices has virtually rendered the 1966 act meaningless.

In our system of self-service shopping, every buyer has a right to know exactly how much he is paying for a product, and how much product he is receiving. The 1966 act attempted to provide for this fundamental consumer right. For a number of reasons, neither the act nor individual initiative of private retailers or manufacturers brought about any semblance of fair containerization or price labeling. Today the situation is no better than in 1966.

To cite just one example, in a local Northwest Washington, D.C., grocery store, Ivory Liquid dishwashing soap was recently found in three different sized plastic bottles: a 32 ounce "king size" bottle for 89 cents; a 22 ounce "giant size" bottle for 59 cents; and a 12 ounce "regular size" bottle for 35 cents. On the container was a retail price marked by hand. According to the 1966 act, net quantity of the contents was imprinted on the label by the manufacturer. A housewife requiring the most economical value must stand before a shelf of goods, figuring out by herself which bottle is the most economical buy. This is done by dividing the retail price figure by the net quantity figure—in this case ounces—and is called unit retail price.

Until recently, it was assumed that the largest container was most economical. It was said it is cheaper for a manufacturer to produce in quantity. This is not necessarily so today. In the example just cited, the cheapest bottle of Ivory Liquid was the middle size "giant" 22 ounce, 59 cent item with a unit retail price of 2.68 cents per ounce. The largest sold at 2.78 cents per ounce and the smallest at 2.91 cents per ounce. This is but one example of how retailers have been convincing the unaware and unprotected consumer into paying more for less.

In light of the fact that the 1966 Fair Packaging and Labeling Act is not accomplishing what was intended, I am introducing a bill to allow American consumers the opportunity to find at a glance exact unit retail price of a product. My bill simply and effectively provides that a retailer must place on every package and item for sale both retail price and unit retail price of the product.

This bill does not impose undue hardship upon retailer or manufacturer. At present the retailer must mark every item for sale with the retail price, either by hand or machine. My bill provides that in addition to retail price he must also place on the item price per unit of weight, volume or measure. He may do this by hand, machine, or separate label which he can affix to the container.

Specific guidelines are provided in the bill for appearance and location on the container of these two figures. To reduce confusion for the retailer, such specifications are in language similar to existing specifications for the manufacturer's net quantity mark. My purpose is not to bind and intimidate the retailer, but to provide in a workable and effective manner, clarity, fairness and truthfulness in price labeling.

Mr. Speaker, every consumer should rightfully be told exactly how much he is paying for a product and how much product he is receiving. I therefore urge prompt and careful consideration of this bill in light of the obvious ineffectiveness of the present 1966 Fair Packaging and Labeling Act. We have for too long tolerated deceptive and unfair packaging and price-labeling practices, whose sole purpose is to confuse vulnerable consumers.

My bill amending portions of the Fair Packaging and Labeling Act of 1966 reads as follows:

H.R. 12322

A bill to amend the Fair Packaging and Labeling Act to require the disclosure by retail distributors of unit retail prices of packaged consumer commodities, and for other purposes

Be is enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 4 of the Fair Packaging and Labeling Act (15 U.S.C. 1453) is amended by adding at the end thereof the following new subsection:

"(c) No person engaged in business in the sale at retail of any packaged consumer commodity which has been distributed in commerce, or the distribution of which affects commerce, shall sell, offer for sale, or display for sale any package containing any such commodity unless such person theretofore

shall have placed upon such package a retail price mark. The retail price mark required to be placed on a package by the preceding sentence shall—

"(1) contain information effective to disclose plainly to purchasers and prospective purchasers (A) the retail price of the entire contents of the package, and (B) the unit retail price of such contents determined in such manner as the promulgating authority specified in section 5(a) shall by regulation prescribe; and

"(2) be prepared and placed upon or affixed to the principal display panel of the label appearing on the package—

"(A) in conspicuous and easily legible type in distinct contrast (by typography, layout, color, embossing, or molding) with other matter on the package,

"(B) in letters or numerals in a type size which is uniform for all packages of substantially the same size,

"(C) so that the lines of printed matter included in the retail price mark are generally parallel to the base on which the package rests as it is designed to be displayed, and

"(D) in accordance with such additional requirements relating to manner and form as the promulgating authority specified in section 5(a) may by regulation prescribe."

(b) Section 10 of that Act (15 U.S.C. 1459) is amended by adding at the end thereof the following new subsection:

"(g) The term 'unit retail price', when used in relation to the contents of a package of any consumer commodity, means the retail price of the contents of that package expressed in terms of the retail price of such contents per single whole unit of weight, volume, or measure—

"(1) in which the net quantity of contents of such package is stated upon the label appearing on such package; or

"(2) if the net quantity of the contents of such package is so stated in terms of more than one such unit of weight, volume, or measure, the unit thereof prescribed by regulations which shall be promulgated by the authority named in section 5(a)."

Sec. 2. Section 7(a) of that Act (15 U.S.C. 1456(a)) is amended by inserting after "or delivered for introduction into commerce" the following: ", or sold at retail, offered for sale at retail, or displayed for sale at retail,".

Sec. 3. The amendments made by this Act shall take effect on the first day of the seventh month beginning after the date of enactment of this Act.

LAST LETTER TELLS PROUD SOLDIER'S HOPES

HON. G. ELLIOTT HAGAN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. HAGAN. Mr. Speaker, I do not believe that any oratory is needed from me to explain to my colleagues the intense feeling of pride coupled with overwhelming compassion that came over me upon reading the following article which appeared in the June 19 edition of the Flight Trainer, publication of the U.S. Army Flight Training Center and Fort Stewart, Ga., concerning a truly great American patriot, Sgt. Jeff Davis:

LAST LETTER TELLS PROUD SOLDIER'S HOPES

A moving letter, written by a Division sergeant before his death in September, speaks for virtually every American Soldier who has risked his life in Vietnam.

"It is too bad I had to die in another country; the United States is so wonderful," wrote Sgt. Jeff Davis of Manchester, N.H. "But at least I died for a reason . . . and a good one."

Davis was killed in a firefight Sept. 6 while serving with A Co., 3rd Bn., 187th Abn. Inf. near Cu Chi. Before departing for Vietnam, he wrote the letter to his fiancee, whom he later married in Hawaii. He requested that it be opened only in the event he died here.

The letter showed that Davis, fighting with bravery and pride like every other Screaming Eagle, was aware that the commitment of the 101st in Vietnam calls upon young Americans to be both diplomats and warriors. He spoke a tribute to these men, fortified with the belief that his job and the mission of his fellow Airborne troopers will someday bring peace to the people of Vietnam.

"I may not understand this war or like it, or want to fight it, but nevertheless I had to DO, and I DID," wrote the proud American. "I died for the people of the United States."

The young sergeant served with the Screaming Eagles in combat for more than nine months after arriving in Vietnam Dec. 1, 1967. During his tour, he earned a Bronze Star with "V" Device, Bronze Star Vietnamese Campaign Medal, Vietnamese Service Medal, Combat Infantryman's Badge and Purple Heart.

Davis saw compensation for his death in a future of freedom for his relatives, friends and others also who enjoy this wonderful country, who appreciate what they have and thank God every day for it.

"I died for the guys with long hair and protest signs," he continued, "the draft card burners, the hippies, the 'anti-everything' people who have nothing better to do. The college kids who think they shouldn't have to serve because they're too good. I died so these people could have a little longer time to try to get straightened out in life. God knows they need it.

"Yes, I died for the so-called 'younger generation,' of which I was a part, but for some unknown reason I never became an active member. I guess I was a 'square' or something with short hair, no police record, didn't drink or smoke (pot included) and volunteered for the service. I died for the parents of these kids also, God forgive them.

"I died so these members, active members of the 'younger generation,' could have the right to do what they do. To protest, have long hair, go to the college of their own choice, wear weird clothes, and run around mixed up with no direction at all.

"I died so they can protest the war I fought and died in. Without it, what would they protest? But I also died for the many thousands who died in this war and other wars before, for these same reasons . . . for the men who fought gallantly on the many battlefields of many wars to keep this country free. I guess that in order to gain freedom there must be war. I died for the United States."

THE ARCHAIC FEDERAL 160-ACRE LIMIT POLICY MUST BE MODERNIZED

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. HOSMER. Mr. Speaker, I am pleased to be a House sponsor of legislation drafted by the senior Senator from California (Mr. MURPHY) to increase the acreage limitation of the Federal reclamation law from 160 to 640 acres and to make it possible for lands in excess of the limitation to obtain reclamation water under certain conditions.

Two other identical bills also have been introduced in the House, H.R. 9475 by Mr. TALCOTT and Mr. TEAGUE of California and H.R. 10140 by Mr. PRICE of Texas. We all are hopeful of early consideration of this important bill.

The official newsletter of the American Farm Bureau reports that the Farm Bureau also supports the objectives of these bills.

Another strong supporter of this legislation is Mr. Allan Grant, president of the California Farm Bureau. Mr. Grant is an authority on agriculture in general and California agriculture in particular. In addition to being president of the California Farm Bureau, he also is chairman of the State board of agriculture and a regent of the University of California.

For many years, he has been an outspoken advocate of modernizing the acreage limitation provisions of the Reclamation Act. In a recent issue of Western Water News, Mr. Grant addresses himself to the current proposals and the need for prompt congressional action. The article follows:

THE ARCHAIC 160-ACRE LIMIT POLICY MUST BE MODERNIZED

(By Allan Grant, president, California Farm Bureau Federation)

The 160-acre limitation on water deliveries from Federal water projects is geared to a horse and buggy type of agriculture and general economy. Congress must act, without delay, to modify and modernize this archaic law to fit our present day economy and its demands on agriculture if farmers and ranchers are to maintain their capability to meet the food and fiber needs of the United States and its foreign commitments.

In order to keep pace with the demand for food and fiber placed on agriculture in recent years, farms have been forced to mechanize their operations and increase the size of their farm units. This was necessary in order to stay in business and continue efficient production of high quality food and fiber products in the quantity needed by our growing economy and to maintain a strong, healthy citizenry. During 1968, 24 million acres of farm land changed ownership. Over half of the buyers were purchasing additional acres to add to their existing farming units in order to stay in business and earn a reasonable income for their families.

Congress, in its wisdom, has recognized that it was impractical to apply the 160-acre limitation policy to all Federal projects, even in bygone years. There are some 19 or more Federal projects where Congress has provided exemptions or modifications of the policy. Legislation has been introduced in the current session of Congress, supported by several national organizations, designed to modernize this outdated Federal policy. The California Farm Bureau Federation joins with the California State Chamber of Commerce, the Irrigation Districts Association of California and other state groups in support of the national effort seeking favorable action by Congress on this legislation.

Financial institutions, which provide credit to farmers, are becoming increasingly concerned with the effect of the application of the 160-acre limitation policy to lands already privately owned and desiring a supplemental water supply from Federally-constructed reservoirs. The security of loans is threatened. Credit risks are greater.

This is not a problem affecting only the Western reclamation states. Financial insti-

tutions, manufacturers and distributors of agricultural supplies, fertilizer, equipment, etc., in other areas, as well as the total economic structure of the country, will suffer unless Congress takes positive action correcting this archaic policy so family farms can continue to operate on an efficient, economically sound basis.

TITLE IX—A NEW DIMENSION IN FOREIGN AID—VI

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. FRASER. Mr. Speaker, I hope this Congress and the new administration will make great strides in modernizing the U.S. foreign aid program. However, Prof. John Schott warns that some new approaches would be harmful rather than helpful. He cautions against multilateralizing and he warns against the fragmentation of the program. If these routes are followed, the outlook is dismal, he feels. He wrote these remarks earlier this year before the administration's proposal was made public.

The concluding section to his very thoughtful paper follows:

OUTLOOK IS DISMAL

Given these three conditions as prerequisites of a successful attempt to implement title IX, the outlook seems pretty dismal. It is generally assumed that the Nixon Administration will recommend organizational and perhaps substantive changes in the foreign aid program. To date, there has been no official indication as to what these may be. Rumors, fortified by several unofficial proposals and continuing Congressional criticisms, suggest that multilateralizing significant aspects of the foreign aid program and/or distributing several of its existing facets among a number of private and semipublic agencies will be given serious consideration. If either of these general proposals become government policy, Title IX should suffer.

The multilateral approach is a noble one and has much in its favor. Further support of existing multilateral organizations is undoubtedly in the long-term interest of this country. Many large capital projects can be effectively designed and efficiently administered by a world organization so, too, can certain humanitarian and politically-immune technical assistance activities. Title IX, however, involves undertakings of a potentially sensitive and multidimensional character. To seek to increase a country's GNP or to care for its sick and hungry is one matter; to promote increased popular participation in the benefits of development, in the implementation of development activities, and in the decision-making processes governing a country's development, is quite another.

On three grounds it appears unlikely that a multilateral agency can be optimally effective in directly influencing these latter developments: (1) by representing sovereign states with greatly differing social, political, cultural, and economic value systems, a genuinely multilateral agency seeking to realize Title IX goals could not expect from its backers the degree of single-minded, durable support required; (2) denied the forms of leverage possessed by a powerful U.S. government, a multilateral agency would more easily be victimized in delicate Title IX areas by established regimes and prevailing socio-economic elites fearful of increased popular participation in their country; and (3) lacking the variety of assistance instruments potentially at the disposal of the U.S. Government, multilateral agencies would find it more difficult to provide multi-faceted, fully coordinated programs so essential when dealing directly with the social and political framework of a country.

At the other end of the spectrum, proposals to splinter the responsibilities now under the general aegis of A.I.D., would further complicate the process of coordination, reduce leverage, disintegrate the country programming approach, and—most importantly—probably make Title IX implementation the responsibility of but one of the resulting agencies, most likely that concerned with residual technical assistance activities. Title IX would thereby become narrowly construed and be rendered largely ineffectual. What, on the contrary, is required for Title IX implementation is recognition of the fact that this mandate relates to all facets of U.S.-sponsored development efforts in the LDCs. As A.I.D.'s administrator recently said:

We want Title IX considerations to be weighed when we decide on the overall composition of a country program. When we prescribe the negotiating instructions for a program or an agriculture sector loan, when we decide on a particular capital assistance project, when we undertake and evaluate technical assistance activities, when we support the development efforts of private institutions.[1]

Title IX relates not only to *what* is done, but *how* it is done. It's implementation requires not only an expansion of the spectrum of "allowable" undertakings by A.I.D. and a reorientation of priorities along that spectrum, but conscious Title IX attention to the ways in which particular projects are undertaken and to the conditions attached to various sorts of loans and grants. It means that a feeder road can be built in the most efficient or quickest way possible primarily to increase agricultural productivity; it can also be constructed by inefficient labor-intensive methods in "uneconomic" areas primarily to ameliorate unemployment, teach laborers new skills, or promote national integration. It means that a family planning program can give first consideration to the most efficient and broadest dissemination of propaganda and devices, or it can seek more slowly to establish or strengthen indigenous groups or nascent organizations to perform this work, thereby encouraging small group activity and cooperative local undertakings at the possible sacrifice of a more greatly quickened decline in the birth rate. A sector loan can be granted only on condition that the moneys are channelled to local or intermediate governmental institutions which will have largely autonomous control over their use, thereby seeking to get a particular developmental job done while strengthening the interest and capacity of local decision-making units to perform such jobs without awaiting the sluggish administrative hand of the central government to do it for them.

Military assistance programs can begin to recognize in their training programs the uncomfortable fact that the military in many LDCs will not remain an "a-political" force. Acceptance of this would suggest that officers should be trained as much in the developmental problems and prospects of their country as in the use of sophisticated military hardware, the methods of counter-insurgency warfare, and the irrelevancies of the American way of life. The Peace Corps, without too great sacrifice of its myopic attitude towards the U.S. Government establishment, can intensify its halting and fragmentary efforts of the past to dovetail its program with that of A.I.D. and to demonstrate greater appreciation of the role of its volunteers as promoters and auxiliaries of a host country's development in contrast with the value of the overseas experience to its volunteers, (however residually important for recruiting purposes that may be). U.S.I.A. can begin to utilize its expertise in the field of communication and public diplomacy to provide needed technical assistance in these areas; they can also begin to fashion overseas programs which in fact—not just in name—give priority to the transmission or dissemination of information and skills relevant to the developmental needs, desires and capacities of the people in particular countries, as opposed to explaining away our public and private foibles and proclaiming the virtues of American-style democracy and life in suburbia.

There is good reason to despair of this more systematic, integrated and long-term approach to the foreign aid process ever becoming the reality which it should. Yet many would not be in this business if they did not foresee significant reforms taking place in the near future. It is hoped by a few of these that Title IX will constitute a catalyst for these reforms, if not their principal synthesizing element.

Perhaps these reforms may not replace old myths with new realities, but only substitute new myths for old—ethnocentric myths of the universal applicability of pluralism, popular participation and certain types of democratic institutions; egocentric myths of the infallibility of our predictive power as regards the resources of—and prospects for—political development in the new states. Hopefully, however, if Title IX becomes an important energizing force within our foreign aid establishment, greater modesty will be displayed than has been the case among many economists and technicians, and greater appreciation of the necessarily marginal impact U.S. assistance has on LDC development will prevail among the American public and their Congressional representatives.[2] It may be too much to hope that Title IX will at once broaden our horizons and limit our aspirations. There probably are not many precedents for this; but then, again, there really are no precedents to Title IX.

[1] Statement of William S. Gaud before the House Foreign Affairs Committee, March 20, 1968.

[2] It may be suggested that Title IX arrives at a particularly inauspicious time in the history of this country. When democratic principles are being so violently abused and when institutions based upon these principles appear so incapable of coping with the domestic problems confronting this country, who are we to suggest the possible applicability of these principles and institutions to the lesser developed countries of the world? Without attempting to argue here a case for seeking to uphold the dignity of the individual in varying contexts and the author's particular faith in the general validity of democratic principles, it will only be suggested that: (a) the validity of these principles is further strengthened—not brought into question—by the institutional changes now being sought so strenuously in the United States, and (b) it is to be hoped that the United States may soon recognize that we may have as much to learn from the LDCs as we may have values and skills to impart to them. Development should be—but has been inadequately seen as—a two-way street. Title IX and its broader conception of the development process may help us to recognize this simple verity.

TAX, SPEND, ELECT—THE GAME CONTINUES

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. RARICK. Mr. Speaker, this week the House will be asked to consider a new tax bill relating to extension of the 10-percent surtax—a discriminatory tax, double taxing people who already have a duty to pay a tax—and to repeal the investment credit.

It becomes more and more difficult to explain our Government's fiscal policy and it is impossible to justify the continued theft of dollars out of the paychecks of hard-working Americans.

How, for example, can a Congressman explain a $120,000 grant by HEW to a Communist University at Ljubljana, Yugoslavia—not only a Communist country but one that hastened to recognize the Vietcong-sponsored provisional revolutionary government in South Vietnam which is killing the sons of our taxpayers?

Or how can any Member explain 8½-percent interest to our banks, business people, contractors and homebuilders when we just last week announced a U.S. Export-Import Bank loan of $14,688,000 to the Irish Government to buy Boeing jet planes. The interest rate on this loan was 6 percent.

Or, how can anyone defend $480,000,000 to the World Bank for 30-year loans at no interest—or the overall foreign aid slush funds at the discretion of diplomatic bureaucrats, estimated to be $10,428,000,000? Interest? We will be lucky even to get part of the principal back.

How can we defend the gift to the U.N. and its specialized propaganda agencies of $83,886,000 with no benefit to our people but rather deterioration of our national sovereignty and constitutionally secured individual protections?

Mr. Speaker, the overwhelming majority of the people who settled and built this land fled Europe to escape excessive taxation.

The United States of America declared its independence from the unrelenting domination of a king because of taxation without representation.

Louis XVI and Marie Antoinette lost their thrones for less than the tyranny of the taxes being piled again on the backs of our American people.

Taxes have become the curse of the continent.

Our people are being taxed federally, by the States, municipally, locally—directly and indirectly—whether they want the purported reforms or not.

Rather than a continued barrage of taxes against the people, I feel it is time that we who are charged with representing our people start earning our pay by reducing their taxes. Hard-working Americans can be the best deterrent to inflation by handling their own dollars—by enjoying the benefits of the income earned from their own initiative and ingenuity.

Regardless of all the flowery oratory, no one is fooling the man back home who knows that his savings have been wiped out and whose wife knows that groceries, clothing, and rent continue to soar. And he is getting more incensed at those who would say inflation is caused by his spending rather than by the Federal giveaways of what they first have to take away from him. He just cannot understand taking away from him the money he needed to have his daughter's teeth straightened—then sending it to Yugoslavia, or bribing rioters not to riot again.

I include a recent newsclipping:

INTEREST RATE TODAY REACHES HISTORIC HIGH

NEW YORK. (AP)—Major banks today raised the prime rate—the interest charged their biggest and best customers for loans—to a historic high of 8½ per cent from 7½ per cent, effective immediately.

An increase had been expected for some time. But the amount of the hike—a full one per cent—was surprising.

The first bank to increase the rate was Bankers Trust Co. of New York and it did so without making any comment on its reasons. Other New York banks, and then Chicago, Philadelphia and Boston banks quickly made the same move. Among the banks was Chase Manhattan and First National City of New York.

Reacting to the move, the Dow Jones industrial average dropped about 7 points shortly after the New York Stock Exchange opened.

When one bank increases the prime rate, others usually follow.

The prime rate is used in determining the interest rate charged most large corporations. Other rates, such as interest rates to consumers, are scaled upward from the prime rate.

The old rate of 7½ per cent was a record high when it was set on March 17. As recently as last Dec. 2 the rate was 6¼. A series of rate increases, usually one-fourth or one-half of a per cent at a time, had occurred between December and March.

The Federal Reserve Board has taken a number of steps to make it more expensive and more difficult for banks to borrow money. But the demand on banks for money to borrow has continued strong.

By raising the prime rate banks can afford to pay more for the money they borrow.

DISPLAYING THE STARS AND STRIPES

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. BROYHILL of Virginia. Mr. Speaker, a constituent of mine, Mr. Edward Hunter, who publishes a monthly newsletter entitled "Tactics," called my attention recently to an article he wrote in 1965 concerning the lack of interest on the part of many Americans in displaying our American flag on July 4, Independence Day.

As I believe Mr. Hunter's article contains a message for all Americans, I welcome the opportunity to reprint it in full at this point in the RECORD.

The article follows:

WHY NOT FLY THE STARS AND STRIPES?—OUR FLAG NOW "CONTROVERSIAL"

Last year, as July 4 approached, this writer found he was without a suitable American flag. He found none on sale in the neighborhood. On Independence Day, not a flag was flying on any house in the area, and he had to go blocks before seeing the Stars and Stripes. Startled, he made a tour of the District of Columbia. One could tell where government employes lived; there seemed to be some unwritten rule among them not to display the flag of the country which even was paying their salary. Flying the flag just did not fit in their so-called "sophistication." This editor went home and ransacked closet and drawers until he found an old souvenir flag with 48 stars, 8 by 5½ inches, which he tacked at the top of a downstairs, outside window. At least it was a flag, our flag!

The fact of the matter is that the American flag has joined the word "patriotism" as 'controversial." Schools don't teach patriotism any more; it's chauvinistic and apparently a symbol of extremism. It's intolerant to fly the U.S. flag unless you fly the U.N. flag alongside, so as to show you are in the mainstream, and consider all countries the same, the same as all religions, and all the people of the world. After all, to display preference for your own country is a value judgment, and as almost any social scientist will tell you, a value judgment is "unscientific." Nobody wants to be unscientific.

Bunk and buncombe! The failure to fly the American flag, and avoidance of such words as "patriotic," are evidences of the extent to which our people are being softened up by enemy propaganda tactics, and how subtly it spreads.

This writer is going to call this situation to the attention of some leaders hereabouts. Maybe some readers will do the same, for their home areas and the national capital. Maybe the White House and our legislators might suggest American flags be available for purchase conveniently, and they be flown on July 4. Maybe federal employes can set the example.

A GREEK POLITICAL TRAGEDY

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. EDWARDS of California. Mr. Speaker, for 4 years a Greek political tragedy has unfolded in Athens step by inexorable step, with the final chapter looming more tragic than all that has come before.

America's role in this political tragedy has been an inglorious one. From the time the Papandreou government fell in 1965 until the colonel's coup in 1967, the American mission in Athens was a party to the maneuvers which forestalled elections. By forestalling elections the victory of the Democratic and Liberal Center Union Party was averted, a very questionable political judgment. The political pot was allowed to boil and an atmosphere was created which encouraged a military coup.

When the colonel's coup came on April 21, 1967, it came from an unexpected source; namely, antiestablishment middle-ranking officers in the Greek Intelligence Service, a service trained and financed but not directed by the United States.

From the beginning in April 1967 several of us in Congress have spoken of the short-term and long-term political and moral consequences of America's support of the junta which has been im-

posed on the Greek people. The State Department at the beginning explained that the junta was merely interested in constitutional reform—an explanation which we did not accept and which has proved to be an utter illusion.

Furthermore, the State Department had been and is tepid in asserting the political consequences involved, yielding always to a highly questionable "military" argument based upon the junta's support of NATO. One of the jokers in this argument is no matter what the regime in Greece—conservative or liberal—it has and it will support the Western alliance.

Three outstanding articles on the Greek situation have appeared in the last few days in newspapers of national prominence. They deserve the most thoughtful attention of every Member concerned with American foreign policy and the sometimes inadvertent damage done by short-term military considerations.

Two of the articles are by Rowland Evans and Robert Novak in the June 19 and June 23 issues of the Washington Post. The third, in the June 19 Christian Science Monitor analyzes the demoralization of Greece's officer corps, civil service, and diplomatic service as a result of the dictatorship.

The articles follow:

[From the Washington (D.C.) Post, June 19, 1969]

GREECE FACING GRIM ALTERNATIVES: SALAZAR-TYPE RULE OR BLOODY REVOLT

(By Rowland Evans and Robert Novak)

ATHENS.—The Greek military dictatorship, after two years of bland assurances to Washington about restoring democracy, intends to retain power indefinitely without free elections—posing immense danger to long-range stability in the strategic eastern Mediterranean.

If the colonels who seized power April 21, 1967, on the pretext of preventing communism here ever intended any partial return to representative government, that intention is dead. Even the few politicians who have tried to cooperate with the colonels now concede that Col. George Papadopoulos, the Premier, envisions an institutionalized tyranny modeled after Salazar's 37-year dictatorship in Portugal.

Unlike our last visit there two years ago when the freshly installed junta pledged an early return to constitutional forms, the regime now regards itself as permanent. Brig. Gen. Stylianos Pattakos, Deputy Premier and the junta's No. 2 man, bristled when we asked about popular elections. "That is an internal matter that you cannot inquire about," he said. "Go ask the people on the street. Nobody wants elections."

Indeed, all objective sources here agree that the military regime would lose badly in free elections. The colonels' "revolution," attempting by edict to transform the Greeks into work-oriented puritans, has depleted what popularity the regime enjoyed in 1967. Although past Greek governments have had excellent success in rigging elections, the military regime's popular base is so low—perhaps 10 per cent—that calling elections would be equivalent to surrendering power.

Unwilling to surrender power, the colonels have turned Greece into a huge political pressure-cooker with the true feeling of the Greeks suppressed by the local gendarmerie's watchful eye. An election today probably would show a sharp leftward swing. More ominously, after two or three additional years, the pressure-cooker may explode into insurrection with Communists in leading roles.

These ominous prospects have their source in perhaps the tightest police state this side of Moscow. Violating the colonels' own new constitution, non-Communist potential foes of the regime—mainly army officers and intellectuals—are imprisoned without indictment or trials. Reports of torture are impossible to verify in detail, but maltreatment and brutalization of low-level political prisoners continue.

Former political leaders are watched constantly. They cannot speak their view, are denied passports to travel abroad, and have their mail and telephone calls monitored. One former Premier cannot move without a car full of police agents following him. All former cabinet members are tailed when they visit their old constituencies.

The regime's iron vise is even tighter on the academic world. So many teachers have been purged that the educational system is crippled. Distinguished professors are subject to humiliating interrogation by Col. John Ladas, hard-line secretary general of the Interior Ministry. University students, solidly against the regime, are intimidated by police agents attending their very classes. A further deterrent is formed by severe prison sentences given six young teaching assistants (two of whom later were tortured) for distributing anti-junta propaganda.

The first armed resistance against this tyranny has come from the right: clandestine supporters of exiled King Constantine. Infrequently reported in the controlled Greek press are daily bombing incidents in the heart of Athens (forcing the government court martial to change buildings). There have been unconfirmed reports that the royalist resistance was responsible for the recent deaths of three pro-junta officers.

Thus, 16 retired officers arrested recently are all royalists with anti-Communist records (two of them with service in the Korean war). The regime's contention that the arrested officers participated in a left-wing army plot is only a propaganda smokescreen.

Harassing though it may be, however, the royalist resistance is incapable of overthrowing a regime so vigilant against potential opposition. Remembering the existence of the anti-Nazi resistance in World War II. Greeks fear that the Communists—better organized than ever—will dominate if and when the resistance assumes major proportions.

That day remains relatively distant. Greek Communists, badly fragmented into rival segments, are passive. The Soviet Ambassador here is circumspect, declining to discuss Greek internal affairs during a recent two-hour luncheon with an anti-junta politician. The Communists know the time is not ripe for insurrection.

But heavy government borrowing and stagnant investment here the last two years are storm signals for the modest prosperity now enjoyed by Greece. If an economic recession and rising discontent with dictatorship intersect some years from now, the dismal alternatives may be these: an institutionalized police state along Salazar lines or a bloody insurrection with Red overtones. Before that happens, however, the colonels might yet be turned out by a strong stand against them from Washington—a prospect, even though unlikely, worthy of discussion in a later column.

[From the Washington (D.C.) Post, June 23, 1969]

U.S. ACTION AGAINST GREEK JUNTA IS PREVENTED BY MILITARY NEEDS

(By Rowland Evans and Robert Novak)

ATHENS.—The growing need by U.S. foreign policy for a tough stand against the Greek military dictatorship to avert ultimate political tragedy here is being undermined by the Pentagon's military requirements in the eastern Mediterranean.

Indeed, Greece poses a critical dilemma in American foreign policy. A return to Greek democracy may well depend upon U.S. repudiation of the colonels and halting all military aid. But such action conceivably could deprive the U.S., in the short run at least, of naval bases and communications guidance for the 6th Fleet and Polaris submarines vital to the nuclear deterrent.

Those military considerations prevent sharp U.S. action against the junta. But the long-run cost could be immense. At worst, perpetuated dictatorship here could trigger a popular insurrection led by the Communists. At best, U.S. permissiveness toward the military regime already is building intense anti-American sentiment which will surface in any regime that replaces the colonels without Washington's help. Thus, the long-range U.S. military position in the eastern Mediterranean is becoming dependent on permanent tyranny in Athens.

Even though military needs inhibit American diplomats, relations between the Greek government and the U.S. Embassy here—so intimate for 20 years—are icy. The junta deeply resents the absence of an American ambassador since January. U.S. diplomats do not hide their displeasure with the colonels' aim of institutionalized dictatorship.

But whatever impact this official American frigidity might have is counteracted by the U.S. Military Advisory Group here whose commander, Maj. Gen. Samuel Eaton and his subordinate officers have exercised little discretion in telling their Greek counterparts how they oppose the Embassy's fastidiousness about democracy.

Any psychological influence of the vacant Ambassador's chair is obliterated by constant shuttling in and out of Athens by U.S. officers assigned to NATO. Their photographs in friendly poses with Col. George Papadopoulos, the Prime Minister, almost daily adorn the controlled Greek newspapers. Most notorious was the reply to a Papadopoulos toast by Gen. Lyman Lemnitzer, retiring NATO commander, in which Lemnitzer conveniently omitted phrases about democracy and the rule of law while quoting from the NATO Treaty's preamble.

The same impression was given by President Nixon's shabby treatment of King Constantine, self-exiled in Rome since his bungled counter-coup in December, 1967. A tentative visit with the King during Mr. Nixon's visit to Rome early this year was cancelled after pressure from the junta. Constantine was denied a meeting with the President while in Washington for the Eisenhower funeral (although Brig. Gen. Stylianos Pattakos, the Deputy Prime Minister, had a few minutes with Mr. Nixon).

Moreover, the Greek colonels are expert at disregarding signs of displeasure from Washington. In an interview, Gen. Pattakos told us that the portion of military aid which has remained suspended since the coup of April 21 will be resumed soon. When we asked the basis for this forecast, Pattakos replied with a statement that simply is untrue: "President Nixon has promised it."

In fact, Pattakos's triumphant account of his Washington visit was so removed from reality that the State Department on April 24 issued a sharp statement indicating Pattakos had been urged to restore representative government and civil liberties. When we asked about that statement, Pattakos told us it did not represent the U.S. Government's position. Then who wrote it? "Some Communist," he snapped.

Summing up, a conservative Greek politician says. "Everybody I know thinks the American Government participated in the coup." Old-line politicians such as former Prime Minister Panagiotis Canellopoulos argue with friends that Washington cannot be blamed. But among the younger genera-

tion and particularly students, anti-American feeling is rising steadily in a land where once it was almost unknown.

Nevertheless, the United States might yet put itself on the side of democracy. The three elements whose maneuvering degraded Greek political life before the coup—the King and the two major political parties—are belatedly cooperating and ready to form an interim unity government.

Tentatively, King Constantine would return as rallying point for all Greeks with the government headed by conservative Constantine Karamanlis, who provided stability during eight years as Prime Minister and is now exiled in Paris. But neither the King nor more important, Karamanlis will return to Athens without Washington's repudiation of the junta.

Few realistic Greeks, however, believe the Nixon Administration will move decisively against the colonels. That accounts for skepticism among gloomy Greek democrats that the dictatorship can be terminated peacefully. Worse yet, they feel preoccupation with naval bases is wedding the United States to the fate of the colonels, be it a generation of tyranny or their violent overthrow and the dangerous days that would lie beyond.

[From the Christian Science Monitor, June 19, 1969]

NATO DOUBT: IS IRON FIST IN GREECE WEAKENING RELATIONSHIP WITH ATLANTIC ALLIANCE?

NICOSIA, CYPRUS.—The demoralization of Greece's officer corps and civil service by the authoritarian rule of Prime Minister George Papadopoulos has seriously affected Greece's role in the North Atlantic Treaty Organization.

It also has made it more difficult for Western European governments to supply Greece with defense equipment which NATO leaders believe Athens needs to fulfill its NATO obligations in the Mediterranean.

These are conclusions of authoritative, non-Communist and pro-Western Greek opponents of the Papadopoulos regime. They have managed to supply detailed evidence to newsmen of other countries inside and outside Greece.

The resulting picture is bleak: the Greek military establishment, government bureaucracy, and diplomatic service are reported thoroughly terrorized and weakened by the former colonels now ruling in Athens.

CORRUPTION CHARGED

Mr. Papadopoulos and his associates seized power April 21, 1967. They used a secret NATO plan reserved for the emergency of a Communist uprising. They said they were saving Greece from communism and strengthening its ties with NATO. They also pledged they would end favoritism, nepotism, and corruption.

Instead, their pro-NATO opponents charge, they have ruined Greece's reputation in the West and its effectiveness in NATO. Corruption, nepotism, and the other abuses they vowed to abolish now flourish, these opponents say, in their own power group.

On May 5, antigovernment tracts reached foreign correspondents in Athens. They were signed, "General Akritas, chief of the national resistance movement." Akritas is a legendary pseudonym of the sort politically minded Greeks love.

The tract called on Greek officers to "separate yourselves from power-hungry colleagues." It added, "the Greek people have begun to feel hate for the Greek uniform because of the same ambitious, small-time dictators."

Meanwhile, during May courts-martial tried scores of persons for subversive activities.

Earlier this month Mr. Papadopoulos told a news conference that 15 retired officers had been arrested in connection with an abortive plot to overthrow his regime.

Greek opponents of the Papadopoulos regime say that it is completely false to call the regime, as Western news media frequently do, "Army backed." They say that it seized power in April, 1967, through a ruse which deceived King Constantine and the Army's highest staff officers.

They were led to believe that a Communist take-over attempt was imminent. But the junta never produced a scrap of real evidence to support this. The King and the armed forces were tricked into opening and activating sealed orders for "Operation Prometheus," a NATO plan designed to counter such an emergency.

Purges have eliminated all but two of about 40 senior officers who functioned before the coup of 1967. These two are the regent, Gen. George Zoitakis, who was assigned the King's ceremonial functions after the King's flight, and Gen. Odysseus Anghelis, chief of the defense general staff.

A number of high-ranking officers out of favor were sent to remote frontier garrisons or obscure posts. In each of these, as in every Greek embassy or mission abroad, there is an officer of KYP, the Greek Central Intelligence Agency.

Following the Soviet model, he often holds junior rank but is always the most powerful. Those of higher, equal, and lower rank flatter him and go to him for favors. "This completely disrupts the Army's traditional hierarchy and destroys morale," says one Greek close to the Army. "Greeks cannot bear to take orders from lower-rank people."

By contrast, those who cooperate with the junta are richly rewarded.

CIVILIAN POSTS TAKEN

Fifteen officers last year followed the example of Mr. Papadopoulos, Deputy Prime Minister Stylianos Patakos, and Coordination Minister Nicholas Makarezos. They ostentatiously resigned from the Army. Two of these were Mr. Papadopoulos brothers, Constantine and Haramboulos.

These 15 and hundreds of others who have served the junta have become general secretaries of ministries; heads of government committees; chairmen of the broad of public companies; the directors of athletic teams, theaters, and the opera.

Both their income and their influence have increased far beyond what they were as officers. Constantine Papadopoulos was named general secretary of the Prime Ministry. His brother Haramboulos became general director of the Prime Minister's political office.

Their salaries and fringe benefits are many times their former military pay.

Politics always have existed in the Greek Army, a well-known Greek historian points out. But they always were factional. They never concentrated around one leader or center of power. Posts were not distributed for nonmilitary reasons or as political plums.

JOSEPH P. McCAFFREY—25 YEARS OF RESPONSIBLE SERVICE

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. CORMAN. Mr. Speaker, Joe McCaffrey this month is observing his 25th year as a Washington news commentator, and I am proud to associate myself with his many friends in congratulating him on his important, honest, and dedicatory service in the public interest.

There is no other newsman in Washington, to my knowledge, who reports news more accurately, precisely and factually than does Joe McCaffrey. We in the Congress are particularly fortunate that Joe has made the daily activities of the Congress his broadcasting specialty. His daily reports have been called the "Congressional Record of the Air." Joe himself has been called "the Voice of the Congress." Both titles are truly justified.

It is not easy for the public to always understand the intricacies of complex congressional action, and unless a knowledgeable, objective commentator undertakes to interpret Congress to the listening public, a great deal of misinformation is sent along the air waves.

Joe McCaffrey is an eminently responsible and enormously able reporter and commentator. His broadcasts reflect the highest standards of excellence and he is listened to with confidence.

I have known Joe personally for many years and value his friendship. He is a warm, kindly, sincere person, and his friends on the Hill are legion. Yet, friendships never stand in the way of his first duty—to report the news fairly and accurately.

His record is a worthy example of the best in broadcasting to all the members of his profession, and I hope that Joe will continue to be the "Voice of the Congress" for many, many years to come.

THE MISSION OF MANPOWER POLICY

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. STEIGER of Wisconsin. Mr. Speaker, Prof. E. White Bakke, sterling professor of economics at Yale University, has a long and distinguished career as a labor economist and analyst of labor market problems. In a recent publication of the Upjohn Institute entitled "The Mission of Manpower Policy," Professor Bakke demonstrates the breadth of his perspective in addressing the question of what elements must be included in a truly comprehensive manpower policy.

Because Dr. Bakke takes an unusually cosmopolitan view of what such a national manpower policy should include, and because this Upjohn Institute bulletin raises a number of problems in relation to such a manpower policy which other critics have too often neglected, I rise today to call his remarks to your attention. The excerpts I am introducing here include Professor Bakke's definition of the mission of a positive manpower policy and his summary of what the distribution of responsibilities and tasks in such a national manpower policy should be:

EXCERPT FROM "THE MISSION OF MANPOWER POLICY"

VII. THE MISSION OF A POSITIVE MANPOWER POLICY

Government manpower policymakers and administrators need to have a clear concept

of the mission for which they are responsible if they are to answer adequately these questions: How are we doing? Where do we go from here? How do we get there? The conclusion implicit in the preceding discussion is that the *de facto* concepts of mission emerging from the action programs labeled "manpower" in the United States is too narrow to provide a satisfactory criterion for answering the second and third questions, and is useful in answering the first question only to the extent that achievement is measured by the degree of effectiveness in doing what we *are* doing rather than in doing what we *could be*, or *ought to be*, doing. The "manpower" programs launched in this decade to increase the employability and employment of those who have been left out, kept out, or left behind in the system of self-support through gainful employment mark a major milestone in the recognition and acceptance by government of its responsibility to equalize for the unsuccessful few the opportunities for a secure and meaningful working life enjoyed and satisfactorily exploited by the many. In principle and purpose those efforts represent the most significant advance, since the introduction of social insurance, in the alleviation of the causes of poverty and in remedial public service to those who are the victims of the hazards to continuous and secure employment.

But even a maximum fulfillment of that mission does not exhaust the potential benefits of a positive manpower policy to the nation and all of its citizens who work for a living or desire to do so. The narrow mission does not suggest the operational field which needs to be cultivated and the whole set of essential functions that need to be performed if those potential benefits are to be realized. It might be compared to confining the mission of a conservation and water policy for a valley to draining the swamps. Important and necessary as that is, it is only a part of the task.

The definition of the whole is a precarious task. The twin dangers are that the boundaries for action suggested or set by the definition may be too limited or they may be too comprehensive. If too limited, the potential of the action for service to the individual and the nation is unnecessarily restricted. If too comprehensive, the focus for action is confusing and not operationally meaningful.

Nevertheless, since policy implies and requires a purpose, there have been much interest, concern, and discussion about manpower objectives among political, social, and economic leaders, among government officials, and among social scientists. A consideration of their published thoughts on the subject indicates a focus on several questions, the answers to all of which are important in providing clues to a necessary and appropriate mission for manpower policy. Among these questions are:

1. What target group or groups should be served and how?
2. What basic human values are to be served?
3. To what societal problems can manpower programs contribute complete or partial solutions?
4. What is the necessary and appropriate operational field for manpower policy?
5. What specific functions in the cultivation of that field are essentially and appropriately assigned primarily to manpower authorities?

Concern with the answers to each and every one of these questions provides an orientation essential to the development of the concept of the mission of a sound and workable comprehensive manpower policy. Disassociated from the answers to all the questions the answer to any one question furnishes an inadequate clue to that concept. In my judgment, however, the answers to all the questions follow and are dependent upon the determination of the boundaries and action focus of the *operational field*. In other words, a definition of manpower policy mission by reference to its essential and appropriate operational field provides the clue for an integration of the aspects of that mission whether stated in terms of target groups, support for basic human values, contribution to the solution of basic societal problems, or functions assigned appropriately to manpower authorities.

A brief consideration of these several approaches to the definition of the mission of manpower policy will indicate the reason for this judgment.

Target group mission

Sufficient attention has been given to the consequences, both positive and negative of the approach indicated in the first question, that is, definition by reference to target groups. This is the approach which has characterized the development of the concept of manpower mission in the United States, both in the explicit declaration by manpower authorities and in the implicit assumptions revealed in action taken. It is an obvious requirement of a practicable concept of mission that there should be a definite answer to the question, "Mission to whom?" If the answer to that question is to be integrated with answers which I would suggest are appropriate to the other questions, however, the "whom" will necessarily have to be defined more broadly than the disadvantaged unemployed at or on the borders of poverty and the residents of urban slums or impoverished rural areas.

The alternatives range from the inclusion of the total actual or potential labor force to limitation to specific groups in the labor force expressly disadvantaged in the matter of finding and holding jobs. There is, in my judgment, no basis other than political expediency for defining those eligible as clients of manpower services in terms narrower than the following: All citizens or permanent residents of whatever income level, educational achievement, skill status, occupation or profession, age, race, creed, sex, marital status, or employment experience (employed or unemployed) who have employment potential which is not being used, which is being inadequately used, which may not be used (i.e., become redundant) in the future, which can be used to achieve balance and growth in the economy, or which is being used in ways not consistent with legally established standards of economic or social justice.[1]

Consideration of how such a comprehensive clientele is to be served by government sponsored or supported manpower programs raises a related question. What organization premises as to program orientation will lead to the most effective and nonduplicating set of services and institutional facilities? The chief alternatives are an orientation toward client categories, e.g., youth, dropouts, disabled, aged, nonwhite, selective service rejectees, Indians, parolees, the urban or rural poor, hard-core unemployed, higher talent personnel, etc.; or an orientation toward functions and institutional facilities, e.g., planning; monitoring; counseling; placement; training; giving work experience; providing movement, education, and training allowances and grants; job creation; research; information; etc.

[1] Professor Fred Harbison's definition of the appropriate target group is similar to this: "In the broadest terms, manpower policy should be concerned with the development, maintenance, and utilization of actual or potential members of the labor force, including these who are fully and productively employed as well as those who experience difficulties in getting work."

The present policy and programs emphasize orientation toward client categories, in part because this is the way in which appeal could be made to the political instincts of legislators. The major shortcomings of this orientation are that overlapping among programs is inevitable, that different standards for the same functional services and institutional facilities are established for different client groups, and especially that the definition of the task to be carried out is influenced by the total life problem (not just employment problems) faced by any specific group. This makes the setting up of orderly guidelines as to the objectives and operations of an employment-system-oriented manpower program difficult.

The advantages of defining the manpower policy mission by reference to client groups to be served are that it keeps attention focused on facilitating a humanly equitable employment experience for disadvantaged individuals, and that it provides a ready and politically attractive reason for legislative action. The disadvantages are that it may prevent the focusing of attention on anything else, and that some such client groups are peculiarly subject to definition by reference to the political payoff for legislative attention to their needs.

Support for basic human values mission

At the other end of the spectrum from the concept of limited mission implicit in existing American manpower programs are concepts of the manpower mission which are nearly as unspecific and comprehensive as "providing the greatest happiness to the greatest number."

To make democracy a reality, not a dream; to promote social welfare; to implement the right of every American to a livelihood possible in an affluent society; to humanize the life of the forgotten among us; to establish justice as a foundation for law and order; to bring a sense of human dignity to those who have lost it or have never experienced to it; to bring all citizens into the mainstream of American life and work; to share equally the costs of technological change; to achieve fuller and more productive and humanly satisfying utilization of human resources; to enable every American to realize his full potential and to utilize it fully in his own and the nation's interest; to achieve a full realization of human aspirations—these are some of the phrases which have expressed such global concepts of the mission of manpower policy.

Walter Reuther has provided one such wide-ranging definition, and an appealing one:

"When we speak of manpower policy, we generally think first of full employment—how to create it, how to maintain it. But the proper goals of manpower policy go far beyond assurance of a job for everyone willing and able to work. The job must provide a useful and rewarding outlet for the worker's highest capacities. The work environment must promote dignity and self-respect. The work must offer opportunity for development and advancement. The job must pay a decent wage and insure the maintenance of income when the worker is unable, or denied the opportunity, to continue at work.

"All this, however is still only part of the story. Manpower policy is, or at least should be, concerned with the nature of work and the elimination of its discontents; with the preparation of human beings for creative and constructive activities and for the enjoyment of leisure; with swift and painless transition from one job to another in an economy in which advancing technology is constantly changing the educational and skill requirements for work and the occupational, industrial, and geographical distribution of employment opportunities. Manpower policy must also be concerned with

the disadvantaged individual and the disadvantaged community—with breaking down the barriers of prejudice, with provision of opportunities for the handicapped, with preventive as well as therapeutic medicine for personal or area distress.

"Most of all, however, manpower policy should aim at making obsolete such words and phrases as 'manpower' and 'labor market,' for our central concern must increasingly be with the worker as a human being rather than as an instrument of production. For example, the major purpose of education and training must not be simply to produce more effective human tools for the use of employers but, rather, more effective human beings for participation in, and for enjoyment of, all aspects of living."

Arthur M. Ross, when he was Commissioner of the Bureau of Labor Statistics, pointed to the emerging of this kind of an idealistic concept of the goal of manpower policy:

"Up to now, 'full employment' has been the most general statement of our national objective. There is considerable evidence, however, that a more ambitious and challenging goal, which might be called 'full realization of human potential' is emerging.

"Thematic statements of this type represents the ideal which is sought, not the reality which is achieved. We have almost never enjoyed full employment except in periods of war. Yet, the existence of the commitment has certainly made a difference. . . .

"The goal is to give all Americans [who are out of it] the opportunity to move into the mainstream of national life [or working life].

"Thus, a new view of the manpower goal, which concentrates on human aspirations and possibilities, as well as accumulated skills and jobseeking endeavors, is emerging. Up to now, labor-market policies (as well as labor-force statistics) have concentrated on the quantity of jobs. One hour's work—no matter what kind of work and what kind of pay—classifies an individual as employed. But jobs have not only a quantity but also a quality; they vary in capacity to contribute to the output of goods and services, to yield a decent income, and to satisfy other legitimate human aspirations.

"Recent policy declarations state that rewarding, self-respecting, and self-fulfilling employment, not merely something which qualifies statistically as a job should be the birthright of every American. . . .

"The emerging restatement of the manpower objective involves a radical concept of equal opportunity which might be called economic universalism. We are in the course of resolving that the illiterate farmhands and casual laborers in the back country and small towns of the South, the subsistence farmers and ex-coalminers of Appalachia, the inmates of the slums and ghettos of the North, and the pauperized Indians of the Southwest will all be provided with sufficient motivation, discipline, education, and training to join the parade on the broad highway of economic progress."

There are those who scoff at such idealistic goals for manpower policy, labeling them "pure rhetoric." It is a mistake to do so, for they provide a qualitative humane dimension to the goal of activity, an essential dimension when that activity is a service carried on both for and by human beings. Although such goals provide few guidelines for functional specifications, they do remind us that any action taken comes eventually into sharp focus on the life problems failures and successes, frustrations and aspirations of real human beings. Such goals reassert what can easily be forgotten, namely, that these human beings accept and support popular government with a willingness premised on their expectancy that the ultimate purpose of government is to promote and make secure *their* general welfare. They offer a challenge to any tendency to plan and operate programs as though the beneficiaries were merely resources for a productive and profitable enterprise, or numbers on a roster, or the inputs in a computerized accounting system. They announce alike to beneficiaries and administrators that man does not live by bread alone; and they stress not only the importance of what is done, but also the spirit and the climate of compassion and mutual respect in which it is done. Such goals also give meaning and significance to the efforts of those who direct and administer the projects. Bureaucrats do no live by rules and statistics alone. Moreover, while it is difficult to translate such ideal statements into programs of action, the process of invention of projects will be stimulated by a contemplation of the significance of such ambitious goals for the next steps to be taken.

But concern for the shaping of policy and practice which is consistent with progress toward realizing such common values does not distinguish those engaged in manpower tasks from those engaged in other fields of private and public activity. Manpower programs have no monopoly on making contributions to the achievement of such goals. A commitment to bringing out into life the ideal values of western democracy is an essential but not a unique feature of manpower programs. The programs of public health agencies, community development commissions, religious institutions, schools and colleges, charitable organizations, the conservation service, civil rights commissions, and public assistance agencies hopefully serve the same end of supporting basic human values.

Activities in all such institutional areas must, however, be geared operationally, not only to such ultimate objectives, the most of which are the same for all of them, but also to a specific mission which provides a direction for, and a standard for, testing the specific policies and programs in their particular area of involvement, and a guide to the appropriateness of the kind of activities in which the particular agency should be engaged.

Contribution to the solution of societal problems mission

A somewhat similar generalization is applicable to the concept of the mission of manpower policy as that of helping to stabilize and strengthen the economy and the political system. The spelling out of desirable specific characteristics of a sound economy is, however, a bit more suggestive of the particular functions required of manpower programs if they are intended to make a major contribution to full employment or low aggregate unemployment; reasonable price stability; increased productivity; a satisfactory rate of economic growth; the economic security of workers and their families; the full exploitation of the opportunities presented by technological change; the uncovering of ways to develop and use, rather than squander, our vast wealth of human resources; the avoidance of urban or rural decay; and the improvement of the chances for societal peace and harmony.

These goals do imply specific functions of collaboration for manpower authorities, but success or failure in their fulfillment is the shared responsibility of so many agencies and the consequence of so many variables outside the control of manpower authorities that such goals do not define a mission with respect to the carrying out of which the manpower authorities can be independently evaluated.

Because, however, the resources and operations of the labor market are factors so clearly related to such objectives, the collaborative relationship of manpower authorities with the others contributing to the attainment of such goals provides essential ingredients in the mission which is appropriate for those authorities. In activities which involve so many partners, it still remains necessary to determine what, in the whole set of tasks essential for moving toward such goals, is the specific task of manpower policy and practice.

Operational field mission

No operational concept of the mission and responsibilities of private or public policy and of the agencies charged with formulating and implementing it can be clearly stated until we define the nature and boundaries of the operational field within which, and with respect to the peculiar and characteristic problems of which, the contemplated action is to take place. Once that is done, the functions essential to dealing with these problems (that is, the policy in action) can be outlined; the ideal values to which the action is especially to be, or ought to be, oriented can be chosen; the reciprocal cooperative or competitive relationship of action in this operational field to the action in other operational fields can be determined; the targets of action in terms of persons and institutions can be visualized; the appropriateness of choices among alternative approaches such as authoritative direction, technical assistance, financial assistance (and in what form), advice, inspiration and stimulus, regulation and control, or other forms of participative relationship can be assessed; the balance between preventive and remedial action most likely to solve the problems presented can be calculated; and an appropriate organizational and administrative system can be devised.

Consider the definitive character of the operational field, and consequently of the mission, of the following public agencies when compared with that of the manpower authorities: Federal Reserve Board, Interstate Commerce Commission, Securities and Exchange Commission, Federal Bureau of Investigation, National Labor Relations Board, Public Health Service, Judiciary, and Bureau of Indian Affairs. Their mission has evolved over time, but the comparative definiteness of their respective operational fields has provided a framework which has kept the mission both within bounds and comprehensive enough to deal with the most critical of the problems relevant to the fields. There have been debates over the choice of values to be served. There have been border jurisdictional skirmishes with other agencies on the frontiers of their operational fields as well as rationally worked out collaboration and division of labor. There have been disputes over what groups of persons and what institutions should be the target of what kinds of action. There have been challenges that their functions were inadequately designed and, in some cases, inappropriate for the particular agency. But the understanding of the nature, problems, and boundaries of their operational fields has provided a catalytic element inducing a resolution of differences.

Now if we are going to be satisfied to accept the operational field of manpower policy in the United States as the life conditions and resources of the disadvantaged unemployed, the limited mission to increase the employability and employment of that group makes good sense. That definition provides a touchstone by reference to which target groups and institutions can be chosen. It brings into the center of attention and concern the human values which must be, and can be, supported. It gives a clue to the kinds of functions that are relevant to the problems of people in that operational field. A major weakness with respect to the organization and the carrying out of those functions is that many of them are so similar to, or identical with, the functions of those whose operational field is the world of poverty that border disputes are difficult to resolve.

The chief weakness of that definition of the operational field, however, is that its boundaries do not enclose a territory providing operational room for a policy and program serving the ends which manpower policy and program can potentially serve. If the scope of a manpower policy and program for the United States is not to be exclusively directed toward increasing the employability and employment of the disadvantaged, the boundaries named above do not mark out an adequate operational field. Nor are the derived concepts of mission, placing upon manpower authorities the opportunity and responsibility to support human values and to contribute to the solution of large economic and political problems, sufficiently focused to provide the clues to the distinctive operational field appropriate for those carrying out a manpower mission of broader scope.

How can we define the focus and boundaries of the operational field of a comprehensive manpower policy and action by reference to which the several aspects of its mission can be determined?

What's in a name?

The original term used to describe the operational field for this postwar development in specifically assigned public responsibility was "the labor market," and the relevant policy was referred to as "an active labor market policy." The mission was described as "bringing into short- and long-range balance the supply of, and demand for, labor to achieve full employment with price stability and to promote national and personal economic stability and growth." The logical sequence from the concept of operational field to that of mission originated with labor-movement economists in Sweden and was promoted with some amplification, but with no essential change in focus, generally, and particularly in Western Europe, by the Organization for Economic Co-operation and Development.

The decision to change the name of the policy from "labor market" to "manpower" was made by OECD in 1963. I was very conscious of that change, for I had been invited to deliver the orientation paper for the OECD conference of trade union leaders in Vienna on "An Active Labor Market Policy." I had prepared the paper, making extensive use of the term "labor market." Just before my departure, I received a communication from OECD that the term had been changed to "manpower." It became clear in the conference discussions that a major reason for the change was a concession to trade union objections to the impersonal, inhuman, and "commodity" concept of labor implicit in the original terminology.[2]

But it was also clear that the change in name was not meant to connote a change in the nature, scope, and mission of the efforts formerly considered to be relevant to the implementation of "labor market policy." The terms were used interchangeably throughout the conference, and the Swedes still use "labor market policy" in discussions among themselves and "manpower policy" in discussions with foreigners. There is no difference in substance. And once it becomes clear, from that substance, that the human interests and needs of people as well as the economic and political interests and needs of the nation are to be served by the policy and practice involved, any sense of conflicts is removed. It can be assumed that as long as the scope and focus of the activities which implement a policy are meeting a felt need, the name of the policy is of secondary importance. "A rose by any other name would smell as sweet."

It is not likely that the current *de facto* concept of the operational field for American policy as "the employment and life conditions of the disadvantaged unemployed," with the emphasis on direct services to persons, particularly disadvantaged persons, grows solely from the spelling out of the most obvious connotation of the label "manpower." But that word does suggest the primary emphasis on the *supply* of labor, and is not inconsistent with concern about the least employable persons constituting that supply. The word does not, however, automatically call to mind the full extent and mission of an active labor market policy and program.

I do not wish to engage in a debate whose issues are semantic. But in setting forth the concept of mission for "manpower" policy, which in my judgment provides both adequate scope and sufficient and practical operational focus for such a policy, I am going to use the term "employment policy" as more descriptive of what I have in mind than either "manpower policy" or "labor market policy."

The operational field for a more comprehensive "employment policy" is the *system and process of particularized employment* in each locality and in the nation as a whole. The adjective "particularized" is used to distinguish this policy from that which has sometimes also been referred to as "employment policy"; namely, the policy of utilizing monetary and fiscal measures to expand or contract aggregate consumer demand and industrial and business investment and activity, resulting in the derived demand for labor. The projected results of this latter policy are relevant, not simply to producing either aggregate or particularized employment but to the operation of all processes of the economy, including profitmaking, investment, government revenue and expenditures, foreign trade, and maintaining the soundness of the dollar. It is therefore properly labeled "economic policy."

The system and process of particularized employment are as important foundations for the social, economic, and political health and growth of the nation as the systems and processes of communication; transportation; banking; intrastate, interstate, and foreign commerce; industrial production; education; conservation; public health; defense and public order; taxation; wealth and income distribution; collective bargaining; religious faith and practice; the creation and support of ethical and cultural values; the administration of legal justice; political representation; and public assistance and relief. If that system of particularized employment is effectively and efficiently ordered and managed, the efforts within all of those other operational fields are likewise more effective and efficient, for its impact on what can be done in these other areas is great. The adequacy and quality of the economic, political, and social products in those fields are dependent on the quantity and quality of the particularized employment relationships organized to carry on that work. The goods and services produced by those employment relationships are the foundation not only for the economic strength of the nation, but also for the plane of living available to the people. The income from those relationships determines the degree of access of individuals and families to those goods and services. In a culture in which self-support through work is a dominant value, the opportunity and security provided by particularized employment are an essential basis for the experience and realization of self-respect and human dignity. Morever, performance in that system of employment is a major ingredient in the criteria by which individuals are judged, and therefore their social status among their fellows.

The expectancy that government will promote and undergird the general welfare leads it to meet that expectancy and to discharge the implied responsibilities by setting up agencies to cultivate and bring order and effectiveness into the operational fields of such systems and processes as communication; transportation; banking; intrastate, interstate, and foreign commerce; defense and public order; etc. It is equally important that the system of particularized employment relationships receive the same attention. That importance is increased by the obvious fact that policy in this operational field serves not only economic goals, but political and social and individual human goals as well.

A comprehensive manpower policy

Government policy and practice in this field is therefore highly significant in the promotion and sustaining of the general welfare. And because the operational field is defined as "the system and process of particularized employment," it has focus and recognizable frontiers. Stated in the most general terms, therefore, the mission of the government *employment policy* is to promote and sustain the general welfare *insofar as that general welfare is dependent on the system and process of particularized employment.*[3]

More specifically, the mission of employment (manpower) policy within this operational field is:

1. To facilitate and expedite particularized employment which is maximally productive, economically rewarding and dependable for workers and employers, individual and national growth-stimulating, and freely chosen, by:

a. Developing employability in particular people—employed, unemployed, underemployed, and nonemployed.

b. Creating, enlarging, and increasing the productivity of, and opportunities for, employment wherever and whenever these are inadequate to provide jobs for those desiring to work.

c. Providing or stimulating local and national labor market facilities and services and arrangements to bring available workers and available jobs together expeditiously.

2. To undergird the effectiveness of the above processes through:

a. Anticipating and initiating preventatives of, and correctives for, both shortages and surpluses of labor in both the short and the long run.

---

[2] This was not the case with the Swedish Trade Unionists; the term "labor market" is still employed in Sweden. There have begun to appear in Swedish reports, however, signs that they are sensitive to the overtones of the term. In recent official statements and in explanations by public officials of an "active labor market policy" occur such statements as the following:

Labour market policy not only has the task of balancing economic changes, dependent on the labour market situation. It also plays an important part in facilitating structural changes. Besides this, it is subordinated to social and humanitarian considerations, which as a matter of fact were its primary task.

Obviously, to attain balance on the labour market is not the only aim of labour market policy. Its first aim is to assist individuals to find the kind of work which gives them economic and personal satisfaction.

[3] Among the students of manpower policy and practice there are a number whose definitions of objectives suggest this emphasis on the system of particularized employment as the operational field for policy. The definition of Professor Charles A. Myers, for example, is of this sort. "The central task of manpower policy is to facilitate the *employment process* [emphasis supplied], and in these times to assist in the achievement of full employment with reasonably stable prices . . . the end result is the productive employment of people."

b. Making more effective the public institutions which provide services *immediately* related to the processes named in (1) above, with respect to their organization, administration, and personnel; and stimulating such action in relative private institutions.

c. Strengthening the institutions and processes which are basic to the *general* development of employability, to the creation of employment opportunities, and to matching the two, but which have broader societal functions as well.

d. Contributing to the formulation and implementation of broad social welfare and economic policies which affect, and are affected by, the carrying out of the mission of employment policy authorities and by the system and process of particularized employment.

3. To supply resources for mission aspects (1) and (2) above by:

a. Conceptualization and the gaining of a working acceptance of the comprehensive and basic mission of employment policy and functions.

b. Continuous monitoring and evaluation of the performance of public and private agencies engaged in the three basic processes for facilitating and expediting particularized employment. (See [1] above.)

c. Periodic reports to the President, Congress, and the public concerning: (1) purpose, (2) problems, (3) program status and progress, and (4) situation and trends with the adequacy of public and private facilities relevant to fulfilling the mission of employment policy.

d. Research: its distribution and application related to basic and operational problems faced, both current and anticipatory

e. Direct operation and/or funding of mechanisms for accomplishing the mission of employment policy supplementary to or supportive of those provided in the private sector.

f. Economic support for individuals and firms appropriately assisted by employment policy programs, including allowances to encourage movement of workers to jobs and jobs to workers.

g. Financial support to institutions and organizations engaged in the development of employability and in the creation of employment opportunities.

h. Technical assistance and advice to such institutions and organizations.

i. Collaboration with other public and private agencies and organizations whose efforts also contribute to strengthen the system and process of particularized employment.

j. Identification of changing needs and the initiation and development of strategic activities and programs to meet these needs.

The integrating focus: Economic or social welfare?

By naming the policy here under discussion as "employment policy," by delineating its operational field as "the system and processes of particularized employment," and by defining its mission as "facilitating and expediting particularized employment which is maximally productive, economically rewarding and dependable, individual and national growth-stimulating, and freely chosen," one opens himself to the charge that this approach neglects the human and social aspects of that mission and concentrates dominant attention upon its economic aspects.[4] The charge is superficial. It assumes a dichotomy between economic and social welfare which in fact does not exist. The emphasis on particularized employment is made in order to give focus and organizational integration to an economic effort, the success of which is a *sine qua non* in the achievement not only of economic well-being but of human and social welfare as well.

Individuals cannot satisfy their total human needs and aspirations, and government cannot provide effective support for that achievement in the absence of rewarding, dependable, secure, and productive gainful employment. Arranging and managing the factors and processes which make that possible are chiefly economic problems. Nevertheless, because the process involves building and maintaining a relationship between human beings, an impact on the success or failure of the effort is made by every human quality, interest, predisposition, and condition of life of both employees and employers. The development of employability in people contributes to the satisfaction of their total human needs and aspirations only if that employability is useful to themselves and others, and if they can find employment in a healthy economy. That employment will be offered only if their work is considered economically advantageous to profitseeking employers, or if it is considered to supply services which can be paid for within the budget restraints of nonprofit insitutions, or if it is considered by taxpayers to be work which provides products and services for which they are willing to pay by the very economic process of taxation.

This does not mean that employment serves *only* economic ends for workers, or employers, or the public. Its doing and its rewards are important ingredients in the cement which stabilizes family and community relationships; lack of employment and inadequate rewards therefrom undermine those relationships. Experiences in gainful work develop qualities of character and moral action important to the stability of organized society. The degree of adequacy of the opportunities provided by the system and process of particularized employment is a basic determinant of the degree of experienced justice, which in turn has its impact on the commitment of people to the support of the economic, political, and social system within which they live and work.

Nor can the exclusive economic character of employment be supported by evidence that the motivation for either public or private employers is, or needs to be *solely* economic. It never has been. Private and government employers have been known to use their power to create and fill jobs to help disadvantaged and unfortunate people out of trouble, to answer the urgings of moral and religious conscience, and even to provide favors to friends when mere economic efficiency motives would have suggested another course.

The fact that the system of particularized employment is one of the most essential foundations upon which the achievement of values important to human beings is based, is as obvious as the fact that other essential foundations are the systems of public health, education, communication, transportation, industrial production and distribution, legal justice, political representation, conservation and development of natural resources, money and credit, and public assistance. But the focus of effort, the functional specifications, and the integration of required activities to build and maintain these foundations are not supplied, for those charged with responsibility in these areas, by the proclamation of their social welfare relevance. The soundness of policy and practice of agencies in some of these areas (e.g., agencies in the areas of public health, education, political representation, and public assistance) is continuously tested by whether or not such agencies make a contribution to social welfare. Manpower agencies are also subject to such testing. The human and social consequences of this relevancy to human and social welfare add significance and urgency to the work of those performing public tasks in these areas. Their concerns are broadened beyond attention to the immediate technical requirements of those tasks. But the organization and direction of their labors lose focus and integration unless the guiding principles of operation are geared to the central and dominant problems relevant to those technical requirements.

For those who plan and direct government efforts to facilitate and expedite the establishment and maintenance of a system of particularized employment which is maximally productive, economically rewarding and dependable, individual and national growth-stimulating, and freely chosen, the technical requirements are produced by the fact that the process of employment is one in which the parties are first of all exchanging what has economic value and by the fact that the exchange can take place in normal circumstances only when the supply of labor offered by one and the demand for labor made by the other are reciprocally advantageous in economic terms.

VIII. DISTRIBUTIONS OF RESPONSIBILITIES AND TASKS

* * * * *

Summary

The government's role in the manpower field is in some respects new but in many respects old. Many of the activities which today are recognized as falling under the manpower umbrella have long been the concern of those chosen to carry on the nation's political affairs. For example, support for vocational rehabilitation, vocational education, land grant colleges, professional education, armed services training, and even for some aspects of general education has long provided government assistance in the development of a qualified labor force. The regulation of immigration has greatly affected the labor supply. Urban and regional development, the direction of government purchases, depressed area renewal, work relief, the encouragement and protection of invention, industrial development, and foreign trade have amplified job openings for portions of that labor force. The Employment Service and the continuous statistical activities related to the operations of the labor market have provided facilities intended to expedite and make more rational the bringing of men and jobs together. This evolution of a multiplicity of activities which have a bearing on manpower problems is one reason for the wide distribution of the responsibility for such activities among many departments and bureaus of the government.

What is new in this decade, in addition to a special effort directed toward the sponsorship of a number of training activities and special efforts for particularly disadvantaged members of the actual and potential labor force, is the effort to develop a concept of a positive manpower policy and to synchronize and integrate the support for, and administration of, the various supply, demand, and labor market facility elements involved in the implementation of that policy.

That effort has not been completely successful. One reason for this is that a workable policy necessarily assumes that the action contemplated is focused on a commonly accepted objective, or at least on a priority relationship among several objectives. That is something we are not clear about.

There are two paramount objectives which have traditionally motivated government ef-

[4] That charge has been made concerning my discussion of the premises of manpower policy in an earlier book, entitled *A Positive Labor Market Policy* (Columbus, Ohio: Charles E. Merrill Books, Inc., 1963), Chapters I and XI of that book contain an answer to the charge.

forts in the manpower field. The first is to amplify the economic strength of the nation. The volume, productiveness, and adaptability of the particularized employment relationships in the country provide the national economy with essential resources for economic stability, viability, and growth; and with the ability to meet the tests of national strength raised by war, competition in international trade, and the desires of political leaders and others to boast about the superiority of our economic system.

A second paramount objective traditionally motivating government efforts in the manpower field is to increase the economic and social well-being of the nation's individual people. The volume, productiveness, and adaptability of the particularized employment relationships in the country provide individuals with income to buy a living and give them working roles which are an important factor in determining their status in society.

The effort to achieve each of these objectives is essential to the achievement of the other. Successful efforts to increase the nation's economic strength make firmer the institutional foundation for individual economic and social well-being. Successful efforts to improve the economic and social well-being, and especially the employability, of people provide better human resources contributing to developing national economic strength.

The demands of two wars and the scare thrown into the nation's leaders by Sputnik led to an initial emphasis on the national economic strength objective.

The rapid advances in technology and both the threat and the promise of automation and the need to turn these developments into sources of national strength and growth provided an initial objective for MDTA.

The actual working objective that can be inferred from the way manpower legislation and its administration have developed in the United States in the 1960's is, however, more closely related to providing economic welfare for individual people and, in many ways, to carrying out a major aspect of the war on poverty. Indeed, if one can infer objective from practice, it can be said, I think, that the manpower policy of the 1960's is simply the latest of those policies by which government has acknowledged responsibility for the economic well-being of individual citizens, and in particular those on the bottom rungs of the economic ladder. The idea of what is appropriate and important for government to do in implementing its overall manpower role has been colored very naturally by the idea of what is appropriate and important for government to do in relieving economic distress of certain people.

A positive manpower policy must necessarily be based on objectives. The two paramount and interdependent objectives have been the economic strength of the nation and the economic and social well-being of individual citizens. I am willing to accept the second objective, the one which has come to the fore in our present manpower programs, as highly important at this time. But I am not willing to accept it as the exclusive objective, or even as the paramount objective, of a positive manpower policy and program for the future.

The concentration of attention at the present time on the problems of disadvantaged groups and on the utilization of new so-called "manpower measures," not merely with the objective of improving the employability of the disadvantaged but as a means for income maintenance, is concentration on one laudable and desirable objective of manpower policy. Unless, however, the other objective of manpower policy: namely, to increase the nation's economic strength, stability, and viability, develops a wider and more comprehensive clientele and operational field for manpower activities, those activities will simply add up to a more sophisticated form of public assistance. In my judgment that is not the end sought by a positive manpower policy and program.

To be more precise, I look forward to a time when the meaning of manpower policy and program will be provided by an emphasis related to achieving national economic strength as well as the economic and social well-being of our disadvantaged citizens in the following ways:

1. Manpower programs will emphasize the development of particularized demand in the form of jobs geared to the characteristics of the available labor supply, as well as the development of employability in individuals.

2. The supply resources and, therefore, the focus of concern will be regarded as *all* potential workers whose productive potential is underutilized, as well as the disadvantaged, be they employed or unemployed.

3. The maximum development and utilization of productive potential will amplify, though not replace, the objective of removing men from the rolls of the unemployed.

4. Labor shortages will receive as thorough remedial attention as labor surpluses.

5. The needs of, and the opportunities provided by, the national labor market will receive attention equal to that given to the needs and opportunities provided by local and state labor markets.

6. The anticipation and prevention of unemployment in particular places, among particular groups, and in particular seasons will receive attention equal to that devoted to the relief of the unemployed.

7. The total overall direction and guidance of, and financial support for, all aspects of the manpower effort will be synchronized by a single agency at the federal level and at the local level.

8. The agency referred to in (7) will be responsible for keeping the public and public officials informed about the current status and anticipated developments related to the factors influencing demand and supply in connection with employment relations supporting all goods and services consumed in the nation, and about the facilities, both private and public, for achieving balance in that supply and demand.

9. The modification and development of programs will be guided by built-in and followup evaluation procedures so that the primary reliance for progressive improvement will be empirical experience rather than brainstorming sessions.

10. Every decision with respect to economic and social welfare policies will be made in full collaboration with the manpower agency and after due consideration of the reciprocal impact of the implementation of those policies and of employment (manpower) policy on each other.

A manpower policy which can realize its potential contribution to the economic, social, and political strength of the nation and to the economic and social well-being of all its citizens is an *employment* policy, the operational field of which is the system, processes, and mechanisms of particularized employment and its dual resources of employability in people and opportunities for work. Its objective is a system of full *particularized employment* which is maximally productive, economically rewarding and dependable for workers and employers, national and individual growth-stimulating, and freely chosen. Its clientele is the total labor force now employed, to be employed, unemployed, underemployed, or ineffectively employed, whatever their type and degree of skill, industrial or occupational attachment, or condition of social or economic advantage or disadvantage.

BETTER LEGAL REMEDIES FOR CONSUMERS

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. ROSENTHAL. Mr. Speaker, on June 20, 1969, the National Legal Aid and Defender Association, in cooperation with the American Bar Association Standing Committee on Legal Aid and Indigent Defendants, held a seminar on consumer law problems. The participating consumer lawyers, who have been deeply involved in consumer problems over the past several years, discussed, among other topics, Federal legislation to assist the consumer and tasks facing the new National Consumer Law Center in Boston.

Mrs. Virginia H. Knauer, Special Assistant to the President for Consumer Affairs, spoke to the group about legal remedies available to combat consumer abuses. Her statement, which follows, suggests specific ways or providing consumers with new and improved remedies:

STATEMENT BY MRS. KNAUER

I am pleased to be here today since I understand this Seminar is to plan for action. I am all for that. I believe consumer abuses and possible remedies have been discussed long enough. I read speeches, articles, accounts of meetings a decade ago—or longer—to discuss consumer abuses and I find they are decrying many of the same abuses being discussed here today. It is time for action.

Of course there have been heartening signs of progress. That is why I commend the organizers of this meeting. It is time for those who have been working somewhat independently or concentrating on some specific problem or remedy to come together to assess progress, determine how the work can be better coordinated, and to develop a united plan that will accelerate progress. One of the priorities of my office will be establishment of closer liaisons with Legal Services Programs and the provision of research and other assistance.

I offer my congratulations, too, to the new Consumer Law Center at Boston College Law School under the direction of the very capable Professor William Willier. One of the priorities in the consumer area is research. Sometimes lack of *extensive* research which would prove the consumer's case overwhelmingly has materially slowed progress in securing remedies for abuses known to exist. Lack of research has permitted consumer advocates to be dismissed too often with the charge they are mere "bleeding hearts." Actually, it is a sad commentary that the consumer has been researched from his head to his toe, by the marketeers to determine what he will buy, how he can be induced to buy, when he will buy, where he will buy, and so on ad infinitum. But research as to what his *problems are,* the scope and the scale of those problems, and how they can be resolved is still in its infancy.

Also sadly lacking, and I believe a factor which has also slowed the progress of securing remedies for consumer abuses, has been the absence of a source of centralized information to assist lawmakers, educators and others.

Consumer law courses have been yet another deficiency. There has been even the more basic deficiency of text and reference material for use in such courses. Law courses, in the main, have been presented from the

strictly commercial point of view. As a result, the number of lawyers who have developed an awareness of the consumers' problems and have directed their careers to consumer law have been few. Admittedly, the development of more consumer law courses is a long range project. But it is essential to start now. Not only will this be reflected in the private bar within a few years, it will be reflected in those who serve in government, in legislatures, and in the courts.

I believe it is a reasonable statement that the private bar is the sleeping giant in this area. For obvious reasons, the organized bar has for years avoided consumer transactions. The small amount generally in controversy, the difficulties of proof, and the lack of adequate compensation for professional service have relegated the handling of consumer litigation to a very small portion of practicing lawyers. Yet no greater protection for consumers could be provided than an aroused bar, properly motivated. Not only would consumers receive greatly enhanced measures of protection, but the cost of such a program to government at all levels would be slight.

An import step to bring the private bar into the consumer protection picture is proposed in the suggested revision of the Unfair Trade Practices and Consumer Protection Law. The four keys to greater involvement as suggested in the proposed law are: (1) Minimum damage recoveries; (2) Admonitory damages, such as treble damages; (3) Class action; and (4) Payment of attorneys' fees.

Hopefully, the creation of the new Consumer Law Center will inspire and guide the creation of others throughout the country. It goes without saying that my office will seek to cooperate in every way possible.

Ideally, a nationwide program to resolve consumer problems will reach literally from the consumer's door-step to the State Capitols, to the White House, and the Congress, and to the courts at every level. It will be a working partnership, incorporating the business community, educators, consumers themselves, government at all levels, and the private bar.

There is also an increased role which I believe the National Legal Aid and Defender Association can take. (1) Documentation of the problems, particularly, of course, in the case of the poor consumer. (2) Bring test cases into the courts so that in time we will have established a broadly expanded body of reported case law. For example, three weeks from today the Federal Truth-in-Lending Law becomes effective in this country. In order to dramatize its meaning to consumers and to businessmen, I would like to see representatives of your groups file private suits of behalf of consumers for violations of the Act in our courts pursuant to the statute. I think that such ligitation will point up in a way that no other action could that Truth-in-Lending is indeed the law of the land and that it will be enforced as Congress intended. The Federal Truth-in-Lending Law provides for private remedies. Let us use them.

One of the major needs today—and one which this group can play a major role in resolving—is improvement of the grievance and redress procedure for the consumer. A key factor here is a review of the present court system. Debtor's prisons supposedly are a thing of the past—the dim, dark unenlightened past. But, imprisonment for debt as a result of the supplementary process procedure in our courts is still possible. That this should be so in America in 1969 is incredible—and intolerable.

We must also improve the small claims courts procedures. We must make wider use of consumer class suits. Given the crowded condition of court dockets and the realities of the present day market-place, perhaps courts of law are not the most satisfactory forum for settling controversies, and we should explore other possibilities.

We must also review the whole range of Federal and State laws in which the buyer does not, in effect, have equal rights with the seller. The holder-in-due-course doctrine in consumer transactions should be eliminated. As those who have long studied the consumer's problems point out, the risk of dealer fraud now rests squarely with the consumer under the system in which a financing agency can purchase installment notes free of consumer defenses or can assume this position a short time after a contract is signed. The fact that some States have removed holder-in-due-course protection from all installment sales raises a strong question as to the validity of the argument that removal of holder-in-due course protection would put finance companies out of business. Not only are financing agencies quite able to protect themselves by requiring reserve deposits, for example, from sellers of installment paper, but the self-policing that they would initiate would rebound to the benefit of consumers and ethical businessmen alike. Once a finance company knows that it has some responsibility in seeing to it that the goods or services underlying the installment contract are properly furnished, we can confidentially expect that consumer complaints will decrease in volume.

Harsh collection practices should be outlawed, especially the third party contacts. I think it outrageous that a consumer's employer, neighbor, or brother-in-law should be contacted about an alleged debt owed by the consumer. Confessions of judgment in consumer credit transactions, wage assignments, and wage garnishments should be prohibited. So should referral sales. The whole concept of repossession of goods in the consumer field should be reexamined.

Cooling-off periods should be provided in door-to-door sales contracts, so that the housewife who signs the contract in order to get rid of the persistent salesman can have an opportunity to rescind without cost and without cause.

Some of these practices have been restricted in the proposed Uniform Consumer Credit Code adopted by the National Conference of Commissioners on Uniform State Laws and introduced into a number of the 1969 State legislative sessions. We recognize that the Code provides stronger protection for the consumer than now exists in some States. But some States have stronger provisions already on the books. Many provisions of the UCCC must be changed for it to become even basically acceptable to consumers. As one example, the Code inexplicably excludes pawnbrokers from its coverage. Yet, pawnbrokers traditionally are the highest rate lenders available, and their clientele are invariably our poorer and disadvantaged citizens. Further, the Code excepts insurance companies selling insurance from its coverage, with the exception of credit insurance. And yet, automobile and fire insurance is surely often sold on credit, and the consumer who buys that service is entitled to protection. We should strive to make the Code a real consumer bill rather than one which is merely better than nothing.

Essential to the improved consumer protection framework which must be built is the establishment of strong consumer affairs offices in every State. Such offices should be adequately financed and adequately armed with basic protection laws, power to conduct investigations, hold hearings, issue subpoenas, and enforce the laws effectively. Such offices should have branches throughout the State, especially in the urban and rural ghetto areas so they are easily accessible to the poor.

Of course, one of our highest priorities both at the Federal and State level must be attention to the special consumer problems of the poor. There is unmistakable evidence that a factor in the discontent in our cities is frustration with a system which for years has permitted the unscrupulous to take advantage of those least able to pay. These frustrations and the alienation were voluminously documented by the Kerner Report. The present system has permitted laws and institutions designed for the more affluent to work special hardship on the poor and the least sophisticated. We must make the establishment work for the poor, and we must help them overcome their fears of the establishment. Certainly consumer education can help—and must be increased. Urgently needed, too, are nonprofit debt consolidation services and family financial counseling. Perhaps consideration should also be given to some form of Federal grant-in-aid programs to the States to provide this counseling. In this connection, I would urge that commercial debt-pooling practices be reviewed carefully, with a view towards outlawing or, at the least, restricting such practices. We must also devise a means to increase credit options and increase true competition in the ghetto areas so that the poor do not pay more. I stress again, we must improve the grievance and redress system. When we consider the results achieved by the Legal Defense Fund of the National Association of the Advancement of Colored People to secure equality and justice for Black Americans, we are convinced that a similar venture to eliminate the oppression of the low income consumer will meet with equal success.

I expect much from this Seminar in terms of concrete proposals which can assist consumers, and I would welcome the presentation of those proposals to my office. I want you to know that you have, in my office, a sympathetic ear and that I intend to be active in the consumer area.

The consumer, especially the poor, has waited long for effective remedies and elimination of abuses. He must soon see results. It is my intention that he will. I know it is yours.

Thank you.

NEW DRUNK DRIVING GUIDELINES

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. FRASER. Mr. Speaker, I have introduced a bill which I am setting out in the RECORD at the end of my remarks. It updates the District of Columbia law on driving under the influence of intoxicating liquor. A blood alcohol level of 0.10 rather than the present 0.15 would generally be evidence of being under the influence of intoxicating liquor. In addition, it would establish the legal right for an arresting officer to have a blood alcohol or similar test performed on a driver operating a motor vehicle within the District. This is the law in a vast majority of the States.

This type of legislation has been very effective in discouraging drunk driving in other parts of the country and I believe it will be very helpful in the District of Columbia. The bill follows:

H.R. 12317

A bill to promote safe driving and eliminate the reckless and irresponsible driver from the streets and highways of the District of Columbia by providing that any person operating a motor vehicle within the District while apparently under the influence of intoxicating liquor shall be deemed to have given his consent to a chemical test of certain of his body substances to determine the alcoholic content of his blood, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Implied Consent Law for the District of Columbia".

SEC. 2. As used in this Act—

(1) The term "Commissioner" means the Commissioner of the District or his designated agent.

(2) The term "District" means the District of Columbia.

(3) The term "license" means any operator's permit or any other license or permit to operate a motor vehicle issued under the laws of the District, including—

(A) any temporary or learner's permit;

(B) the privilege of any person to drive a motor vehicle whether or not such person holds a valid license; and

(C) any nonresident's operating privilege.

(4) The term "nonresident" means every person who is not a resident of the District.

(5) The term "nonresident's operating privilege" means the privilege conferred upon a nonresident by the laws of the District relating to the operation by such person of a motor vehicle, or the use of a vehicle owned by such person, in the District.

(6) The term "police officer" means an officer or member of the Metropolitan Police force, the United States Park, or the Capitol Police force, or any other person actually and officially engaged in the performance of police duties in connection with guarding the property of the United States or of the District.

SEC. 3. Any person who operates a motor vehicle within the District shall be deemed to have given his consent, subject to the provisions of this Act, to a chemical test or tests, of his blood, breath, or urine, whichever he may elect, for the purpose of determining the alcoholic content of his blood. The test or tests shall be administered at the direction of a police officer who, having arrested such person for a violation of law, has reasonable grounds to believe the person to have been driving or in actual physical control of a motor vehicle within the District while under the influence of intoxicating liquor.

SEC. 4. Only a physician or registered nurse acting at the request of a police officer may withdraw blood for the purpose of determining the alcoholic content thereof. This limitation shall not apply to the taking of a breath or urine specimen. The person tested may, in addition to submitting to the test administered at the direction of a police officer, also submit to a chemical test or tests administered to him by a physician, registered nurse, or other person of his own choosing who is qualified to administer such tests or tests. The failure or inability to obtain an additional test by a person shall not preclude the admission of the test or tests taken at the direction of a police officer. Upon the request of the person who is tested, full information concerning the test or tests taken at the direction of the police officer shall be made available to him.

SEC. 5. Any person who is unconscious, or who is otherwise in a condition rendering him incapable of refusal, shall be deemed not to have withdrawn the consent provided by section 3 of this Act and the test or tests may be given; except, that if such person thereafter objects to the use of the evidence so secured, such evidence shall not be used and the license of such person shall be revoked, or, if he is a resident without a license, no license shall be issued to him for a period of six months.

SEC. 6. If a person under arrest refuses to submit to chemical testing, he shall be informed that failure to submit to such test will result in the revocation of his license. If such person, after having been so informed, still refuses to submit to chemical testing, no test shall be given, but the Commissioner, upon receipt of a sworn report of the police officer that he had reasonable grounds to believe the arrested person had been driving or was in actual physical control of a motor vehicle upon the public highways while under the influence of intoxicating liquor, and that the person had refused to submit to the test or tests, shall revoke his license for a period of six months; or if the person is a resident without a license to operate a motor vehicle in the District, the Commissioner shall deny to the person the issuance of a license for a period of six months after the date of the alleged violation, subject to review as hereinafter provided.

SEC. 7. (a) Whenever any license has been revoked or denied under the provisions of this Act, the reasons therefor shall be set forth in the order of revocation or denial, as the case may be. Such order shall take effect five days after service of notice on the person whose license is to be revoked or who is to be denied a license, unless such person shall have filed within such period written application with the Commissioner for a hearing. Such hearing by the Commissioner shall cover the issues of—

(1) whether a police officer had reasonable grounds to believe such person had been driving or was in actual control of a motor vehicle upon the public street or highway while under the influence of intoxicating liquor; and

(2) whether such person, having been placed under arrest, refused to submit to the test or tests, after having been informed of the consequences of such refusal.

(b) If, following the hearing provided in subsection (a) of this section, the Commissioner shall sustain the order of revocation, the same shall become effective immediately.

SEC. 8. Any person aggrieved by a final order of the Commissioner revoking his license or denying him a license under the authority of this Act, may obtain a review thereof in the District of Columbia Court of Appeals in accordance with chapter 3 of title 17 of the District of Columbia Code.

SEC. 9. (a) Paragraphs (2) and (3) of the first section of the Act of March 4, 1958 (D. C. Code, sec. 40–609a) are amended by striking out "fifteen one-hundredths" and inserting in lieu thereof in each such paragraph "ten one-hundredths" and by striking out "twenty one-hundredths" and inserting in lieu thereof in each such paragraph "eleven one-hundredths".

(b) Subsections (c), (d), and (e) of such Act are repealed.

BLACK REPARATIONS OR BLACKMAIL

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. RARICK. Mr. Speaker, the Lord's servants have converted his tithes and offerings to the devil's work. See Matthew 7: 6.

So that our colleagues may understand the background on the National Black Economic Development Conference and its parents, the Interreligious Foundation for Community Organization—IFCO—and the American Baptist Convention, I include articles from the American Baptist Crusader magazine, from Christian Beacon, and newsclippings:

[From American Baptist Crusader]

THE BLACK ECONOMIC DEVELOPMENT CONFERENCE

WHAT IS IFCO?

"The Interreligious Foundation for Community Organization is a unique national coalition of Protestant, Jewish and Roman Catholic social agencies and local and regional development groups. It seeks to implement common programs and strategies of member organizations, give local assistance in technical areas, conduct research in cooperation with indigenous community groups, and raise funds for the development of mass-based community organizations."—*from an IFCO release dated Sept. 5, 1968.*

IFCO was founded in September, 1967. Currently 23 religious and quasi-religious agencies are members (membership fee: $1,000 per year). It has raised and disbursed $1,495,510.49 to about 50 community-type social-activist and/or training organizations.

The executive director is the Rev. Lucius Walker Jr., an American Baptist clergyman and an ecumenical missionary of the American Baptist Home Mission Societies. In a statement prepared for delivery at the recent ABC sessions in Seattle, Mr. Walker reported (in part): "I would also like to make it very clear that IFCO funds have not gone exclusively to militant groups. Our funds go to projects that are inclusive in their membership and promote people power so that poor minority groups can redress their grievances in society. The groups we fund represent diverse segments of community population ranging from conservative to militant. . . . The claim that we are connected with the Black Panther Party is utterly ridiculous."

HOW ARE AMERICAN BAPTISTS INVOLVED WITH IFCO?

American Baptists are related to IFCO through their Home Mission Societies which pay the annual membership fee and which, additionally, has made an unrestricted grant of $200,000 to IFCO from World Mission Campaign receipts. Two ABHMS staff members are on IFCO's board: Dr. Paul O. Madsen and the Rev. Ray L. Schroder. As noted above, the Rev. Lucius Walker Jr., IFCO's executive director, is a commissioned missionary of the ABHMS.

WHY ARE THE AMERICAN BAPTISTS INVOLVED WITH IFCO?

A statement released on May 26 by the ABHMS says:

"One denomination is limited in its resources. In IFCO we saw a viable entity through which we could combine resources with others to address massive problems. We also saw IFCO as a means of keeping in meaningful dialogue with black leadership. . . .

"But those are strategic reasons. Our prime reasons for charter membership in IFCO were (and still are) theological. The social problems of today are massive. . . . We feel a compulsion as Christians to minister to those needs. Support of community organization, with its emphasis on the right of local determination (clearly a Baptistic principle) is currently the best way known to us for carrying on this ministry."

The Home Mission Society explains that the $200,000 donation to IFCO was not included in World Mission Campaign publicity "be-

cause it did not exist at the time the literature was prepared." The release also states:

We realize that many constituents are critical of the ABHMS Board for not dramatically increasing that amount. We realize that good stewardship will require constant re-evaluation.

WHAT IS THE NATIONAL BLACK ECONOMIC DEVELOPMENT CONFERENCE?

A three-day conference April 25–27 in Detroit, Mich., called together and funded ($50,000) by IFCO attracted more than 600 black leaders from all parts of the nation. The white press was barred but black reporters were admitted. Director Walker (in the document cited above) reports:

"Throughout the conference speakers and participants concurred in total concensus on such points as the irrelevance of black capitalism . . . the dysfunction of capitalist interest in contributing to the genuine liberation of the black community and . . . an impatience with piece meal programmatic projects for the economic development of the black community. . . . These points were contained in many conference workshop and caucus resolutions and were riterated in a document that was presented on Saturday evening, title 'Total Control of Black Communities—The Only Solution to the Black Economic Development' by Mr. James Forman. At the close of this speech, Mr. Forman prsented a document that has since become known as the 'Black Manifesto' in which reparations in the total of $500 million from white Christian churches and synagogues was demanded."

After presenting the manifesto (adopted by the conference by a reported vote of 187 to 63 with many abstentions), the National Black Economic Development Conference was declared established with a Steering Committee of 24 members headed by James Forman. It first received headlines with its confrontation at Riverside Church, New York, on May 4.

ARE IFCO AND THE NATIONAL BLACK ECONOMIC DEVELOPMENT CONFERENCE RELATED?

Technically, no. At a meeting on May 6 in New York City the IFCO Board (among other things) supported "the programmatic aspects of the manifesto and the other conference resolutions" without "endorsing the strategies or tactics by which this manifesto is implemented." It suggested that no IFCO staff member serve on the Black Economic Conference Steering Committee; it urged the churches to come up with $270,000 necessary to launch the conference's activities; and it said that only money so designated and coming to IFCO "above and beyond present church commitments" would be turned over to the conference.

It is fair to say, therefore, that the Black Economic Conference was spawned under the IFCO umbrella—and IFCO is related to it as it is to 50 other organizations—but organically the two are separate.

Director Walker (in the document cited above) says, however, that "IFCO applauds itself and feels that its responsibility . . . has been justly exercised in convening the forum where such a new thrust could emanate." He also records his personal position as follows:

"In my judgment the introduction of the concept of reparations through the National Black Economic Development Conference occasioned a new level of awareness and an encouraging turn in developments within the movement of black liberation. In the years ahead our society will need to deal with the question of restitution for its maintenance of and participation in the slave economy and in a dual system that has deprived and denied black citizens equal rights in American society. The guilt of white America has never been expiated in any formal manner. The concept of reparations will allow an opportunity for formal restitution which will not only contribute to the economic development of the black community but the psychological relief of the white community that can potentially diffuse the rising tension between the races and put us on the road towards viable reform rather than the present tack that we seem to be following towards revolution and conflict in American society."

[From Christian Beacon, June 19, 1969]

ABC LEADERS HEAR FORMAN

The American Baptist Convention at Seattle, Washington, May 14–18, 1969, became the platform for James Forman and his Black Manifesto, and he received "a considerable hand when he finished." The American Baptist news-magazine *Crusader* gives a detailed account:

"The convention's most dramatic moment—though certainly not its most inspiring one—came on Saturday when Mr. James Forman, chairman of the newly-formed National Black Economic Conference, and several supporters arrived in Seattle and requested platform time to address the delegates. After a huddle of officials, it was decided to give him 15 minutes at the start of the afternoon's business session, a decision later approved by vote of the delegates who also agreed to grant another 15 minutes to any who wanted to respond.

"In the interest of adhering to his time allotment, Mr. Forman skipped most of the verbiage of his manifesto which he had read before some religious groups and in which he demands one-half billion dollars in 'reparations,' and came directly to the three demands (he said there were four but announced only three) which he levied against American Baptists.

"These were:

"(1) The deeding of all unused ABC land holdings in the South to the Black Economic Conference for conversion into cooperative farms;

"(2) A donation of $60 million to the Interreligious Foundation for Community Organization (IFCO).

"(3) A listing of the denomination's holdings in stocks, bonds and investments, and the turning over of 60 percent of the income to the Black Economic Conference.

"Mr. Forman said these sums were due the blacks as reparations for years of economic subjugation. He declared that he and his followers were prepared to die to achieve them. He received a considerable hand when he finished.

"He was followed at the podium by the Rev. Orlando E. Costas, an American Baptist clergyman from Milwaukee, who proclaimed himself a spokesman for 'The Brown American Baptist Churchmen.' In three minutes of impassioned speech Mr. Costas said that Baptists with a Spanish accent had yielded for many years to the wishes of their 'patrones' (bosses) in the American Baptist Home Mission Societies but 'no more. We have taken enough and no longer will we, the young brown churchmen, accept your paternalism and tokenism.' He proclaimed compatability with the 'black churchmen,' though some inquiry among the blacks and other Spanish-speaking American Baptists did not turn up any broad basis of support for Mr. Costas.

"Five additional speakers then addressed the delegates for three minutes each. Two of them (both white) supported Mr. Forman and his demands and two others (also white) rejected them before the Rev. Samuel B. McKinney, chairman of the Black American Baptist Churchmen, announced that his group endorsed 'the principle of reparations without necessarily agreeing with the methods of the Black Economic Conference.'"

The Baptist magazine also reports the attitudes of American Baptist leaders on this matter:

"ABC President Thomas Kilgore, Jr.: 'I don't necessarily agree with Jim Forman's tactics and I'm not sure "reparations" is the word to use but in substance I favor the idea.'

"Black American Baptist Churchmen: The Rev. Samuel McKinney, chairman, announced on the platform at Seattle that his organization 'endorsed the principle of reparations as a first step toward repentance' and that it 'endorsed the programmatic aspects of such utilization of funds without necessarily endorsing the tactics of the Black Economic Conference.'"

[From the Washington (D.C.) Post, June 7, 1969]

FORMAN, FOLLOWERS OCCUPY NEW YORK CHURCH CENTER

(By William R. MacKaye)

Negro militant James Forman and his followers yesterday disrupted the nerve center of a broad swatch of American Protestantism by occupying three full floors of the Interchurch Center on New York's Morningside Heights.

The Forman group, acting in the name of the National Black Economic Development Conference, has demanded $500 million from American religious bodies as reparations for the ill-treatment Negroes have received from whites in this country.

"These are liberated areas," Forman was quoted as saying from his command post in the headquarters of the Reformed Church of America.

On Monday we'll have a strike of all the black and Puerto Rican workers in this building and we hope white workers will support it," Forman was quoted. "We are not going to leave until we get some action on our demands."

The new occupation began Thursday when the demonstrators moved in on the 18th floor offices of the Reformed Church.

Many of the denomination's officials were in New Brunswick, N.J., preparing for their annual meeting, the General Synod, which began yesterday. But about 50 office workers were forced to leave.

Employes arriving at the eighth floor executive offices of the National Council of Churches found barricades of furniture blocking the exits from the elevators.

There was a similar scene at the 11th floor offices of the Board of National Missions of the United Presbyterian Church. Forman backers occupied the Board offices for five days last month.

A Presbyterian who holds posts in both the United Presbyterian unit and in the National Council said at midafternoon that withdrawals of the Forman forces from the eighth and 11th floors had been successfully negotiated.

The Rev. Lawrence W. McMaster Jr., an executive secretary of the Board of National Missions and an acting associate general secretary of the Council, said the occupiers left the Council's offices after R. H. Edwin Espy, the general secretary, promised to submit their demands to the organization's general board "at the earliest possible date."

He added that Forman had agreed to withdraw also from the Presbyterian floor after he was promised a meeting with the Rev. Dr. Kenneth Neigh, general secretary of the Board of National Missions, as soon as possible.

Dr. Neigh was in the hospital in Detroit yesterday, Mr. McMaster said Forman had indicated in the negotiating session he did not know Dr. Neigh was out of town.

The Interchurch Center is a 19-story building adjacent to Riverside Church, where Forman first used his tactic of calculated disruption by presenting his reparations demand at a Sunday service May 4.

It was not known how many of Forman's supporters were in the Center.

Some confusion developed at the Center over who would determine how the occupation was to be handled.

The Center's board of trustees, headed by New York banker Edmund F. Wagner, met in emergency session, according to Mr. McMaster, to decide whether to seek a court injunction ousting the occupiers.

Mr. McMaster said such a move was strongly opposed by most of the religious agencies housed in the building. The building manager's office declined to say what decision the trustees reached, but a National Council spokesman said he believed they had decided not to ask for an injunction.

Since his campaign began, Forman has also presented his reparations demand to officials of the Roman Catholic Archdiocese of New York, the Episcopal Church, the Lutheran Church in America, the Christian Church (Disciples of Christ), American Baptist Convention, and the United Methodist Board of National Missions.

[From Christian Beacon, June 19, 1969]

SOME 2,000 STRIKE AT NCC CENTER

Two thousand employees of the Church Center, headquarters of the National Council of Churches in New York, and other church bodies, walked out in a one-day strike at the call of James Forman. Forman, who is demanding that all the church organizations in the Church Center contribute to his reparations, called the sympathy strike. He estimated that 80 percent of the workers in the building obeyed his call. Other church officials insisted that only 50 percent went out. Work, however, was disrupted for that day.

SENATE—*Tuesday, June 24, 1969*

The Senate met at 11 o'clock a.m. and was called to order by the Vice President.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

God of grace and glory, at this morning altar of devotion flood our souls with a sense of Thy presence. Dispel all doubts of Thee, and of Thy divine guidance of this Nation in the processes of history. Assure us once again "that they that wait upon the Lord shall renew their strength." Grant us clean hands and pure hearts for high and holy work in this place. Equip us with a faith that dares, a love that shares, and a service that cares, until by Thy grace this shadowed earth becomes Thy kingdom of justice and truth and brotherhood. Bring us to the end of the day unashamed, with quiet mind, and the assurance of work well done. Amen.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States, submitting nominations, were communicated to the Senate by Mr. Leonard, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Monday, June 23, 1969, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

FISCAL 1970 FOOD STAMP AUTHORIZATION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that Senate Joint Resolution 126, Calendar No. 254, be laid before the Senate and made the pending business.

The VICE PRESIDENT. The joint resolution will be stated.

The ASSISTANT LEGISLATIVE CLERK. A joint resolution (S.J. Res. 126) to increase the appropriation authorization for the food stamp program for fiscal 1970 to $750 million.

The VICE PRESIDENT. Is there objection to the present consideration of the joint resolution?

There being no objection, the Senate proceeded to consider the joint resolution.

S. 2470—INTRODUCTION OF A BILL TO EXTEND THE BENEFITS OF THE FOOD STAMP PROGRAM TO ELDERLY PERSONS

Mr. SCOTT. Mr. President, will the Senator from Montana permit me to introduce another food stamp measure?

Mr. MANSFIELD. Surely.

Mr. SCOTT. Mr. President, I introduce, for appropriate reference, legislation to extend the benefits of the food stamp program to elderly persons now denied eligibility because they lack kitchen facilities, or because they are physically unable to cook for themselves. Under my bill, nonprofit, charitable organizations would be authorized to accept food stamps in exchange for cooked meals prepared either for home delivery or for consumption in community dining halls.

I welcome as cosponsors in this effort Senators ALAN BIBLE, Democrat, of Nevada; EDWARD W. BROOKE, Republican, of Massachusetts; THOMAS J. DODD, Democrat, of Connecticut; HIRAM L. FONG, Republican, of Hawaii; PHILIP A. HART, Democrat, of Michigan; VANCE HARTKE, Democrat, of Indiana; MARK O. HATFIELD, Republican, of Oregon; ERNEST F. HOLLINGS, Democrat, of South Carolina; DANIEL K. INOUYE, Democrat, of Hawaii; EDWARD M. KENNEDY, Democrat, of Massachusetts; WARREN G. MAGNUSON, Democrat, of Washington; WINSTON L. PROUTY, Republican, of Vermont; WILLIAM B. SPONG, Democrat, of Virginia; TED STEVENS, Republican, of Alaska, and EDWARD J. GURNEY, Republican, of Florida.

In the House of Representatives this bill is being introduced by Congressman JOSEPH M. MCDADE, Republican, of Pennsylvania; Congressman EDWARD G. BIESTER, JR., Republican, of Pennsylvania; and others.

Congress, in approving the Food Stamp Act of 1964, intended to help older citizens with meager incomes to buy more and better food. Under the present law, however, persons who otherwise meet age, residency, and income requirements are still not eligible for food stamps if they do not have cooking facilities in their households. If a physical incapacity or chronic illness make it impossible for persons to shop or prepare food, and if they have no one to do these things for them, these persons, too, are in effect denied the use of the food stamps. I see no reason why these citizens, who are often among the most isolated and needy in the community, should be denied the benefits which the Food Stamp Act was enacted to provide.

My bill would amend the Food Stamp Act to meet this problem. It would authorize the Secretary of Agriculture, under regulations carefully prescribed and administered by him, to designate specific church and other nonprofit organizations of a bona fide charitable nature to accept food stamps in exchange for prepared meals. Although the redemption of these stamps would assist eligible groups in the purchase of food, the stamps themselves would be issued only to individuals, who would be the direct beneficiaries of this amendment. This, I believe, is fully in keeping with the congressional intent behind the Food Stamp Act. Moreover, by engaging the cooperation of nonprofit, charitable organizations, my proposal would be in keeping also with the current focus of relying more heavily on private initiative for solutions to pressing national problems, of which one, certainly, is hunger.

Today, in communities across America, more than 50 charitable organizations are taking one approach to the alleviation of hunger through programs which offer prepared meals to "shutins" and other elderly persons who are unable to cook for themselves and who, in the absence of this assistance, might otherwise face the dismal prospect of institutionalization. These programs, relying heavily on voluntary effort, are aimed at an element of the hunger problem which,

though less noticed, is nevertheless significant and fully worthy of attention.

It was through one such effort in my Commonwealth of Pennsylvania that I first learned of the need for the legislation which I am proposing today. The meals on wheels program, operated by the Lutheran Service Society of Western Pennsylvania, currently provides such service to Pittsburgh's Northside, a section in which an unusually large number of persons live in rooming houses. A well-balanced nutritious diet is offered through two meals a day served five times weekly. Despite the extensive use of volunteers, however, food and other costs have limited the number of elderly who can be reached by this program so far to only about 50. Estimates indicate that in this one area alone, several thousand needy persons might potentially be served. My bill is designed to encourage and make possible the expansion of just such efforts, not only for Pittsburgh, but for the many communities and cities throughout the Nation where a similar situation and need exists.

It is an irony in these times of unprecedented economic achievement that the basic goal of enough to eat still remains, for too many Americans, a promise rather than reality. As a nation, we are becoming increasingly aware of the need to strengthen our food assistance programs to assure access to a proper diet for persons living on poverty level incomes and below. This administration has announced its intention to make the food stamp program a more effective vehicle for this purpose. Yet, without the changes proposed in my bill, some of our most needy older citizens will remain disenfranchised from food stamp benefits.

Mr. President, the Senate Agriculture and Forestry Committee currently has under consideration the administration's proposed food stamp program revisions. I have urged that my bill be included in these sessions as additional legislation urgently needed in order to bring the Federal Government and many communities together in a further common effort to erase hunger and malnutrition among the elderly.

Because these communities speak best for themselves, I ask unanimous consent that the following excerpts from letters which I received in response to this proposal be printed in the RECORD following my remarks and the text of my bill.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill and excerpts will be printed in the RECORD.

The bill (S. 2470), to amend the Food Stamp Act of 1964 to authorize elderly persons to exchange food stamps under certain circumstances for meals prepared and served by private nonprofit organizations, and for other purposes, introduced by Mr. SCOTT (for himself and other Senators), was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

S. 2470

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the second sentence of section 3 (e) of the Food Stamp Act of 1964 is amended to read as follows: "The term 'household' shall also mean (1) a single individual living alone who has cooking facilities and who purchases and prepares food for home consumption, or (2) an elderly person who meets the requirements of section 10 (h) of this Act."

SEC. 2. Section 3 (f) of the Food Stamp Act of 1964 is amended by adding at the end thereof a new sentence as follows: "Such term also means any private nonprofit organization referred to in section 10 (h) of this Act."

SEC. 3. Section 10 of the Food Stamp Act of 1964 is amended by adding at the end thereof a new subsection as follows:

"(h) Subject to such terms and conditions as may be prescribed by the Secretary, food stamps issued under this Act to any elderly person may be exchanged by such person for meals prepared and served by any private nonprofit organization if—

"(A) such person does not have facilities for the preparation of food in his living quarters, or does not have reasonable access to such facilities, and the meals served by such organization are served in a common dining room and are prepared and served primarily for the benefit of elderly persons, or

"(B) such person is housebound, feeble, physically handicapped, or otherwise disabled to the extent that he is unable to prepare nutritious meals for himself, and such organization prepares and delivers meals to such person.

No elderly person who otherwise meets the eligibility requirements of this Act shall be denied a coupon allotment because he has no facilities for the preparation of food or access to such facilities. As used in this subsection, the term 'elderly person' means any person sixty-five years of age or older."

The material presented by Mr. SCOTT follows:

EXCERPTS FROM LETTERS TO SENATOR SCOTT

CALIFORNIA

Eleanor Guilford, Catholic Committee for the Aging of San Francisco: "Those of us who work in the field of aging are constantly aware of the need to reduce food costs and to arrange for inexpensive food programs for older people. . . . We would like to recommend that food stamps be available for older people to purchase in smaller amounts than $20. We would like to have the Food Stamp Act applicable to non-profit groups such as Senior Centers which serve meals to older people. Our Committee, for example, sponsors ten Parish Senior Centers."

CONNECTICUT

Joyce Ferris, Meals-on-Wheels, Inc. of Greenwich: ". . . we are serving from 18–29 people, mostly elderly. We charge what they can afford to pay and subsidize this by a fund drive annually."

DISTRICT OF COLUMBIA

George M. Pikser, Jewish Social Service Agency and Jewish Foster Home: "We have developed a new program for those aging Jews who are too sick or feeble to prepare hot food for themselves, but who otherwise do not need institutionalization. . . . For the most part the people are able to pay only a small amount of what our cost is and we accept whatever is offered. The program is very small. It is manned entirely by volunteers. . . . I feel that there may be a need for the kind of program you outline; that is, a program allowing nonprofit organizations to accept food stamps for prepared food."

William A. Wendt, Rector, St. Stephen and the Incarnation Church: "Indeed we feel a tremendous need for the type of legislation you are currently hoping to draft concerning the Food Stamp Act. We are at present feeding approximately 100 elderly people five times a week with a hot lunch type program, and for most of them it is the only nutritious meal that they eat in the course of a week."

ILLINOIS

John A. Murdock, Services to the Aging, General Board of Health & Welfare Ministries, The United Methodist Church, Evanston: ". . . based on our experiences, I would make the following suggestions:

"1. Provide means by which the poor older people can pay for balanced meals.

"2. Encourage the development of home delivered meals for the relatively few who need them and centrally served meals for the many others who need social contact as much as they need food . . ."

INDIANA

Lester J. Fox, REAL Services (Resources for Enriching Adult Living), South Bend: "The REAL Services program administers . . . the Meals-on-Wheels program that serves on the average of eighty (80) elderly persons a day who generally are homebound and unable to prepare or to have prepared adequate meals for themselves . . . Volunteers utilizing their own automobiles and equipment to maintain proper food temperatures pick up the meals at the hospital and deliver them to the clients' home . . . The meals are purchased from the hospital and delivered to the clients based on the actual cost. Older persons who are unable to pay the full cost are subsidized in part or in total by funds received from the United Fund in St. Joseph County . . . I believe the legislation you have proposed would be of great benefit in the area of adequate food services for older persons."

KENTUCKY

Opal Hughes, Boone Fork Community Kitchen, Fleming, Ken.: "We are feeding approximately 37 elderly people daily at no cost to them, 5 days a week. The elderly people that are receiving our free meals are selected on the basis of being house-confined, real real old and senile, lack of funds to provide proper diets. A number of these people may qualify for the food Stamp program, but are too old and sickly to stand in the line all day the first of the month for their food stamps." . . . "Many more people could be reached by our program if we had the funds or a food supply on a permanent basis."

MONTANA

Wilma Joe Slaughter, Daily Dinner Clubs, Rocky Mountain Development Council, Inc., 324 Fuller Avenue, P.O. Box 721, Helena: "We have 100 people attending both centers. 15 to 20 home-bounds. People of short means hesitate to come to dinner. I do feel there is a need for food stamps to be accepted in exchange for prepared food."

NEW JERSEY

Conrad J. Vuocolo, Housing Authority of the City of Jersey City, Box 8051, Five Corners Station: "We know there are thousands of individuals residing in this city alone who live in furnished rooms in such areas as the YWCA and YMCA, etc. In addition most of those who receive MEALS ON WHEELS are technically disqualified for food stamps because they are physically unable to prepare the food. Therefore we are recommending that agencies such as MEALS ON WHEELS and other non-profit organizations who are equipped to furnish low cost meals to those with limited income be considered eligible to accept food stamps in exchange for prepared food. We believe such a simple plan would eliminate the inadequate diets of many of those who are in need, and are now being denied because of the current legislative restrictions."

NEW YORK

Mary F. Champlin, Food and Nutrition Services, 613 Lafayette Building, Buffalo: "The Food Stamp Program may sound ideal; however, as you know, many in need do not avail themselves of the stamps. The amount

which has to be put out at one time and the low amounts allowed for liquid assets or cash value of life insurance in order to be eligible, work against those in great need. While the stipulation for regular and continuous purchase of stamps again may seem ideal from a nutritional standpoint, it is nevertheless difficult for those persons who have little money, have their ups and downs physically, or find it hard to cope with bad weather. We especially urge that food stamps be allowed to purchase prepared meals from non-profit meals services. That privilege would allow also more flexibility to the non-profit programs."

PENNSYLVANIA

Margaret R. Spencer, Luzerne County Bureau for the Aging, 3 East Market Street, Wilkes-Barre: "Your proposed amendment to the Food Stamp Act would be beneficial to many of our senior citizens who do not have cooking facilities or who are physically unable to prepare their own meals. The income of these people consists of Social Security benefits and/or Public Assistance and many are living below the poverty level. Any assistance they might receive by using food stamps certainly would afford an opportunity for them to enjoy a more nutritious diet."

Donald A. Nelson, Lutheran Service Society of Western Pennsylvania, 5940 Baum Boulevard, Pittsburgh: "One family of a 71-year-old mother and her 37-year-old retarded daughter are living on a total of $123 per month for both. The mother is no longer able to cook, and without the home delivered meals, the daughter would have to be institutionalized. Obviously, this cost would be considerably higher.

"A 75-year-old black gentleman was referred by the Social Service Department of Allegheny General Hospital as he did not have enough money for food each month. His income is $130 with $57 needed for rent, and he could not manage all additional expenses and eat properly.

"There are several such cases and the cycle is vicious since improper diet means more illness and less money for food."

UTAH

Mrs. V. Lucile Hutchings, Metropolitan Salt Lake Services for the Aging, 156 Westminster Avenue: "Our agency . . . for the Aging sponsors the program Meals on Wheels, which delivers a hot, nutritious noonday meal 5 days a week to Senior Citizens in the Salt Lake City area. Any Senior Citizen over 55 years of age who is physically handicapped, has a chronic illness or other condition which prevents them from shopping or preparing food for themselves, are eligible to come on the program. There is no discrimination because of race, creed, or color.

"We feel we are saving money for our local governmental agencies as the Senior Citzens Meals on Wheels recipients are able to retain their independence by remaining in their own homes, thus lessening the need for institutional care.

"Although we are charging a bare minimum fee, we still have many people who are not financially able to purchase the meal 5 days a week, and therefore purchase only 3 meals a week. We work very closely with the Welfare Department, and find about 35% of our Welfare Meals on Wheels recipients are receiving some additional funding to help them obtain the meals. Even after this help, many of them are not able to purchase a full month's meals.

"As of March 31, 1969 we were delivering over 137 meals a day, and serving an averaeg of 2,873 meals per month.

"In addition to Meals on Wheels, we have a Dining Room where any and all mobile Senior Citizens can come for hot lunch 5 days a week. . . . At the present time approximately 100 Senior Citizens attend."

WISCONSIN

Marjorie I. Jothen, The Visiting Nurse Association, 1540 North Jefferson Street: "Food Stamps help to increase the buying power for foods, but do not help people who have no means of buying or preparing the food."

PROGRAM

Mr. MANSFIELD. Mr. President, it is the intention of the leadership, following the disposition of the food stamp joint resolution, to take up Senate Joint Resolution 11, Calendar No. 123, to provide for the appointment of Robert Strange McNamara as Citizen Regent of the Smithsonian Institution.

That joint resolution will be followed by the nomination of Otto F. Otepka.

TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. I ask unanimous consent that following the disposal of those three items, there be a period for the transaction of routine morning business, with statements limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The VICE PRESIDENT. Without objection, it is so ordered.

FISCAL 1970 FOOD STAMP AUTHORIZATION

The VICE PRESIDENT. The Senate will now resume the consideration of Calendar No. 254, Senate Joint Resolution 126, to increase the appropriation authorization for the food stamp program for fiscal 1970 to $750 million.

Mr. DIRKSEN. Mr. President, is Senate Joint Resolution 126 now before the Senate?

The VICE PRESIDENT. The Senator is correct.

Mr. DIRKSEN. I merely wish to observe that there is no controversy about the joint resolution. There is a general disposition that appropriations for the food stamp program ought to be increased. Obviously, they cannot be increased without legislative authorization. The present authority extends only to $340 million. The joint resolution proposes that the amount be increased to $750 million. I think there is general agreement on that also, so I know of no opposition.

Mr. MANSFIELD. That is my understanding, but the distinguished chairman of the Committee on Agriculture and Forestry (Mr. ELLENDER) is on his way to the Chamber to make a brief statement justifying the action of the committee. I understand that the distinguished Senator from South Dakota (Mr. McGOVERN) also wishes to make a brief statement.

I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. ELLENDER. Mr. President, this is a very simple joint resolution. The committee is now working on a revision of the so-called food stamp program. I do not believe we can conclude our work on that program until early next month.

Present law provides for an authorization of $340 million for fiscal 1970. The joint resolution before the Senate would increase that amount from $340 million to $750 million. The committee is eager to have the joint resolution enacted, so that the appropriations may be increased to the amount necessary to operate the food stamp program.

Under the program that we hope to adopt early next month, the funds that will be appropriated in accordance with this joint resolution will be spent in accord with a revised food stamp program. In the joint resolution we are not attempting to change the present Food Stamp Act in any manner except to increase the amount of the authorization. I hope there will not be any objection. I can promise the Senate that the committee will report a food stamp bill soon. We hope that if the appropriation authorization is adopted, the Committee on Appropriations will provide sufficient funds to enable the food stamp program to operate at a higher level for fiscal year 1970.

The joint resolution was reported unanimously by the Committee on Agriculture and Forestry; however, the distinguished Senator from South Dakota (Mr. McGOVERN) has some reservations which he desires to state at this time.

Mr. McGOVERN. Mr. President, first of all I wish to commend the chairman of our committee, the Senator from Louisiana (Mr. ELLENDER) for his leadership and the prompt action he has taken to the food stamp legislation. I support the resolution that is pending, which was reported by our Committee on Agriculture. I support it not as the final answer, as the Senator from Louisiana said, but as a means of securing the funds that are needed not only to keep the program operating but expanding in fiscal year 1970; and also with the understanding, as the Senator pointed out, that our committee will move as expeditiously as possible to report changes that the committee feels are in order that will improve our overall food stamp program.

I also wish to commend the Senator from Louisiana for his very patient and consistent attendance not only in his own Committee on Agriculture, of which he has been chairman for so many years, but also in the new Select Committee on Nutrition and Human Needs. It is fair to say he attended more of those sessions than any other member of the committee and he followed the deliberations of the committee at every step.

Mr. President, over the past several months the Select Committee on Nutrition and Human Needs has heard repeated criticism of the food stamp program as presently administered. From the poor themselves we have learned that the cost of food stamps is far too high, that many needy families have never even heard of the program, that others have been denied the opportunity to participate, and that those who do participate are not given enough stamps to permit them to purchase a nutritious diet. But until recently we did not know how widespread these failings actually were.

I have, and shall insert in the RECORD in a moment, two documents which illustrate how few are actually served with food stamps. The first is a Department of Agriculture study showing for each State and county, and for the Nation, the percentage of poor actually participating in the food stamp and commodity distribution programs. The second, prepared by the staff of the select committee from figures supplied by USDA, shows the drop in participation in those counties switching from commodity distribution to food stamps. These documents offer conclusive proof that the food stamp program has failed, and failed dismally, in its attempt to reach the poor of this Nation. It has failed not just in the District of Columbia, California, and Florida where our select committee has visited, but in virtually every county in which it has been implemented.

This program, a program which many have called our first line of defense against hunger and which has been operating for nearly 5 years, presently reaches only 33 percent of our 3,091 counties. What is worse, even in the relatively few counties where it does operate, the food stamp program reaches a meager 16 percent of the families who are in need of assistance.

What these figures mean, Mr. President, is that a poor American family has only one chance in three of living in a county where stamps are distributed and even if it happens to have the good fortune to live in such a county, this family still has only one chance in six of actually receiving any stamps.

These figures alone are enough to explain why citizens groups in many communities have opposed the food stamp program on the grounds that it is a "cruel hoax upon the poor." They might well have added that, rather than helping the poor, the food stamp program is at this moment actually denying 1.1 million Americans food assistance which they would be receiving if no food stamp program had ever existed. These 1.1 million people were being helped by their Government through direct distribution of surplus foods. But they had the misfortune to live in counties which switched to the new and supposedly better food stamp program. Unfortunately, under the new program they soon found that they did not qualify for assistance, that they could not afford to hand over as much as 50 percent of their total income for an adequate supply of stamps, or that they could not find time to spend hours or even days waiting in line to be certified for their stamps.

I doubt very much, Mr. President, whether many Members of Congress are aware of how very poorly the food stamp program is performing in their own States. I did not know that in South Dakota that of the 14 food stamp counties out of the total of 67 only two reach more than 10 percent of the poor and that the other 12 reach an average of 5.6 percent.

Let me cite a few other examples:

In Illinois the average food stamp county reaches 3 percent of the poor; in Iowa, 4 percent; in Nebraska, 3 percent. Unfortunately the Midwest has the worst participation record.

Comparable figures for the Northeast States show, for example, that the average food stamp county in New York serves 13 percent of those in need; Pennsylvania, 12 percent; Ohio, 9 percent.

Only in the South is the national average of 16 percent generally exceeded. In Mississippi the average food stamp county serves 25 percent of the poor; in Louisiana, 18 percent; Kentucky, 21 percent.

Much of the low food stamp participation results when counties switch from a commodity to a food stamp program. Nationally, at present, there are 40 percent fewer people on food stamps than were on commodities in such counties. In Illinois, for example, there are 68,000 poor in the 62 Illinois counties which have switched from commodities to stamps who used to receive direct food donations but now get no help of any kind.

In Missouri there has been a 67-percent drop in food program participation in counties switching from commodities to food stamps 46,000 of the 68,000 persons who received commodities before the transfer of programs are not now receiving food stamps.

These figures are, very simply, a disgrace. They prove beyond the slightest doubt that drastic reform of the food stamp program is needed, and needed now. By demonstrating that there are only eight counties in the entire Nation where the food stamp program has attained the very modest goal of serving one-half the poor, these figures make a mockery of the contention that this program, as now operated, can even begin to eliminate malnutrition.

I ask unanimous consent that the tables to which I refer, along with a brief explanation prepared by staff of the Select Committee on Nutrition and Human Needs be inserted in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER (Mr. SAXBE in the chair). Without objection, it is so ordered.

(See exhibits 1, 2, and 3.)

Mr. McGOVERN. Mr. President, I realize that these charges are serious, but I do not make them lightly. I ask the Senate how a program whose administrators are forbidden by law to provide the assistance in any county where local officials arbitrarily decide that the poor do not need help, whose regulations cut off the poor of one State, while helping those in another State, and whose legislative authority often requires that the poor be charged more than they can possibly afford to pay, can ever hope to reach all of the poor? The answer, of course, is that no such program will ever reach even a significant portion of the poor.

Mr. President, we now have before us Senate Joint Resolution 126, a bill to raise the authorization for the food stamp program to $750 million for fiscal year 1970. While it is perfectly clear that major legislative reforms are required before the food stamp program can become an effective defense against malnutrition, it is equally clear that the appropriation of additional money for the existing program would permit important changes to be made in the program. Testifying before the select committee last January former Secretary Freeman made the startling admission that in the operation of the food stamp program:

> Honestly, strictly speaking we are not squaring with the Congressional directive, which is that people should pay only as much as they have been spending for food. We can't do that because we don't have enough money.

He might have added that without any additional authority the Secretary could use additional funds to put an end to the inequitable practice of providing the very poor with about half the stamps they need to eat properly while providing the marginally poor with more than enough stamps.

Senate Joint Resolution 126 has been reported by the Committee on Agriculture as an emergency measure to permit the immediate appropriation of additional funds for the food stamp program. I understand the desire of its sponsors to move now against malnutrition. Because I share this desire, and in order to facilitate administrative reforms which can be implemented immediately I will vote for the resolution. But I must reemphasize my belief that $750 million is woefully inadequate. It is inadequate because it would not provide either the money or the authority to expand the food stamp program into every country in this Nation. It is inadequate because it would not provide the money or the authority to help all of the poor in the counties that now have a food stamp program. It is inadequate because it would not provide the money or the authority to offer stamps to all of the poor at prices which they can afford. And it is totally inadequate because it could not even provide either the money or the authority to insure that equally poor families in New York and Mississippi would be equally entitled to receive the help that they need.

Let me repeat, Mr. President, as an emergency measure the $750 million authorization is acceptable though inadequate. But it is no substitute for immediate action to pass a comprehensive food stamp reform bill. If this resolution were intended in any way as a substitute for immediate comprehensive reform, I suspect that many Senators including myself would prefer to move for such reform now by amending Senate Joint Resolution 126 on the floor. But I have been

assured by the distinguished chairman of the Agriculture Committee (Mr. ELLENDER) that his committee, on which I serve, will continue to work as hard as it has been working this past week, and that we can expect to complete markup of a comprehensive food stamp reform package either just before or immediately after the July 4 holiday. It is the hope of both Senator ELLENDER and myself that the Senate will pass a comprehensive food stamp bill in mid-July. It is also my understanding, Mr. President, that the 1970 agriculture appropriations bill will not be considered in the Senate until the Senate has disposed of Senate Joint Resolution 126 and that the appropriation for the food stamp program will be increased in the Senate, subject to passage by the House of Senate Joint Resolution 126.

I hope the other body also understands that the $750 million which we authorize today is a temporary emergency measure and not an effective response to the disgraceful failures of the food stamp program. The present administration has said that it may not even be able to spend that $750 million effectively unless we pass new food stamp legislation immediately. None of us favors appropriating money that cannot be well spent, and I am certain that the House does not favor waiting longer than it takes to pass a good food stamp reform bill before moving to end the shocking hunger and malnutrition which have aroused the conscience of America as have few domestic issues in recent years.

For these reasons I urge the Congress as a whole to move as rapidly as possible, first to authorize the emergency appropriation before us today and then to write a food stamp program that can turn the money which we appropriate into food for all, not just a pathetic handful, of the poor.

Mr. President, I have often heard in this Chamber the argument that we must not send our brave soldiers charging up a hill with only enough ammunition to get halfway to the top. This usually comes just before a vote to appropriate $40 or $50 billion for the Pentagon. I suggest with respect to the $750 million authorized by Senate Joint Resolution 126 that we are asking the poor to begin the long climb out of the valley of hunger and despair with less than enough ammunition to get halfway and without a gun that can fire that ammunition. So long as I am sure that we will soon rescue the poor with a properly financed, reformed food stamp program, I will vote to send them on their way up the hill now. If I thought we were sending them off with false promises, only to leave them stranded halfway up, I would vote not to send them at all.

For our sake and theirs, to save dollars and to save lives, I urge the Senate to vote today for Senate Joint Resolution 126 and next month for comprehensive reform of the food stamp program.

EXHIBIT 1

SUMMARY OF USDA ANALYSIS OF FOOD ASSISTANCE PROGRAMS

Recently the Consumer and Marketing Service of the Department of Agriculture completed a study which gave the percentage of poor persons participating in food assistance programs in each County and City administrative unit for which data was available.

Using this data, the staff of the Senate Select Committee on Nutrition and Human Needs developed the following State by State summary of participation in the Food Stamp and Commodity Distribution Programs. It should be noted that the Counties in the United States with no Food Stamp or Commodity Distribution program as of February, 1969 are not included in either the USDA data or the tables below.

Nationally, the average county reached only 10% of its poor people with its Food Stamp Program, and 18% of its poor people with its Commodity Distribution Program. Nationally, only .6% of the counties with Food Stamp Programs reach over 50% of their poor people and only 5% with Commodity Distribution Programs reach over 50% of their poor people. Again nationally the average participation rate for all poor persons living in Food Stamp counties is 16%. In Commodity counties this figure is 22%.

TABLE I.—THE PERCENTAGE OF POOR PEOPLE SERVED BY COMMODITY DISTRIBUTION PROGRAMS, BY STATE AND COUNTY

State	Number of programs [1]	Percent participation in average program [2]	Participation range: Lowest to highest program [3]	Number of units reaching given percentages of the poor [4]		
				0 to 20	21 to 50	51+

Wyoming	([5])					

[1] The number of counties includes all counties and cities for which the participation percentage was computed by USDA.
[2] Participation rate in the median county in each State.
[3] The range gives the percentage of poor people served by the counties reaching the lowest and highest percentages in the State.
[4] Some city programs are not included in USDA's data or in this summary due to lack of information on number of poor persons living in such cities.
[5] No program.
[6] No commodity program.
[7] The median and range are not given where only data were available on a single county in the State.

[1] Includes only counties transferring during fiscal years 1961–68. Based on participation in food stamp programs on Jan. 1, 1969, as reported by USDA and on USDA publication "Participation in Needy Family Program in Projects Prior to Transfer to Food Stamp Program and Participation in Food Stamp Program" C. & M. S./CFPSS, Dec. 2, 1968. Participation in food stamp program on Jan. 1, 1969 includes only counties which have transferred from the commodity program, thus, it is not equivalent to total participation in the food stamp program. Prepared by the Select Committee on Nutrition and Human Needs.

[2] These totals vary slightly from totals in USDA table II because cities for which Jan. 1, 1969, participation figures are not available are omitted from this table.

[3] See the following table:

	Commodity participation just before transfer	Food stamp participation just after transfer	Food stamp participation Jan. 1, 1969
California:			
Humboldt	5,032	1,027	3,539
Modoc	282	59	127
Shasta	882	2,556	4,373

[4] This figure is based on the May 1968 participation, not the December 1968 participation as all the others are.

[5] Returned to commodity program.

[1] Participation in needy family program is the peak of the 3 months prior to entering food stamp program; participation in food stamp program is the peak month nationally in fiscal year.
[2] States are counted only once in arriving at fiscal year total; also, only once since beginning of food stamp program in arriving at cumulative total.
[3] Projects expanding city to county operation or new county joining existing projects are not included as new projects.
[4] Includes District of Columbia.
[5] Rice County, Kans., withdrew Apr. 1, 1965.
[6] Cherokee County, S.C. (reentered July 1, 1968) and Hardeman County, Tenn., withdrew July 1, 1967; Nash County, N.C., withdrew August 1, 1967 (reentered Aug. 1, 1968); Marshall County, Miss., withdrew December 29, 1967.
[7] Includes District of Columbia; Massachusetts discontinued program when Amherst (city) withdrew July 31, 1968.
[8] Amherst (city), Mass., withdrew July 31, 1968; Red River, Tex., withdrew Sept. 30, 1968.

Mr. HOLLAND. Mr. President, I, too, shall vote for Senate Joint Resolution 126. During consideration of the whole food stamp situation in the Committee on Agriculture and Forestry, it was agreed that the length of time required to work out a general revision of the food stamp legislation in both Houses, and to obtain Presidential approval, was so great that the only way in which we could reflect the evident and recognized need, and go beyond the $340 million presently authorized by law for the food stamp program, would be to follow the course now being followed; namely, to authorize the chairman of the committee, the able Senator from Louisiana (Mr. ELLENDER), to present for the full committee a resolution along the lines we are now considering, increasing the authorization for fiscal 1970 to $750 million.

Since, however, there are many questions in this whole matter, I want briefly to speak as to my understanding of the situation.

My understanding was, first, that the Senator from Louisiana would be empowered to present the resolution in the speediest time possible before the final markup of the annual appropriations bill for the Department of Agriculture.

I serve as chairman of the Subcommittee on Appropriations which handles that bill and which, on yesterday, marked up that bill providing for $340 million, which was the maximum that we could provide under existing authorizations.

The full Senate committee will consider this matter and approve or disapprove the recommendations of the subcommittee of 15 which marked up this bill yesterday.

My understanding is that, after the Senate completes action favorably on Senate Joint Resolution 126, the full committee will be empowered to proceed, in accordance with the resolution we are now considering, to consider the amount up to, but not exceeding, $750 million which ought to be placed in the annual appropriations bill in its final markup by the Appropriations Committee for the food stamp program.

Mr. President, it was my understanding, at the time that we authorized our distinguished chairman to present this resolution, that it would include also a provision for the carrying forward of any unspent amount of the total appropriation for 1970.

I have just consulted with the distinguished Senator from Louisiana, who tells me that it proved to be not practical to include that in this resolution; but that he still feels that our committee is committed to include in the food stamp bill the committee is still working on a provision for carryover of any unspent amount in the 1970 appropriation to 1971, and I believe a similar commitment to carry over any unspent amount in the appropriation for 1971 into 1972, it being the present intent and decision of the Senate Committee on Agriculture and Forestry to have the new, enlarged food stamp bill cover not only the increased authorization for 1970, but also to increase authorizations for 1971 and 1972.

Mr. ELLENDER. Mr. President, will the Senator yield?

Mr. HOLLAND. I am glad to yield to Senator from Louisiana.

Mr. ELLENDER. That is the understanding. As a matter of fact, when this resolution was first presented, we had this carryover provision, but a point was made that it might be best to carry it in the bill we were considering rather than this resolution. In other words, the idea was to change no part of the present law except to increase the authorization. As the Senator knows, we have tentatively agreed on some of the main provisions of the food stamp program, and in that tentative agreement we have included language that would carryover the unused money from the appropriation of 1970 over to 1971, and any unused money from 1971 to 1972. That will be in the act.

Mr. HOLLAND. I thank the Senator. Is it the understanding of the distinguished chairman of our committee that we are working on a new bill which would cover authorizations through 1972, but not beyond that date?

Mr. ELLENDER. The Senator is correct.

Mr. HOLLAND. I thank the Senator for his statement.

Mr. President, this statement leaves the situation in a somewhat different posture from that which existed when we acted in the Senate Committee on Agriculture and Forestry. At that time, as the Senator from Louisiana will recall, and likewise the Senator from South Dakota, we had before us, even in executive session, authorities from the Department of Agriculture to handle this important program. Mr. Davis and Miss Kelley stated to us at that time that the maximum amount which the administration could recommend for expenditure in 1970 at this time was $610 million, which was an increase of $270 million beyond the $340 million, which is the maximum authorization in the current, existing legislation.

Since there is no provision in this legislation for the carryover feature, it would be my feeling that the full committee tomorrow should approve $610 million with the understanding that, if the new legislation passes before the conference work is completed on the annual appropriation bill, and if at that time $750 million, with the carryover feature, has become law, the conference committee would be expected to put that $750 million figure with the carryover feature into appropriation legislation. That is my understanding, and that would be my commitment if that course was carried out.

I want it distinctly understood, however, that until there is a carryover feature and unless we have some assurance that more than $610 million is needed or even can be spent in 1970, it would be my feeling that the full committee should confine itself to the evidence before it and to the request of the administration and what the administration witnesses

stated, that they were highly doubtful as to whether the $610 million could be fully spent in any reasonable method of amplifying or enlarging the present food stamp program.

However, that will be a matter for the full committee to pass upon; and in the event my own suggestion is followed, it will be a matter for the full conference committee to pass upon in the light of what has been accomplished by the Congress prior to the final action of the conference committee on the annual appropriation bill.

There are several other comments I would like to make, but I will not attempt to make them all. I just want to say, however, that at this time, in my view, the main problem we are dealing with is one of malnutrition, and not of hunger. I am sure there is some hunger in the United States; there may be some hunger in my own State; but malnutrition is that which I think this bill is principally aimed at. For that reason I want the RECORD to show that the Department of Agriculture evidently so believes because, beginning last fall, it started, out of section 32 funds which were made available, in spite of the fact that we had no specific appropriation for that purpose, to build up a program under which more information would be extended to the poverty-stricken families and those of low estate generally as to how they could have a more nutritious diet. Funds were made available for that program in mid-November and by the beginning of April more than 4,270 aides had been employed. They were recruited from the group of poverty-stricken people but under the direction of the Agricultural Extension Service, and particularly the home economics aides in the various counties of the Nation, in giving sounder information as to what does constitute a really balanced or nutritious diet. I think that approach is a sound one.

We were advised, in the testimony taken before the Appropriations Subcommittee, that the number of nutrition aides would be 5,300 by the time this June came to an end, that is, by the time we entered fiscal 1970, and that that number would increase in 1970. I think this approach is decidedly in line with the food stamp idea and the food stamp program, which is essentially a self-help program. One of the most important elements of self-help is in the choice of foods to be purchased by the use of food stamps. Because this is essentially a food stamp program, I want to make it very clear that, in my own opinion, we should never distribute food stamps without some contribution made by the individual or those who were backing him in his particular community, so that there will be an element of self-help in both the acquisition of the food stamps and, as there must be, in the use of the food stamps.

It is in the use of food stamps, as to whether they are spent for a balanced, nutritious diet, that we are going to have the answer as to whether this program is to be, in large measure, successful, as I hope it will be. The factor of the education of those who use the food stamps, and the factor of the use which they make of the food stamps in the purchase of food which will constitute a balanced, nutritious diet, will be the real test of the degree of success which we attain in this program.

Mr. President, there are many other things that I shall have to say when we get to the consideration of the basic legislation. I wish to say today that I am supporting this resolution because I think it points the way to a sizable enlargement for 1970, which I regard as necessary, of the food stamp program for the Nation. I wish to make it very clear, however, that I regard the agreement in the committee, though not represented in this resolution, that there shall be a provision for carryover of any unspent funds in the 1970 and 1971 programs, as an important and essential part of the agreement which we made in the committee, and I shall look forward to the carrying out of that part of the agreement as we proceed to draft the basic legislation, which should enlarge and replace the present food stamp bill.

I have one further comment. I do not know whether the distinguished chairman of the committee made this point. If not, it should be made. This is a completely bipartisan approach, in which the members of the Senate Committee on Agriculture and Forestry, as usual on matters coming before us, have joined in a completely bipartisan way in support of this resolution. There was no dissenting vote. All members of the committee on both sides of the aisle, as I recall, were of the conviction that we must raise the authorization for 1970, and that this is the appropriate way to do so.

I see in the Chamber the distinguished Senator from North Dakota (Mr. YOUNG), and I shall be happy to yield to him for further comment if he wishes.

Mr. YOUNG of North Dakota. Mr. President, I simply wish to state that the ranking Republican member of the committee, the Senator from Vermont (Mr. AIKEN), has been a longtime advocate of the food stamp program, and I have joined with him in supporting it these many years. We believe it is a good program, and support it fully.

Mr. KENNEDY. Mr. President, despite the grim facts revealed in testimony received by the Select Committee on Nutrition and Human Needs; despite the evidence of hunger and deprivation viewed by committee members in several communities of our Nation; despite the pleas for assistance from the Poor People's Campaign marchers; and despite the scientific evidence of malnutrition obtained by Dr. Arnold Schaefer, in his nationwide nutrition survey—despite all of these demands to put an end to hunger and suffering in our country, there are still thousands of Americans who are not yet convinced that there is a problem to be solved.

We in the Congress might appear to be at fault, because hungry Americans look to us for relief. They expect that we can provide the changes needed to improve their lives, and rightly so. We have promised and promised to help. We have enacted programs that bear a hint of making life more meaningful—when in reality these programs are a patchwork of temporary measures which do not go nearly far enough to solve this festering problem.

Today, in considering Senate Joint Resolution 126, we are asked to authorize the extension of one of these temporary measures—the current Federal Food Stamp Act. I know, as every member of the Select Committee on Nutrition and Human Needs also knows, that this program is frightfully ill equipped to meet the needs of our Nation's 30 million poor people. We are asked to extend a program that does not reach into every county where the poor are living; and even in those counties where it does operate, less than 16 percent of the poor actually receive the assistance they so urgently need if they are to have an adequate diet.

Public debates about the country's ability to feed the poor pointlessly end in a wrangle about money, loss of personal incentives, and concern over proving the relationship between good nutrition and desired productivity. But imagine, if you will, what it would mean if the Department of Defense became enmeshed in similar debates and therefore provided adequate diets for just 16 percent of the men in every military unit. In fact, in fiscal year 1970, DOD plans to expend nearly $4 billion to feed 3.5 million servicemen, an annual cost of considerably over $1,100 per person. This compares with the administration budget for food assistance for the poor, which would allegedly service 16 million poor people, at a cost of $1.226 billion, or an annual rate of $77 per person. That ratio of nearly 15 to 1 in favor of the armed services can only make the poor firmly convinced that their government is not fighting the real enemy.

It is interesting to note that DOD does not question whether there is a provable relationship between good nutrition and desired productivity before acting on its own food program.

I believe that is the message for each one of us—we in the Congress must not continue to question whether there is a provable relationship between good nutrition and desired productivity before acting on a program to feed our Nation's poor.

I shall vote for the authorization to extend the present food stamp act only because I believe this meager assistance is an emergency program that must continue until total reforms can be made to the food stamp program. Senate Joint Resolution 126 is at least a step, and for this reason I support the measure before us. We must, however, go much further and go further soon.

THE CALENDAR

Mr. MANSFIELD. Mr. President, in view of the fact that a Senator who wishes to be heard on the pending business is on his way to the Chamber, I ask unanimous consent that the pending business be temporarily laid aside, and that the Senate proceed to the consideration of certain unobjected to items on the calendar.

The PRESIDING OFFICER. Is there objection to the request of the Senator

from Montana? The Chair hears none, and it is so ordered.

Mr. MANSFIELD. I ask unanimous consent that the Senate proceed to the consideration of Calendar Nos. 123, 255, and 256, in that order.

The PRESIDING OFFICER. Without objection, it is so ordered.

APPOINTMENT OF ROBERT STRANGE McNAMARA AS CITIZEN REGENT OF THE BOARD OF REGENTS, SMITHSONIAN INSTITUTION

The joint resolution (S.J. Res. 11) to provide for the appointment of Robert Strange McNamara as Citizen Regent of the Board of Regents of the Smithsonian Institution was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S.J. RES. 11

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the vacancy in the Board of Regents of the Smithsonian Institution, of the class other than Members of Congress, which occurred by the death of Robert Vedder Fleming, of Washington, District of Columbia, be filled by the appointment of Robert Strange McNamara for the statutory term of six years.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–134), explaining the purposes of the joint resolution.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Senate Joint Resolution 11 would provide that the vacancy in the Board of Regents of the Smithsonian Institution, of the class other than Members of Congress, occasioned by the death of Robert Vedder Fleming, of Washington, D.C., be filled by the appointment of Robert Strange McNamara for the statutory term of 6 years.

The Board of Regents, pursuant to 20 United States Code 42, is composed of the Vice President, the Chief Justice of the United States, three Members of the Senate, three Members of the House of Representatives, and six other persons other than Members of Congress. The six Citizen Regents, two of whom shall be residents of the District of Columbia and four of whom shall be inhabitants of some State (but no two of the same State), are appointed by joint resolution of Congress and serve 6-year terms.

UPPER NIOBRARA RIVER COMPACT

The bill (S. 38) to consent to the upper Niobrara River compact between the States of Wyoming and Nebraska was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 38

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the consent of Congress is given to the upper Niobrara River compact between the States of Wyoming and Nebraska. Such compact reads as follows:

"UPPER NIOBRARA RIVER COMPACT

"The State of Wyoming, and the State of Nebraska, parties signatory to this compact (hereinafter referred to as Wyoming and Nebraska, respectively, or individually as a 'State', or collectively as 'States'), having resolved to conclude a compact with respect to the use of waters of the Niobrara River Basin, and being duly authorized by Act of Congress of the United States of America, approved August 5, 1953 (Public Law 191, 83rd Congress, 1st Session, Chapter 324, 67 Stat. 365) and the Act of May 29, 1958 (Public Law 85–427, 85th Congress, S. 2557, 72 Stat. 147) and the Act of August 30, 1961 (Public Law 87–181, 87th Congress, S. 2245, 75 Stat. 412) and pursuant to the Acts of their respective Legislatures have, through their respective Governors, appointed as their Commissioners: For Wyoming, Earl Lloyd, Andrew McMaster, Richard Pfister, John Christian, Eugene P. Willson, H. T. Person, Norman B. Gray, E. J. Van Camp: For Nebraska, Dan S. Jones, Jr., who after negotiations participated in by W. E. Blomgren appointed by the President of the United States of America, have agreed upon the following articles:

"ARTICLE I.

"A. The major purposes of this compact are to provide for an equitable division or apportionment of the available surface water supply of the Upper Niobrara River Basin between the States; to provide for obtaining information on groundwater and underground water flow necessary for apportioning the underground flow by supplement to this compact; to remove all causes, present and future which might lead to controversies; and to promote interstate comity.

"B. The physical and other conditions peculiar to the Upper Niobrara River Basin constitute the basis for this compact; and neither of the States hereby concedes that this compact establishes any general principle or precedent with respect to any other interstate stream.

"C. Either State and all others, using claiming or in any other manner asserting any right to the use of the waters of the Niobrara River Basin under the authority of that State, shall be subject to the terms of this compact.

"ARTICLE II.

"A. The term 'Upper Niobrara River' shall mean and include the Niobrara River and its tributaries in Nebraska and Wyoming west of Range 55 West of the 6th P.M.

"B. The term 'Upper Niobrara River Basin' or the term 'Basin' shall mean that area in Wyoming and Nebraska which is naturally drained by the Niobrara River west of Range 55 West of the 6th P.M.

"C. Where the name of a State or the term 'State' or 'States' is used, they shall be construed to include any person or entity of any nature whatsoever using, claiming, or in any manner asserting any right to the use of the waters of the Niobrara River under the authority of that State.

"ARTICLE III.

"It shall be the duty of the two States to administer this compact through the official in each State who is now or may hereafter be charged with the duty of administering the public water supplies, and to collect and correlate through such officials the data necessary for the proper administration of the provisions of this compact. Such officials may, by unanimous action, adopt rules and regulations consistent with the provisions of this compact.

"The States agree that the United States Geological Survey, or whatever Federal agency may succeed to the functions and duties of that agency, insofar as this compact is concerned, may collaborate with the officials of the States charged with the administration of this compact in the execution of the duty of such officials in the collection, correlation, and publication of information necessary for the proper administration of this compact.

"ARTICLE IV.

"Each State shall itself or in conjunction with other responsible agencies cause to be established, maintained, and operated such suitable water gaging stations as are found necessary to administer this compact.

"ARTICLE V.

"A. Wyoming and Nebraska agree that the division of surface waters of the Upper Niobrara River shall be in accordance with the following provisions.

"1. There shall be no restrictions on the use of the surface waters of the Upper Niobrara River by Wyoming except as would be imposed under Wyoming law and the following limitations:

"(a) No reservoir constructed after August 1, 1957, and used solely for domestic and stock water purposes shall exceed 20 acre-feet in capacity.

"(b) Storage reservoirs with priority dates after August 1, 1957, and storing water from the main stem of the Niobrara River east of Range 62 West of the 6th P.M. and from the main stem of Van Tassel Creek south of Section 27, Township 32 North, Range 60 West of the 6th P.M. shall not store in any water year (October 1 of one year to September 30 of the next year) more than a total of 500 acre-feet of water.

"(c) Storage in reservoirs with priority dates prior to August 1, 1957, and storing water from the main stem of the Niobrara River east of Range 62 West and from the main stem of Van Tassel Creek south of Section 27, Township 32 North, shall be made only during the period October 1 of one year to June 1 of the next year and at such times during the period June 1 to September 30 that the water is not required to meet the legal requirements by direct flow appropriations in Wyoming and in Nebraska west of Range 55 West. Where water is pumped from such storage reservoirs, the quantity of storage water pumped or otherwise diverted for irrigation purposes or other beneficial purposes from any such reservoir in any water year shall be limited to the capacity of such reservoir as shown by the records of the Wyoming State Engineers' Office, unless additional storage water becomes available during the period June 1 to September 30 after meeting the legal diversion requirements by direct flow appropriations in Wyoming and in Nebraska west of Range 55 West.

"(d) Storage in reservoirs with priority dates after August 1, 1957, and storing water from the main stem of the Niobrara River east of Range 62 West and the main stem of Van Tassel Creek south of Section 27, Township 32 North, shall be made only during the period October 1 of one year to May 1 of the next year and at such times during the period May 1 and September 30 that the water is not required for direct diversion by ditches in Wyoming and in Nebraska west of Range 55 West.

"(e) Direct flow rights with priority dates after August 1, 1957, on the main stem of the Niobrara River east of Range 62 West and Van Tassel Creek south of Section 27, Township 32 North, shall be regulated on priority basis with Nebraska rights west of Range 55 West, provided, that any direct flow rights for a maximum of 143 acres which may be granted by the Wyoming State Engineer with a priority date not later than July 1, 1961, for lands which had Territorial Rights under the Van Tassel No. 4 Ditch with a priority date of April 8, 1882, and the Van Tassel No. 5 Ditch with a priority date of April 18, 1882, shall be exempt from the provisions of this subsection (e).

"(f) All direct flow diversions from the main stem of the Niobrara River east of Range 62 West and from Van Tassel Creek south of Section 27, Township 32 North shall at all times be limited to their diversion rates as specified by Wyoming law, and provided that Wyoming laws relating to diversion of 'Surplus Water' (Wyoming Statutes, 1957, Sections 41–181 to 41–188 inclusive) shall apply only when the water flowing in the main channel of the Niobrara River west of Range

55 West is in excess of the legal diversion requirements of Nebraska ditches having priority dates before August 1, 1957.

"ARTICLE VI.

"A. Nebraska and Wyoming recognize that the future use of ground water for irrigation in the Niobrara River Basin may be a factor in the depletion of the surface flows of the Niobrara River, and since the data now available are inadequate to make a determination in regard to this matter, any apportionment of the ground water of the Niobrara River Basin should be delayed until such time as adequate data on ground water of the basin are available.

"B. To obtain data on ground water, Nebraska and Wyoming, with the cooperation and advice of the United States Geological Survey, Ground Water Branch, shall undertake ground water investigations in the Niobrara River Basin in the area of the Wyoming-Nebraska State line. The investigations shall be such as are agreed to by the State Engineer of Wyoming and the Director of Water Resources of Nebraska, and may include such observation wells as the said two officials agree are essential for the investigations. Costs of the investigations may be financed under the cooperative ground water programs between the United States Geological Survey and the States, and the States' share of the costs shall be borne equally by the two States.

"C. The ground water investigations shall begin within one year after the effective date of this compact. Upon collection of not more than twelve months of ground water data Nebraska and Wyoming with the cooperation of the United States Geological Survey, shall make, or cause to be made, an analysis of such data to determine the desirability or necessity of apportioning the ground water by supplement to this compact. If upon completion of the initial analysis, it is determined that apportionment of the ground water is not then desirable or necessary, reanalysis shall be made at not to exceed two-year intervals, using all data collected until such apportionment is made.

"D. When the results of the ground water investigations indicate that apportionment of ground water of the Niobrara River Basin is desirable, the two States shall proceed to negotiate a supplemental to this compact apportioning the ground water of the Basin.

"E. Any proposed supplement to this compact apportioning the ground water shall not become effective until ratified by the legislatures of the two States and approved by the Congress of the United States.

"ARTICLE VII.

"The provisions of this compact shall remain in full force and effect until amended by action of the Legislatures of the Signatory States and until such amendment is consented to and approved by the Congress of the United States in the same manner as this compact is required to be ratified and consented to in order to become effective.

"ARTICLE VIII.

"Nothing in this compact shall be construed to limit or prevent either State from instituting or maintaining any action or proceeding, legal or equitable, in any court of competent jurisdiction for the protection of any right under this compact or the enforcement of any of its provisions.

"ARTICLE IX.

"Nothing in this compact shall be deemed:

"A. To impair or affect any rights or powers of the United States, its agencies, or instrumentalities, in and to the use of the waters of the Upper Niobrara River Basin nor its capacity to acquire rights in and to the use of said waters; provided that, any beneficial uses of the waters allocated by this compact hereafter made within a State by the United States, or those acting by or under its authority, shall be taken into account in determining the extent of use within that State.

"B. To subject any property of the United States, its agencies, or instrumentalities, to taxation by either State or subdivision thereof, nor to create an obligation on the part of the United States, its agencies, or instrumentalities, by reason of the acquisition, construction, or operation of any property or works of whatsoever kind, to make any payment to any State or political subdivision thereof, State agency, municipality, or entity whatsoever in reimbursement for the loss of taxes.

"C. To subject any property of the United States, its agencies, or instrumentalities, to the laws of any State to an extent other than the extent to which these laws would apply without regard to the compact.

"D. To affect the obligations of the United States of America to Indians or Indian tribes, or any right owned or held by or for Indians or Indian tribes which is subject to the jurisdiction of the United States.

"ARTICLE X.

"Should a court of competent jurisdiction hold any part of this compact contrary to the constitution of any State or of the United States, all other severable provisions shall continue in full force and effect.

"ARTICLE XI.

"This compact shall become effective when ratified by the Legislatures of each of the signatory States and by the Congress of the United States.

"IN WITNESS WHEREOF, the Commissioners have signed this compact in triplicate original, one of which shall be filed in the archives of the United States of America and shall be deemed the authoritative original, and one copy of which shall be forwarded to the Governor of each of the signatory States.

"Done at the city of Cheyenne, in the State of Wyoming, this 26th day of October, in the year of our Lord, One Thousand and Nine Hundred Sixty Two.

Commissioner for the State of Nebraska
s/Dan S. Jones, Jr.
Commissioners for the State of Wyoming
s/Earl Lloyd
s/Andrew McMaster
s/Richard Pfister
s/John Christian
s/Eugene P. Wilson
s/H. T. Person
s/Norman B. Gray
s/E. J. Van Camp

"I have participated in the negotiation of this compact and intend to report favorably thereon to the Congress of the United States.

s/W. E. Blomgren
Representative of the United States of America".

SEC. 2. The right to alter, amend, or repeal this Act is reserved.

SEC. 3. Nothing in this Act shall be deemed to impair or affect any rights or powers of the United States, its agencies, instrumentalities, permittees, or licensees in, over, and to the use of the waters of the Upper Niobrara River Basin; nor to impair or affect their capacity to acquire rights in and to the use of said waters.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–265), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE MEASURE

The purpose of this measure, which was introduced by Senator Hansen for himself and Senators Curtis, Hruska, and McGee, is to provide congressional consent to the upper Niobrara River compact between the States of Wyoming and Nebraska. The upper Niobrara River compact provides an equitable division or apportionment between the States of the available surface water supply of the Upper Niobrara River Basin and to provide for studies of the subsurface water supplies of the basin.

BACKGROUND

Consent of the Congress to the negotiation of the compact was granted by the act of August 5, 1953 (67 Stat. 365, as amended). A representative of the United States participated in the negotiations. The compact has been ratified by the State legislatures.

A bill similar to the present bill passed the Senate in 1966 (S. 553, 89th Cong., second sess.) but was not acted upon in the House of Representatives. Reports have been received from the Departments of Justice and the Interior and from the Bureau of the Budget expressing no objection to the enactment of S. 38.

PRESENT LEGISLATION

Section 1 of the bill grants the consent of the Congress to the compact. The compact provides for the division between the States of Wyoming and Nebraska of the waters of the Upper Niobrara River. The Upper Niobrara River is defined in the compact to mean the Niobrara River and its tributaries in Nebraska and Wyoming west of R. 55 W. of the sixth principal meridian.

The compact further provides for cooperative investigations of the ground water resources of the basin as a basis for negotiating a supplemental compact apportioning ground water.

Section 2 of the bill reserves to the Congress the right to alter, amend, or repeal the act.

Section 3 of the bill protects the rights and powers of the United States, its agencies, instrumentalities, permittees, or licensees regarding the waters of the Upper Niobrara River.

COMMITTEE RECOMMENDATIONS

The Interior and Insular Affairs Committee recommends that S. 38 be enacted.

Mr. McGEE. Mr. President, I note with satisfaction that the Senate has today given its approval to the Upper Niobrara River compact between Wyoming and Nebraska. By passing this bill, we have granted consent, if the House acts as well, to the compact dividing the available project waters supply of the Upper Niobrara River Basin between my own State and our good neighbors to the east. Congressional assent to this compact is, if anything, overdue, and I am pleased we have moved today to approve the pact.

AMENDMENT OF THE ACT OF NOVEMBER 9, 1966

The Senate proceeded to consider the bill (H.R. 4297) to amend the act of November 8, 1966, which had been reported from the Committee on the Judiciary, with an amendment, on page 1, line 9, after the word "of" to strike out "$850,000'." and insert "$850,000', and adding at the end thereof a new sentence as follows: 'Authority is hereby granted for appropriated money to remain available until expended.'"

The amendment was agreed to.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-266), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD as follows:

EXPLANATION OF AMENDMENT

The purpose of the amendment is to authorize the Commission to carry over any funds not expended in 1970 into 1971.

PURPOSE OF THE BILL, AS AMENDED

The purpose of the bill, as amended, is (1) to extend to November 8, 1970, a period of 1 year, the time within which the Commission shall submit its final report; (2) increase the amount authorized to be appropriated for carrying out the provisions of the act by $350,000—an increase from $500,000 to $850,000; and (3) authorize the Commission to carry over any funds not expended in 1970 into 1971.

STATEMENT

The aim of the act of November 8, 1966, was to establish a National Commission on Reform of Federal Criminal Laws, which would make a full and complete review and study of the statutory and case law constituting the Federal system of criminal justice and would make recommendations for revisions, reform, and recodification of the criminal laws of the United States, including the repeal of unnecessary and undesirable statutes and appropriate changes in the penalty structure.

Section 8 of the act of November 8, 1966, requires the Commission to submit a final report to the President and the Congress within 3 years of the date of enactment, and provides that the Commission shall cease to exist 60 days after submission of the final report. Section 10 authorizes $500,000 to carry out the provisions of the act. H.R. 4297 would extend the time for submission of the final report from 3 to 4 years, would increase the authorized funds from $500,000 to $850,000, and authorize the Commission to carry over any funds not expended in 1970 into 1971.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, what is the pending business?

The PRESIDING OFFICER. The pending business is Senate Joint Resolution 126, a joint resolution to increase the appropriation authorization for the food stamp program for fiscal 1970 to $750 million.

EXTENSION OF THE 10-PERCENT SURTAX

Mr. METCALF. Mr. President, yesterday I stated my opposition to any extension of the 10-percent surtax without tax reform and expressed my intention to debate this subject at some length at the appropriate time.

Back in April of this year, President Nixon told the Congress, and I quote:

Reform of our Federal tax system is long overdue. Special preferences in the law permit far too many Americans to pay less than their fair share of taxes. Too many other Americans bear too much of the tax burden.

This Administration, working with the Congress, is determined to bring equity to the Federal tax system.

No one can take issue with that statement. The President then went on to say that he was "directing the Secretary of the Treasury to thoroughly review the entire Federal tax system" and present to him "recommendations for basic changes, along with a full analysis of the impact of those changes, no later than November 30, 1969."

Now I do take issue with the fact that we are expected to take action now to extend the surtax for a full year until at the same time we are asked to wait until next year before taking any meaningful action with respect to tax reform. Such a request completely ignores the existence of a 2-year study into this same problem, together with specific proposals that would bring equity into our tax laws. The study to which I refer is the one that was conducted during the last 2 years of the Johnson administration. It was that study that served as the course outline for 28 days of hearings conducted by the House Committee on Ways and Means earlier this session.

On May 27 the Ways and Means Committee announced the first set of tentative decisions it had reached on the subject of tax reform since it had gone into executive markup of a tax reform bill. If things are being done over there the same way as when I was a member of that committee, then members of the Treasury's team are working right alongside members of the committee in executive session. I see no reason why bill language cannot be made available to the Congress now. I see no reason why we should be expected to act upon the surtax without having a tax reform package to consider right along with it.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

FISCAL 1970 FOOD STAMP AUTHORIZATION

The Senate resumed the consideration of Senate Joint Resolution 126, to increase the appropriation for the food stamp program for fiscal 1970 to $750 million.

Mr. JAVITS. Mr. President, I express my appreciation to the leadership and to the senior Senator from Louisiana (Mr. ELLENDER) for being kind enough to wait so that I might say a word about the $750 million emergency authorization for the food stamp program for fiscal year 1970.

As the ranking minority member of the Select Committee on Nutrition and Human Needs, I join with the Senator from South Dakota (Mr. MCGOVERN), chairman of the select committee in approving the emergency action taken by the Agriculture Committee, of which the Senator from Louisiana is the chairman.

I think that a word needs to be said also concerning the hearings which our select committee has carried on in various parts of the country. I believe that these hearings have so markedly brought to public attention what so many Americans can hardly believe to be credible, a situation which seems to be so heavily substantiated by the fact that we do have a far greater number of cases of malnutrition which can properly be labeled hunger than any American ever thought likely or possible in our country.

I feel, therefore, that the work which has been done by the select committee in this regard has been very valuable. I am very pleased and gratified to express my appreciation to the Senator from Louisiana (Mr. ELLENDER) and to the Senator from North Dakota (Mr. YOUNG) because the committee has responded so very promptly on the monetary level.

The real problem we face is a problem of outreach and participation which seem to be very much needed. I do not say that, in any sense, to blame anyone. I say it merely to point out the difficulty that exists even in my State of New York, which one would expect to be very enlightened on this score. The average county with a food stamp program there serves only an estimated 13 percent, although it could and should benefit all.

Governor Rockefeller has just signed legislation in New York that is designed to provide statewide programs that will reach out to those who should be covered by the food programs.

One finds the situation in all parts of the country. I first encountered an interesting situation which may be of some concern to my colleagues. During the course of the hearings held by the Subcommittee on Permanent Investigations of the Committee on Government Operations involving the Black Panther Party in California, especially in the bay area around San Francisco, it developed that one of the very big attractions responsible for bringing attention and people to the Black Panther Party was that it serves hot breakfasts to children.

No one looked into the matter. The policy authorities did not look into the matter of whether there was a hot breakfast program in Oakland or San Francisco.

That is a very interesting situation and shows what food may mean from a totally different point of view than we have been discussing in the realm of poverty.

The other point which I wish to make in supporting the resolution, together with the Senator from South Dakota (Mr. MCGOVERN), the chairman of our select committee, has to do with expressing deep interest in the work of the Agriculture Committee which, is working now in executive session on improving the food stamp program. I urge the committee to consider reforming the food stamp program to deal with national eligibility standards so as to make allowances for differences in the cost of living and in living standards in different parts of the country. Also, I urge that the committee consider taking into account the realities of the problems of the poor and whether the income levels below which people might be eligible for free stamps, like the one fixed by Secretary Hardin at $30 a month, are really humanistic in impact—after all, that is what the program is all about—and commensurate with geographic differences in living costs and standards.

Also, I hope that the committee will consider and deal with the possibility of authorizing the simultaneous operation of the food stamp and commodity distribution programs in some counties, which is excluded by present law; and to deal with the problem of maximum drain upon the income of an individual with respect to what he can afford to pay for food stamps. We found instances in our investigations in which the amount required to be paid for food stamps, small as it is, was nevertheless a great proportion of the income of the individual. This prevented him from getting his health care, or intruded upon the payments of rent for the modest amount of housing which he could afford. In other words, the expense became such a major dent in the very small income of the individual as to make him perhaps not indigent in respect to food, because he was getting food help, but indigent with respect to everything else. I know that the committee will consider these matters.

I take great pride in the knowledge that both the Senator from Louisiana (Mr. ELLENDER) and the Senator from South Dakota (Mr. MCGOVERN) are members of the Committee on Agriculture and Forestry. I assure Senator ELLENDER that I shall do my utmost, as the ranking member of the minority, of the Select Committee on Nutritional Human Needs, to correlate, coordinate, and cooperate as intensively as I can in dealing with the major findings which are beginning to emerge from our work, to which I note with deep satisfaction, the Agriculture Committee has given its ears, as is reflected by the joint resolution.

I favor the joint resolution and hope that it will be passed promptly by the Senate.

Mr. COOK. Mr. President, I wish to take just a moment to commend the senior Senator from Louisiana for his promptness in reporting the joint resolution to the Senate. We discussed this subject last Thursday.

I think it was his insight that resulted in the increase in funds to $750 million. It was through his efforts and his prodding that the committee overwhelmingly agreed to the increase. I feel certain that his leadership will bring about a logical compromise between the House and the Senate on the measure.

I think the Senator from Louisiana knows, as well as every member of the committee knows, that in this entire field it is not only the money that is important; it is the rules and regulations that are promulgated by the committee, as well. The standards that we set are important. To that extent, I wish to lend my support to the joint resolution and again commend the senior Senator from Louisiana for the promptness of his action.

Mr. SPONG. Mr. President, I am pleased to support Senate Joint Resolution 126.

Overcoming the hunger and malnutrition problems which exist in our Nation requires a multipronged attack. It requires making food available to those who do not have the resources to obtain it; it requires educating those who have limited funds to use them wisely; and it requires educating many persons, those with limited incomes and those with greater resources, in proper nutrition and eating habits. In addition, it requires a number of related activities, including improved education in general, family planning services and job training.

Senate Joint Resolution 126 would substantially assist in meeting one of these requirements—in making food available to those who do not have the resources to obtain it. It would increase from $340 to $750 million the authorization for the food stamp program in fiscal 1970. It would permit the fiscal 1970 appropriation for food stamps to be more than double the fiscal 1969 appropriation of $258.6 million.

The increase in funds will, however, be truly helpful only if it operates in conjunction with a reformed food assistance program which will make food more accessible and more available to those who need it. I am, consequently, hopeful that the anticipated authorization bill to reform the food stamp program will soon be reported from the Senate Agriculture and Forestry Committee and debated in the Senate.

I am somewhat concerned over Secretary of Agriculture Hardin's testimony before the Senate Agriculture and Forestry Committee on May 27, 1969, to the effect that most of the new funds would be used to improve existing food stamp programs. Certainly we need to improve existing programs, but when more than 400 localities in our Nation do not have food assistance programs; that is, when families in more than 400 cities and counties do not have access to either the food stamps or free commodities, then these areas deserve special consideration. I hope, consequently, that more of the additional funds authorized, if appropriated, will be used to encourage the expansion of programs into those areas where they do not currently exist.

We have had evidence of hunger and malnutrition presented by many sources in many areas of our States and Nation. Hopefully, Senate Joint Resolution 126, the upcoming bill to reform the food stamp program and the fiscal 1970 appropriations for food assistance and nutrition education will contribute significantly to overcoming existing problems.

Mr. YARBOROUGH. Mr. President, I believe that S. 2014, the Food Stamp Reform Act of 1969, is one of the most vital measures before the Congress today.

It has been my privilege to serve on the Select Committee on Nutrition and Human Needs since its creation. This committee, under the able leadership of the distinguished Senator from South Dakota (Senator MCGOVERN) has studied the problem of hunger in this country. We have uncovered evidence that massive malnutrition and hunger exist in parts of the Nation. In a land as prosperous as this one is, that situation is unacceptable.

In my home State of Texas, the preliminary results of a study by Dr. William McGanity of the University of Texas Medical School at Galveston show severe conditions of hunger there. They found that 5½ percent of the people surveyed had goiter which is caused by a lack of iodine. As a rule, most people get sufficient amounts of iodine from salt. But, in 10 of the 26 counties surveyed, there was no grocery selling iodized salt.

The survey found that 1 in 14, of the individuals under 10 years of age, had a serious dental problem. It was also found that 8 percent of the total population examined in Texas suffered from anemia. Two children were found who showed advanced signs of starvation. Also, the researchers found children with bow legs, rickets, and enlarged wrists—all of which are caused by a lack of vitamin D which comes from milk. They also found gum sores which are caused by vitamin C deficiency. Vitamin C is normally obtained from citrus fruits and tomatoes.

The problem of malnutrition is tragic and is most tragic in the young. The select committee received testimony that permanent brain damage can result if children do not receive proper nourishment.

The food stamp program offers one solution to the problem of malnutrition. But, during the years that this program has been in operation, it has become apparent that there are several deficiencies in this program.

In Texas, the major problem has been that few counties have a food stamp program. Under the present law, the county government must request that food stamps be distributed in the county. In Texas, 10 counties have made such a request. These counties are Bexar, Brewster, Culberson, El Paso, Hudspeth, Jeff Davis, Pecos, Presidio, Tarrant, and Terrell. In March of this year, the most recent month for which we have data, only 39,180 people benefited from this program

The Food Stamp Reform Act (S. 2014) would eliminate this situation. The counties would be given strong incentives to initiate food stamp programs. If they still cannot do so, then a program could be started through a private agency or some other governmental unit. The important thing is that the inability of one local governmental agency to institute a food stamp program would no longer constitute a barrier to the distribution of food stamps to those who need them and are entitled to receive them.

Two other provisions of this bill would certainly have beneficial effects in Texas. First, stamps would be made available at a price which people could afford. At the present time, this is not the case, so even in the 10 counties in Texas which do have food stamp programs, the cost of the stamps is often too great for many people to bear. This may be one factor in the low rate of participation in the food stamp program in those counties which have such a program. At any rate, it is a barrier to the efficient operation of the Food Stamp Act and one which should be removed.

Also, in Texas, many poor people live in rural areas and are thus not able to obtain food stamps easily. Under the provision of this bill, stamps could be issued by mail or through food stores or post

offices. This would make obtaining the stamps considerably less of a difficulty for many people in my State.

The saddest thing about all this is that this situation exists all over the Nation. The Select Committee on Nutrition and Human Needs has revealed in its investigations of the problem of hunger that it is a national problem. The conditions of which I spoke exists in all 50 States, not just in Texas. And the food stamp program as it is now structured has the same shortcomings and the same weaknesses in the other 49 States that it has in Texas. Too few counties across the Nation have food stamp distribution programs. Too few people are being fed. The stamps are not being provided at prices which many people who need them can afford. The process for obtaining them is so difficult that many people who need them are not getting them. And this is happening all over the country, not just in Texas. I feel that this bill should be enacted to remedy this problem all over the country, not just in Texas.

As I told my constituents in February of this year, "It is within our power to banish hunger and malnutrition from our land; we have a responsibility to exercise that power. Our unparalleled agricultural abundance must be shared with all our people here at home—no American should be malnourished."

I think that the food stamp program could be a useful means to this end. Unfortunately, this program is not now operating as it should. I think that the reforms provided for in this bill are necessary if this program is to achieve its full potential for effectiveness. I give it my unqualified support.

Mr. President, I ask unanimous consent that tables showing the March, 1969, participation in the food stamp program in Texas and the March 1969 participation in all food distribution programs in my State be added at this point in the RECORD.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

[2] Red River County discontinued program as of Sept. 30, 1968.

The PRESIDING OFFICER (Mr. ALLEN in the chair). The joint resolution is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the joint resolution.

The joint resolution (S.J. Res. 126) was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

S.J. RES. 126

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That section 16(a) of the Food Stamp Act of 1964 is amended by striking "$340,000,000" and inserting "$750,000,000".

Mr. ELLENDER. Mr. President, I move that the Senate reconsider the vote by which the joint resolution was passed.

Mr. MANSFIELD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nomination of Otto F. Otepka, of Maryland.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBVERSIVE ACTIVITIES CONTROL BOARD

The PRESIDING OFFICER. The clerk will state the nomination to the Subversive Activities Control Board.

The bill clerk read the nomination of Otto F. Otepka, of Maryland, to be a member of the Subversive Activities Control Board.

Mr. YOUNG of Ohio obtained the floor.

Mr. MANSFIELD. Mr. President, will the Senator from Ohio yield without losing his right to the floor?

Mr. YOUNG of Ohio. I yield for that purpose.

Mr. MANSFIELD. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. YOUNG of Ohio. Mr. President, I move to recommit the nomination of Otto F. Otepka, and on the motion I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. YOUNG of Ohio. Mr. President, President Nixon's appointment of Otto F. Otepka to a $36,000 a year post on the Subversive Activities Control Board was an outlandish piece of political expediency. Let us hope that it does not signal a return to that era of pointless suspicion, fear, character assassination, and ruined careers that marked the so-called McCarthyism of the 1950's.

When asked about the President's decision to nominate Otepka, the White House press secretary stated:

I think the appointment speaks for itself.

It certainly does and with revolting eloquence. The question involved has little to do with national security, subversion, or anything of that nature. What is involved is an official of the executive branch sneaking information, which he was forbidden to disclose to anyone, to representatives of the legislative branch. Otepka was chief of security evaluations in the State Department. In 1963 Secretary of State Dean Rusk removed him from this post for giving confidential security files to the Senate Internal Security Subcommittee without permission. No administrator with any self-respect could permit such disloyalty, and Secretary Rusk was correct in removing this witch-hunter from his position. Even Secretary of State Rogers refused to restore the disloyal Otepka to the post from which he has been ousted.

Furthermore, it has been revealed that a fund raised by groups with close ties to the lunatic rightwing splinter group, the John Birch Society, so-called, paid approximately 80 percent of the $26,135 in legal expenses incurred by Otepka in his 4-year fight to win reinstatement as chief security evaluator in the State Department. During that period Otepka made numerous speeches at meetings of extreme rightwing gatherings. While he has denied any formal or informal connections with the John Birch Society or the Liberty Lobby, so-called, the fact is that he has attended rallies organized by Birch Society leaders. At least on one occasion he was formally introduced by a member of the Birch National Council. Furthermore, this rally was headed by Clarence Manion, a member of the national council of the "Birchsaps." When questioned about this by a reporter for the New York Times, Otepka said:

I am not going to discuss the ideological orientation of anyone I am associated with.

In his account of this incident to the subcommittee considering his nomination, Otepka offered the weak excuse that he felt he was being baited into making statements that could be used against him.

It has been established beyond any possible doubt that the Liberty Lobby, headed by Willis Carto whose Fascist inclinations and associations have been well documented, was one of his stanchest champions. That neo-Nazi lunatic group produced and distributed a film entitled "The Otepka Case" and its pamphlets consistently defended Otepka and attacked his critics.

Mr. President, it is interesting to note that J. G. Sourwine, chief counsel for the Senate Internal Security Subcommittee and one of the staff members who helped write the Judiciary Committee report praising Otepka, was the person through whom Otepka leaked the State Department documents when both were trying to smear Walt Rostow, the Kennedy-Johnson national security adviser, as a security risk. Now, I take a dim view of a man like Otepka, who seeks to play God with other people's patriotism.

Obviously, Sourwine has a personal interest in having Otepka confirmed by the Senate. Although the committee report seeks to disassociate Otepka from any formal or informal connections with the John Birch Society or the Liberty Lobby, Sourwine certainly was aware of the activity of these lunatic rightwing organizations in behalf of Otepka. He knew or should have known that Otepka has called the Liberty Lobby "a reputable organization—patriotic," and Willis Carto, the neo-Nazi who runs it, a defender of "the fine traditions of American life." Furthermore, Sourwine himself when interviewed by Joe Trento of World Wide Features, not only expressed his high regard for Liberty Lobby, but went further saying:

Liberty Lobby often requests information about individuals and issues . . . I do not hesitate to supply anything this dedicated group requests.

Yet this "dedicated group" brazenly distributes "Imperium," the Mein Kampf of American nazism.

Mr. President, in the memorandum from J. G. Sourwine to the chairman of the Committee on the Judiciary, reprinted in part 2 of the hearings on the Otto Otepka nomination, it is stated that over $21,000 of the $26,135 for legal expenses incurred for Otepka's defense was raised by the American Defense Fund organized in 1964 by James M. Stewart of Palatine, Ill. The memorandum goes on to state:

The American Defense Fund has no connection of any kind with the John Birch Society . . . according to Mr. Stewart.

The fact is that after careful research and inquiry to try to determine the names of the sponsors or directors of the American Defense Fund, I have been unable to determine any but Mr. Stewart himself. It is obvious that this is a one-man paper organization dedicated solely to exonerating Otto Otepka.

Mr. President, it has been reported to me that on June 16, 1969, 8 days ago, this same James Stewart attended a fundraising party at the home of Julius W. Butler in Oakbrook, Ill., a Chicago suburb. This is the same Julius Butler who is an admitted fundraiser for the John Birch Society and active in several John Birch front organizations. He also is a sponsor of a New England Rally for God, Family, and Country held annually near Boston, which Otto Otepka attended last year. The guests at Mr. Butler's home last week included Robert Welch, founder and head of the John Birch Society, who spoke at length spewing forth the usual John Birch lunatic obsessions. Mr. and Mrs. James Stewart, I am told, were in charge of the refreshments that were served at the meeting and were introduced to the crowd and received applause.

This is the same James Stewart who stated to J. G. Sourwine that the American Defense Fund, which is James Stewart and him only, had no connection of any kind with the John Birch Society.

Surely, Mr. President, an investigator as trained and experienced as the counsel for the Senate Internal Security Subcommittee is said to be, should on his own have questioned Mr. Stewart's statement and delved further. Julius Butler, at whose home Stewart recently attended a Birch Society rally, admitted in a telephone conversation with a reporter from

the New York Times that Otto Otepka had spoken to groups "of 15 to 20 or 30 or 40 people" at his home over the last several years. "He comes here whenever he comes to Chicago," said Butler. The New York Times also reported Mr. Butler said that in addition to his explaining his dispute with the State Department, Mr. Otepka also talks about treason in high places in Washington "and all the horrible things that are taking place."

Those Birchsaps, or Sons of Birches, as the former assistant minority leader, Tom Kuchel, of California, used to term them, are seeking to play God with other people's patriotism. They claim there are Communists in the State Department, on the faculties of our universities, and in the clergy. Of course, they could not name one.

Mr. President, as a free American, Otto Otepka has the right to join or associate with the John Birch Society or any other organization. He has violated no laws in accepting money from Birchites or Sons of Birches to use the terminology of our friend, Senator Thomas Kuchel, or other lunatic rightwing sources to meet legal costs of his unsuccessful fight for reinstatement as chief security evaluator of the State Department. However, I question whether a man with such a record—a man who unhesitatingly accepted more than $22,000 from these groups—should be confirmed for a post in which he will judge the loyalty of American citizens and organizations.

Of course, he reported to the subcommittee that he would "resist with every resource at my command any attempt to establish in this country a Nazi, or Fascist, or Communist government, or any other form of totalitarianism."

His past record clearly belies this. In my view, any man who has accepted support from the John Birch Society, the Liberty Lobby, and organizations of that ilk has a warped concept of Americanism, has no place on the public payroll and certainly not in a position in which he will be called upon to judge the loyalty of other Americans.

Mr. President, on May 16, 1969, there appeared an excellent article on the Otepka nomination in the Washington Post entitled "Security Pooh-Bah." I ask unanimous consent to have it printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SECURITY POOH-BAH

Otto Otepka's long and unfaithful service to the State Department certainly entitled him to some reward from those on Capitol Hill who were the beneficiaries of his peculiar form of infidelity. And for a while it seemed as though President Nixon had found an innocuous, if somewhat expensive, spot for him, as a $36,000-a-year member of the Subversive Activities Control Board, an agency which has no work to perform and consequently no secrets to leak. The title probably seemed congenial, if not actually honorific, to Mr. Otepka. And President Johnson had already established a precedent for using the Board as a sinecure for the politically wounded and disabled.

But there is a scheme afoot, it appears, surreptitiously to turn the chairmanship of the SACB from a sinecure into a seat of power, from a bad joke into an ugly menace. S. 12—cited as the "Internal Security Act of 1969"—a bill sponsored by Mr. Otepka's sponsor, Senator James O. Eastland, and by a collection of the Senate's ultraconservative sedition hunters, would create in the United States Government a brand-new super-snooper agency to be designated the "Security Administration for Executive Departments" and to be "subordinate only to the President of the United States." This new agency would serve as a sort of Politburo, supervising all security clearances, would have power to initiate cases before the SACB, would conduct continuing surveys and inspections of the loyalty and security activities of all Executive agencies, would train security personnel and would exercise a variety of additional powers. Although the bill does not actually so designate him, the proper title for its Administrator would be "Commissar."

The bill contains an interesting provision: "The Chairman of the Subversive Activities Control Board may be appointed as Administrator, and if so appointed may continue to hold the position of Chairman of the Subversive Activities Control Board during any term for which he shall have been appointed and designated as such Chairman." Now, what do you suppose the architects of this legislative extravaganza have in mind? How foresighted they are! The present Chairman of the SACB, John W. Mahan, a deserving Democrat—deserving of a more honorable office—could readily be replaced by—guess who?—the refurbished Mr. Otepka, and the authors of this remarkable measure would, if they managed to get it enacted, then have their own particular darling in one of the seats of the mighty.

It is in the light of this possibility that one must evaluate the statement made by Senate Majority Whip Edward M. Kennedy that "I don't think there is room on the Subversive Activities Control Board for someone whose basis of strength is the support of the John Birch Society and the Liberty Lobby." How much more vital it is to keep such a person from the office of Security Pooh-Bah. There must be room for Mr. Otepka on the staff of the Senate Internal Security Subcommittee where he will be relatively harmless and feel entirely at home. S. 12 is a nightmare. With Otto Otepka administering it, it would become a reality.

Mr. YOUNG of Ohio. Mr. President, it is difficult to reconcile Secretary Rogers declining to reinstate Otepka with the President's nominating him to a $36,000 post, albeit in a worthless Federal agency. If the President had deliberately set out to make his administration appear ludicrous he could not have chose a better means than through promoting Otepka. This nomination is an insult to the American people. It is pure political chicanery, and the Senate should reject it forthwith.

The Otepka nomination raises an issue of more importance than the promotion of a petty, self-seeking bureaucrat. Again it raises the question as to why the Subversive Activities Control Board has been permitted to exist at all. The President's appointment of Otepka might be simply dismissed as his tossing a bone to restive rightwing elements. More important, it may be an indication that he intends to keep alive part of his past as a Communist chased by resurrecting the discredited Subversive Activities Control Board.

Mr. President, earlier today, I introduced a bill to once and for all abolish the SACB. I am hopeful that this legislation will be acted upon as swiftly as possible. It is high time to rid the Federal Government of this insidious leftover of the witchhunts, this boondoggle costing hundreds of thousands of dollars of taxpayers' money annually.

In the 19 years since its creation, the Subversive Activities Control Board has served no useful purpose and has not made a single contribution to the welfare or safety of the Nation. The major section of the statute creating it has been held unconstitutional. From 1965 through 1967, the Board did not hold a meeting and there were no cases pending before it. In fact, in 1967, Congress enacted legislation specifying that the Board had to hold at least one hearing in 1968 or go out of business. Subsequently, under great political pressure Attorney General Clark sent the Board seven cases and the Board started its hearings in September 1968. Since then, it has dealt with three cases naming minor Communist Party functionaries as members of a "Communist-action" group, a process that involved only 6 days of hearings, 1 day of oral arguments and reading of extensive FBI reports. Recently, the Board began hearings on three more cases which are nothing more than "make work" cases to keep this worthless agency in business.

Apart from the five Board members, only 10 employees remain, who do nothing today but send messages to one another and expend energy once or twice a month to draw their salaries. Their average salary is one of the highest in the entire Federal bureaucracy. This year this boondoggle is costing taxpayers more than $365,000, all completely wasted. The continued expenditure of taxpayers' money for this absurd boondoggle is unconscionable at a time when we are looking for ways to save taxpayers' money.

Mr. President, there is no need whatever to continue this virtually dead agency. According to J. Edgar Hoover, who should know, the Communist Party in the United States has lost 90 percent of its membership since reaching its numerical peak strength 25 years ago. The FBI report is that there were 80,000 Communists in the United States in 1944. The Soviet Red Army was crushing Hitler's "supermen" in Europe, and in America there was tolerance for homegrown Communists. The Soviet Union was our ally at that time and some 20 million of its finest youngsters had given their lives to help save the world from Nazi domination.

Quoting J. Edgar Hoover again, at the present time he estimates that the numerical strength of the Communist has nose-dived and instead of being 80,000, as it was in 1944, their total strength in the United States today is between 8,000 and 10,000.

In that total of 8,000 or 10,000, Mr. President, are included those FBI agents who have infiltrated—we do not know in what numbers—and are masquerading as Communists. At most, there is one Communist in the United States for every 21,000 non-Communists, the odds in favor of free institution being 21,000 to 1.

Customarily from 80,000 to 83,000 spectators sit in the Cleveland Stadium Sunday afternoons witnessing National League football games, cheering on the Cleveland Browns. Mr. President, many, many times I have been seated with those 80,000 to 83,000, and I have never felt any fear whatsoever of the Communists there. Taking the FBI calculations—and

they should be correct—then all of three people in that entire crowd of 80,000 might be Communists. Should we be afraid that those few will harm the rest of us? Furthermore, we have on our side the brains and brawn of the city and State police, the FBI, the Army, the Air Force, the Navy—and never forgetting the Marines. Do we need the five men on the Subversive Activities Control Board and some 10 employees feeding at the public trough to gallop to our aid? If it is claimed that we no longer are the land of the free, let us at least be the home of the brave.

When the SACB was created in 1950, it was a bad idea. That was my opinion then; that in my opinion now. Nothing has happened to change it. Instead, the evidence clearly and convincingly shows an effort to introduce totalitarian uniformity into political thinking. The Board, by the very fact it is permitted to exist, continues to be a challenge to the basic principles of the democratic way of life of our Republic.

In 1950, when President Truman vetoed the McCarran-Walter Act which created this bureaucratic monstrosity, he said in his veto message:

> The provisions of the act are not merely ineffective and unworkable; they represent a clear and present danger to our institutions.

His warning has been validated in numerous Supreme Court decisions which have all but nullified that legislation.

The SACB is part of that debris of the witch hunts of the 1950's, the so-called period of "Joe McCarthyism," that still lingers with us to some extent. It is a part of that era in which a number of practices were adopted which were claimed to be necessary for the national security, which would have shocked our forefathers.

Many of the nefarious laws of the McCarthy era were subsequently declared unconstitutional by the Supreme Court of the United States. I maintain that, from the standpoint of civil liberties, historians of the future will credit the Supreme Court of the United States with playing a major role in the preservation of our traditional concepts of individual liberty.

We have recovered somewhat from that era, but the Subversive Activities Control Board, unfortunately, is still with us.

Mr. President, it is obvious that today the Subversive Activities Control Board is nothing more than a sop to the right-wing and a convenient place for a President to place his friends. Senators will recall that in 1967 President Johnson nominated Simon F. McHugh, Jr., to the SACB. At the time Mr. McHugh was a minor executive in the Small Business Administration, but, more important, he was the husband of a one-time personal secretary to President Johnson.

So, he became a member of that Board by Presidential appointment, and he is now a member of the Board, although his appointment was criticized violently by some of those who are now opposing this nomination.

The Chairman is John W. Mahan, a former national commander of the VFW, who headed a Veterans for Johnson Committee in 1964. When asked by a White House aide to take a vacancy on the Board, he replied that he had never even heard of it. The other two members are Leonard L. Sells, who was an attorney for the Renegotiation Board, and John S. Patterson, neither of them with a distinguished background of public service entitling them to a $36,000 a year appointment.

Mr. President, the future safety of this country does not depend in even the slightest measure on the Subversive Activities Control Board. It does depend on citizens and leaders who realize that hunger, poverty, and unemployment pave the way to communism. Those who have appropriated the issue of communism to serve their political ends are poor reeds to lean on in a fight against communism. These are the men who will be found continually on the side of the powerful special interests. They can always be depended upon to oppose all measures to make life better for more people and to insulate them against communism—protection against dependence on old age, unemployment, and occupational hazards, the elimination of poverty, slums, and hunger and malnutrition that afflict millions of Americans, decent housing, medical care for the elderly, farm programs based on the knowledge that a healthy agriculture is potent insurance against communism, the right of labor to bargain for a fair share of the wealth it helps to create, and providing a decent education for every American child.

Mr. President, let us at all times manifest the pioneering spirit of free and courageous men and women intent on maintaining our way of life and adhering to those sacred guarantees in our Constitution. Let us reaffirm the ideals and principles that have made our Nation the hope of the world. As one who despises Communists, communism, and Communist methods, I urge that this scarecrow agency, the Subversive Activities Control Board, be discarded along with all reminders of totalitarianism in our society.

Mr. President, it is crystal clear that despite his denials Otto Otepka has strong ties to un-American extreme right-wing organizations and many of their leaders. Also, it appears that the response from J. G. Sourwine of the Judiciary Committee staff to specific inquiries of Senators HART, KENNEDY, BURDICK, and TYDINGS respecting finances and connections of Otto Otepka was inconclusive, based almost entirely on the statements of individuals involved, and seriously lacking in depth and careful research. I believe that the committee should investigate further any formal or informal connections between Otto Otepka and the John Birch Society, the Liberty Lobby, and any persons or organizations actively associated with either of these lunatic fringe groups.

Therefore, Mr. President, I move to recommit the nomination of Otto Otepka.

I yield the floor.

Mr. MANSFIELD. Mr. President, I ask unanimous consent, with the full concurrence of the minority leader, that the vote on the pending motion take place not later than 2:30 p.m.

Mr. DIRKSEN. With the understanding that at least 30 minutes of the time will be given to the proponents of the nomination.

Mr. DODD. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. DODD. Mr. President, I simply want to say, with all deference, that I have talked with the distinguished majority leader. That would give us how much time? The Senator mentioned 2:30. I do not know how many speakers there are.

Mr. MANSFIELD. There will be time, Senator.

The PRESIDING OFFICER. The Chair would inquire of the Senator from Montana whether his request that the vote on the nomination take place at 2:30 o'clock will be a vote on the pending motion?

Mr. MANSFIELD. That is correct, the vote on the pending motion.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana? The Chair hears none and it is so ordered. The vote on the pending motion will occur at 2:30 o'clock p.m.

Mr. MANSFIELD. Let me say that if any complications arise at that time, we will take care of them then. I want to thank the Senator from Ohio.

Mr. EAGLETON. Mr. President, earlier this year, in connection with the nomination of Walter J. Hickel as Secretary of the Interior, I had occasion to do some study and research on the advice and consent function of the U.S. Senate as it related to nominees for various governmental posts as submitted by the President of the United States. My statement on same and my reasoning in supporting Mr. Hickel's nomination will be found at page 1522 of the CONGRESSIONAL RECORD of January 22, 1969.

In that statement, I pointed out the criteria which the Senate might keep in mind in the case of a nominee for the Cabinet, the President's official family, the members of which serve at the pleasure of, at the discretion of, and to the possible embarrassment of the President of the United States.

I also pointed out that different criteria were necessarily involved in the consideration of appointees to the Federal bench, for life, or to regulatory bodies for a fixed term, where the control of and the direct responsibility to the President were absent.

I said at that time:

> The debates at the Constitutional Convention of 1787 shed little light on what criteria the Senate should apply in exercising its advise and consent authority. Through almost two centuries of experience in implementing this responsibility, different Senators under different circumstances facing different questions have exercised their prerogatives in different ways.
>
> In studying the historical evolution of this senatorial authority, I am constrained to conclude that a standard or criterion applicable to one category of nominee may not necessarily be the proper standard for another category of nominee.
>
> It is one thing to consider the background and qualifications of a potential Supreme Court Justice to be appointed for life. It is another thing to consider the background and qualifications of an appointee to an independent regulatory agency who will serve

independently of the President and often for a fixed term of years. It is still another thing to consider the background and qualifications of an appointee to the Cabinet who operates under the direction of and at the pleasure of the President.

In one of the few books devoted to the advice and consent function, Prof. Joseph P. Harris made these observations:

"The tests applied by the Senate in considering nominations vary widely, depending in part on the character and importance of the office concerned and whether the nomination is one to which the Senate gives individual attention. Well-established custom accords the President wide latitude in the choice of members of his own Cabinet, who are regarded as his chief assistants and advisers (p. 379).

"It is appropriate for the Senate to consider the philosophy and general outlook of nominees to high federal offices, particularly to regulatory bodies and to the bench. These offices stand in a different position from that of the heads of executive departments for whose actions the President is responsible (p. 384).

"The confirmation of presidential nominations to independent regulatory commissions is always of especial importance, for members of these commissions are regarded as having a special relationship to Congress. The function of the Senate in passing upon the nominations is not limited to the technical qualifications of the nominee and his fitness for the office; it is appropriately concerned with his stand on broad policies and the effect his appointment may have upon the functioning of the commission. Often the character and attitude of the officers who head an agency have as much to do with its policies as the legislation under which it operates. The Senate must therefore consider whether a nominee to a regulatory commission is in sympathy with the objectives of the laws which he will be called upon to administer, and whether he will support policies which are agreeable to the majority of the Senate (p. 178). Joseph P. Harris, 'The Advice and Consent of the Senate' (University of California Press, 1953)."

Today we consider the appointment of Otto F. Otepka to be a member of the Subversive Activities Control Board to serve for a fixed term ending August 9, 1970.

Mr. President, it is therefore the duty of the Senate to consider the nature of the position for which Mr. Otepka has been nominated and the nature of Mr. Otepka's case history as bearing thereon.

THE ROLE OF THE SUBVERSIVE ACTIVITIES CONTROL BOARD

The Subversive Activities Control Board—which I shall hereinafter refer to as SACB—was created by law in 1950. Through the years since its creation, its duties have been drastically reduced by decisions of the Supreme Court of the United States. However, in 1968 Congress granted further powers to the SACB.

The Board is now empowered to hold hearings and to compel the appearance of witnesses and the production of evidence by subpena for the purpose of determining whether groups named by the Attorney General are Communist-action or Communist-front groups, or whether named individuals are members of Communist-action groups.

Persons found by the SACB to be Communists or members of Communist-front groups are prohibited by law from holding Federal appointive positions, and from holding jobs with labor organizations or in defense facilities.

Groups found by the Board to be Communist organizations must announce themselves as such in using the mails or any broadcast media and must be denied tax-exempt status.

Finally, it should not be ignored that it is proposed in the present session of Congress in S. 12 that the aforementioned powers be considerably expanded.

The SACB is, then, a board with existing authority and prospectively, at least in the minds of the sponsors of S. 12, it will have even expanded authority in the area of adjudging, evaluating, and handling security matters and files.

To this Board Mr. Otepka has been nominated by the President.

THE OTEPKA CASE

Otto Otepka's case within the State Department began in 1963. During the course of hearings before the Senate Internal Security Subcommittee Mr. Otepka handed over to Mr. J. G. Sourwine, chief counsel of the subcommittee, some 34 documents of which 11 were classified ranging in degree of classification from "confidential" to "official use only" to "limited official use."

Otepka was charged with "conduct unbecoming an officer of the Department of State" in connection with the handing over of these papers to Mr. Sourwine. At the outset he was also charged with other allegedly improper acts, but these other charges were later dropped by the Department of State by the time the case was presented to the hearing officer.

Specifically, Otepka was charged with violating the Presidential directive of March 13, 1948, which provides, in part, as follows:

All reports, records, and files relative to the loyalty of employees or prospective employees (including reports of such investigative agencies), shall be maintained in confidence, and shall not be transmitted or disclosed except as required in the efficient conduct of business.

The report of the hearing officer is printed at pages 75–84 of the April 15, 1969, Judiciary Subcommittee hearing on the instant nomination—hereinafter referred to as the "hearing." I call to the attention of the Senate findings No. 12 and No. 42 which I read herewith verbatim:
